IN THE prison the American who was detained, Lieutenant Daniel James of the United States Marines, looked about him. He had been able to keep his own clothes, although obviously it was against the will of his captors. He had not understood anything of the agitated chatter that had gone on about him, but the difficulty had been made plain to him when they held up against his great height one microscopic suit after another of faded garments. In the end there had been grunts of disgust and he was pushed as he was into this bare cell. It was dry, at least, he saw gratefully. A Chinese wooden bed strung with ropes, a fairly clean quilt, a bamboo stool, a tin basin and tin water pitcher and wooden commode made up the room's furniture. The door was heavily barred with iron and the small high window in the plastered brick wall was barred, too.

He sat down on the bed when the door clanged behind him, and drew a long breath and wiped his mouth with his hand. He was dazed with all that had happened. It seemed impossible that only two days ago he was in a comfortable houseboat being poled slowly up a narrow beautiful creek, far from the city. Arnold Hatford's houseboat had been furnished with everything to make a holiday gay, and Arnold Hatford's pretty wife, Leone, had been the prettiest decoration of all. Where were they now? He imagined them, traveling overland by any means they could, southward, to escape internment.

"We'll get a boat somewhere and reach Hong Kong—Hong Kong'll be safe enough," Hatford had said easily, when at last they had believed the bad news.

It had seemed a risky business to Daniel, but Hatford had only laughed. "I've been in China so long that I'd always rather take my chances with the Chinese than anybody else. And Leone here is half-Chinese anyway—eh, Leone?"

The beautiful Eurasian girl had smiled lazily at her English husband. "To be half English is quite enough for me," she said and they had all laughed.

How incredible that terse radio voice had sounded announcing the attack at Pearl Harbor! They had heard it, actually, in the ridiculous time circle of the world, before it had happened. The

defenseless and at his mercy, he despised him. Well, let him rot in jail! When there was talk of exchange of prisoners he would see to it that this young man was forgotten. In prison, living on a handful of rice a day, it would not even be necessary to torture him. Beriberi would do that.

And that ridiculous old woman, plaguing him day after day about her wretched "girls!" Those girls were escaped prostitutes—French, Russian, English—as if a prostitute could ever be a girl again! He had forbidden his men to go there for some obscure reason that he could scarcely fathom in himself. No, let him be honest. He was ashamed of the reason why he kept his men away from the old woman's house. He did not want her to despise him.

She was an American, and she was trying to rescue those girls—she and her husband had kept the place as a refuge for years, until that morning not two years ago, when her husband had been killed inadvertently by a hasty guard whom he had enraged. He was sorry for the incident—it had been written of in the papers and had been sent abroad, and it had made the Japanese look des-

composed in spite of her situation, and this he admired. But he had been infatuated with her ever since he first had met her, months ago. He had met her at a *thé dansant*, at Arnold Hatford's house, at that time when the English were in such straits in Europe that they were trying to be very friendly in Shanghai. The Burma Road had just been closed.

HE HAD thought Leone Hatford was very beautiful, her mixed blood adding flame to the fire of her beauty, until the American girl had come in. Then the pure blond type had simply shone above the dark Eurasian. He sighed and pressed his hands to his eyes.

"I shall ruin myself if I go on like this," he thought. He sat down at his desk and leaned his head on his hands. Then after perhaps five minutes he picked up the telephone receiver.

"Get me the Cosmopolitan Hotel," he said in a low voice.

He listened and heard the reply, "Cosmopolitan Hotel—good morning!"

"Has the American, Miss Jenny Bar- chet, come in yet?" he asked, and made his voice very brusque.

small short wave radio that Hatford had built so cunningly into the carved Chinese panel of the wall had blared forth the news. Instantly, the wonderful food which but a moment before they had so eagerly attacked turned tasteless in their mouths.

"It can't be true!" Hatford cried.

He rose after a second and softened the voice, lest even the servants hear. But the voice had gone on, the news no less relentless in the softened tones.

"IT IS true," Daniel had said. "It's what we've been told a thousand times would happen—but I guess we haven't believed it could." He rose, dropping his fine linen napkin on the floor. "I've got to get back to my ship, Hatford," he said.

"Of course you must," Hatford said hurriedly. "My dear fellow, sit down. I'll see that we are turned about at once for Shanghai." He rang the bell for the *lao-dah* and the old captain came in, a gnarled brown Chinese, the son of generations of Chinese boat families.

"Shanghai, chop chop, lao-dah," Hatford said. "Much business have got now."

He turned to his young wife. "Tell him, my dear," he said to her. "Don't tell him what for, of course—it may all be rumor—but just say the lieutenant is called back to his ship."

She lifted her long black lashes and translated, the soft Chinese words pouring off her tongue. The old man nodded, his eyes as bright as a monkey's in his withered face, then he went agilely out of the room. At some time in his life he had broken a leg and it had never been properly set, so that he manipulated it almost as though it were not a part of himself.

But Arnold Hatford was not looking at him. He had sat pinching his thin lower lip. Suddenly he looked up at his wife. "Leone, my dear, how about you and me skipping ship and trekking right away down to Hong Kong? It'll be nasty in Shanghai for a bit. Of course this means war, you know. I mean to say, America'll naturally have to declare war and England won't be behind. It would be nasty being interned, you know, for ever so long, and I'd rather get away to Hong Kong and work in our offices there until we saw what was what." Hatford & Hunt had offices in all the great Eastern ports.

Leone had lifted her long eyebrows lazily. "As you like, Arnold," she said. And at that moment she reached for one of the big honey oranges on the table and began to peel it. She had Chinese hands, exquisite and small, and the fingers were

pointed to the delicacy of a child's fingers.

Daniel James thought of them irrelevantly now. He was glad for only one thing—that something had happened to separate Leone Hatford from him. He had not been in the least in love with her, but he recognized in her those signs which made him uncomfortable, in any woman who was another man's wife when she looks at a man younger and better-looking—well, than her husband. Hatford was a good fellow, but she was his second wife. His first wife had been English, and she had died years ago, and there had been years between and then suddenly he had married Leone. She had told Daniel so, half indifferently, her red lips scarcely moving from their pure curve. "It was arranged," she had said, as if she had been speaking about someone else and not herself.

They had left the houseboat at a village, and there he had seen them off in sedan chairs, Hatford sitting straight and uncomfortable, and Leone as gracefully as though the chair were a throne. Wherever they now were, he at least was in prison! He had gone straight to the wharf the moment the houseboat drew into Soochow Creek. Standing there on the Bund he had searched the empty waters. There were ships enough but not his ship.

"By golly!" he had cried aloud, and at that moment three Japanese soldiers had stepped up to him out of nowhere and had seized him and led him before that fellow in the office yonder.

By such simple but inexorable steps had the enemy fallen upon him.

"DON'T hurry me," Mrs. Shipman said rudely to the Japanese who kept the point of his bayonet in the small of her back. "I'm not as young as I once was. Besides, I have more right here than you have, by a good deal."

The Japanese emitted some coarse guttural sounds and Mrs. Shipman threw a look at him over her shoulder. "I don't understand a word of what you're saying and I am glad I don't," she said. She looked at him again. "I suppose some woman thought the world of you when you were born," she remarked conversationally, "but it's hard to imagine it now."

She gave up attempts at communications after that and plodded on bleakly. There were almost no vehicles left in the filthy street of what had once been so proud a city. Such desultory rickshas as were there shifted away from her. No ricksha man with a family to feed would have offered to pull an elderly white woman being steadily pushed by a Jap-

anese soldier with a bayonet at her back. But she was used to walking, being often so low in funds that a ricksha was beyond her purse anyway.

It was strange, she reflected, though without bitterness, when things were especially hard, as they had been ever since the Japs came, that God should seem more rather than less negligent in the matter of moving people's hearts at home to send her a little money now and then. She still had some of her burial money left, that precious small sum which dear Paul had told her she must not use except for her own funeral. He had told her that when he lay gasping out his life from a wound in his lung made by a Japanese bayonet exactly like the one she now felt touching her back.

Tears stung her eyes whenever she thought of him. He had been such a good man, so trusting, so sure that they would always be cared for because they were doing God's will. Somehow or other these Japs had come here in spite of God.

"Sneaked in," she thought sadly, "when He was thinkin' about something else!"

SHE reached her house, footsore and weary, and her felt hat was askew. But she had all her courage intact. On the stone threshold of the gate, which was always kept locked, she paused and knocked vigorously. The little Cape Cod sailor raised his right arm under her hand and pounded on the iron plate beneath his hammer. The gate slid open, and with a sudden movement she gave the Japanese soldier a push that sent him sprawling in the dusty cobbles, and then she was inside the gate and the bolt was drawn. In a moment she heard the shots she had expected when he rose from that dust, but the gate was thick, and the bullets did not come through. One soldier she could and would keep out. If she had to be guarded, then let them stand outside the gate. If more were sent, then she must deal with them as they came.

She said to the old Chinese gateman who stared at her in terror: "I am interned, old Wang. Now if you are afraid you had better go out the back gate and find your family."

She looked at him with her steady gaze and he shrugged his shoulders. "I have been here at this gate for twenty years," he said. "I will stay here as long as you are here, lady."

"Good!" she said. Then she cast a quick look toward the rooms across the court. "Is all as I left it?" she asked. There was not a sign of the girls but then she had told them always to stay at the back of the house, near the back gate, when she was away.

"All is as you left it," he said quietly. "I have not heard a sound since you went away." He glanced at the open doors of the house and then drew a little nearer to her. "But that last young girl I do not trust—the one you picked up the day you went to court for the Russian."

"You mean Meri? Why, she's a child!" she said.

"French," old Wang said. "We never had any good come from them."

"You mean you think she's a spy?"

"How do I know if she is a spy?" old Wang said. "I do not know how a spy looks. All I say is—watch her."

"Well, maybe," Mrs. Shipman said. She spoke outrageously bad Chinese because she had never taken the time to learn it properly. No one could understand her except old Wang. Questioned as to how he did, he always said judiciously, "It is not difficult. When I know what she is going to say, I can understand all. Even when I do not know

what she is going to say, I can understand one half." But he stayed with her because he had promised the old preacher he would. There had been a good man!

Mrs. Shipman plodded across the courtyard and into the house. There was nothing but stillness until she opened the door into the inner court. Then suddenly she heard the sound of girls' voices and laughter. It was a pleasant little court, with a small pool in the middle and old bamboo trees that had been planted long ago when a Chinese family had owned the place.

In this court some eight or nine young women sat or lounged on the grass, and watched an old cat and her family of kittens. They looked up when the door opened and cried out in a crescendo of gaiety, in several languages:

one as she did, that they did not look girlish—no, not even though they were so young, and so smooth. The eyes were old. Only Meri had very young eyes like a child, she thought, like an eternal child.

"Listen, girls," she said. "I've got bad news. War has got me, I guess. I'm interned."

A tall Russian girl leaped to her feet, her face very pale. "Does it mean—" she whispered.

"It will not mean what you think," Mrs. Shipman said. "But it means that I cannot come and go as I have before—it means we shall have to trust old Wang to get us food beyond what is sent us. It does mean"—she gazed solemnly around the faces all turned toward her. "It does mean that you must be ready when I tell you—to run out of the back gate, along the ways I have already

"Do you suppose, Professor, it's just because I don't understand women?"

COLLIER'S

GARDNER REA

"Ah, Mother Shipman!" "Ah, dear one, you are back!" "Mother Shipman!" "Good Mother, Good Mother!"

Only the little auburn-haired one with the long green eyes did not cry out. She leaned over and plucked up a kitten by its tail like a stem and dropped it into the shallow pool.

Mrs. Shipman rushed forward. "Shame on you, Meri!" she cried. "The little thing'll drown!" She picked the meowing scrap out of the water and dried it on her woolen skirt, and the old mother cat rubbed against her legs in anxiety.

"For shame, Meri!" the girls cried. "Oh, you wicked one! God will punish you," they said.

But Meri shook her auburn curls out of her eyes. "Where is God?" she asked in a sweet childish voice. She looked up at the sky and then she stuck out her red tongue. There were more cries of consternation—"Meri—God will punish you!" But she shook her curls at them again and ran into the house. A door banged and the girls looked at Mrs. Shipman. But Mrs. Shipman had already forgotten Meri. She looked seriously at the faces around her.

They looked so young and girlish, these faces, when one saw them at a distance. But it was only when one saw them close, when one knew them one by

taught you. If I give the word there must be no delay—you understand?"

Heads nodded. The Russian sank to her knees and covered her face with her hands. "There is no peace," she moaned. "Nowhere in the world is peace!"

Mrs. Shipman looked at her for a second. Then she sighed. "I think I'll go and rest a little bit," she said. "Somehow for the first time in my life I feel real tired."

"YES?" Jenny Barchet was saying into the telephone. She had been startled a moment ago when it rang. Whom did she know in the city who would call her? All her friends had thought her safely on the ship thirty-six hours ago. Wherever they were, interned, imprisoned, they would be envying her. She had tried in vain for the last hour to get the American consulate. The clerk had assured her that he had rung many times but that there was no answer.

"It is I, Miss Barchet."

She recognized his voice instantly, but she pretended she did not. "I don't know who you are," she said.

He laughed pleasantly musical laughter into her ear. "Yes, you do—it is your good friend, Shigo Kuyoshi!"

She bit back her flaming denial of such friendship and made her voice as cold as

her heart at the sound of his name: "Yes, Mr. Kuyoshi?"

"Are you alone?"

She hesitated and then evaded the truth: "Is there something you wish to tell me? At least there is no one in the room with me, if that is what you mean."

"May I come and tell you myself?"

"I had rather hear it, please, over the telephone," she made the words a command.

He laughed again richly. "And I had rather come and tell you myself!"

"It is not convenient for me to receive you," she said bluntly.

There was a moment of silence. Then he said gently, "I had so much rather come as your guest than to come—otherwise."

She was determined not to be afraid. "I had rather not have you as my guest," she said distinctly. "If you come otherwise, of course that I cannot help. But at least I can help having you come as my guest."

There was silence again. Then she heard his voice, clear and pleasant and inexorably firm, come across the wires: "Very well—then I will come—otherwise!"

The receiver clicked in her ear.

She put it down slowly and looked about the room. It was a pretty room, the sitting room to the small suite which had been her home since she came to Shanghai now nearly three months ago. It had been the scene of pleasant parties, and of many hours of good companionship with friends. Now it was her prison. She thought, at that word prison, of the tall young man whom she had met this morning, from whom she had parted so unwillingly. "If we were in prison together I'd feel safe, anyway," she thought.

BUT she was alone in her jail and he in his and there was no communication possible. Now she must think quickly what to do. She went into the bedroom and changed her thin woolen dress to a suit with pockets. Then she opened her locked box and took out a small revolver. Months before, when she had started around the world, her boss, the editor of the paper that had sent her here, had given her this thing. "I wouldn't give it to just anybody, Jen," he had said. "But you're so darned reckless—you'll get yourself into a fix, sure as fate, and so you'd better have this inside somewhere."

She was in the fix all right. She chanced to look up at that moment and saw herself in the mirror, holding the pistol in her hands, and was startled at her own reflection. She was very pale, and there were shadows under her eyes.

"I mustn't look like this," she thought. "He'll know I'm scared." She dropped the pistol into her right-hand pocket. "I mustn't be scared," she thought. So in the few minutes she knew she had left before he could get there, she made up her face carefully and brushed her blond hair until it lay on her shoulders in shining curls.

"A clean handkerchief," she thought, and smiled as she found it. "With a clean handkerchief," her mother used to preach to her when she was a little girl, "a lady is always prepared."

"You were right, Mom," she whispered half aloud, "but you didn't go quite far enough, dear. With a clean handkerchief—and a pistol—a lady is prepared—maybe!"

She went out into the other room and stood at the window looking out. The door was locked. When she heard his knock she would open it as though indeed he were a casual visitor. But until then she stood quite still, looking out into the street. Across it there were the

# THE

# LIFE INSURANCE AGENT

## IN WARTIME

**A**MERICA has always been known as a nation of individualists. From the very founding of this country, we have insisted upon our inherent right to live our own lives and to plan our own futures.

Out of this demand for individual planning has grown the institution of American life insurance. Through this, Americans have provided for their loved ones and themselves a greater measure of individual financial security than has ever been known before. In fact, we Americans, representing only 7% of the world's population, own more than 70% of the world's life insurance.

In keeping with American individualism, life insurance itself is individualized—tailored to fit the hopes and ambitions, the needs and income of each policyholder. And each family's insurance program, shaped according to its own particular needs, has been made possible

by the untiring work of the life insurance agent.

It is the agents who teach people to understand and appreciate the benefits of life insurance. Through their efforts, in times of peace, agents helped some 65,000,000 Americans to take advantage of the flexible, individualized service characteristic of American life insurance.

In wartime, this service takes on new and more important meaning. The agent's work is a major contribution to the morale of our men in the armed forces, for millions of them know that, through life insurance, their families back home are cared for no matter what happens.

The agent's work in wartime also helps prevent inflation. He assists people with excess earnings to invest part of such earnings in life insurance. This keeps excess funds from competing for

consumer goods and helps hold down prices.

Life insurance bought today serves a double purpose. It not only provides protection for the policyholder, but a substantial part of the money he pays for such protection is invested by his Company in United States Government Bonds. Since Pearl Harbor, the life insurance companies of America have added nearly \$3,000,000,000 to their holdings of United States Government securities...money that is going for tanks, planes, guns and other war equipment. In addition, life insurance agents sell War Stamps as part of their daily activities.

Thus, through the life insurance agent, Americans have found a way to accumulate life insurance funds which have not only helped make America what it is, but are now helping to pave the way for Victory.

1 MADISON AVENUE, NEW YORK, N. Y.

ruins of a great department store which, when it had been bombed, had carried into its destruction the lives of thousands of people. The bombs had fallen when the shop had been at its most crowded hour. It had been long before she came and yet even now there were smears of blood upon the plaster walls. In the lower floors, business was going on. It was only from above that one could see the record of death.

Will he bring soldiers in with him? This question struck across her heart like a cold sword. Certainly she could not cope with several men. She took her little pistol out of her pocket and examined it carefully. It was well loaded, and the delicate trigger was shining and ready. She would manage as best she could.

SHE had scarcely slipped it into her pocket again when the knock she dreaded was on the door. She walked steadily across the room and threw the door open. He was alone! There was not even a guard to be seen at the elevator nor in the hall.

"Yes, I am quite alone," he said gaily. "You need not be afraid. It is a purely social call."

"Come in, please," she said, ignoring his perception of what must have been in her eyes. Very well, she must be careful of her eyes!

He came in, and she saw he was meticulously dressed in formal morning clothes. He had even a silk hat and cane and pale gray gloves, and these he put on the couch beside him. She suddenly understood that he had dressed himself thus out of pure vanity. He wanted her to see him at his best. She felt for the first time a flicker of amusement, and then a dash of reassurance. If he were vain, then it gave her a little safety, perhaps! At least there was a weakness in him!

"How beautiful you look," she said with a small, cool smile. "You must forgive me that I am dressed so—casually."

He sat down, delicately, pulling his striped trousers over his knees. "My dear Miss Barchet, you are always beautiful," he said. He looked at her, appreciation shining in his eyes. Then he leaned forward a little, his hands together at the finger tips. He had put, she saw, a heavy gold ring on his little finger. Certainly that ring had not been there this morning. He followed her eyes.

"That ring I bought in Berlin," he said. He slipped it from his finger. "It is hand wrought. An old German jeweler made it for me. Can you think why?"

The ring was warm from his flesh and she could scarcely bear to touch it. Nevertheless she took it and pretended to examine it. It was very fine indeed. A curious insignia was carved on the seal.

"I cannot think why," she said, and handed the ring back to him, avoiding the touch of his fingers. But he made no effort, she saw with relief, to touch her hand.

"He had a great admiration for my people," he said. "That old man, you will be surprised to hear, had studied Japanese art and knew—well, really he knew more about it than I did. This, you see"—he moved over to a chair next to her and showed her the seal again—"this is the sign of Shinto—and this the crest of my own samurai family."

She drew back a little. "Yes, I see," she said. He had put on himself some sort of perfume, very faint, not in the least effeminate—a strange musky scent. He rose and moved back to the couch. The ring was on his finger again. He sat looking at her for a moment, a charming smile on his handsome mouth.

"You need not be afraid of me," he said in a low voice. "I will not take ad-

vantage of this barbarous situation between us."

Her lips grew stiff with terror. "Do not forget you are not here as my guest," she said huskily.

"No, I remember that I am not," he said. His mellow voice did not lose a tone of its pleasantness: "I understand all that you are feeling. What you fear is entirely natural. But what I want you to know is that I am not an ordinary man. I have to take my place in the world as I find it, of course. To do otherwise would be folly. When the world is at war, it is throwing away one's life not to seem zealous for war. But actually, what sensible man can approve a situation which destroys all the pleasures of living? You and I, for instance, in a peaceful world we might have been very good friends. As it is, I have to overcome, if I can, this foolish obstacle—this foolish detail, let us say—of the fact that I am the conqueror and you—well, you are the conquered!"

HE LAUGHED, but she looked at him from wary eyes.

He rose and drew a chair toward her. "I will be patient," he said. "I will not hurry your belief in me. But I should like you to listen to me when I say you can believe in me. I am a man of the world, in the truest sense. I have spent years in your country. I went to school there. I know England and Europe. I admire the Western world. Although I am a Japanese proudly, yet I can tell you that I believe it would have been far

wiser for us if we had not begun this career of conquest—if we could have kept on with the good progress we were making in trade and peaceful penetration. We would have made more progress with friends than with enemies."

His eyes, she thought, so large, so clear, were nevertheless the shape of a snake's eyes, and the peculiar fold of skin above them made them look lidless when they were open. But his voice was the voice of a cultivated man—as he said, a man of the world. He spoke English with a pure Oxford accent which an English lord might have envied. She had heard him speak French and German and knew that he spoke them both as well as he spoke English.

"Will you believe me?" he asked gently.

"I cannot forget we are enemies," she said shortly.

He leaned back and took out his gold cigarette case and held it toward her mutely. But as mutely she shook her head. She realized that, whether it was absurd or not, she did not even want to smoke one of his cigarettes. She knew that cigarettes could be charged with narcotics. But he took one himself and began to smoke it gracefully.

He continued to watch her. Now she saw that he did have lids to his eyes. He dropped them a little as he watched her. "I wonder if you realize what a predicament I am in," he said slowly.

"You?" she repeated.

He smiled slightly at this. "Yes, I," he said. "You need not think you are the

only one. It is only technically, you know, that you are my enemy and ought not to have anything to do with you. I ought to keep you under heaviest guard. Actually, you are only woman who has interested me since I—" he flicked the ash from his cigarette and for a moment his eyes left her face. "Well, since I left Europe."

She did not answer or move. "I have the misfortune," he went on slowly, "to be in the least attracted to the women of my own race. Our theory about women," he said, seeming to reflect what he said and yet not to be thinking about it at all, "is very defective. In keeping our women uneducated, in keeping them our servants, we have neglected to provide for ourselves companions. Of course the geishas—but the truth is, geishas are seldom fit for real companionship. They have a surface charm, prettiness, if you like prettiness, but man such as I am—I long for the companionship of an intelligent woman. I can hire a servant and I can go to theater for my entertainment. But I cannot buy companionship of the sort I mean. It has to come out of deep compatibility."

He was not looking at her now. She saw his handsome profile turn to the window and then she saw, to her amazement, that he was really sad. "You see why you need not be afraid of me," he said. "I would force you to nothing. The very spirit of the thing I want from some woman—perhaps not even you would be lost if there were any compatibility."

HE TURNED his face to her again and now he smiled. "I beg you not to be afraid of me," he said softly.

"I am not afraid of you," she said last, "only—under the circumstances—cannot see the possibility of friendship between us."

"Why not?" he begged. "Here we are in this Chinese city. In a sense we are quite alone. Whom do you know among whom do I know who might be friendly to either of us? You too have been everywhere in the world. You are a cosmopolitan and so am I. You know that patriotism is not enough for people like us. I do not ask you to cease to love your country, and you will not ask me to cease to serve mine. But there will be hours when it will be pleasant to me to converse here like this—there will be hours when I can take you out of these walls for a drive in the countryside. We can do our full duty and yet we can be friends."

She felt dazed and a little sick. The strain upon her was making her giddy. She put her hot hand in her pocket and the little silver pistol felt like comfort to her. What did he mean by all that talk? And how could she answer it? She would have been less afraid of him if he had been simply—brutal.

"Please go away," she whispered. "Please leave me alone!"

He rose instantly. "Certainly," he said. "I will not stay a moment longer than you wish—if you will let me come back."

He put out his hand and unwillingly she put out hers. She felt it enveloped his smooth palm.

"May I come back?" he asked, still holding her hand.

She pulled it away. "I—don't know," she murmured.

"At least you do not say I may not," he said, releasing her hand. He stopped to pick up his hat and cane and glove and went at once to the door. Then he turned to her and bowed his graceful Japanese bow. "Thank you at least that I may come again," he said clearly and closed the door softly behind him.

(To be continued next week)

Continued from page 20

"I don't know," she snapped. "I don't dare bring up his name. I'll have to wait until it comes up in conversation. I don't even know if I can come here again. At luncheon, Channing referred to you as a 'common murderer.' And that, my dear, is how the wind is blowing."

"Will you get me the rest of that information?" Jason said.

Natalie nodded. "Of course, Jason. But you're whipped. What can you do?"

She turned quickly and walked away from the latticed door. And it occurred to Jason that there was no longer any need to make up his mind whether or not he could trust her. He had no choice. His life was in Natalie Mace's hands.

She was back again after dinner. In a pale blue dinner dress, she looked fragile. She was pale. She approached the latticed door unsmilingly.

She had had, she announced, another talk with Luana. "And I have the other information you wanted. I got Channing to talk before dinner. Winfield Grazzard was an ordnance inspector in one of the Bethlehem Steel plants from 1923 to 1927. Is it really important, Jason?"

Her expression was forlorn.

"Very important."

"Well, I'm glad. It took a lot of wangling. And Luana finally confessed she wasn't talking with anybody last night—but she won't say where she was. She's hysterical again. She had another awful row with Lorrin. She wanted to see you. The upshot of it was that Queen Bertha ordered her to have nothing more to do with you. And I've had my orders, too. Channing laid down the law when Queen Bertha mentioned at dinner that I'd been here this afternoon."

"How did she find out?"

"I don't know, Jason. She knows everything. She sees all and knows all. And she has a new smugness about her. She loves to put people in the doghouse. Luana's in the doghouse, and you're in the doghouse and I'm in the doghouse. And I won't be coming here any more, because the last time I disobeyed Channing he punched me in the eye."

"You might look in on me at the Honolulu jail," Jason suggested.

"I'll bring you a homemade cake with a file in it," Natalie said. "It seems to be our last chance."

**N**EXT morning, Channing Mace visited the brig.

The manager of Kokala plantation wore an expression appropriately sympathetic. His dark red hair had been somewhat ruffled by the wind as he had come forward, and he was smiling sadly.

"I would have dropped around to see you sooner, Amboy," he said in his vigorous way, "but I was waiting to see if someone would turn up who'd seen your man jump overboard. I wanted you to know that Mrs. Grazzard is very much concerned over you."

"That's very kind of her," Jason murmured.

"Well, I'd say her attitude may be just a little selfish, Amboy. You see, she has a great deal of family pride and she considers you, in a sense, one of the family. She wants to do anything she can for you."

"It's kind of you to go to all this trouble," Jason said.

"Oh, not at all. I've been in jams myself. In fact," Channing Mace said, with his cool smile, "I was in a jam myself a few years ago very similar to this one. A drunken bum insulted my wife, and I

punched him, and, as luck would have it, he hit his head on a curbing and died of a skull fracture, although I'll always believe he died of acute alcoholism."

"Then you know," Jason said quietly, "just how I feel."

"Indeed I do!" the plantation manager agreed with heartiness. "And I, too, will do everything in my power to clear you of this ridiculous charge."

"That's odd," Jason said. "I didn't know I'd been charged with anything."

"Unless things clear up for you," Channing Mace said pleasantly, "you're definitely going to be charged with murder. That's pretty obvious, isn't it?"

"At least, it's a possibility," Jason agreed.

"But don't be too downcast, Amboy. We have a great many strings to our bow, you know. Or perhaps you hadn't realized how powerful the Grazzards are in the islands?"

"I'm certainly beginning to realize it," Jason admitted. "Will you tell Mrs. Grazzard I'm very grateful for her interest?"

"I will, gladly," Channing Mace said heartily. "And, by the way, Amboy. I've suggested to my wife that it might be better if she didn't drop around here any more. People talk so, you know. You appreciate my feelings, of course."

"Of course," said Jason.

**H**E WATCHED the manager of Kokala plantation walk away. When Channing Mace reached the deck doorway, sunlight struck his tousled hair, and it became decidedly red. It was not as bright a red, Jason decided, as Singapore Sam Shay's, but it was decidedly red. And he wondered if it was as red as this when it was wet.

From the mess boy who brought him his breakfast three mornings later, Jason learned that the Tasmania would dock in Honolulu at noon. He had finished his breakfast when Captain Horngold and Lieutenant Commander Matthewson came into the corridor on which the brig faced.

Matthewson had a cluster of keys in his hand. With one of them he unlocked the latticed steel door. He opened it.

"Congratulations!" he said. "We've finally got you a clean bill of health, Mr. Amboy!"

Captain Horngold said vigorously, "I'm delighted to be able to release you, Mr. Amboy. A passenger has finally come forward who saw your valet jump. He jumped off A-deck rail, aft. The young lady even talked to him, trying to dissuade him. It was Miss Topping."

"What!" Jason shouted. He hadn't intended to shout. The shout was surprised out of him.

"Yes," the captain said, "I was surprised, too. It certainly was an unusual coincidence. Of the five thousand people aboard this ship who might have seen him jump, it had to be a young lady sitting at your own table!"

"Miss Topping came to my office immediately after breakfast saying she had something to tell me. She said she hated to have you penned up here all of this time, and the reason she hadn't spoken sooner was that she hated publicity so. She hoped someone else might have seen Flack jump. The main point is, she did come forward—and the case against you is cleared."

"Yes," Jason said thoughtfully, "that's the main point."

He went to his stateroom for a change of clothes and a shower, then went on

**GIRL:** Don't be silly! I always throw a piece of carbon paper away after using it 20 times!

**P. A.** Ah, but you never used Roytype's

"Retire at 20?  
Not me, lady—  
I can work  
right up to 60!"

Park Avenue before! It's made by the Royal Typewriter Company, and one sheet can be used up to 60 times, cleanly and clearly. Here's a test copy that proves it . . .

This is the sixtieth copy made with the same sheet of Park Avenue Carbon Paper, a product of the Royal Typewriter Company. This sheet of carbon paper had been used 59 times before! The test was made at the United States Testing Company, Inc., one of America's largest independent testing laboratories. See what a clear, legible copy this sixtieth one is!

Laboratory test No. 36092-NY, issued October 6, 1942

**GIRL:** Why, that's amazing! It looks like a first copy! What makes it possible?

**P. A.** They tell me it's because Park Avenue is deep-inked. They use a special process that soaks the ink right down into the paper. And notice Park Avenue's extension edge . . . it lets you reverse the sheet, top to bottom, so that all areas of the paper can be used.

**GIRL:** Well, I may be dreaming . . . but from now on, I'll try to get a lot more copies from each sheet of Park Avenue before I throw it away!

\* \* \*

THERE ARE MANY different carbon papers in the Roytype\* line, made by the Royal Typewriter Company. One of these . . . it may be Park Avenue, or it may be another . . . will exactly fit your needs, depending on the particular type of work

done in your office. Your local Royal Typewriter Representative will gladly show you the whole price range of Roytype carbon papers and help you choose the weight, finish, and quality best-suited to your requirements.

The armed forces need typewriters! See how many of your standard machines (made since Jan. 1, 1935) you can spare. Call your nearest Royal Branch—we will buy them, affix the Government seal, and pay you the Government fixed price.

deck looking for Luana. The breeze was sweet with the fragrance of the land. The green mass of Molokai was rising out of the sea to the south, and he could see, dead ahead, the loom of Oahu against a white billow of tropical cloud.

The convoy was now strung out in a long double line. Several more destroyers had appeared. They were darting here and there and naval planes were swooping about the convoy.

He found Luana on a sun mat on B deck. She wore white slacks and against their snowy whiteness her copper-colored skin was striking and beautiful. She was lying on her stomach. Pushed up on her elbows, she was reading a picture magazine. Her brown hair was shaken out. It curled about her shoulders and was softly stirred by the breeze.

Jason sat down beside her. She turned her head as his shadow fell across the magazine. She was wearing dark glasses with pink scalloped rims.

"Oh, hello, Cousin Jason," she said. He couldn't see her eyes, but she wasn't smiling.

"I understand," said Jason, "I owe you a great debt of thanks, Cousin Luana."

SHE was gazing steadily at his eyes. Her mouth looked small and unhappy.

He was trying to see her eyes through the dark lenses. "I can't decide," he said gravely, "whether I'm still in love with you or not. One moment I think I am. The next moment I think I'm not. But I'm sure of one thing: My dream woman wouldn't let me stay in a dungeon for several days and nights because she's afraid of publicity."

"Perhaps," the copper-skinned girl said, "it was a good thing to put you to the test. I don't want you to be in love with me. It's made me unhappy. I'm glad you're cured."

"If you thought I'd stopped being in love with you," said Jason, "you'd be eating your heart out. And I didn't say I was cured. Just looking at you and hearing your voice brings it back stronger than ever. And I want to hear the rest of the evidence. I must say this sun feels awfully good. It was gloomy down there."

Why didn't you visit me?"

"Orders," she said crisply. "You were kapu. You are still kapu."

"I suppose that means I'm an outcast," Jason murmured. "Before you're snatched away from me, please tell me what happened that night."

Luana took off her sun glasses. Her eyes were very clear. "It was awful, Jason. It was horrible. I'd come out of the lounge. I suddenly saw this little gray-haired man sitting on the rail, with his legs dangling over, and his left arm around a stanchion. He was leaning forward as if he were about to jump. I called to him. I was simply terrified."

"Wasn't there anyone else on deck?"

"No. It was raining and cold. I don't know what I said. I just yelled and he turned his head. Then I ran to him and I grabbed him by the arm with both hands—the arm that was hanging onto the stanchion."

"Did you know who he was?" Jason asked.

"No. I think I'd seen him about the ship once or twice, but I didn't know who he was until afterward. The strange part of it was he wasn't agitated at all. He said very calmly, 'Don't try to stop me, Miss Topping.' Then he jerked his arm out of my hands and jumped as far out as he could."

Luana's sea-green eyes were entranced.

Jason reached for her hand, then thought better of his action and drew his hand back. "That must have been a horrible experience," he said. "Did you ever see a man go overboard before?"

Luana's mouth became firm. "Of course! Lots of times!"

"What did you do those other times?" Jason asked.

Her eyes were narrower. "I don't know," she said impatiently. "What has that got to do with it?"

"I thought," Jason answered, "it was an old, old law of the sea that when someone saw someone else go overboard, he yelled 'Man overboard!' so the ship could be put about and the man picked up. Did you yell 'Man overboard!' when Flack jumped?"

"I was so horrified I almost fainted. I hadn't enough strength to yell."

Jason was nodding gravely. "You hung onto the rail until the faintness passed, then you came serenely down to the dining room—"

Luana's face was pink. "I wasn't serene!" she cried. "I was having the jit-

The coldness and the trembling were going. Jason's heart was returning to an even keel and its tumult was subsiding.

His manservant was observing him with anxiety. "Gently does it, sir," said Flack.

JASON glanced at Luana. She was sitting up on her sun mat and the breeze was softly blowing her hair. She was not pale. She was not trembling. She did not seem astonished. She was taking it, it seemed to Jason, very calmly.

"So—" he began in a low growl.

"Control yourself, Jason," said Luana in her melodious voice.

"Do you," said he, "know who this man is, Luana?"

"Yes, Jason," she said calmly. "Don't yell so. Everything will be explained." She glanced at Flack and her expression

his lips in a gesture that was as familiar as it was distasteful to Jason.

"Yes, Mr. Amboy, the chain locker—the place where the anchor chain is stowed. When the ship was searched the night I vanished, several times ship's officers threw flashlight beams on me, but I was very ingeniously concealed."

Flack chuckled. "I was lying beneath a piece of burlap the exact color of the rusty chain."

"Did you have that figured out, too?"

"Yes, sir."

Jason was studying his manservant's face. It seemed to be the same humble face he had known for years, yet there was something subtly different, something new and something gone. It contained no diabolical cunning that Jason could see, yet there was something about the eyes and something about the mouth—the promise that Flack's new personality was about to break through.

"Roth knew about this?" Jason said softly.

"Yes, sir."

"And Miss Topping is obviously in the plot?"

"Very much so, sir."

"And that redheaded boomer. Who else?"

"You've guessed the entire cast of characters, Mr. Amboy."

"Mrs. Grazzard? Her son? Mr. Mace?"

"No, sir. Only Miss Topping."

"Who phoned me that night and said it was you?"

"That was Roth, sir."

"Who tried to murder me on the paddle-tennis court?"

"That was my pal—Singapore Sam Shay."

Jason was trying to control his voice: "And what did your pal intend to do with the corpse?"

FLACK backed away a step. "I hope you won't lose your temper, sir. You've done so nicely so far. . . . The truth is, Mr. Amboy, my plans went awry. My plan was that Singapore Sam would knock you painlessly unconscious and leave you trussed up—"

"Hog-tied," Luana murmured.

Jason glanced at her. "You like to have your victims hog-tied, don't you?"

"They're so much more tractable that way," said Luana.

"He was to have left you hog-tied on the boat deck," Flack resumed. "But—"

"In that cold downpour?" Jason interrupted. "Don't tell me this next one, Flack. Let me guess. Was my part in this plot the part that a football plays in a game, say, between Notre Dame and the Army?"

Flack backed away another step. "My intentions," he said earnestly, "were not sadistic, Mr. Amboy. You were to have been found hog-tied. I reasoned that you would be taken to the captain in a semiconscious condition at about the time my disappearance was confirmed by a search of the ship. I reasoned that you would be unable to explain what had happened to you—and that the captain would, in turn, reason that you were innocent of any connection with my disappearance."

"That," said Jason, "is utterly ridiculous. Why did you do it, Flack? What's back of it all?"

"I will clear up everything," Flack answered with dignity, "at the proper time. It is far too important to be told piecemeal. There are too many vital elements. And I want you to be calmer, sir. You are obviously in no mood to talk about it now."

"I want this explained."

"It will be," Flack said hastily. "I assure you, Mr. Amboy, I will explain ev-

COLLIER'S

ters. I must have looked as if I'd seen a ghost."

"You must have had yourself under wonderful control," Jason said. "You looked as if you'd just been having cocktails with some very amusing people. Your eyes were—"

"Mr. Amboy!" a familiar voice above him said.

JASON'S heart gave a sickening lurch. He stared at the short, plump, bandy-legged little man in gray who stood there, smiling paternally and squinting a little in the strong Hawaiian sunlight.

Jason felt himself turn cold. His mouth dried up.

"Flack!" he gasped.

His valet chuckled. "Yes, Mr. Amboy," he said airily. "Not a mirage. Not a ghost. Not a motion picture. But Flack himself—in the flesh and in the best of health."

Jason's heart was beating so tumultuously that he could hardly breathe. He put his fists on his hips to steady himself and he stared into Flack's white face, his spaniel eyes.

It really was Flack. It was Flack, standing on the deck before him, with the hot sunlight shining through his thin black hair and gleaming brightly on his scalp.

The first shock was beginning to pass.

was severe. "Flack, I thought you said you were going to stay in hiding until we docked, and then slip ashore."

"I decided it was best to appear now, Miss Topping," Flack said blandly. "I wanted to spare both of you a grilling by the F.B.I."

Luana seemed displeased. "Won't this mean endless complications?"

Flack was smiling at her, and it was the smile of a man bewitched. "I have an answer to every question, Miss Topping."

He turned back to Jason: "I merely wanted to reassure you for the moment that I'm alive—very much alive, in fact, sir. I trust my disappearance didn't distress you too much, Mr. Amboy."

"Great heaven!" said Jason.

"Please," his manservant implored, "don't lose control of yourself, sir. I only wanted to let you know that I'm alive and well, Mr. Amboy, before reporting to the captain."

Jason was trying to suppress his anger. "I suppose," he said, "you've been swimming along beside the ship all these days and nights."

"Please, Mr. Amboy," Flack begged, "don't lose your temper. Everything will be explained in due course. I have been hiding in the chain locker."

"The chain locker!"

Flack placed his right forefinger to

# THE PLAN

## BEHIND THE MAN

## BEHIND THE GUN

BURLINGAME  
PUBLIC LIBRARY  
Burlingame, Calif.

OLDSMOBILE

### HERE'S WHAT GOES INTO OLDSMOBILE'S ANTI-NAZI NETWORK

IT'S AN EFFICIENT, HIGHLY DEVELOPED SUB-CONTRACTING SYSTEM THAT IS HELPING OLDSMOBILE DO ITS PART TO "KEEP 'EM FIRING"

OUR fliers have more cannon, our tank gunners have more high-velocity weapons, our artillerymen have more shell—because American industry has teamed up to Keep 'Em Firing! Scores of manufacturing plants, large and small, from Massachusetts to Missouri, are co-operating with Oldsmobile in the production of "Fire-Power"... sending in a steady stream of vital parts for vital weapons of war! Many were enlisted in this vital war work long before Pearl Harbor. All are working wholeheartedly today to back up our fighters

with production. That's the spirit of industry... that's the plan at Oldsmobile—teamwork behind the man behind the gun.

The Army-Navy "E" pennant that flies over Oldsmobile was earned very largely through the smooth-functioning teamwork of Olds' vast network of sub-contractors.

You too can help support the man behind the gun by investing in War Bonds and Stamps regularly.

#### 137 Sub-Contracting Plants

They once made 'most everything, from can openers to sewing machines. Today they're all busy on war work.

#### Covering 10 Different States

Sub-contracting eliminated needless shifts in war-worker population, utilized pre-war plants and machines.

#### Employing Over 100,000 Men and Women

Their ranks include thousands of experienced craftsmen, and many who were specially trained for war work—

ALL DOING THEIR PART TO  
**KEEP 'EM FIRING!**

everything to your complete satisfaction—with Miss Topping's assistance."

Jason glanced again at Luana. Her green eyes were fixed on him and she wasn't smiling. "Yes," she said. "Everything." And her tone, it seemed to him, was ominous.

He turned back to his valet. "Have you been down there in that chain locker all this time?"

"Practically all of it, sir."

"Who brought you food—Roth?"

"Mr. Amboy—please," Flack begged. "People are beginning to stare. I assure you, every question you have will be answered to your complete satisfaction. But, first, I must find Captain Horngold and explain myself to him, so the last penumbra of blame will be removed from you."

"Luana," Jason said gently, "do you know what a penumbra is?"

"Isn't it a shadow?"

"All right," Jason said. "It's a shadow. Do you know what it is that you're going to say to Captain Horngold to remove this penumbra, Flack?"

"Yes, sir. I had an attack of amnesia. At about seven o'clock, on the night I vanished, my mind went completely blank. A few minutes ago, to my amazement and terror, I found myself in the chain locker. I haven't the faintest idea how I got there. I don't even know what day it is."

"You have other items in your past to explain. Your disguise and your assumed name, to mention only two."

**FLACK** made an airy gesture. "It all comes under amnesia, Mr. Amboy. I am now under the delusion that my name is Brannigan."

"Hold on, Flack. You're taking off again. You seem to have things worked out very nicely, but this one has some vicious angles. Captain Horngold may look as if he should be taking up the collection in a small-town church in Iowa, but he is as cynical as a Hollywood glamor girl. He has all the skepticism of a man who has been sold the Brooklyn Bridge. He is as tough as a fifteen-cent steak. He's in the Navy now, Flack. You'd better put plenty of rivets into that story of yours."

"I am not worrying about Captain Horngold," Flack said blandly. "I will see you this evening at dinner, Mr. Amboy. Everyone is staying at the Moana. Are you?"

"I hadn't planned."

"It's the only hotel left in Honolulu with an orchestra. Honolulu—all the islands—has a total blackout every night and no one is allowed on the street during blackout hours."

"Are you staying at the Moana?" Jason asked Luana.

"Yes."

"And we three," Flack went on, "are having dinner together—unless you have other plans."

"Miss Topping, too?"

"Yes, sir. You and Miss Topping are to be my guests."

Jason again glanced at Luana. "Will you really be there?"

"Yes, Cousin Jason; I'll really be there."

"Sharp at eight, Mr. Amboy," Flack said.

**JASON** was packing when Roth came into the stateroom. He closed the door. His meek and mousy air was, it seemed to Jason, more pronounced than usual. And his sharp, bright eyes were very alert.

"I believe it's customary," Jason said, "for a passenger to tip his room steward in proportion to the amount of service the steward has rendered on the trip."

Roth, I don't know whether to give you a dime with a hole in it or to throw you out that porthole."

The room steward spun about. "Don't you lay a hand on me!" he snarled. He tried to open the door, but Jason was already there, with his weight against it. "Steady, Roth," Jason said. "If you answer my questions, I may decide not to throw you out the porthole."

The room steward retreated to the middle of the stateroom. His lips were still twisted in a snarl.

"You're a great actor," Jason said pleasantly. "You really should be in the movies. You had me completely convinced. Now I want to know all about it."

"I have other passengers to attend to," Roth said warily. "I am a very busy

"He is the devil in disguise," the room steward declared.

"Did you hide him in the chain locker?"

"Yes, sir."

"Was that your idea or his?"

"He got it from that redheaded tramp."

"This is growing more and more interesting," Jason remarked. "Did you hold a sort of round-table conference on me?"

"Yes, sir."

"Was Miss Topping there?"

"Yes, sir."

"Where did the meeting take place?"

"In Flack's room."

"And our redheaded friend was there, too?"

"He was," the room steward replied.

"This parrot and I have had some very interesting talks, and I'd like to meet the young lady who previously owned him!"

man. Besides, I gave my promise not to blab."

Jason started slowly toward him. "You have your choice of blabbing or going out that porthole. Your other passengers can wait. Why did you go into this thing, Roth? Did Flack blackmail you into it?"

"Yes!" the room steward snapped.

"By threatening to tell the captain about our stowaway, even if it involved me?"

"Yes!"

"I thought so! He forced you," Jason marveled, "to phone me, to take his mustache to the captain; and to tell him that suicide story. He told you what to say and what to do. He is an awfully clever fellow, Roth."

"He is too clever for his own good," Roth said waspishly.

"It's a curious thing," said Jason, "but when you were talking to me on my first night in the brig, and I saw how cleverly you'd worked it all out—to save my hide and to save yours, too—I almost suspected then that Flack was behind it. Somehow, it had his earmarks. Flack is something of a genius, Roth."

"How did he manage to be so invisible?"

"When he climbed to the top deck and took that wallop at you—I stood by and gave him signals when the coast was clear."

"Whose idea was that?"

The subject seemed to be growing more and more distasteful to Emil Roth. His lower lip was protruding rebelliously. "Flack's."

**JASON** said thoughtfully. "You can never guess from a man's face what will come out of his imagination. Did Flack mention the stowaway in the presence of Miss Topping and Sam Shay?"

"No, sir. He made all his blood-curdling threats to me alone before he called in the others."

"What was Miss Topping's attitude?"

"She didn't have much to say, but everything Flack said was okay with her. They were hand in glove, if you ask me."

"Did she approve of his plan that Sam Shay meet me on the paddle-tennis court and knock me unconscious?"

"No, sir; not at first. But she gave in

when he explained what a fine idea it was."

"I suppose he was excited and a little hysterical—"

"No, he wasn't. He was as cold as ice."

Jason was shaking his head with wonderment. "I still don't understand how he got away with it. In peacetime it would have been difficult. In wartime it was impossible—but he swung it. Have you been acting as liaison office between him and Miss Topping?"

"I've been carrying notes back and forth, if that's what you mean."

"That's just what I mean. He has a real talent for intrigue. And I'll never forget, Roth, how well you played your part."

Roth's eyes were growing brighter and brighter. "Let me out of here!" he cried.

"But I haven't tipped you yet."

The room steward was sidling toward the door. "I don't want your money!" he panted. "It's tainted."

Jason took out his billfold. He removed a ten-dollar bill.

"You'll find," he said, "it's as good as the untainted variety. And I'm sorry you have these hard feelings, Roth. You must try to take a broader view of Flack. Didn't you once tell me you were a student of humanity?"

He opened the door. Roth flicked the bill out of his hand as he sidled past. And as he scuttled out, he snarled, "I've learned to spot a pair of bad eggs when I see them, if that's what you mean!"

**THE** Tasmania was off Diamond Head. Army planes were playfully zooming the ship and none of them, Jason reflected with a faint resentment, was powered with an Amboy-in-Line, liquid-cooled engine.

He walked to the forward turn on A deck and looked at the palm-fringed beach, with its hotels. The mountains were green and beautiful and soothing. Restfulness was in the golden air. It seemed to pour out of the serenity of the soft blue sky.

Even at that distance, he could see the barbed-wire barricades along the famous beach, and in all those soft green hills, he knew, were antiaircraft and anti-invasion gun emplacements. And swarms of gray-black planes were snarling overhead.

Natalie Mace joined him at the rail. "Congratulations, partner!" she cried gaily. "Wasn't it sweet of Luana?"

She was wearing white. With her slenderness, her golden hair, freshly done, her large blue eyes and her clear skin, she looked young and appealing. Her eyes were aglow and there were dimples at the corners of her mouth.

"Terribly sweet," he murmured. "Are you glad to be getting home?"

"For some obscure reason—yes. . . . Wasn't it a shame that Flack had to pop out of the chain locker and spoil it?"

"So you know about it," said Jason.

"I know the high lights. Are you still as much in love with her as ever?"

"I'm afraid it's that way," Jason said.

"Too bad, my dear. Such a nice emotion—so wasted." She sighed. "So often wasted. . . . You know, Jason, it's odd I didn't think of that stunt myself. I could have had you out of that brig in half an hour. It simply never occurred to me. We've missed quite a few busses, haven't we? And I'll bet you haven't any more plans than a moth."

"In my stealthy, relentless way," Jason said gravely, "I am pursuing my plan."

There was a brief silence.

"Something important is going on," Natalie said thoughtfully. "I can always

tell. The family is in a perfect dither. I understand you're having dinner tonight with Luana and Flack at the Moana."

Jason straightened up from the rail. "Did she tell you?"

"No. Channing. And the queen knows and so does Lorrin. All I got, as usual, was a few crumbs. All I know is that Luana is dining with you tonight with their consent. You didn't suspect it, did you?"

"I can see breakers ahead," Jason murmured, "and I'm not talking about Waikiki Beach. No, I didn't suspect it, but I'm receptive to it. It opens an entirely new field of thought."

"You realize, don't you," Natalie said, "that your lovely valet has sold out?"

Jason was frowning thoughtfully. "I've been considering that. Of course, it's a possibility, but I question it. The cornerstone of Flack's nature is loyalty."

"Darling, I'm afraid you're credulous, or gullible. Your Flack is a traitor. . . . And I don't suppose you feel like telling me what your plan is."

A gray-black light bomber came diving beautifully out of the sky. Jason critically watched the pull-out.

"Not yet," he said. "It isn't quite ready for the drafting board. My main drawing is still in the rough. I need details. For example, will you find out for me the date of Hiram Grazzard's death and the date on which Uncle Colton was banished to Kahuna Island?"

"Is it really important, Jason?"

"Yes."

"I'll find out," she said. Her mouth was sad. "When will you be going to Kauai?"

"As soon as possible."

"Regardless of what may happen tonight?"

"Regardless of hell or high water."

NATALIE MACE was considering him with a brooding expression. She sighed. "Jason, I'm afraid they're too *akamai* for you. In spite of your brave show of confidence, I feel sorry for us. And we're *such* nice people. Do you know what I think?"

"What do you think?" Jason laughed.

"I think we were born to be made into duck soup for the Grazzards of this world. Did I tell you we are still in the doghouse? You are an evil character and I was told again a moment ago to

have absolutely no traffic with you. So *aloha*."

The reporters found Jason at his hotel. "Is it true," one of the reporters asked, "that you've sold your engine to the British government?"

Jason winced. "If it is," he replied, "then I'm in the same boat with the man who has an unfaithful wife—we're the last to hear the news."

He went to the office of Pan American Airways and secured the envelope, containing his brother's wrist watch, which Pete Durkin had left there for him.

He examined the watch. Some of the smear of dried blood on the back of it had chipped off. It was Wayne's watch. There was no question of that. But Jason's examination of it told him no more than the machinist had told him over the telephone.

From the PAA office, Jason went to the courthouse, where he spent some time. What he found there fitted to the fraction of a millimeter into the pattern which was taking shape in his mind, and with the exception of one point, would need no further proof than the existence of the record. This point would do for a shot in the dark when the showdown came, as he was sure it would before many more hours had gone by. He wound up the afternoon with a visit to the firm of Longstreet, Crumpton & Hays, on King Street.

He saw many Oriental faces in the streets, and many dark faces, but only a few that looked Hawaiian.

What impressed him most was the warlike activity of this compact little island. The air above it roared with planes. The sea all about it was dotted with destroyers, cruisers and battleships. The streets were filled with soldiers and sailors and a type of workman that Jason recognized—machinists and riggers, steelworkers and carpenters—men with skilled hands. These were defense workers, coming in by every convoy.

He saw dozens of new houses, many of them ugly, built to accommodate this latest invasion, and he wondered if the charm of Hawaii was doomed. Would the war ruin it? He decided not. He sensed a quality in these cozy green islands that nothing would ever destroy.

(To be continued next week)

"But why fool around with all those gadgets? Why not just call the fire department?"

## WAR

RUN BY  
RADIO

### For Instance...

... the patriot forces of Yugoslavia continue to fight. Over its secret radio Gen. Mikhailovitch's headquarters announced the fall of Demberlin after the killing, wounding or capturing of over 3,000 Axis troops. (news item)

... importance of radio in this war is emphasized by the army establishment of radio mechanic and operator schools in Stevens and Congress Hotels at Chicago... it is reported that capacity will be about 15,000 men taking 14 weeks training. (news item)

### Interesting!

Watch for radio use in the war news—you'll find it in the air—on the ground—and at home.

WITHOUT radio, the movement of war would still be anchored by telephone lines—the physical hazards of the courier and visual signals.

Now war moves swiftly over the whole face of the earth—instantaneous radio communication thru the ether instead of over copper wires has blasted the barriers of space and time.

So today all our radio production centers on war use.

But what of tomorrow—what effect will this have upon the future—after victory?

One thing is certain—it will revolutionize and speed the great new future form of transportation.

Radio has never been universally necessary in transportation before. In automobiles—on trains—it has been entertainment—in boats it has been a great aid but not an essential.

But today for the future, in that great, new universal transportation that is forming itself—the airplane—radio is essential as the engine itself.

Zenith's leadership in the radio industry has been established by a constant achievement of "firsts." Repeatedly, ideas "brand new" when Zenith "first" introduced them, later became essentials on all radios. And that same "forward thinking" of engineers and factory and organization now concentrates on war production of the thing we know—radio—exclusively radio. We are progressing—we learn every day—and this new experience will inevitably reflect itself when Zenith again produces for peace.

For over seven years Zenith Radio Corporation has advertised on short wave sets—"Europe, South America or the Orient—every day or your money back." It has never been called upon for a refund.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make.

RADIO PRODUCTS EXCLUSIVELY—  
WORLD'S LEADING MANUFACTURER

It was well after supper one night and the pile of peelings was reaching commendable proportions when Private Flint caught the snort of tractors as the big Bastions were being dragged from their dispersal areas. A loud-speaker erected on a four-by-four cleared its throat and eventually snarled an "Attention!" order. Little Albin palmed his fatigue hat to a new off-the-face mode and peered over to the mess shack steps where Sergeant MacColl sat puzzling over the details of a *News of the World* soccer football pool.

"All air crews to their ships!" the loud-speaker ordered.

Baggy at the knees and still clutching a half-scalped potato, little Albin was totally snubbed by the elite who hurried past laden with B7 chutes, navigation equipment, chart cases and service helmets.

Six sets of inboard engines were barking and kicking over somewhere beyond in the gloaming. The loud-speaker coughed and spluttered a lot of words that made no sense to him. Suddenly something flashed into his vision and tinkled a tiny bell deep in the grottoes of his memory.

Across the hard-packed roadway separating the Administration Building from the barracks, four young women were matching lisle-legged strides. They wore blue uniforms with jaunty caps and they moved with the grace and precision of a section of Rockettes.

"Hey, what's them?" demanded Private Flint, pointing with the ever-present jackknife.

MacColl glanced up from a rheumy advertisement for a sciatica remedy. "Them's Waacs," he said. "Women who work in the Army."

"Waacs!" burst Albin, trying to recall where he had heard the sound before. "Them's Waacs?" he queried, a thin sliver of enlightenment pricking his memory.

Private Flint's worries and disappointments were hoisted from his shoulders. His Army brogans felt and fitted like dancing pumps. The world glowed and became an answering smile.

"I gotter see Captain Frost," he decided.

PRIVATE FLINT attained take-off speed with little effort and banked around the mess shack doing the "100" in 10-flat. He leveled off in front of the Officers' Mess, bending the throttle industriously. He pulled a rat race through a group of mechanics and drew a drum-fire of service expletives but cleared beautifully with a wingover, the half-peeled spud held high in his left hand. He opened up once more but was running out of speed by the time he reached the bomber carrying Captain Frost's flight-leader markings. He tried to fishtail to a halt but a small truck which carried booster batteries for the starters, intercepted him as he cut under the wide wing tip. He went sprawling and then pawed uncertainly at the outline of a technical corporal: "I . . . I gotter see Captain Frost. It's awfully important. Captain Frost . . .!"

"You'll find him forward . . . control pit. Make it snappy," the corporal bellowed as he lugged little Albin to his feet.

"I gotter see . . ." Flint began again, but the corporal rammed a shoulder under his rump and hoisted him aboard. "Make it snappy!"

Bushed with the blow across his shins,

Flint dropped the unpeeled spud into his denim jacket pocket and moved gingerly amid the unfamiliar equipment. He fumbled with his free hand and found something to sit on. The gleam from the exhaust punched oblong blocks of light against the curved walls and little Albin felt he had been sucked into some massive pneumatic tube and was well on his way to a violent conclusion.

"Captain Frost!" he called again, but his voice had the quality of something being squished out of a squash. He settled back to muster his forces and then huddled deeper when a bundled figure in black leather appeared suddenly from a cavern aft and cranked the cabin door

pattern across it all. The steady roar of engines against the background of compact sound riveted a lump of fear a few inches below his breastbone.

He was startled from his investigation by the thump of heavy boots—and a voice. He turned and stared full into the helmet-framed mug of Corporal Krause. For a minute Krause was blocked out of the play by his failure to identify a puzzling situation. Finally he exploded with: "What the devil are you doin' here?"

"Now look, Corp," little Albin began, trying to maintain his balance as the Bastion bounced through a wall of cumulus updraft.

shut. Strange metallic voices frittered from the boxes on the wall, snapped orders and disintegrated with the crash of engines. The whole structure began to creak and wobble ominously.

"Captain Frost!" Flint bleated again; but his voice was drowned out by the thunder of full-throated engines. He gave up, rubbed his shins and visualized the harrowing details of a court-martial, a last-minute cigarette and weighed the decision of refusing the sympathetic offer of a handkerchief-blindfold before a firing squad.

But withal, the scene of the four young women striding toward the Administration Building still gleamed through the murky montage and warmed the situation a trifle. He trusted that there might still be an open post for him somewhere aboard the bomber.

"Captain Frost said he'd take care of me," he assured his glimmering hope.

The big Bastion rocked and tilted as the four propellers thrashed the air. Flint clambered to his feet, tottered to a small oblong port and peered out. Indistinct shadows marked the coastal towns of England. Blocks of streets laid a gridded

What came out of Corporal Krause sounded like a scrambled transatlantic telephone message, blown up for exhibition purposes. He choked on it, regained his breath, yanked Flint around and poked accusingly at his back.

"Why you dope! You ain't even got a parachute!"

THE charge meant about as much to Flint as an observation that he was not equipped with a retractable landing gear. He raised his hands with an eloquent appeal for a sympathetic audience.

"Now look, Corp! I just came aboard to tell Captain Frost about the Waacs."

"Baby, you're gonner get moidered!" the corporal gunner blatted. "Aboard a service aircraft wit'out a parachute. Wow!"

Another massive figure in a leather coverall and wearing a jockey cap with the peak turned up clambered down from the dorsal gun turret and thrust its face full into Flint's.

"What is this?" the face erupted. "A joy hop?"

"I'm tellin' you. I didn't have no

chance to git off!" wailed young Albin; his parched face wrung with anguish "I just wanted to tell the captain about the Waacs."

"Yeah? You can't tell that guy nothin' about no Waacs!" Corporal Krause observed with a suitable grimace. "He gits around!"

"But he said I could be a gunner when the Waacs came," Private Flint pleaded. "That's what I wanted to tell him."

"You stop right here. I'll tell him."

THE dorsal turret gunner stood off wide-legged and studied the little K.P. guy who still clutched his jackknife. He considered the bulge in Flint's pocket and conjured up all sorts of fifth column skulduggery: "You ain't bin to no armament school, have you?" the gunner accused.

"No-o-oo, but Captain Frost said that when we got some Waacs I could quit K.P. duty."

"They ain't no Waacs over here yet," the dorsal guy burst out. "The ones you seen must have bin some of them English broads. They operate radio-locator panels. They ain't cooks!"

Captain Frost came down the catwalk from the pilot's compartment, a dramatic figure in a neat twill flying suit. He had a freckled nose and gun-metal eyes that smiled easier than they frowned. Frost moved into the gunners' station mustering a glance of authority.

"What's the meaning of this?" he asked, making his way to Flint, who tried to salute with his jackknife still clutched in his hand. "What are you doing here, soldier?"

"I—I came to report, like you said, sir," Flint began again. "I saw the Waacs and came right over, but someone shut the door and you took off before I could get out."

"Waacs?" exploded Frost. "Don't tell me we have Waacs aboard too! What goes on here?"

"No... Don't you remember me, sir? You said back at Westover that when we got some Waacs I could quit K.P. and become a gunner—maybe. I saw some and came right over. I didn't bring any on board with me, sir."

"He means he saw some of them English Waacs, sir," explained Corporal Krause. "They're radio-locator op-

erators; but he thinks they came to work in the kitchen."

"Get back to your posts!" ordered Captain Frost to the gunners. "I'll take care of this."

Little Albin watched Krause move off, the lump of fear dropping with a thud to the pit of his stomach.

"I suppose you realize this is serious business?" Frost began again.

"But you said, sir—"

"I can't even remember ever seeing you before," Frost argued, unconsciously wounding his man. "What am I going to do with you now?"

"Ain't there something I can do, sir?" appealed little Albin. "Couldn't I... couldn't I serve the coffee—or something?"

"All you can do now is keep out of the way. Maybe... coffee later, when we start back."

Captain Frost moved off with a hopeless gesture and Flint subsided slowly, pitiful and aghast at his unimportance. "He didn't even remember me and there's nothin' I can do," he muttered with a gulp.

He resented now, every minute he had squandered at The Spotted Dog, playing darts with the rustics when he might have learned something about a machine gun. If he had only volunteered to check ammo and clean Brownings in his spare time.

But Kaypees don't fly, they had told him—so many times.

THE big bomber was heading deep into enemy territory. Already the arrowlike blades of searchlights were probing from below, trying to weave a latticework barrier that would fend them off. Flint peered out the port and saw the exhaust pennons of the other ships strung out and stepped up behind them. The flak spat and raged, splashing uneven daubs against the sky and the Bastion trundled woodenly through the undulating air path cobbled with the boulders of concussion. Flint's heart kicked about inside him with the numbing realization that while he was part of all this, he was not an integral part.

He stared about despairingly and his eyes finally focused on the details of the waist gunners, important and alert in zippered flying suits, their helmets cabled to wall sockets which connected them with

the oxygen supply and intercommunication. Somewhere above was a pattern of platform structure where another gunner sat tense and steadfast behind a brace of .50-caliber guns. There were tubes and dials, levers and push-button panels, indicators and conduit boxes; none of which he was even superficially acquainted with.

He was cold now and beginning to feel the effects of the altitude. He breathed in short gasps and decided that if there was any chow aboard now was the time to get at it before he folded up. He worked his way uncertainly past another figure posted behind a black gun breech into which was fed a broad snakelike belt of ammunition.

"Hey!" he yelled into the side gunner's ear. "Where's the chow?"

"That wall locker over there," the gunner growled back.

"How about some java?"

"Sure! Since when we got K.P. guys aboard to sling hash?"

Flint ignored that and stumbled across to the locker. He was just reaching up for the latch when the Bastion leaped and rang with the resonant crash of a heavy blow. A terrific blast of wind typhooned up and drove young Flint along the narrow catwalk. The side gunner reached up and grabbed him. "The bomb doors are open! Get the hell out of here!" he yelled.

The roar lashed the waist gunners into action. They pounded short bursts through their open hatches and laced the Bastion to the sky with sparkling cables of tracer. The dorsal gunner treadled his turret and poked a cone of converging fire at something dragging a blue exhaust plume.

The bomber lurched on and then staggered under the blow. Flint went to his hands and knees near the feet of the waist gunners, who were hunched and following the breech casings of their Brownings. The mad rattle of mechanism and the stench of burned powder made little Albin wince, but he watched how they thumbed the round metal buttons behind the handles.

Had he been hooked into the communication line, Flint could have listened in on the crisp orders and reports crackling back and forth from the tail turret to the bomb-sight compartment. He would have heard the engineer half-sobbing with frustration that he couldn't do anything about the bomb doors and that half the hydraulic system which provided pressure for flaps, automatic fire extinguishers and the retractable landing gear had been ripped out with a chunk of flak. Flint would have trembled at the concern expressed by Captain Frost as to whether the bomb-release mechanism would respond when they went at their target.

THE Bastion recovered and blundered on through the tempest of hate and concussion. Flint squinted back toward the aperture, which provided a view through the open bomb doors. He could see the long 1,000-pounders, sleek and sinister in their metal racks. They were pointing straight down at the mottled earth below, where fires twinkled and slats of searchlight swished through the sky. Already flame areas dotted the panorama and clouds of smoke swept across, blanking out the glare. The smoke took on scarlet edges like the broad piping of a velvet costume thrown carelessly across a spinet.

Flint was fascinated by the revelation but had he been in the control pit he would have seen Frost hesitate, wipe his upper lip with his tongue and draw the wheel back with a muscular twitch. Frost took over his intercom mike and spoke

"I avoid a good many steps each day by keeping Arm & Hammer handy in the medicine cabinet, in the cleaning closet, in the laundry and of course in the kitchen."

"It's the first choice of cooks as the leavening, with sour milk, for biscuits and baked foods. And you'll save a lot of elbow grease if you use it in the cleaning water."

"Did you know that it is pure Bicarbonate of Soda—can be used whenever that remedy is needed for hyper-acid types of indigestion or for minor scalds and burns."

"Three cheers and a couple of medals for Arm & Hammer Baking Soda. Why there's no end to the ways you can use it to ease house-keeping chores, cut expense."

to the bombardier: "Stand by, bombardier! To bombardier from pilot: Will fly level at six thousand. Will circle target once and then make runover from south-east to northwest . . . check!"

"Roger!" the bombardier answered, giving the acknowledgment response. "Altitude six thousand . . . bomb doors open! . . . And how!"

Private Flint knew nothing of the drama being enacted forward. He could only kneel on the catwalk and watch the fire-spattered world tilt up at a new angle as the Bastion was drawn up into level flight. The bomber rocked again and a gargled scream knifed along the catwalk. Flint turned and saw a side gunner slumped below the gun mounting, his knees drawn up, his gloved hands clutched at his stomach.

"You all right?" inquired Flint solicitously when he had crawled to the gunner's side.

"Never mind me," the gunner growled. "Get up there and nail that guy!" He jerked his head toward the gun breech. "It's a Focke-Wulf. A heller on wings!"

The bomber leaped again with another blow before Flint could reach the gun. The blast from the open bomb chamber increased in volume and the belly of the Bastion became a blocked-off wind tunnel. There was a new stench of smoke and the brittle tang of hot metal. Flint turned to seek advice from the other side gunner and suddenly the metal cavern was aglow with flame that spurted from a tangle of metal somewhere above the still-open bomb doors.

"This is a flamer!" a gunner yelled.

**A** SIDE gunner huddled and snapped on his chute pack and then hooked a pack into the harness still worn by the wounded man. Flint backed to the wall and watched, uncertain now what was actually happening.

The flame gilded them as they crawled forward toward the open bomb chamber. "We're getting out of here," a gunner barked. "We're not staying here to fry. The whole automatic system must be off."

"Sure," agreed Albin. "Lemme help you . . ."

But the side gunner shoved him away, lifted the wounded man and dragged him along the catwalk: "Your pack's fitted, Joe. Grab your ring, kid. We're hitting the silk!"

The wounded man nodded with a dumb grimace and crawled the last few feet. Flint watched, still unconscious of his own jeopardy. He blinked as the wounded gunner crawled to the open floor panel and rolled out into space. The second side gunner looked back once, wagged his head and pitched headlong through the bolster of flame and disappeared.

Flint gasped and choked on a new acrid smell, rammed the palm of his hand over his mouth and gurgled. "Creepers! They jumped out—the dopes! That's Germany down there!"

Above, the dorsal turret gunner was directing a stream of whitish liquid from a scarlet tank, full into the flames that were dancing and splashing over the tail fins of the exposed bombs. Flames billowed up and went cataracting over the crosspieces of the catwalk.

The stench of extinguisher fluid from the dorsal turret almost suffocated Flint and gradually forced him along the wall until he was on the narrow ledge that framed the sides of the bomb chamber. He covered his face with his hands and then peered through his open fingers and saw that a broken copper tube was spurring a bluish stream of liquid full into the flames.

"That shouldn't be like that," he ob-

served, wondering where the stuff came from.

It *did* smell like gasoline, little Albin concluded.

The dorsal turret guy was screaming something at him but Private Flint was half blind and tortured with the realization that something ought to be done, and that the dorsal gunner was probably trying to explain.

He tried to get across to the broken tube but the flames drove him back. He moved forward and lowered himself by the door flanges and straddled his insteps over the long black bombs and struggled his way further along toward the gushing tube.

"You darn fool!" the dorsal gunner yelled. "You're standing on the bombs. If they pull the plug you'll . . ."

But the roar of slipstream, the rage of engines and the crackle of the flames drowned out the warning and little Albin worked his way along and grabbed at the

were well out in the open and he was forced to an almost straight-out position until he sensed that he'd better work his way aft to safety.

Inch by inch he crawled along the flange of the bomb door and then came to the edge where some raw gas still burned. He hung there a second or so and then decided he'd better get back the other way but someone reached over, grabbed him under the arm and lugged him across the flaming catwalk grid to safety.

"**W**HAT the heck did you do?" the dorsal gunner demanded. "What stopped that gas flow?"

"I just stuck a potato over the end. Is that what was burning?" inquired little Albin as he patted his face and wondered why the skin across his cheek felt so tight.

"Sure! I couldn't hold it with just what I had. It was spraying from the main

"You'll save money by having it done now, ma'am. If you wait till it stops snowing, it'll cost you twice as much"

COLLIER'S

GEORGE HAMILTON GREEN

open end of the tube. He caught the tang of the liquid as it sprayed through his clenched fist and then sensed that this probably was a line leading from one of the wing tanks. He clutched harder and then stared down and realized that if he could hang on there the dorsal guy might get the rest of it under control.

"You're on the bombs!" the gunner yelled down. "Get the hell out of there!"

"That's right," agreed Flint. "I gotter get out of here. That's Germany down there."

**H**E TUGGED his giddy fatigue hat tighter over his face with his free hand and wondered how he could stop the flow of gasoline. He fumbled gingerly and saw that the dorsal guy was blotting the flame out along the catwalk.

"Get off those bombs, you fool!" the upper gunner yelled.

"Sure! Wait a minute while I . . . Holy Smoke . . . I clean forgot!"

He hung on again, felt in his denim jacket pocket and came out with the half-peeled potato. He made a quick exchange and with a sudden swipe rammed the big potato over the end of the copper tube. It held and he hung on to make certain it would stick.

"Get the . . . !" the dorsal turret guy yelled.

The Bastion leaped and the bomb releases scrawched. Little Albin felt himself go but grabbed and hung on with his finger tips to the hinge flange. His legs

feed line and I thought we were goners. You better go forward and report to Cappy. My intercommunication line is out."

"Cappy?"

"Sure! Captain Frost up forward. He'll probably be giving an abandonment order, if he don't know."

"I guess we put it out, eh?" Flint beamed with this new responsibility.

"Cripes! It's burning itself out now. You sure did a job!"

Flint worked his way forward, crawled up the steps and moved along the smoke-filled gangway and finally came to a narrow doorway fitted to the main bulkhead. He saw the compact shoulder of Captain Frost outlined against the bank of instruments.

"Private Flint reporting, sir!" yelled little Albin. "The fire's out, but two of your gunners jumped overboard. Can I serve the coffee now, sir?"

Frost stared at the charred apparition that grinned at him from the doorway. "She's out? . . . You sure?"

"Sure, sir! I stuck a potato on the end of a pipe. I guess it was gasoline . . . and we got it out. I was on K.P. and I had a spud in my pocket."

Frost blinked and took several seconds to digest the potato gag. He looked quickly at his instruments and turned to grin across at his copilot: "Get it Pete? He stuck a potato on the end of a pipe. Look! The fuel gauge is holding now. We'll get *all* the way back!"

The copilot looking like a guy who had unexpectedly guzzled on a strong astringent managed: "Golly! It must have been the main fuel line across the bomb bay! I'm going back and take a look." He turned to Flint and added, "Soldier, you sure did a job!"

Captain Frost thanked his lucky star there were still men in the service charged with a blazing singleness of purpose and deified with the ability to react when the occasion arose. He cleared the Bastion and took her over the North Sea and headed for The Wash on the coast of Lincolnshire. At intervals he glanced across at Flint who sat luxuriating in the control pit, utterly oblivious of the danger that still faced them.

The copilot came back with a face as long as a wet week. "We take a belly flop, I guess," he said. "Two bomb bay jacks are burned out and we can't get the doors up. The wheels won't come down either."

Frost nodded and scrawled a message on a thigh pad: "I'll get her over the field and all hands will abandon ship. I'll take her in and try to skid her on the bomb doors. Warn the crew!"

The copilot thumbed at Flint. "What about this guy? No parachute?"

"He can take mine. I won't need it," Frost said.

Flint took it all in and then reached over and grabbed Frost's arm. "I'd like to stay with you, sir. Maybe I can be of some help."

"You want to stay for a crash landing?"

"Yes, sir. I'll stay with you."

**T**HE field was warned by radio and Frost circled the Chuzzleton Priory aerodrome while Corporal Krause rounded up the enlisted men and lined them up at the open hatch of the bomb chamber. The copilot, engineer and bombardier came next, checking straps and snaffles. One by one they drew in their breath and went out headfirst.

"Okay, soldier!" Frost grinned. "This is it. Ram your feet against the instrument board. Wrap your arms around your head and—hang on. It may not be too bad . . . with your luck."

"Yes sir," grinned Private Flint. "But just in case, sir. There's one thing . . ." He leaned over, pointed down the companionway to the front office and made his request.

"Sure thing! Glad you thought of that. Now hang on."

The Bastion went in, flaps down and the propellers properly set. Captain Frost checked his shoulder straps and quick-release gear and grinned across at Flint. She touched once and plowed up the runway with the raw edges of the bomb doors and then flailed savagely with her prop blades. She bounced, tore an inboard engine out of its mounting and subsided with a growl of wrenched metal and skidded along on her belly.

"Wow! We made it, Cappy!" beamed Private Flint.

"Cappy!" protested the pilot amid the tinkle of instrument dial glass. "What the . . . ?"

But little Albin was out of the belt and clambering through the tangle to get into the wreckage of the nose. He came up bearing a well-zipped valise and plunged on down the catwalk for the door. The last Captain Frost saw of him that night was when little Albin went off, still clutching the bomb sight to his chest with two scuttle-helmeted sentries escorting him in charred triumph to the Administration Building.

"Who says Kaypees can't fly?" challenged Captain Frost from the battered cabin door.

THE END

# Look...the Smiths are building a new home!

Stamp by Stamp and Bond by Bond—the Smiths are building for the future. Buying bonds to bring Victory nearer... building for a prosperous peace.

To the Smiths, Home means freedom, happiness, comfort and security... the fruits of Victory. More power to the Smiths! And to the millions of patriotic American families whose "all-out" purchases of War Bonds and Stamps are helping to win the war... and insure a prosperous America after the war.

## AFTER VICTORY—THE HOME YOU HAVE ALWAYS WANTED!

Look at it this way. U. S. War Bonds and Stamps are common sense savings... Four dollars at maturity for every three invested now. After Victory, your Bond purchases can be used as part payment on the kind of a home you have always wanted... *with everything in it that makes a real home.* Act today—buy Bonds and save—your nation and your future both depend on it.

### To Serve You in Wartime

The General Electric Consumers Institute is dedicated to the service of America's homes and carries on constant research on such subjects as:  
Nutrition • Food Preparation  
Food Preservation  
Appliance Care • Appliance Repair • Laundering  
Food Conservation  
Home Planning

ILLUSTRATED BY BINFORD VALENTINE

Talk came hard for young Ben Manney. When his friends, his girl among them, began to wonder why he didn't join up, he couldn't tell them. Young Ben had to get action

IN THE barn the tractor's motor thrummed so sweetly that it blended with the crickets in the evening hush. On the shady back porch the pump handle squeaked twice and there were splashing sounds.

In the cool farmhouse kitchen Mrs. Manney tuned one ear to the porch as she put the cold veal and watermelon pickle and the blue-bordered plate with its mound of sweet butter on the red-

and-white oilcloth of the broad kitchen table.

The splashing stopped. Mrs. Manney, unhurried, reached for the sweating pitcher of buttermilk and filled a tall glass at the head of the table.

Footsteps along the porch shook the kitchen ever so slightly. In another second her husband would fling open the screen door and stand there, his brown face and hands ruddy from the scrubbing at the pump, brown hair blackly damp on his forehead and temples, his gray eyes smiling and expectant.

Mrs. Manney's eyes were thoughtful. Ordinarily this was her valued moment of all the day, when her sense of abiding security was as warm and real as the sunshine in the yard. But not this evening. A tiny variation in her husband's routine at the pump, a slight hesitation

in his footsteps, told her that he was putting from his mind some thought that he did not wish her to see in his face. And when the screen door swung open, and he stood there, she saw that his smile had been donned at the last moment.

HER feeling of apprehension persisted through the familiar, pleasant rites. Martin Manney went "Ha!" and she felt his strong fingers on her shoulders and the quick, hearty kiss that was never casual. Then the ceremony of draining the glass of buttermilk and the second "Ha!"—this one shaded a trifle to convey that he loved her better than the buttermilk. She refilled the glass, and in doing so, composed her face.

They sat down and she passed him the veal. Platter in hand, he paused a moment, cocking his head toward the win-

dow. In that instant the tractor's motor stopped.

"Ben's crazy about that tractor," he said, still smiling, and began to help himself to meat. But she had caught the faint undertone of resentment. She wondered. Always, before, his pride in Ben's passion for the tractor had been without reservations.

"He caught a ride to town with Gid Evarts again today," she volunteered. "This time it was a new float for the separator."

"Carburetor, not separator." Her husband chuckled. Then, carelessly, "Did he stop in the village? I asked him to pick up that seed Acton's been saving. . . ."

"He said he'd see Acton next week." "Oh." Martin was buttering a triangle of crust and did not look up. Once again

# "Together, we're building bridges across the seven seas"

**THIS STALWART FIGURE** is a pilot of the Air Transport Command, the Army's wartime partnership with the country's 18 leading airlines.

**HIS JOB** is to speed new planes and vital supplies to the fighting fronts and fly Democracy's brains...statesmen, generals, scientists, doctors . . . where they're needed in the world-wide chess-board of this war.

**IT'S NOT AN EASY JOB.** Tonight, he might be jockeying a fast combat plane off an East coast runway. Tomorrow, setting it down in the English midlands. Tonight, he might be lifting a "Flying Fortress" off a California apron. Tomorrow, riding high somewhere over the Southwest Pacific. Tonight, he might be in Florida, loading a transport with technicians urgently needed in Africa. Tomorrow, nearing Morocco or Algeria. Tonight, he might be in Minneapolis with racks of serum and blood plasma for an Alaskan hospital. Tomorrow night, on his way back.

**HE AND HIS FELLOWS** never know where they're going or

what they're going to take along. But they're shoving the stuff through, thousands of planes and hundreds of thousands of tons of freight every month. Their big brown transports are familiar sights in hundreds of airports from California to Cairo to Chungking . . . from London to Sydney.

**SIMPLY** and as a matter of course, these invincible crews of transport fliers are shrinking the size of the globe and moving history ahead at least a decade. And blazing new air trails with them is another crew of pioneers—the "PIONEER" Instruments of "The Invisible Crew" of Bendix.

**FAITHFUL COMPANIONS** on every flight, these precision instruments tell pilots and navigators the important things they have to know to get their precious planes and cargoes through. One points direction, steadily, consistently. Others tell the rate-of-climb, the speed in the air, the turning angles and the height above the ground. Still another keeps pilots informed on all the things that are happening inside the engines.

**IN THIS,** America's great aerial offensive, and on land and sea

well, members of "The Invisible Crew" of Bendix are playing a vital role. Together with the Air Transport Command, these precision instruments are building bridges across the sky, bridges of bombers and transports today to clear the way for bridges of commerce tomorrow. *Back America's invincible crew, our fighters on every front. Buy War Bonds and Stamps regularly.*

## PIONEERS OF "THE INVISIBLE CREW"

Pioneers in technical development as well as in name, the sensitive and precise instruments of "The Invisible Crew" perform scores of vital tasks in every Air Transport flight. They watch directions, speed and drift. They check on temperature and wind. They tell height and horizon. They set the trackless course and check it against the stars. Here are a few of the famous "PIONEER" names in the world of flight: Air Speed Indicator, Rate of Climb Indicator, Turn and Bank Indicator, Driftmeter, Octant, Altimeter, "AUTOSYN" System of Remote Indication, "MAGNESYN" Remote Indicating Compass, Vapor-Proof Manifold Pressure Gauge, Oxygen Regulator.

the kitchen vibrated to footsteps on the porch.

Ben came in, a taller, broader, browner version of his father. Mrs. Manney's glance went up to him as he bent to kiss her. She could find no cloud in his gray-blue eyes, and his greeting to his father was, as always, quietly respectful.

Ben slid his long legs under the table and his father passed the veal and pickles. "You won't forget to see Acton about that seed, son?" he said.

"No, sir. I figured next week would be plenty time." Was she mistaken, or was there a wary, defensive note in the reply?

She said, "That note Gid Evarts brought this morning was from Livvy Doster's mother. She wants us to come over to a party at their place Saturday night. She didn't say what it was for. If you go over there tonight, Ben, will you tell her we'd love to come?"

"Afraid I can't tonight, Ma. I got a new booklet on the tractor in town today, and it'll take me a couple of hours at least to . . ."

"That's all right, dear. I'll send her a message by Gid in the morning."

"The party's probably for Lance Watriss," said Ben slowly. "He's leaving Monday—for camp."

She had seen her husband look up quickly when Ben started to speak. Ben's gaze was riveted on the veal he was cutting, and there were scarlet patches like danger signals in his brown cheeks.

THERE was no more talk at the meal. Mrs. Manney finished her supper with a tight feeling in her throat.

Ben had inherited, or acquired, his father's habit of silence on troublous matters. They did it to spare her, she knew; in the fond belief that she was not aware, until told, that things were going badly.

But the ache under her heart told her that this situation was different. This had nothing to do with the farm. This was personal between Ben and his father.

Deliberately, like a general maneuvering to protect his flank, Mrs. Manney left the dishes in the sink and went and stood in the cool, dark hallway. She had never done anything like this before, and she was trembling.

Ben and his father were on the front porch, their backs to her, and they looked as though they were staring out at the lawn.

Martin Manney said, "I hear you had a dust-up with Lance Watriss in the village Monday night."

"Yes." Ben might have been answering a stranger.

Through the mesh of the screen door she could see Martin's cigarette glow twice before he spoke:

"Tom Burnett says Lance told you to stay away from Livvy Doster while he was in the Army." Tom Burnett was Martin's closest friend in the village and a fellow Legionnaire. He and Martin had been the first from the village to enlist in 1917. They had been wounded within two days of each other in the Argonne. "Tom says Lance was talking pretty free. He says you didn't offer at Lance."

"Lance carries a knife," said Ben. He was standing very straight and he did not look at his father.

"Did he pull?"

"No, sir. I walked away."

"Lance Watriss is yellow."

"He's in the Army now," said Ben, not quite so slowly. "He's not yellow."

Mrs. Manney felt hollow and chilly inside. It was not like Ben flatly to contradict his father. And she knew that Martin had not yet made his point. Ben knew it, too, and his hands withdrew

from his pockets and hung loosely at his sides. They were big hands, broad and brown. The cigarette glowed orange-yellow for ten full seconds.

"Tom says he hasn't seen you in a couple weeks," said Martin. "He says he's been kind of expecting you to drop in and see him."

It had come without warning. An icy hand closed around Mrs. Manney's heart, and the stillness in the hall hummed in her ears. Tom Burnett was chairman of the Legion's county committee on enlistments. All the volunteers consulted with him before joining.

She could see Ben turning his father's remark over in his mind as she had seen him turning some part of the tractor over in his hands, carefully, thoughtfully. . . .

"I'd like to show you the new carburetor float I put in today," he said

sion radiated from him in almost visible waves. A great moment, but not to be compared to the day four years later when Gid Evarts, the postman, wrestled a flat crate from the back seat of his Model T. Curious, she had called Martin from the barn and together they had watched Ben, hands shaking and lips pressed tight to hold back the tears of excitement, tap the crate apart and reveal the shiny bicycle that explained the year-old mystery of what he had been doing with his egg money and why he had not bought the new ice skates they knew he wanted.

She remembered how Martin had turned to her and smiled a little uncertainly as Ben dropped to his knees and worshiped the shining sprocket, the perfect chain and the gleaming intricacies of the rear hub. Neither she nor Martin had spoken, any more than they would

parlor, feeling the twinge of old wound and old loyalties.

Tom Burnett was wondering why he had not seen Ben. And Martin was wondering.

"God forgive me," murmured Mrs. Manney as she realized that she, too, was beginning to wonder why Ben had not "seen" Tom Burnett.

A FAMILIAR chattering rattle in the yard startled her momentarily. Through the fringe of trumpet vine around the west kitchen window she saw magnified and distorted by tears the clung to her eyes and refused to drop Livvy Doster's jalopy—the one Ben had rebuilt for Livvy and conjured into life.

Livvy swung leggily over the door that would never open and cupped her hands to her mouth. Her clear voice rang across the yard: "Hey, there glamor boy!"

Mrs. Manney put a dish down very quietly and pressed her hands tightly together. The affectionate irony of the "glamor boy!" She wondered if the relationship between Ben and Livvy was one of the things marked for destruction now. Livvy was dark-haired and slender and laughing. She liked to dance, and she had many beaux. But she turned to Ben more frequently than anyone but Mrs. Manney (and perhaps Mrs. Doster) noticed.

The tractor stopped. Ben strolled across the yard. He made a humorous gesture with his right hand, and his "Hello, Repulsive," was elaborately casual.

"Heading for the village," said Livvy briefly. "How's for coming along and buying the old lady a coke?"

Ben shook his head. "Can't." He thumped a wrinkled fender thoughtfully with his fist.

Mrs. Manney saw Livvy's head come up. "Oh, come on." There was a strained note in Livvy's usually uninhibited voice.

Ben caught it. He raised the hood of the jalopy and his head and shoulders disappeared inside for a moment. When he came up he said, "Your kid brother's been fooling with that distributor again."

LIVVY ignored this. "You're sure you don't want to come?" All the lightness in her manner was gone.

"Got some things I've got to do," said Ben evenly. He cocked his head and appeared to be inspecting a steering knuckle.

Livvy flounced into the driver's seat in a welter of skirts and bare knees. Even at that distance Mrs. Manney could see the quick anger and disappointment in her face. She flushed, started to speak, checked herself, and said, "You're all coming over Saturday night, aren't you? We're giving Lance a send-off."

"The family'll be there," said Ben, fiddling with a headlight connection. "I'm not sure if I can make it." He looked up, and Mrs. Manney winced at the utter lack of expression in his eyes and mouth.

"So long." Ben stood aside as Livvy backed onto the grass, spun the wheel, and bullied the old car down the driveway at a speed more eloquent than a tirade. He watched the car a minute before returning to the barn, head at a thoughtful angle. Mrs. Manney drew breath. So Livvy had heard that Lance had warned Ben away from her. And Ben knew that Livvy had heard. And Lance was to be found in front of the village drugstore nearly every evening. . . .

Mrs. Manney plunged her hands into the dishwater. It was nearly scalding, but the physical pain was somehow a relief. That night she lay long awake. Beside her, Martin slept—or so she

COLLIER'S

finally, and she caught her breath. "It needs adjusting the first few weeks. . . ."

"I'll leave that to you," said Martin curtly, and turned on his heel. She stood frozen as he opened the screen door, but he did not come down the hall. He turned into the front parlor and she heard the creak of his Morris chair.

MRS. MANNEY made her way back to the kitchen, her knees treacherous, and stood a moment at the sink before touching the dishes. Ben was crossing the yard to the barn, and it was as though she were watching a stranger. The house was silent with the ugly silence of things left unsaid.

The tractor's motor resumed its rhythmic hum under Ben's sure hands. Mrs. Manney visualized his expression as he worked; visualized the glow in his face that he could no more hide than he could hide the glow that warmed his eyes when Livvy Doster's name was mentioned.

Pictures crowded one another across the screen of her mind. Ben, nine years old, contemplating the bull calf his father had just told him was all his own.

A great moment, this one had been, when the boy's pride and joy of posses-

have talked out loud in church during service. It had been minutes before Ben ventured to touch the mirrored silver of the handle bars, and when he did he was rigid and shivering a little.

Just as he shivered, four years later, when the salesman had driven up from the freight station in the new tractor, and Martin had calmly told Ben that the tractor was to be his charge. "A hundred and sixty horsepower!" was all Ben could say, and he said it over and over. And for the last three years that tractor had been the best-kept, best-running tractor in the county—or state either, for that matter.

Three years. Three years in which the world had changed, but she and Martin and Ben and the farm had not changed; years that had made Ben twenty, a solemn boy, gravely affectionate.

Mrs. Manney's hand, reaching for a dish, went instead to her throat. Incredible that a single, brief conversation on the porch, in which she had had no part, could have shaken a structure of love and harmony as apparently solid as the farmhouse itself. Yet it had. And now there were strangers on the place: Ben, in the barn, thinking; his father in the

# Sometimes, husbands ARE like that!

It all started at the dinner table; like this...

Mrs. Garrett: Pet, I had lunch over at Louise Daniels' today.

Mr. Garrett: (reading the paper) Mmm...mm.

Mrs. G.: She had the best hot drink. I'd never tasted it before.

Mr. G.: Mmm...mm.

Mrs. G.: We're having it tonight, instead of coffee. You've been drinking too much coffee, anyway.

Mr. G.: (coming out from behind the paper)...Whazzat?

Mrs. G.: I say, we're having Postum tonight, instead of coffee. It's awfully good, and I think you'll like it as well as I do.

Mr. G.: Nix. No coffee substitutes for me.

Mrs. G.: But it's not a coffee substitute, dear. Why, the first sip of it I had...

Mr. G.: DON'T TELL ME! Bob Work tried it. Said it doesn't taste anything like coffee.

Mrs. G.: Of course not. It's not supposed to taste like coffee—any more than you'd expect coffee to taste like tea. It's a delicious drink in its own right.

Mr. G.: (retiring behind paper) Mmm...mm.

Mrs. G.: You ought to try it, dear. Louise told me that Postum is now one of the great mealtime drinks—that millions of Americans drink it regularly.

Mr. G.: Mmm...mm.

Mrs. G.: Besides, it costs less than half a cent a cup. And that's something these days, considering coffee prices—and that you can't buy all the coffee you want now, either!

Mr. G.: Mmm...mm.

Mrs. G.: Really, Ted, you're being difficult. I tell you Postum is a grand drink, and you're not even open-minded enough to try it. You, and your logical mind! Once you get a wrong idea in your head, you refuse to budge. Ted Garrett, you might just as well be an ostrich, and stick your head in the floor. So there!

And what was the result of this little tiff?

Mrs. G., being a sensible woman, is going right on enjoying Postum every day. Not only because she likes it. But because she knows there is nothing harmful in it.

And Mr. G.? Well, for all we know, like an ostrich, he still has his head stuck in the dining-room floor.

## POSTUM

## ***Call it Lightning!***

### **- SAY THE PILOTS**

Nobody had time to name this Lockheed fighter plane when it was born. They just called it by a number, P-38.

Then the pilots sent it climbing over eight miles straight toward the stratosphere, up where even the highest-flying bombers couldn't go. They brought it screaming down out of the clouds like forked vengeance. They jammed down the throttle and it flew faster than any fighter ever flew before. They pressed the trigger-button and saw how *concentrated* fire-power from its cannon and machine guns could rip apart anything on wings — and there was only one name for it: *Lightning*.

So that's its name, a name it's earned from British and American pilots alike, a name to watch: Lockheed *Lightning*. Lockheed Aircraft Corporation... Vega Aircraft Corporation... Burbank, Calif.

thought until he got up and lit a cigarette and sat by the window staring out into the front yard.

THE next three days were a bad dream for Mrs. Manney. Martin and Ben fell into a solemn politeness at meals which was worse than any sullen silence could have been. Ben stayed on the place. Martin went twice to the village, and the second time returned with the bag of seed he had asked Ben to fetch from Acton's. Ben stowed it away in the barn. What his reaction was to his father's move, neither Martin nor Mrs. Manney could tell.

Saturday morning Mrs. Manney overslept. She awoke with the uncomfortable feeling that she had lost a day somewhere. From her window, as she dressed, she saw Ben waiting at the mailbox for Gid Evarts. By the time she got downstairs he had returned to the house—there was a flower-seed catalogue for her on the kitchen table—and left for the barn. She saw him taking the tractor out toward the south lot.

The Dosters' party was not mentioned until supper, when Martin said, "You coming over to the Dosters' with us, son?"

"Think I will." Ben met his father's eyes. His voice was more alive than it had sounded for days, but his eyes were as guarded as ever.

Martin hitched up the buckboard. When Mrs. Manney came out of the house, husband and son looked admiringly at her.

"You look nice, Alice," Martin said, and Ben echoed heartily, "You sure do, Mother." For a second her old sense of security was revived, only to die in the lull as Martin clucked to the team, and the buckboard jounced down the drive and turned grandly into the road.

THEY were among the early arrivals at the Dosters'. Ben tethered the team in the side yard, and Mrs. Manney and Martin waited for him on the steps. There were lanterns on the veranda, and over the hum of talk from the brightly lighted parlor came the tuning scrape of a fiddle. It was inevitable that, as they mounted the steps, the first person they should see was Lance Watriss, husky and animated, passing the open door with Livvy on his arm. Mrs. Manney's shoulder was touching Ben's and she thought she felt him relax just a trifle.

Mrs. Manney set her chin against the fleeting instant of silence that greeted their entrance. The story of Ben and Lance must have gone the rounds by now. She wondered miserably what shape it had assumed after passing through many mouths.

Livvy left Lance and came forward with her mother to greet them. Mrs. Doster's round, red face was sympathetic, without guile. Lance Watriss turned and began to talk loudly to one of the Acker brothers. From the corner of her eye Mrs. Manney saw young Art Doster glance furtively from Lance to Ben, then say something under his breath to a youth beside him. The other boy grinned expectantly.

Mrs. Doster led her to a chair beside an open window giving on the veranda, and began to make hurried, anxious conversation. Mrs. Manney felt her features twisting themselves into what she hoped was an expression of interest. Already the room and the people in it had taken on a nightmarish quality, and the flat, arrogant tones of Lance Watriss seemed to dominate all other sounds.

Ben had stopped near the door, talking to Livvy. Mrs. Manney tore her

eyes from him and looked for Martin. He was near the fireplace talking to Tom Burnett. Burnett's face was serious. He was a small man with sharp eyes and a steel-trap mouth. She saw him ask Martin a question; saw Martin's quick glance in Ben's direction before he shook his head.

Ben and Livvy stepped out on the veranda. Mrs. Manney caught a glimpse of Livvy's face as they went. She had stopped smiling, and she was serious and a little apprehensive. Mrs. Manney's glance flew to Lance Watriss. He was a round-bodied, gigantic, hard-muscled man, close to thirty, with thick blond hair and a baby face that seemed to belie his reputation in the county. He was fully aware of the disappearance of Ben and Livvy, and the careless confidence of his body and the bland set of his face

village the other night?" said Lance Watriss softly.

"No," said Ben. Mrs. Manney felt him choosing his words. "No," he said again, "but what made you think I'd knuckle to you?"

"Would you like to find out?" Lance's voice was getting stormy, but he kept it low.

"No," said Ben, and Mrs. Manney held her breath. Lance Watriss snorted. "But I'm willing," Ben said.

A BOARD creaked as Lance Watriss shifted his weight.

"Not here," said Ben, as though talking to a child. She heard him take a step, then hesitate. "You coming?" he asked Lance.

"I'm coming," said Lance Watriss, and they were gone, stepping lightly.

as he made his way toward the door turned Mrs. Manney a little sick.

With an effort, she turned to say something to Mrs. Doster and found, to her surprise, that Mrs. Doster was no longer beside her. She was puzzling over this phenomenon when, outside the window at her elbow, Lance Watriss said, "Hello, Ben. Hello, Livvy."

There was a little puddle of silence on the veranda. Mrs. Manney dared not look around. Her wrists and ankles felt feverish and watery.

Livvy said uncertainly, "Listen, Lance..."

Watriss said amiably, "Like to talk to you a minute, Ben. Will you excuse us, Livvy?"

"I'll do nothing of the kind." Livvy sounded shaky. "If you think for one minute..."

Ben said, "Please go on in, Livvy."

MRS. MANNEY heard Livvy's gasp of temper, then the angry tapping of her heels along the veranda. Her eyes picked up Livvy at the door, saw her go straight to Martin and Tom Burnett near the fireplace and say something, but it was the voices on the porch that held her whole attention.

"You forgotten what I told you in the

Over by the piano, old Denny Adkins had finished tuning his fiddle. Now he drew the bow, and a full-flavored chord filled the room. All heads turned toward him.

Mrs. Manney looked for Martin. He and Tom Burnett were no longer in sight. Then Livvy Doster blocked her view, and she heard and felt the girl's quick breathing.

"Mother Manney—Ben and Lance—" began Livvy fearfully.

Mrs. Manney stood up, surprised to find that her knees had somehow become quite strong. "I know," she said.

Livvy stared. "Aren't you going to— to try to..."

"I don't know, dear," Mrs. Manney heard herself say gently. She started out, Livvy trotting at her side.

The veranda with its lanterns, the front yard dappled with light, were as unreal as the house they were leaving. Some people were arriving, and Mrs. Manney found herself nodding and smiling and murmuring greetings as they passed on the steps.

Livvy touched her arm. "This way," she said. They stepped out on thick, fragrant grass and went around the corner of the house. Then they saw them, halfway across the yard, Ben and Lance,

on the brink of a pool of light flooding out from one of the kitchen windows. In the midnight shadow of a thick-leaved oak Mrs. Manney seized Livvy's wrist and the girl stopped obediently.

"Martin's there," said Mrs. Manney. She looked again. "And Tom Burnett." Her calm had yielded to a sick tumult now, but her hand on Livvy's wrist was perfectly steady. "They have to do it their own way," she said.

"But..." The word was little more than a sob. Mrs. Manney loosed the slender wrist and her arm went around the trembling shoulders.

"You know I love Ben, don't you, Mother Manney?" said Livvy. "You know that? I don't care what..."

She broke off short, for Lance Watriss had said something to Ben, and they saw Lance's white sleeve flash and heard a sound neither of them had ever heard before, the sharp, sickening sound of a fist on flesh. Ben went backward and down, and there was a wholly unreal tableau for a moment, Ben on his elbow on the ground, Lance looking down at him.

Livvy made a small, miserable noise. Mrs. Manney looked toward Martin. He and Tom Burnett were graven images in the half-light beyond Lance and Ben, watching, not moving.

Ben got up slowly. Lance charged, white-sleeved arms flailing. For a blurred second it seemed as though he would drive Ben into the sinister blackness outside the light, but at the last moment his round head flew back as though in amazement. Mrs. Manney saw a brown fist apparently bury itself in Lance's round belly just above his white belt. Another brown fist struck Lance's mouth with the same sickening sound they had heard at the start of the fight. Lance went sprawling into the center of the pool of light.

Mrs. Manney was dizzy. The pounding of her heart seemed to be right inside her ears. She forced herself to look at Ben. He looked very tall and strangely mature there, gazing down at Lance.

LANCE WATRISS drew himself together on the grass like a snake coiling, and while he was yet on his knees he reached behind him. Before they realized the significance of the gesture, Martin appeared from nowhere.

"You touch that knife and I'll kill you." He spoke very plainly and held out his hand. "Give it to me," he said.

Ben said, "Wait a minute, Father."

"Give it to me," repeated Martin. He bent suddenly and wrenched Lance's hand from behind him. There was a scuffle, over in a second, and Martin straightened up. They saw him swing his arm, and heard something crash, far off, in some bushes.

"Okay, son," said Martin, stepping back beside Tom Burnett.

Lance Watriss bounced up. The blows that drove him down again were only two, but they were as calculated and even as piston strokes, and the sound of the second made Mrs. Manney turn her head away and close her eyes. When she opened them again, Tom Burnett's bald head was shining over Lance, and he was helping Lance to his feet.

"Can you stand?" he asked disinterestedly, and Lance grunted thickly.

"Then stick your head under the pump before you come back in," said Tom Burnett. "We don't want to spoil the party." He watched Lance stumble off toward the back porch, then joined Martin and Ben.

Ben was talking in a low tone. Mrs. Manney could not hear what he said, but she heard Martin exclaim, "What!" Ben talked some more, and when he

**RELIEVE HEADACHES NEURALGIA & MUSCULAR ACHES WITH "BC" QUICK ACTING**

"BC" contains not just one but several effective ingredients that dissolve quickly and act in a hurry. Use only as directed on the package.

## MANY NEVER SUSPECT CAUSE OF BACKACHES

**This Old Treatment Often Brings Happy Relief**

Many sufferers relieve nagging backache quickly, once they discover that the real cause of their trouble may be tired kidneys.

The kidneys are Nature's chief way of taking the excess acids and waste out of the blood. They help most people pass about 3 pints a day.

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

paused for breath his father chuckled in a queer sort of way and Tom Burnett laughed from his belly and said, "Let's go in."

The men moved toward them. Mrs. Manney shoved Livvy gently forward. Martin said, "Hello!" when he saw them, and Ben passed his hand over his mouth and looked embarrassed until Livvy ran to him and took his arm.

"Come on, Battler," she said. "We'll see if you can dance as well as you can fight."

Mrs. Manney knew Ben was going to look at her, and he did. She smiled reassuringly, and he smiled back. Livvy was tugging at his arm. Ben looked at his father, and his father nodded slowly. Then Ben yielded to Livvy and they began to walk briskly toward the house.

MRS. MANNEY felt her husband's arm through hers, strong and loving. "Upset?" he said.

"Not now," she answered.

They were strolling to the house. Tom Burnett said, "Go ahead, Mart."

"Ben's joined the Air Corps," said Martin, and his arm tightened against her. "He didn't tell us before because he didn't want us to worry any longer than was necessary. And I think he was kind of afraid he'd miss out on the examinations. He just got the letter this morning."

Her heart had begun to beat again now, but she did not try to speak.

"That time he walked away from Lance in the village," said Martin slowly, "he was going to take his physical exam over in town next day—remember when he said he'd gone to get the float for the carburetor? He was afraid Lance would mess him up and make him miss out on the physical." He chuckled. "He's a funny kid."

They were at the steps now, and indoors the fiddle was loud over the shuffling of many feet.

They mounted the steps. At the door Martin stopped. Denny Adkins was sawing out a waltz.

"Like to try a dance, Alice?" said Martin, almost shyly.

Then they were on the polished floor

and she was in his arms. The house was friendly now, and real, and she knew they stepped out that she would never forget that moment of music as long as she lived.

Ben danced by with Livvy. Mrs. Manney saw that he had told Livvy, for her head was tilted back and her eyes were deep and had stars in them.

LIVVY turned her head and for a second she met Mrs. Manney's glance. In Livvy's eyes Mrs. Manney saw mirrored all her own pride and happiness—and all the pain that would come later when Ben was gone.

Ben was talking, quite volubly to him. Mrs. Manney caught a snatch of it: "... new motors ... two thousand horsepower ... if I can just get one of those ... ." He was rapt.

After the dance he and Livvy went out on the porch and down the steps into the kindly shadows. There, Mrs. Manney knew, there would be no more talk of motors; or at least, comparatively little.

THE END

## Mike Moran's Men

Continued from page 19

the ship's doctor dug thirty-two pieces of shell fragment out of that leg and showed Lowry the tin hat he had been wearing. There was a jagged hole, two inches across, a souvenir of that blast.

Frank Hurst, a chief boatswain's mate, was the battery officer on Gun One. The blast that disabled his gun also threw him against a bulkhead, and a pile of empty shell cases showered around him as they hit the overhead and bounced back to the deck. Chief Hurst sized up the situation instantly. A fire had started on the splintered deck, so the first thing he did was to empty the ammunition hoist of live shells while two other men on Gun One's crew played a hose on the blaze. Luckily the ammunition passers had just completed a round trip from hoist to gun, so there was no live ammunition exposed at the time of the hit.

Gun Captain King checked his gun. Most of the electrical leads had been carried away which meant no more director control. He spent all of two minutes inspecting and testing the rest of the mount and decided to try firing it manually. From then on, the gun captain "kicked them out," ramming by hand and firing each shell by percussion. By this time, the fire on deck had been put out, and the ammunition again was coming up the hoist in a steady flow.

### Manning a Disabled Gun

Dan Brand, a young junior lieutenant who was the starboard battery officer, watched anxiously as the gun captain thumbed the firing key for that first round. Lieutenant Brand knew what can happen to a gun when you try to fire it after it has been disabled. A defect in the barrel or breech mechanism might cause the gun itself to blow up and kill everyone in the vicinity. But Brand also had complete confidence in King's gunnery ability, backed up by five years' experience. King was one of the "plank owners" of the Boise. He had been aboard her since her commissioning in 1938 and he was as familiar with each of her guns as a mother hen with her chicks. He gave the order to fire.

The five-inch rifle spoke sharply, and the message it carried was a direct hit on the enemy heavy cruiser. Not bad for a cripple. And as round after round was

"kicked out," Chief Hurst had the satisfaction of seeing his manually operated weapon score a total of three punishing hits on the Jap before it finally sank. When the "Cease firing" order came, Chief Hurst reached down and picked up a heavy hunk of shrapnel that had recently skimmed past his ear and bounced off the overhead to land at his feet. He handled the piece of steel gingerly; it was still hot. But he didn't have time to examine the Japanese characters on it closely—another target was coming up.

There had been a lull of almost two minutes. It was now close to midnight. The Boise had been in action less than a quarter of an hour and, together with the other ships in her task group, had disposed of four enemy ships, two of them huskier than herself.

Captain Mike stood on the flying bridge and watched tracer shells from

his main battery crisscross tracers from the secondary as they plowed their way toward the enemy. The range was almost point-blank now. Both forces were steaming on courses that ultimately would reach the point of a huge V.

Signal Officer Davis realized then that it was for this moment he had joined the Navy twenty-three years before. To him, it was just like a skeet shoot. Fix your sights on the pigeon just released and—bang!—it disappeared. Turn half around and there was another pigeon. Bang!—no more pigeon! Turn and shoot. Turn and shoot.

The fifth pigeon was a Jap destroyer that apparently had been hit by other ships in the Boise's group and she was on fire. Her guns were still blasting away, however, when the Boise batteries opened up on her. In about two minutes, she too had been polished off, and the fires on her deck hissed out as she sank

"And if anybody had ever told me that some day we'd be dressing for dinner at our house I'd have said they were nuts!"

under a cloud of steam and heavy smoke.

"Shift targets and resume firing." For five full minutes there was no target handy, which gave the Boise men a brief respite to catch their breath and police the deck around their busy guns. Empty shell cases were thrown over the side and debris from the enemy hits was cleared away hurriedly to give the gunners more room to operate. Below decks, the damage-control men were mopping up the fire in the captain's cabin and dousing water on the deck of the radio shack which had been scorched by the same blaze.

In Central Station, Lieutenant Commander Tom Wolverton, the ship's damage-control officer, was directing all this repair work. Telephone circuits connected him with his "branch offices," separate repair parties forward, aft and amidships. The job assigned Commander Wolverton and his men was comparable to that of a prize fighter's second. They did their work between rounds, moving quickly and surely to get the champ ready for the next bell.

Commander Wolverton had taken upon himself another job. Most of the ship's personnel were closed off below decks in sealed compartments behind dogged hatches and naturally could see none of the show topside. They could hear the muffled roar of the Boise's guns and the occasional burst of enemy shells ominously close, but that didn't help much. So the damage-control officer manned a microphone on the ship's loud-speaker system and broadcast a running account of the battle from reports which observers on deck relayed to him by phone.

### The Face of Danger

When Commander Wolverton first passed the word that the enemy had been engaged, he noticed that most of the men crowded in the Central Station cubicle with him suddenly went tense. He recognized the symptoms immediately. These men, as brave as any aboard, were facing an enemy they couldn't see, and their nervousness was natural.

Their reaction reminded him of a remark his four-year-old son had made the first time Wolverton, senior, took him for a ride on a roller coaster when the car was approaching the top of the first steep dip. The men stationed around him with stern faces had heard this story and had chuckled over it. Now, Wolverton decided, was a good time to remind them of it. In the stillness of that crowded Central Station deep in the Boise's innards, a voice boomed out ridiculously in baby talk: "Daddy, I want to go home now!"

The effect was magical. Grins spread over a dozen men's faces as they settled

back and relaxed. Psychology Professor Wolverton then resumed his other jobs as damage-control officer and radio announcer. Topside reports started coming in rapidly now and he was kept busy passing them on to the rest of the ship's company. "Enemy heavy cruiser is breaking in two . . . she's going down in flames . . . Another target coming up . . . Japanese destroyer . . . three direct hits . . . target sunk."

About five minutes past midnight, came his most startling announcement: "Torpedo approaching ship on starboard beam!"

Eagle eyes on the signal bridge had sighted the white foam of the torpedo track. An instant later, Captain Moran bellowed, "Right full rudder." The Boise heeled over in a sharp turn and aimed her bow directly at the enemy column. Men aboard the ship astern of the Boise thought she had gone out of control. But Iron Mike knew what he was doing. As the torpedo came closer, that sudden turn put the Boise on a parallel and opposite course to it. While men on deck held their breath, all hands below cocked a worried eye toward the starboard side of the ship. The few seconds they waited seemed hours long.

"Whee—it missed us!" Bill Butler, anti-aircraft control officer, gleefully passed the word over his phone circuit. At his station on the bridge, he saw the torpedo slip by the Boise's bow, missing it by just a few feet. Had the Boise been on her normal course, the result would have been a direct hit.

Down in his broadcasting booth, Commander Wolverton got the good word by phone and passed it on to the rest of the ship. The stern lines on men's faces melted into happy smiles. Santa Claus had answered their letter. A spontaneous cheer rose in each buttoned-up compartment as that message poured out of the loud-speakers. And that wasn't all. A follow-up announcement reported that a second "fish," obviously fired in a "spread" from the same enemy destroyer, had missed the Boise's stern, clearing the fantail by about thirty yards.

"Left full rudder!" Iron Mike was swinging his ship back into battle formation.

Kicking along at flank speed, she soon had resumed her position in column, and already her batteries were firing on a sixth target—another Jap cruiser just abaft the Boise's starboard beam. The ship being on a steady course now, her fire-control men handily drew a bead on their newest target.

Everything was well under control. The fire in the captain's cabin had been quenched, and the relatively minor damage occasioned by that barrage of shell-fire had been temporarily repaired. All

guns were back in action now. Chief Hurst was still "kicking them out" on Gun Three forward, and high up in Spot One, Spotter Forter was busy watching the shells splash around the Jap cruiser and—more important—the shells that didn't splash.

Throughout all this action, there was a demonstration of Navy discipline that gave eloquent testimony to Mike Moran's iron-hand, velvet-glove policy of training fighting men. A dozen men stationed in the port secondary-battery director stuck grimly at their posts, their backs to the enemy ships and to all the shooting. During the entire time, not a man turned around to see what was going on behind him. They were too busy manning their director and watching the opposite dark horizon hopefully, just in case a Jap ship or two loomed up on that side to deliver a sneak punch. It was a sight to make any skipper proud of the men under his command.

In contrast to their immobility, the men on the starboard battery were now busier than ever. They had got the range on target six, a Jap cruiser, and that unit of Admiral Togo's fleet was getting a terrific pasting from Boise guns and from other ships in the task group.

### Too Close for Safety

But just as the Boise's first salvos struck home, disaster came to her. Another Jap ship, a heavy cruiser, showed up in the distance, forward and to starboard of her. Using her eight-inch twin-mount turrets, the Jap opened up at several thousand yards, and it was soon obvious that the Boise was her intended victim. Both forces were operating under powerful searchlights then, and the cold white beam of these torches cut through the orange-red flashes of exploding shells.

One of these shells struck the Boise's starboard side, pierced it and exploded just forward of her sick bay. There were only a few patients there, but the ship's doctors and hospital-corps men bundled them out of there in a hurry and to a battle dressing station set up in the chief petty officers' quarters. One of the patients, his broken leg in a cast, hobbled along on crutches to the dressing station. Another, who had been relieved of his appendix three days before, got up from his bunk and brushed aside the corps men starting to put him on a stretcher. "Outta my way!" he told them. "I'm getting to hell out of here!" And he got.

Damage Control Officer Wolverton heard and felt that shell explode just above his Central Station. He dispatched a repair party there and reported the location of the hit to Captain Moran on the flying bridge. Jap shells from the newly arrived heavy cruiser were splashing dangerously close to the Boise then, as her batteries split up to fight off the two attackers.

Suddenly a terrific explosion on the fo'c'sle flung Captain Moran and everyone on the bridge prostrate. Before Gun-nery Officer Laffan could scramble to his feet he heard an ominous report over his earphones:

"Fire in the forward magazine." Then: "Direct hits on Turret One and Turret Three."

Still prone on the exposed deck of the flying bridge, Captain Moran snapped out an order: "Hard left rudder. Flank speed." When he stood up and looked down at the ship's forward turrets, he saw the whole fo'c'sle afire, with flames leaping fifty feet in the air. The Boise was in trouble.

This is the first of two articles on the Boise by Frank D. Morris.

# Fourteen Dollars and a Girl

Continued from page 24

His mother smiled a little. "Yes," she said, "and how neatly you managed to change the subject!"

He grinned at her. "Couldn't have been so darned neat. You spotted it quick enough."

She patted his arm. "I'm maybe the smartest mother you'll ever have. But you'd better come downstairs, dear. Dinner's ready—and our guest is here."

Hilary had been rummaging for a handkerchief. He looked up and stared. "You don't mean that evacuated girl! You don't mean *she's* here!"

His mother nodded and Hilary responded with a hollow groan—as a matter of form. He was, actually, injured to girls. His sister Nora's friends had been clowning all over the house as long as he could remember. They'd never had any effect on his pulse. This new girl, though, wasn't a friend of Nora's. She was a stranger whose family had been evacuated from a section of the town that the government was taking over for an Army camp. She had been assigned to the Craigs because the Craigs' house was not too far from the school she attended.

"What's she like?" he asked.

"Oh, well, I guess she's a nice enough little thing."

He looked at her sharply. Her voice had sounded a trifle strained. "What's the matter, Mom? She bring a trunk?"

"No. Three large suitcases and a hatbox."

"You don't like her," Hilary said. "Why not?"

"I didn't say I didn't like her. I merely said she'd brought three large suitcases and a hatbox."

"But I know you, Mom. You've got that arsenic in your voice. Say! Is she awful to look at? Anything like that drip Nora brought home from the Red Cross?"

His mother turned from the doorway. "Now, Hilary! When did we ever discuss our guests?"

He was genuinely startled. "Why, my gosh!" he said. "We always discuss 'em!"

But Mrs. Craig had already started down the stairs. He clattered after her—into the dining room—there to confront the most wonderful girl he had ever seen in this world.

**E**LISE VARDEN had eyes as blue as a noonday sky and—exactly to match her eyes—she wore a blue ribbon threaded through her corn-colored curls. She had a little laugh like three notes down the scale. She frequently laughed when anyone spoke to her, even if there wasn't any reason. That was just one of the fascinating little tricks she had. The wonder was that the rest of the family went on eating and arguing and carrying on as if this were just an ordinary girl sitting at their dinner table.

Hilary strove to make amends for this. He leaned toward her solicitously. "I'll bet it was kind of inconvenient," he said, "to be kicked out of your own house the way you were!"

"Well, yes," she admitted, with her little laugh, "only we're moving into a terribly cute apartment, you know, the first of the month. The crazy thing was the way we waited till the last minute and I had to get taken in by perfect strangers this way! My goodness! You must think I'm some kind of a poverty-stricken refugee or something!"

Hilary glanced at his mother.

"Why, no," she was saying, "we don't think anything of the sort, my dear."

It was, Hilary felt, hardly adequate. He redoubled his efforts to see that their guest had everything she might need. He hung, spellbound, on her every word—and was annoyed when Nora cut into the conversation with an overlong story about herself. Elise, obviously, wasn't much interested. He failed to silence Nora with a few brotherly gibes, but he was rewarded by that tinkling little laugh from Elise.

**H**E WAS harassed, meanwhile, by a number of small embarrassments. He became aware that his father was mopping up the last of his gravy with a crust of bread. Wincing away from that spectacle, his newly sensitive eye detected something a shade too easy and informal

Hilary felt his throat tighten. "Okay," he said. "Who is he?"

"Why, he's a boy I know in the Army. His name's Joe Burdick. You must have heard of the Burdicks," she concluded, with some pride. "They're terribly well-to-do people—the Burdicks."

"No," said Hilary. "I've never heard of 'em."

"Well, anyway," she said, "I've been going with Joe for just ages. I told him I wouldn't have any serious dates with anybody—all the time he was gone."

Hilary swallowed hard. "He looks after himself—this guy!"

"Why, Hilary! That isn't a very nice thing to say about a soldier!"

"Maybe it isn't," he admitted. "Maybe I was just kind of sore."

COLLIER'S

"Speed is the keynote, Miss Simpson, not artistry"

RODNEY DE SARRO

in the manner of Matty, the maid. He listened, with growing shame, to his mother's rollicking account of the argument she'd had that morning with the vegetable man.

Later, when he was tuning in the radio to Elise's favorite program, he tried to correct any wrong impression she might have received at the dinner table. He gave her a few hints in regard to his parents' importance in the community. He even tried to give Nora some kind of build-up. Then, suddenly, he heard himself bragging like a fool. He turned red.

"But I don't know why I'm telling you all this! We're just an ordinary family like anybody else. My gosh! I'll bet we're just a typical family for being ordinary like that. I don't know why you'd be interested!"

She smiled at him. "Of course, I'm interested!" she said. "I just simply love hearing about people! Joe says it's a feminine instinct I've got developed in me. But Joe, of course, is crazy."

"Who," asked Hilary, "is Joe?"

"Oh!" she said. "Aren't I dumb! As if you'd know who Joe was!"

"Your brother?"

"Joe?"

"Well," said Hilary, "he could be, couldn't he?"

"But he isn't!"

"I don't see," she said, "what you'd have to be sore about."

As she said this, she put her hand over his in quite a sisterly fashion, but after a second, he pulled his hand away.

"You'd better not ask me," he said, "because the way things are—I can't ever tell you, Elise."

**H**E HAD to keep on reminding himself that she was somebody else's girl. It was just as well that they kept him in after school next day for an extra bout with the Spanish language. But he couldn't stay away from his own home forever. That, he thought, would be too much to expect of a guy. . . .

He found Elise in the kitchen. She was making a batch of cookies for her soldier.

"Of course," she said, "it's only a sort of a gag!"

She looked wonderful in a little frilled apron. From her hair came a faint, flowerlike fragrance. She was frowning importantly as she peered into the oven.

"I had a letter from Joe," she explained. "He reminded me about these cookies."

"A swell guy!" said Hilary. "A swell guy, all right! Making you slave in a hot kitchen! Yeah! That's swell!"

"No," she said, "it's only a sort of a gag—the way I told you."

She fished a letter out of the pocket of her dress and started to read it aloud. She made several false starts because there were a number of passages in that letter too impassioned for Hilary's ears. He sat at the end of the kitchen table with his chin propped in his hands and looked at her unhappily.

"Here it is!" she cried at last. "Here's what Joe says: 'I don't believe you about the cookies,' he says, 'because a girl who looks like you just naturally couldn't make cookies, too. It just wouldn't be possible. And while we're on the subject, I wish you'd send me some more snaps of yourself because the ones I have are about worn out from me looking at them so much—'" She broke off here and bit her lip. "But I guess that wouldn't interest you, Hilary. That's just the crazy way Joe always goes on!"

He didn't have to answer that because she wrinkled her nose just then and dashed to the stove. The cookies were burning.

**I**T TURNED out that only the edges were burnt. The cookies were still a little doughy in the middle.

"I don't understand it," Elise said thoughtfully, "but anyhow, I can tell Joe not to eat the middle part, and I won't send him the worst-looking ones. You can have those, Hilary."

"Thanks!"

She flashed a smile at him. "I didn't mean that the way it sounded!" she said.

He couldn't resist the smile. He ate six of the cookies and protested but weakly when she wrapped up the best ones and asked him to take them to the post office. Then Matty came in from the back yard, and Elise had another smile for her.

"I've been making cookies!" she explained.

Matty cast a morose eye around the kitchen. "It's not the one who makes the cookies," she said. "It's the one who has to clean up them pans."

Elise laughed gaily and waggled her fingers at Hilary and tripped out of the room.

"That girl," said Matty, "ain't worth the powder to blow her brains out. You hear me, Hilary!"

Matty had been with the Craigs for a long time and she felt privileged to say what she liked. On this occasion she had gone too far.

Hilary drew himself up. He spoke in tones of ice. "We will not discuss Miss Varden," he said.

"Well," asked Matty, "who wants to discuss her? The chit! And I've got work to do! Hilary, you get out of my kitchen this minute!"

So Hilary, with the package of cookies under his arm, got out of the kitchen with all the dignity at his command—which wasn't under the circumstances, a very great deal.

**E**LISE explained to Joe, in a letter, that Hilary had mailed the cookies to him. She had, in response, a stern word or two from Joe:

"Listen—here's what he says, Hilary: 'I don't think girls have much sense in some ways. You ought to know better than to ask some other guy to be mailing me cookies, because if I were this other guy, I wouldn't want to be mailing another guy cookies from you.'" Elise looked up, with her little laugh in three notes. "Well, that's how crazy Joe is! Don't you think he's crazy?"

Hilary shook his head. He didn't

think Joe was crazy. Hilary was beginning, about this time, to take a certain unwilling interest in Joe. He wanted to hate him, but Joe wasn't the sort of person anybody could hate. He wrote quite a lot of interesting stuff about the camp. Most of the time Joe was cracking wise—but once in a while he got kind of serious. Elise didn't understand this serious side of Joe's character.

"It won't be long before we're sent overseas," he wrote her one time, "and I can tell you one thing—the fellows are ready for it. I'm not bragging, Elise, when I say the men in this company are the best bunch of men you'd find anywhere. I've got to know some of them pretty well and I don't mind saying they're men I'd like to fight with. You get pretty much stripped down to the important things about a person at a time like this. Maybe you're finding the same thing these days in civilian life. Anyway, it's queer what a war can do to your sense of values. It can change your whole slant on things you'd never even bothered to think about."

Elise looked up from the letter in complete astonishment. "You wouldn't think Joe was writing to me any more! You'd think he was writing a book!"

"No," Hilary said. "I guess you don't get it, but he'd naturally want to be writing you what he had in his mind."

He felt compelled to explain how it was with Joe, although he often told himself he was a dope to do it. If Joe hadn't been in the Army, it might have been different. But it would be a lousy trick, he thought, to chisel in on a guy in the Army.

The fact that Elise was Joe's girl was the one thing Hilary had settled for himself. Of course, there were times when, without realizing it, she made things kind of tough for him. Reading from Joe's letters or listening to the radio or just talking about nothing in particular, she would look at him teasingly out of the corner of her eye and wrinkle up her nose in the funny little way she had. He would turn red and growl at her. "Aw, cut it out!" he would say. Then she would laugh at him and lean over to pat his hand.

THEY had agreed there wasn't any reason they couldn't be friends. But Hilary carried the ideal of this friendship into the distant years. He saw himself hovering always, in the background of Elise Varden's life, ready to serve her when she needed him. There were times, before he drifted off to sleep at night, when he would save Joe's life at the cost of his own—muttering a hoarse and manly farewell into the pillow: "It's okay, Elise—I was glad to do it. Just try and think of me—once in a while. And so long, Elise. . . ."

Meanwhile, Joe was counting on a furlough. He was planning to come to see Elise. There was nothing Hilary could offer which could compete with that furlough of Joe's. Hilary could tell himself it was just the Army word for vacation, but he was not consoled.

He looked at her glumly. "I was kind of hoping," he said, "you'd let me take you to the Junior Club dance over at the country club. But I suppose that's out all right . . . on account of Joe."

She turned to him eagerly. "Oh, I don't think Joe would mind. It wouldn't really be like a date—you and me being so kind of platonic the way we are!"

Hilary winced. "Yeah," he said, "but that's a week from next Saturday. That's when that guy's going to have his furlough."

She shook her head. "No, he isn't. I had a letter from Joe today about that. They've changed their minds. They

aren't going to let anybody leave camp. And Joe wants me to come and see him! He's crazy!"

Hilary struggled briefly with his better self. "I don't suppose he's any crazier than anybody else," he said. "Why wouldn't you go and see him?"

"It's fourteen dollars! On the bus!" "That's a lot of money," Hilary admitted, "but still—if a guy's going to war any minute, he'd maybe expect a girl to put herself out a little bit!"

"But, Hilary!" she cried, staring at him. "Where on earth would anybody get fourteen dollars?"

He thought about that for a minute. "You've got me," he said. "Darned if I know!"

He felt better. After all, he thought, he'd behaved in a very honorable way about the whole situation. Nobody could say he hadn't done all he could for Joe. But Joe's hard luck was Joe's hard luck. Hilary began to imagine, now, what it would be like to take Elise to that dance—to maneuver her past the stag line. It could be platonic enough as far as she was concerned, but there was no law saying it had to be platonic for him. He began to make plans . . .

"MOM!" he said.

Janet Craig looked up from the bottom shelf of the linen cupboard. "I don't understand about the pillowcases," she observed mildly. "Why don't we lose the sheets, too?"

"I don't know, Mom. But I want to talk to you about something. It's more than a guy can get away with."

"What is? Hilary, if you're leading up to another advance—"

"Yeah, but listen, Mom. You're the one who's always saying I ought to take more interest in what goes on at that joint for the younger crowd. Always having ten thousand cat fits because I didn't take an interest."

"It is not polite, darling, to imply that your mother is subject to fits. And are you by any chance talking about the Junior Club dance?"

"Sure! And I'll tell you what I'll do for you, Mom. I'll go to that dance if I can have a pair of shoes!"

She eyed him incredulously. "Well, look—the way it was, I spilled some kind of acid on one of those best black shoes I had. Of course, I know what you're going to say, Mom, but it wasn't anything I could help."

"Perhaps not," she said, smiling at him, "but if you want a new pair, Hilary, you'll just have to go out and earn about six dollars." She put up her hand against an anguished protest. "That's final, dear!"

And it was final. Hilary, walking heavily down the stairs, turned the whole thing over in his mind. Before he came to the bottom step, he had come to a decision that appalled him. He was going to get himself a job with old Mrs. Nesbit.

IT TURNED out to be a matter of cleaning out henhouses.

The old lady was looking him up and down. "Well," she said, "you're certainly a great strappin' hulk!"

Hilary reddened. "I guess I can do the work all right."

"Young man, none of your back talk!" "No, ma'am," said Hilary. "Will you tell me where I begin, ma'am?"

"When it's a hen farm," said the old lady, "you begin with the hens. And you end with the hens! You goin' to take up my time with dumb fool questions?"

"No, ma'am."

"No, ma'am—yes, ma'am! Yes, ma'am—no, ma'am!"

"Excuse me, ma'am."

"You talk all the time! Talk, talk!

## The HARVARD CLASSICS Are Still Available. Get them Now

Read how you can have The Harvard Classics at an extraordinarily low price and on most liberal terms.

HERE is your great chance to own Dr. Eliot's Five-Foot Shelf of Books. Now this supreme library can be had at a cost per volume one-third the price of current fiction.

### DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS (THE HARVARD CLASSICS)

It was the lifelong ambition of Dr. Eliot, 40 years president of Harvard, to bring his famous Harvard Classics within reach of all. Now his hope has been fully realized. The present low price places this precious collection of the supreme flowering of man's genius at the finger tips of every ambitious person in America!

### NEVER BEFORE SUCH A BARGAIN

Brentano's, the famous booksellers, recently stated that for only the partial contents of The Harvard Classics in ordinary clothbound editions, the cost would be \$402.00—yet in a beautiful edition, handsomely printed and illustrated, and uniformly bound, you can obtain

these superlative writings at a fraction of that cost. This is the rarest of opportunities. Here are the complete marvelous contents of Dr. Eliot's Five-Foot Shelf of Books. Fifty volumes, 22,407 pages of superb reading, 418 of the world's masterpieces, the Lecture Volume, Daily Reading Guide, and Index of 76,000 entries, costing \$50,000 to prepare is the key to the treasures of The Harvard Classics.

### AT A PRICE YOU CAN AFFORD

Today, for only a small initial payment, you may have a complete, luxurious edition in your home with all shipping charges prepaid by us. But we urge you to act at once as manufacturing costs are rising rapidly.

### FASCINATING BOOK—FREE

Let us send you the complete astounding list of the masterpieces in The Harvard Classics. This list will be included with our famous eighty-page book, "Fifteen Minutes a Day," a little gem of literature. These will be sent you free and without obligation. Mail coupon today.

## OWN THIS FAMOUS LITTLE BOOK—FREE!

I am interested in receiving by mail, free and without obligation, your valuable booklet, "Fifteen Minutes a Day," describing the famous library, Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics) together with the complete list of 418 titles in The Harvard Classics. HCP-822

Mr. Name Mrs. Miss

Address

Talk's cheap, young man! When you goin' to clean out a henhouse? When you goin' to git at it?"

Well, Hilary thought, she certainly was peculiar. But he got to work. He began on the walls of the first of the poultry houses, tackling it with something like a chisel.

"The last boy left it all," the old lady rasped in his ear.

"He sure did," muttered Hilary.

"What say?"

"Nothing," Hilary said hastily. "I'm getting along fine, ma'am."

The old lady sniffed. She went out then with an apron full of corn. He heard her talking to the hens and he turned to look at a red rooster, a lordly creature scrabbling for corn in a dignified way and calling his flock to the feast. But the old lady caught him at this. She flew back into the henhouse.

"Clean, clean!" she shrilled at him. "Clean, clean!"

HE HELD heroically to his unheroic task. Every afternoon, after school, he hurried to old Mrs. Nesbit's farm. He worked all day Saturday as well. He had earned his six dollars—only to realize that he actually needed more than six dollars. A pair of shoes was not enough. He had to have a white shirt and a new tie. He also had to consider buying Elise a couple of gardenias to wear to the dance. Then he really needed some extra cash in case the crowd went somewhere to buy hamburgers.

He kept adding these items in his mind as he scrubbed down walls and perches and edged his way cautiously around a bad-tempered broody hen. Old Mrs. Nesbit reiterated, in vain, her candid opinion of boys in general, and of Hilary in particular. He merely reddened uncomfortably and went on with his scrubbing.

His mother's first amazement and pleasure had given way to a mild alarm.

"Hilary!" she said. "You're working too hard! You aren't leaving any time for your studying at all! And what in the world are you going to do with all that money?"

"Now, Mom," he said, "I don't see why I get this cross-inquisition. A guy has to go out and pick up a little cash for himself."

"To spend on that stupid little Varden girl!"

"Mom! Elise isn't stupid! How could you say a thing like that, Mom?"

His mother put out a placating hand. "It just slipped out, darling. I'm sorry." She eyed him pensively. "But about this job of yours—I really don't want to interfere if it isn't going to last forever.

Only, I do think you'd better have your bath right away, son. That chicken smell—"

Hurriedly, Hilary made for the stairs.

THEN it was all over. He had said goodbye to old Mrs. Nesbit. "You wasn't as good as you might 'a' been," she had observed, in parting, "but you wasn't no worse than most o' the rest of 'em." This, from her, was the utmost in praise.

He felt pretty important, too, with all his hard-earned cash in his pocket. He sat beside Elise on the porch swing and looked down on her with the certain assurance that money gives a man.

"I was thinking about the dance," he said.

She turned to him swiftly. "The Junior Club dance?"

"Yeah."

He hesitated here. He had the picture

in his mind of Elise in his arms—dancing to the local boogie-woogie with his gardenias on her shoulder. All he had to do was tell her about it. But he battled peevishly with some obscure inhibition. He wondered what was the matter with him. After all, when a guy had worked the way he had on a batty old lady's chicken farm just to earn enough money to take a girl to a dance—

Well, what was the matter with him? He had the money. He had, actually, fourteen dollars. Well, there it was—that fourteen dollars. He could see, now, how he'd been kidding himself all along. He hadn't been working for any pair of shoes. He hadn't been working for gardenias and hamburger money. What had he been working for—dope that he was? For bus fare!

"What did you say, Hilary?"

He got his beautiful gesture over with

—in a hurry. "That dance," he said "will stink."

"Why," she said, "what makes you say a thing like that?"

"Because it will. It's practically bound to. But look, I've got this folding money you might as well take and go and see Joe with. I thought I might as well fix it up."

"But that's crazy," she said, smiling at him. "I'd rather go to the dance with you, Hilary!"

"No," he said. "No, I don't get it."

"It's true! Anyway, it's all over between me and Joe," she went on happily "because the way it was—it was so awful for me. I mean I couldn't have any fun or anything. And what if they sent Joe to Australia or somewhere and he fell for some Australian girl or somebody like that? Then where would I be, I'd like to know!"

"You wrote Joe? You told him that?"

She nodded, and he looked at her without seeing her. There'd be all the other fellows around, he thought, when Joe Burdick got his mail. They'd all be ribbing him, most likely, about having a letter from his girl. He felt the way Joe would feel, reading that letter. He felt sick to the stomach. But it wouldn't take Joe long to get over it. Joe would be just as well pleased he hadn't got too involved with a girl like that. He'd be glad he was free again. Once he got over the shock of it, he'd be mighty darn' glad. . . .

"Hilary!" she said. "You're acting so funny! Don't you want to take me to the dance? Pul-ease, Hilary?"

HE CHECKED a simple and fervent negative. He remembered, just in time, to lie in a gentlemanly fashion.

"Well, it's too bad," he said glibly, "but it's just kind of crossed my mind—this other date I'd forgotten all about. A bowling date. Strictly stag."

"Oh!"

"Sure," he said. "That's the way I am sometimes—sort of absent-minded about stuff. But excuse me. I think my mother wants me."

He escaped then and made his way to the kitchen. They were going to have roast pork and applesauce for dinner—a fact which pleased him immensely.

"Darling," said his mother, "get out of Matty's way!"

"Yes," said Matty. "Dinner's ready anyhow. I'm puttin' it on the table."

"Go get Elise," said his mother.

But he had no need to get her. As he pushed back the swinging door, he saw her coming into the dining room. He glanced at her in casual disfavor. Gosh! She had a silly face!

THE END

"Why don't you bring the young man home for dinner one day, Mother—and let me meet him?"

COLLIER'S

JARO FABRY

## They Can't Hurt Us, Kid

Continued from page 26

good. He got 'em for me on my thirteenth birthday. It should've been my lucky day. That night Johnny fought Young Willard. Remember? Johnny got killed that night."

There was a silence. Pudge looked at the kid. He had the same race-horse trimness that Johnny had when he came to Pudge as a youngster. But his face. It was different. There weren't the heavy features, or the bright blue eyes that gleamed dangerous hate in battle; and Danny didn't carry that thatch of flaming hair that endeared the Fighting Irishman to every sports writer looking for color. The kid's face was almost delicately turned—not the kind that would look good after a few years of training rings and tough battles.

"I was with Johnny when he died," the kid said. "Me and the old man followed the ambulance to the hospital. He never did come to really. But he was talking to you, Mr. Golder. He said, 'We'll get 'em next round, Boss. He's tough, Boss, but we'll get 'em. We'll murder the bum.' Then just before he died, he said, 'Don't throw in that towel, Boss. Don't ever throw in that towel for a Gallaher. He can't beat us, Boss. . . . That was the last thing he ever said. That's why we Gallahers never took any stock in what the papers said. We knew Johnny wanted it that way.'"

The kid flushed again. He stammered out, "I'm sorry I got all wound up like this, but it's something I've kinda thought about a long time."

"It's okay, kid, it's okay," Pudge said in a soothing tone.

As Danny went to his locker to dress, Pudge thought again of that night seven years ago. Johnny was old and tired and just another ex-champion of the world when they matched him with a new sensation from the Bronx, Young Willard. But Johnny was Golder's boy, and Golder's boys were battlers. They put on a show for the fans, or Pudge didn't want them. Lots of people came to see the fight. They knew Johnny Gallaher, Golder's boy, would show them whether Young Willard was a fighter.

Johnny threw a right cross in the second round that had the Bronx boy hanging on. Again Johnny was the killer of old. Up on his toes with his thin lips split

in a sardonic grin, he pounded away to the face and body. He danced to his corner at the bell and grunted to Pudge, "I got 'em, I got 'em."

"Not yet, you ain't," Pudge said. "You gotta get 'em this round, champ. Time's run out on yuh, champ. This round, get it! We'll murder the bum!"

Johnny almost ran across the ring and let go a right hand that just grazed Willard's chin. Pudge flinched in the corner. Johnny had telegraphed that punch in capital letters.

He's old, thought Pudge. Old and washed up.

Johnny swarmed over the younger man. Willard retreated, covering. Finally Johnny stopped in mid-ring. He motioned for the youngster to come in

THE SUN  
NEVER SETS  
ON THE  
FIGHTING JEEP

## GIVIN' 'EM HELL AT GUADALCANAL

**T**HEY'RE doing it in the Solomons, too. Tough, tiger-like Marines and Army men, mounted in their fast, power-packed American-built Jeeps, are showing the fanatical Japs how FREE AMERICANS fight with modern American equipment.

Jeeps driven by the Willys-designed "Go-Devil" engine carried these great fighters when they crashed the shores of Guadalcanal. And Jeeps are carrying them *now*—in spite of hell or

high water or anything the Japs can do—carrying them swiftly and safely where no other four-wheeled fighting vehicle in *any* army in the world could take them.

This swift, shifty, and amazingly durable Army Jeep of ours is an American invention—created here—built here for our own army, marines and sailor men and for our Allies. Today it is unquestionably the most spectacular automotive fighting machine on every fighting front in the world, and

in training camps in America, Britain, Australia, Alaska, Iceland and elsewhere.

Willys-Overland's civilian engineers assisted the U. S. Quartermaster Corps in designing and perfecting the Jeep adopted by the U. S. Army. The amazing world-renowned "Go-Devil" engine that drives it with such power, speed, and flexibility, is an exclusive Willys-Overland development.

and fight. Willard obliged. Stepping in close, he threw stiff, short hurting punches. His arms working like pistons, he battered at Johnny's body—into the stomach, over the kidneys, over the heart.

The rest of that round was a ghastly chapter in ring history. Five times the powerful bull of the Bronx sent Johnny Gallaher, ex-champion of the world, crashing to the canvas. With blood streaming from a gash under the eye and a body covered with purple welts, gallant Johnny continued to stumble to his feet. The last time, he crawled to the ropes, slipped twice, then painfully pulled himself erect.

The crowd was on its feet. No longer were they screaming for blood. Stop the fight . . . that's what they wanted. The referee cast anxious glances at Pudge Golder in Johnny's corner. He was a house man . . . had been told not to stop the fight for Johnny . . . that was up to Pudge. Pudge's face was an immobile mask. He made no motion. There were no towels for a Golder boy.

Willard hesitated as he stepped toward his helpless opponent. Gone was his lust for battle. He, too, looked to see if the white towel was fluttering in. Pudge didn't move. Willard turned, set himself, threw three left jabs to Johnny's unprotected face, then crossed with a right that could be heard in the galleries. Johnny Gallaher dropped his arms, sagged, slipped heavily to the canvas. His head hit the ring post and he lay very still. A ringside doctor looked at him. He was rushed to a hospital.

**P**UDGE went immediately to Frizbee's office, filled with the fight fraternity. "My boy put on quite a show, huh? We sent the suckers home happy, we did. It oughta be worth a couple extra Cs to Johnny and me, Mart."

"Yeah, Pudge. You'll get it," Frizbee said. "The crowd was happy, all right."

"Tell me, you guys. How happy is Johnny right now?" It was a young sports writer, Ling Sherwood. He was new to Pudge.

"Shut up, punk," Pudge said.

The hospital called Pudge in his hotel room at three in the morning. They told him Johnny Gallaher was dead. Pudge dressed and went out in the streets. He bought a paper. There was a story on the sports page saying Pudge Golder had sold his boy's life for a "couple extra Cs," and then hadn't taken the trouble to go to his deathbed. It was signed by Ling Sherwood.

"The dirty punk," Pudge said. He swore softly to himself.

There was no apparent change in Pudge Golder after Johnny Gallaher's death. Maybe a bit heavier through the middle and the suspicion of a slight double chin. But his eyes remained as cold, as fathomless, as penetrating. He got another champion—Freddie Pawnee, the welter—and he had his contenders and club fighters. Golder's boys. They were battlers.

Then the skids. Depression. No crowds, no purses. The market crash. The horses. Broke. Seven years. And now another Gallaher—brother of the Fighting Irishman. He'd be a natural. The fans would eat it up. A kid, living in the memory of his brother, traveling the road to gold and glory. What the writing boys could do with that!

The kid was dressed now, looking self-conscious in a new sports coat.

"Done much fighting?" Pudge asked.

"Champ at school. Hadn't much to beat, though."

"Going into the pro game like your brother, ain'tcha?"

"I've thought lots about it. I know

I'd have to live up to Johnny's name. I'm not very sure I could do that."

"I think yuh could, kid."

"Maybe . . ."

"It's in your blood, kid. You're a natural. Just like Johnny. Tell yuh what. Think it over and I'll drop in tomorrow. Yuh can't miss, kid."

"Yeah, Mr. Golder. Okay."

Pudge walked rapidly as he left the gym. A year. Maybe two. Then he'd knock 'em dead again. Him and Danny Gallaher. A natural. Like seven-eleven. Golder's boy would pack the suckers ten deep.

We'll murder the bums, reflected Pudge Golder.

So started again the fistic combine of Golder and Gallaher. Danny, a kid with the old moxie, returning the family name to a public which still remembered the carrot-topped man who took the long count as a champion. And Pudge Golder. Wise. Tough. Back with another Gallaher. A colorful story. A year. Maybe two.

Pudge played the game to its fullest.

nothing between. Sleep plenty. Regular. No night clubs. No late shows. Work, kid, work."

Danny made a quick hit with Cauliflower Row when he started the professional grind. Easy to meet, smiling, he was a welcome change from the sullen beaten men who worked at the ring game. Pudge took the kid through the state, where he scored half a dozen quick knockouts. Then the sports writers were invited up to Frizbee's gym to meet Johnny's brother Danny, talk to him and watch him work on the light bag. It was the bag that got them all. They passed up his shortcomings in the ring and wrote about the bag.

Even Ling Sherwood made one of his infrequent visits to the fight gym. He was standing with Pudge as Danny worked in the ring.

"He's a nice-looking boy," Ling said. "But he's just a good amateur. He'll get hurt. Plenty."

"He'll do," Pudge said.

The round ended. Pudge rubbed the boy down, sent him to a shower.

hissed, Boss—plenty if yuh don't wait out after him. He's a nice boy, Bos

The two men finished their drinks silence. Pudge handed the fighter a b

"Here's a fin," Pudge said. "Be sol when yuh show up tomorrow. Tell him what yuh know, Punchy. Remember he's Golder's boy."

"Yeah, Boss. He's Golder's boy."

Pudge Golder's next stop was at M Frizbee's hangout. The promoter was poring over a racing form.

"Forget the nags, Mart. This is business," Pudge said.

"Okay. Spill it, Pudge."

"Who's got Young Willard now, Pudge asked.

"Old Doc Baffle still has him around for a meal ticket. Fighting him down South. Doc's something like you, Pudge. Never lets a boy go that still packs meal ticket in his right hand."

"Yeah. Doc always liked money. Let's give the kid a couple of spots on your card. Build him up. We know the boys he can beat. Then Willard. The suckers will eat it up. The kid fighting for revenge against the guy that killed his brother. A natural, Mart."

"The kid ain't ready, Pudge. You know he ain't. Willard can't be much more, but he's got the savvy. What's the rush?"

"The kid's about as ready as he'll ever be, Mart. He's plenty ready if Willard puts on the heavy shoes. And if I know Doc Baffle, it'll be no trouble to sell him. Not as long as we talk in dollar marks."

"It's a natural, all right, Pudge. We use the ball park. Standing room only, Pudge."

"Yeah, Mart. A natural."

**D**ANNY GALLAHER was seen through a whirlwind list of fight Sensational. Dynamite. A kid with punch and a heart. That's what the papers said. And now Young Willard. The fight that Danny had pointed for . . . Danny and Pudge Golder. Together they had planned step by step to get this fight, to revenge the defeat and death of Johnny. Pudge, the brain the companion, the ring father. . . Danny, the boy with TNT in his fists and mayhem in his heart. That's what the papers said.

Ling Sherwood was a daily visitor ringside as Danny went through his first paces. He talked to Mart and Pudge about Danny and Willard and Doc Baffle. There was method to his manner.

"Sherwood looks like he's gonna say something," Pudge was talking to Frizbee. It was the day before the fight.

"Looks like it," Frizbee said. "He's only be guessing."

"He won't be far wrong," Pudge said.

"He can't hurt us," Frizbee said.

"Not us. Maybe somebody, but not us," Pudge said.

The next morning, it was spread clear across the top of Sherwood's sports page. It was in big type and by fight time everybody in town had read it. It said the Willard-Gallaher fight was a frame, that Willard was going to dive for Danny—that it was just a step for Danny as he knocked over bums on his way to the champ. It said Pudge Golder, with Max Frizbee's help, was manufacturing the whole thing for a pot of gold. It said Danny Gallaher was a nice boy. "Just the tool of a sordid game and crooked men," it said. The piece made interesting reading, and everybody in town wanted to go and see Danny Gallaher and Young Willard fight.

Pudge Golder, Mart Frizbee and Doc Baffle talked together shortly after the weighing-in ceremony.

"Sherwood made us a cinch for a sellout," Frizbee said.

"No wonder we're losing. We bet on the horses when we should be betting on the jockey's soft brown eyes!"

"Yuh've got lots to learn, kid. I'm not talking about boxing, either. But when these writing guys come around, turn it on. Give 'em the old one-two. You're fighting for Johnny, see? Revenge, see? You've come to carry the Gallaher name back to the top. And yuh come to me to get yuh there. Gallaher and Golder once more. Understand?"

"Yeah, Boss." Danny hesitated. "But I'd like to keep that stuff to myself. It sounds kinda cheap spreading that around."

"Get this straight, kid. You do the fighting. I'll do the thinking. All of it. You wanna go someplace? Okay—do like I say, kid."

"Yeah, Boss, yeah."

**G**ALLAHER and Golder. Pudge and Danny. Slowly, very slowly, the names grew in the consciousness of the entire sporting public. It took time. Time for Danny to learn his lessons. Time for Pudge to teach him. Time for writers to tumble to the story that was there. Time to maneuver managers, promoters and fighters into a string of sensational victories for the Irish boy and his boss who was wise.

Pudge was with the boy constantly. "No drinking, kid. Gotta girl? Not a real one, huh? Forget all of 'em, kid. All of 'em. They're no good to yuh now. Watch your eating, kid. Three meals and

Danny was learning his jabs and hooks from Punchy Hogan. Punchy'd been slated for big things, but ran into too many right hands one night in Chicago. He was never quite the same afterward. But he got two dollars a round for working with Golder's boys. He didn't have to worry any more about keeping in shape. It was nice to have money in the pocket when he wanted to lift a few. Pudge found him in a smelly tavern around the corner from the gym.

"Hello, Punchy."

"Hiya, Boss."

"I wanna know about the kid. How's he?"

"So, so."

"Can he learn, Punchy? Has he got the stuff? The savvy? You're in there with him, Punchy. You tell me."

"I'll tell yuh, Boss. He's got some swift and he's good in close. He can think and he can take it and come back for more. You know that."

Punchy paused and then tapped the breast pocket of his coat. "It's here he ain't got it. He fights just like it was a job to do. He don't fight 'cause he likes to. Up there punching the bag he looks like something. He likes to do that. But not fighting. All the time I leave myself open to see if he'll go for me. All the time he pulls his punch. Don't wanna hurt me. That's a laugh, Boss. He can't hurt old Punchy. But he's gonna get hurt

"You might need it," Doc Baffle argued. "If this fight ain't good, you'll be living on peanuts for a long time."

"The suckers will forget the story in month. They always do."

"But they won't forget a tank fight," Pudge pointed out. "Even the suckers can tell a boy with the heavy shoes on when they've been told he's wearing 'em."

"We gotta take 'em off, that's all," Doc Baffle said.

"Yeah, we gotta take 'em off," Frizee agreed.

"The kid ain't ready for Willard. It might be slaughter," Pudge said.

"We gotta fight it straight," Doc Baffle aid.

"Yeah. We gotta," Pudge muttered.

DANNY was nervous as he warmed up during the semifinal. Pudge was silent as he taped the kid's hands. He voided Danny's eyes. A handler yelled, "You're on."

Danny spoke, "It's level, ain't it, Boss? I'm on my own, ain't I? I don't need any of that kinda help, do I, Boss? I gotta know before I go out there. No clinching, Boss. Give it to me—straight!"

"Sure, kid, sure. It's square. Pudge Golder's telling yuh it's square. It's a tough fight. You'll have to be good to win. But you're a Gallaher, ain'tcha? You're Golder's boy. Go out and punch hell out of this guy. For Johnny. For us. He can't hurt us, kid."

Danny Gallaher grinned at Pudge Golder. It was his first real smile in days. Awkwardly he stuck out a taped hand. "We'll murder the bum, Boss."

Early in the first round, Young Willard slipped inside of Danny's guard and, as they clinched on the ropes, butted him over the eye. It was streaming blood at the bell. Pudge Golder had a hard time closing the cut. Danny allowed Willard in the second with some long hooks that bounced off his head. Young Willard was smart. He knew all the answers. He'd cover up, let the kid get close, and then blast him down stairs. When Danny's guard dropped, he'd whip to the head and work on the eye.

It was the kind of fight that had the crowd on their feet from bell to bell. Danny threw caution to the winds, trading blows with a past master of counter-punching. "Use your left, kid, your left!" Pudge pleaded. "Keep him away from yuh. Box him. Don't punch with him. He'll knock yuh stiff unless yuh keep him off!"

In the fourth, the kid began to tire. Willard's body blows were slowing him up. He couldn't see much out of his injured eye. Danny came out slow for the fifth. He brushed at his eye with his glove. Willard wrestled the kid into the ropes. As they bounced off, he threw a left jab at Danny's eye. He followed with a right hook. It caught the kid in the Adam's apple and he sprawled back against the ropes. Willard came in for the kill. He threw two short lefts into Danny's unprotected face. He crossed with another right that smashed into the kid's mouth. Danny sagged slowly toward the canvas. Willard set himself and ripped a right that spun Danny half around. He fell hard.

Willard danced to a neutral corner. He waved to his handlers. It looked as if it was all over. Willard turned to the ring. There was Danny pulling himself slowly to his feet by the ropes. His face was a bloody smear, and he pawed at his neck with his gloved fist. He shuffled toward the center of the ring. Willard blinked and then charged back. The kid was still standing when the round ended. He was braced against the ropes as

Young Willard smashed with both hands at his head and body.

Pudge had to lead the kid to his corner. He worked desperately getting Danny ready for the sixth. At the rasp of the ten-second warning, Pudge gripped Danny tightly by the shoulders and said something he'd said before, to another Gallaher: "You're through, kid. Willard's gotcha. But remember you're a Gallaher, Danny. You're a champ, Danny. You're Golder's boy. Get in there now. He can't hurt us."

Danny's bleeding lips split in a grin. "Don't let the ref stop the fight, Boss. Don't ever take a technical kayo for a Gallaher. He's tough, Boss, but we'll get 'em. We'll murder the bum."

Danny jerked to his feet at the bell, staggered across the squared circle. Both of his eyes were almost shut now, and he squinted at Willard. He stumbled forward. A right hook to the chin caught him as he was coming in. It lifted him almost off his feet and he fell straight backward onto the canvas. His head hit hard and he lay still.

It was ten minutes before they got Danny out of the ring. Pudge worked over the kid. He was thinking fast—thinking the kind of thoughts that made him the tough, wise man he was.

He's no champ, thought Pudge. But he's a fighter. Good for lots of nickels. A club boy. He'll put on a show for the suckers. There's plenty of peanuts in the sticks. Yeah!

Danny was silent as he showered and dressed.

"I'll drive yuh home, kid," Pudge said.

As they stopped Danny blurted, "I'm sorry I let yuh down, Boss. I . . . I guess I just wasn't good enough for that guy. But everybody gets beat, don't they, Boss? We'll start in again, huh? We can still murder 'em, huh?"

Pudge looked straight ahead. His eyes were expressionless. The muscles in his large face worked rapidly. He was thinking . . . meal ticket . . . peanuts . . . the sticks . . . suckers . . . peanuts . . . He didn't speak.

"Don't be too sore, Boss." The kid's words tumbled out: "I can improve, that's a cinch. I'll work harder than ever, Boss. It's okay now, isn't it, Boss?"

Pudge turned to the kid. "You're through, kid," he said. "Yuh haven't got it. Starting now, you're not Golder's boy any more. Take up tennis, kid, not fighting."

"But Boss . . . I . . . I can't quit now. You're kidding, ain't yuh, Boss? Just wanna see if I still wanna fight, huh, Boss? I gotta. We'll start again, huh? Like you say, Boss, they can't hurt us . . ."

"I'm through with you, kid. You're headed straight for punch-drunk alley. So long!"

A mask of pain spread over Danny's face. Pudge slammed the door and jerked the car into gear. He drove along the lake and into the country and let the wind blow in his face, and he felt better than he had for a long time.

PUDGE GOLDER quickly settled his affairs in the big city. He drifted west, taking up headquarters in Chicago. Time passed. December 7th. It was tough to get young kids as fighters. They had another battle on their hands. And the older champs and chumps—they were being taken. The racket got tougher—almost tougher than the tough man, Pudge Golder. He started handling soldier shows. Matching the best in the service with the best outside. Promotion was difficult. People didn't have time to watch other people fight. Bart Manders, the best of Golder's boys, was gone. Air Corps. Things were tough.

Pudge came early to the gym that

afternoon. A bunch of soldiers were down from the fort to work out. Maybe one of them had class enough to fill a spot on his next bill. Pudge slumped into a chair, watched a young Negro work in the ring.

Slowly, like the first beats of a hot drummer, came the low staccato of the light bag. The tempo increased, and ice ran down Pudge's backbone. The gym rocked with the volume of the bag. The two sparring in the ring turned to watch. Pudge remained glued to his seat, afraid to turn. Danny Gallaher . . . it couldn't be. He'd quit fighting, hadn't he? Pudge had made inquiries. Danny had disappeared.

Faster and faster went the bag, and the echoes boomed across the gym. Pudge slowly turned and watched the man crash at the bag with a defiant surge. There was silence as it bounced crazily to rest. The man's body relaxed, and the fire went out of his eyes. He shuffled off the platform with his head bent down.

PUDGE was tense as he looked at the man. His body was heavy and he was thick through the waist—the body of a man who had absorbed punishment for years in the ring. And his face. Both ears were bent oddly out of shape. There were scars over the eyes and across one cheek. The skin had thickened around the eyebrows. His nose looked as if the bridge had been shoved back into the face. The eyes were sunken deep into the head. They looked dully at the people. The man's movements were slow and mechanical, as if he realized there was nothing to hurry about or no place to go.

It was Danny Gallaher.

Pudge Golder's knees shook as he got to his feet. He went to his small office at the end of the gym. He sat and stared at the pictures on the wall. Golder's boys. Pretty soon the door opened. Danny Gallaher was in a private's uniform.

"Hello, Pudge."

"Hello, Danny."

"Surprised, Pudge? Don't look quite the same, do I? Not very pretty, am I? Didn't take up tennis like you said. I've been fighting, Pudge. Out on the West Coast. They call me Tommy O'Toole out there. Maybe you heard of me . . ."

Pudge nodded. O'Toole. Not much shucks as a boxer, he'd been told. But a club fighter. Put on a good show. Took a lot of punishment. But always a good show.

Danny walked around the room. "See you've got your boys on the wall here. Golder's boys, you call 'em, ain't it? There's Johnny. Made yuh a nice piece of change, didn't he, Pudge? Johnny's dead, huh, Pudge? Don't see my picture. Is that nice, Pudge? Here. Here's a picture for your wall. Yuh can frame my head, Pudge. It won't be a pretty picture, will it?"

Danny laughed deep down in his throat. "But I'm here on business, Pudge. Give me a spot on your next card, huh? Give me a tough boy. I'll put on a good show for the suckers. What the hell, Pudge! They can't hurt us. Isn't that what you've gotta say? Yeah, that's it. They can't hurt us."

Danny Gallaher turned and was gone.

Pudge Golder sat a long time and looked at the door. Then he opened a side drawer. Lying on top was a picture. It was an old picture but it still had a shine. Pudge stood it on his desk.

Then Pudge Golder opened his bottom drawer. He took out a quart bottle of Scotch whisky. He filled up a water glass and sat there and looked at the picture and got very drunk.

THE END

## Are you suffering from VITAMIN DEFICIENCY?

### Check up on yourself

- ☐ Do you tire easily—feel "all-in"?
- ☐ Are you nervous, jittery, irritable?
- ☐ Appetite gone—seldom really hungry?
- ☐ Troubled with pimples, skin blemishes?
- ☐ Do you suffer with muscular weakness?
- ☐ Is your body resistance under par?

### IF YOU DON'T SCORE 100% READ THIS CAREFULLY

Vitamin deficiency can be a very serious matter. If you're suffering or even slightly troubled with any of the above symptoms, it may be a tell-tale sign of vitamin deficiency! Play Safe! Take one GROVE'S Vitamin Capsule daily for your protective requirements of essential vitamins A and D plus all-important B<sub>1</sub> . . . vitamins frequently lacking from your daily diet. It costs less than 1½¢ a day to get the wonderful, protective benefits of GROVE'S Vitamins, when purchased in the large size. An amazing low price! Unit for unit, you can't get finer quality vitamins. Potency guaranteed. Don't risk a deficiency. Don't gamble with your health! Start taking GROVE'S A B<sub>1</sub> D Vitamins today!

I am backstage helping this blonde warm up, holding her while she ties herself in knots. But, it seems, Susie is out on the snooperoo

Somewheres, Sunday  
Editor, THE AMUSEMENT WORLD, New  
York City.

Dear Sir: I guess there has been plenty of talk around since the names of Barton & Barton has started failing to appear on the markeys and I am writing this letter in hopes you will publish it to tell my hosts of friends where I am—though I can't tell that—and also Susie Barton, my ex-assistant in the act and wife.

It goes back aways. We was booked for a split week at the Two Star in some town upstate that I have forgot the name of and though our act is a staple commodity in the entertainment field I will tell you in case you have forgot through our long absence that it was known as Barton & Barton Mentalists and Magicians. At the Two Star through some mistake we are dropped into next-to-closing, between a blond kinker name of Marjorie something and a dumb act consisting of two dogs who jumped through hoops, set up and so forth.

This kinker, the blonde, is a medium-looking dish and I am backstage helping her warm up, holding her back while she ties herself in knots, etc., and Susie is dressing. Only it seems Susie is not dressing but out on the snooperoo and from where she's standing behind the scenery, I guess me helping this blonde loosen up looks to her like I am bending over this jill to give her a light smooch. Well, Susie is edgy over a little hooper in Buffalo the week before, that she held against me long after I had let her go.

However, I did not think that her revenge for this platonic assist would take such a disastrous result. But I will get to that.

WE GET out on the stage after the kinker has closed to the tumultuous silence, and Susie goes down into the audience after blindfolding me. The first part of the act is the mental part. I read the numbers off bills and cereal numbers from keys and stuff and I guess it is not letting fall any professional secrets to say in this publication that I do not exactly read Susie's mind like an open book but that we have a *certain* method. Anyway, this method involves a little co-operation from Susie but Susie is giving from strictly a Woman Scorned, with the result I get the cereal numbers all wrong and can't tell a Ingersoll from a RR watch and in general go very sour on the mental part.

Well the audience don't go for this so good and there is some rather rude remarks made sotto vocco and not all of them so sotto neither. So I cut the mental part short and Susie comes up on stage to stand there while I do the prestidigitating.

Now all Susie has to do is stand there and hand me a gimmick every once in a while and I figure she cannot queer me here and that I will give an unparalleled performance in the art of necromancy and have these peasants eating out of my hand in no time. Do you remember the old song Cantor used to use—If You Knew Susie Like I Know Susie . . . ?

Now my magic act is not absolutely new but it is the finess with which I do it that has brought me my place in the show-business world. I use rabbits and a tall silk hat and I finish off with flags. I take all the little United Nations flags and I put them in the hat one at a time and then I hand the hat to Susie and reach in and pull them out and they are all tied together.

And as the grand final I stuff them back in the hat and pull out a very large edition of Old Glory.

Now I am giving this performance, you remember, shortly before Xmas of the year 1941, so you can see this last touch is seeduled to have them laying in the aisles and whistling.

So I am up there working my heart out, with my rabbits. I use a little dialogue which I can't give you verbattim because of space but which is pretty funny—"They say rabbits can't do anything but multiply but I got one here that can subtract and add." Just a sample, I wrote it myself.

Anyway, I am up there working my heart

out with my rabbits and I am going good. I at least got them quiet and not n no sotto remarks and I go to work w flags.

I stuff the little flags in and I stir around. Well I pull the flags out and tied together because of *certain* things I when the flag of China comes out then couple of people clap and I guess I ha 2 Chinese in the audience and that when out the big U. S. flag they'll come at They would have to clap at their own fla

I stuff the little tied-up flags back i Susie is standing there holding the hat reach in and I pull out the big flag and waving it. The audience is rapt, and the start coming unwrapt. In a word frar did not expect no reaction like I got.

The band is giving it Hail Columbia in the pit and there is a low mutter r through the audience like the wind in bert's alley before a storm. The mutter to a crescendo and I see a couple of gu ing to get through the orchestra pit and the stage and I am saying to myself that the crowning performance of a long an trous career. Which is also strictly from

But the pandemonium has a strangel ister sound to it and I look around and has took a powder. I look down at the It is the biggest Rising Sun you ever saw. frankly the only thing that saves me is th first man of the mob has stepped in the drum and lost a few seconds. I am for the door but swift and I hear Susie yell a "Tell that blond sidewinder about *this*, time you see her." But I did not have tim

I make it into the alley and the m breathing on my neck like and I am fig that I have got to get to a safe place and I think of any safe place and I am larr down the stem and I see a police station dart in there. The angry mob arrives with hot breath on my heels and that is the m thing they are calling me.

The cops don't let them at me and the gant gets on the phone and gets a J.P. there and the first thing I know I am ch with exciting a riot, treason, arson and so

"Judge," I says when I gets a chance, a artiste, a performer. I never meant to any Jap flag out of that hat. I hate them eyes as good as any man but my wife an sistant is sore, see, and she plants this othe which I have not used since we made umphant tour of the Orient some time he

"So," the judge says, "you do not sub after all but are a good 100% American."

"No man is more anxious to defend Country, your honor," I says. "The only son I am not in uniform is that I am a 3A with a dependent wife, not mentioning family."

AT THAT point I hear a familiar voice at the back of the milling throng: "Wh married him I was making twice what th draws now hoofing single on the Keith and I can do it again." I'll let you guess w voice it was.

"She don't sound very dependent to the J.P. says, "and I intend to hold you wit bail and arrange you before the grand j

"Okay," I says, "but you are depriving Country of a Soldier because when I h that Calumy I made up my mind right the enlist."

"You did?" the judge says.

"Yes, sir," I says. "I don't take off my h any man in my desire to make this fair land

"You don't have to make a stump spee the judge says. "Sergeant, just go down street and fetch up that recruiting officer."

Well, that is really the end and I guess I giving away no military secrets when I ask to translate to my hosts of friends that I working up a act with a k—g—oo, who w be jealous of no blondes, and will bring th home soon though I am figuring on brea it in in M—a, or maybe just opening it in T—o.

Yours truthfully,  
Eddie Barton (The Grea  
and his Kollege K—g—

A SHORT STORY  
COMPLETE ON THIS PAGE

## How Doth the Busy Beaver—

Continued from page 13

no sure way to feed. And there's still mamma and the little ones. What's a fellow to do?

Well, the beaver figured it out, and his answer is a dam, bringing into creation a personal pond, with a winter's supply of eating timber anchored in the mud at the bottom of the pond, plus an impregnable family mansion, built on what amounts to piles.

First, the homesteading beaver spots a forest plentifully populated with soft-barked trees. There must be a stream running through it; he doesn't especially care how large or how small.

This stream he proceeds to dam, his operations depending exactly upon the type of problem. If it's practically a dry pond, the start may be made with sticks and brush pulled in from the shore. If it's really a stream with a current he'll cut a tree up above and float it down with the current until it jams near the point at which he wants to build. If it's a stream with little motion he may even start his logging operations downstream and tow up his foundation.

Such a tree, or trees, of course, once set, catch silt and driftwood, but the beaver is working like fury lugging in material from the side lines. Mud, sticks, stones, grass are all grubbed up or pulled in and worked into the mass. Even dead trunks ashore may be cut and steered to the place. Sticks and twigs are usually dragged in with the teeth.

### Mud in the House

Mud, the major ingredient, once the foundation is set, is carried in the hands, sometimes after minute-long dives to the bottom, and worked into place with the hands and the sides of the face. The beaver starts in the middle and builds toward either shore.

A dam may be ten feet long, or it may be a thousand. There's a 900-footer in Alaska, another almost as long in Yellowstone Park. There's one 400 feet long in Wisconsin, and any number 200 feet long in some of our northern states.

Beavers don't work on a dam in great labor gangs either. Colonies are small, and while several may be working at one time, they never seem to pay any attention to one another. Beavers work preferably on clear, moonlight nights. They almost never work days except in case of emergency—something such as a break.

And, as the dam goes up, each beaver couple starts to build a house, keeping the top of the construction just above the height of the deepening water. This house may be affixed to the dam, to the shore or to an island in the pond.

Its foundation is practically the same as the dam, being composed of sticks and stones and twigs and such, so woven that it can't dissolve or collapse. But once the dam is completed and the water level established, this family residence is topped with a big domelike room slightly clearing the water, and provided with a dry wooden floor the water doesn't quite reach. This room is usually from four to eight feet in diameter and three or four feet high. Some as large as twenty feet across have been found.

"The two entrances and exits are down through the floor and under the water. One of these is primarily for the pulling in of timber. The other is for family use. The spare hatch is convenient if submersible enemies come up from under to pay an unexpected call.

The top of the lodge is of heavily

woven thatch, but it is never completed until freezing weather sets in. Then, the beavers plaster it thickly with mud, which freezes in an armor plate often ten inches thick.

In the meantime, a full winter's supply of edible timber has been felled upstream, ferried down to the dam and anchored butt-first in the mud.

So! Come ice and sleet and cold and snow, the beaver family is dry and snug. Nothing that prowls has the strength in its claws to tear out that roof. When anybody gets hungry, the old gentleman merely slides down the chute and comes back with a suitable sapling.

The naked sticks are tossed out for subsequent use in repairing the dam or maybe the home the next summer. For repairs, of course, must be constantly made. Break a beaver dam and the reaction is prompt. The pond may be still, with not a ripple, or a sound, but suddenly a brown head will break through the water near a lodge, and the beaver will swim unerringly to the point of trouble. Surveying the break thoughtfully, if briefly, he'll slide down into the hole and go to work.

The lodge is allowed to go more or less to rack and ruin in the summer. The mud melts and the rains wash it loose. But when the nights grow chill and the leaves about the pond begin to turn to flaming scarlet and shimmering gold, the family reassembles at the old homestead and starts looking it over. Shortly, they're repairing all the leaks and sealing it tightly shut again.

It takes a pair of beaver about six months to build a lodge at leisure, but if rushed by threat of freezing weather, they can do the job in thirty days.

The beaver's logging operations are as amazing as his carpentry and engineering. Standing on his hind feet, he eats round and round a tree until what are going to be the stump and the falling trunk look like a couple of smooth, if briefly tapering, spikes balanced point upon point. The wind or the law of gravity finally brings the tree crashing.

Stories that a beaver can drop a tree in any desired direction are exaggerations. A toppling tree often falls upon the beaver responsible, trapping and even killing him.

His hope, of course, is that it will fall in the water. If it doesn't, he may have to cut it into smaller pieces, and roll or drag these into the drink. If his pond is old, and the shores are pretty well cleaned, he'll dig canals back into the forest and float his timber out.

### They Gnaw 'Em Down

While beavers usually work on saplings they frequently saw down trees a foot and a half thick. Contrary, again, to accepted lore, only one beaver works on one tree. He cuts with special dental equipment consisting of long, curved teeth, hard and sharp and covered in front with almost unbreakable enamel. These teeth grow constantly. He has to keep sawing and wearing them down.

Eventually, of course, although it may not come for generations, he logs the place bare of his type of wood and moves on. Or, as has happened many times, he is completely killed out of a section by fur-hungry trappers. Then those untended dams constitute definite dangers. A big beaver dam, breaking in British Columbia, flooded a valley, derailed a train and killed several people. Other damaging floods of lesser propor-

tions have happened all over the map.

The commercial value of the beaver, of course, is his pelt. Surprisingly easy to trap because of his trusting disposition, and possessed of soft but durable brown fur once used exclusively in male millinery but now a favorite with the ladies, he was almost literally slaughtered from the face of the earth.

Conservationists came to his rescue just in time, and he came bouncing back. All he needed was the chance.

In the spring of 1920, the State of New York loosed three pairs in the woods of Palisades Park over on the Jersey side of the Hudson. A survey made fifteen years later revealed that these six had become approximately one thousand, that they had spread over one hundred and sixty square miles, had built more than one hundred dams, that several had crossed the Hudson, and that one pair of rugged pioneers had migrated all the way to the Catskills more than one hundred miles northward.

### Unknown Quantity

Nobody knows what the beaver census is in New York State today. It may be a half million. I've seen 'em as far north as Saranac Lake.

Maine reports an approximate population of 200,000.

The real headquarters of beaver life in this country, however, still is where it always was—the upper reaches of the Mississippi.

Trapping now is generally done under state supervision in regions where their care-free damming operations are really damaging human property. The state game commissioner having been appealed to, declares open season on him, and the trappers, paying an extra fee for the privilege, start to arrive from all directions.

The state carefully watches the proceedings, and officially tags each skin. Last year in Maine, a total of 7,249 were officially taken. The pelts are worth about \$25 apiece. Furriers must remove long, coarse, apparently protective hairs scattered through the soft, close fur, but a newly developed process of clipping rather than plucking now promises to make beaver the most beautiful, if not the most precious, fur on the market.

A few years ago, the Federal Department of the Interior officially recognized the beaver as an agent of progress by assembling him in numbers and scattering him widely to assist its human operatives in sundry projects ranging from erosion control to the better housing of trout.

The Indians had a legend that a Great White Beaver, living far to the northward, was the father of all mankind. At current quotations that would seem to be something of a libel. He has made his contribution in clothes, contours and customs.

He's changed boundaries and histories. Men have been shot and killed over him—there have even been "beaver wars"—but to hang mankind and all its works around his neck isn't fair.

He'd never let his world get in our sort of shape.

He couldn't. The principal reason was previously noted. Nature taught him to work hard, stay home, and keep the general peace.

There may not be much color to that type of living, but its aspirin content is low.

THE END

### —SAYS "OLD SARGE"

It's war—against worms! They attack most dogs—and all ages. But my outfit's on the watch all the time.

We use the most modern weapon in the war against worms: Sergeant's SURE SHOT Capsules (or Puppy Capsules for pups). That's the way to kill and clean 'em out, pronto! Then Sergeant's Vitamin Capsules (Vitapets) to help bring back normal health.

Read about worms (and other dog ills) in the Sergeant's Dog Book. Free, at drug and pet stores.

# STALINGRAD...

## which we shall also take

ADOLF HITLER

**B**ACK in September, Hitler ranted over the radio that Stalingrad would be taken, that its capture would be concluded. But once again the Nazi timetable ran into a snag. The man whose name the heroic city bears appealed to his people to die, but not to retreat and—like Moscow—Stalingrad still stands. This Red Verdun, under siege since August 24th, is striking back, and methodically, decisively, brilliantly,

the resolute men and women of Russia have cut deep into the ranks of the Nazi invader, who has lost his boastful initiative. Well over 300,000 enemy troops have been killed or captured in the area where the Volga and the Don bend.

These exclusive photographs, recently brought back from Russia by Collier's correspondent Irina Skariatina, show a phase of actual combat in the stirring Battle of Stalingrad. ★★★

Tanks rumble forward to clear the way for Red infantrymen. This photograph was taken through the open port of one of the advancing tanks. The Russians have adapted and perfected panzer tactics, their tank columns attacking far in advance of the infantry

The objective is a strategically important village occupied by the Germans near Stalingrad. In the dusk of early evening, Red scouts and sappers are sent out to reconnoiter. Armed with automatic rifles and carrying explosive charges, they make their way stealthily through the forest

The infantry follows in the wake of the devastating tanks. supremely confident Russians rush in to reclaim land that has been too long in the enemy's possession. Today this same field is snow-wrapped, and biting blizzards are whipping tired Nazi bodies

Above: Antitank gun crews set out at dawn. This crew, commanded by Lt. Stolypin, has been ordered to take up position on the bank of a stream to repel any counterattacks by enemy tanks

Below: Soviet field artillery is moved into firing position for an attack on the enemy. Sergeant Sergeyev's men move up field gun under heavy fire from the enemy who has detected their movements

The village is again in Soviet hands. The battle is over and these Nazis who have not found death near Stalingrad will live in dismal defeat. Even now the raucous, unfulfilled predictions of their Fuehrer may be ringing in their ears as, herded together, they march silently to a prison camp

Camouflaged infantrymen approach closer to the enemy, crawl toward the Nazis' outer defense line. They take advantage of the uneven terrain while the Red artillery covers their advance.

The Red air force has been busy overhead, strafing and bombing. In this attack, Sr. Lt. Baranov again distinguished himself by shooting down two more enemy planes to bring his total to 26.

When the first houses in the village are captured, Soviet troops maintain fire from doorways and windows to dislodge reluctant Nazis. Here two Red soldiers are firing a mortar from an attic window.

# ST. OLAF'S DAY

By Harold Lamb

ILLUSTRATED BY HARRY MORSE MEYERS

The hawk's beak flashed down, and Salza, with a cry of pain, struck at the falcon

It was a magnificent bird, trained to capture meat for its Viking master. Ernst of Salza desired it mightily, and his greed betrayed him

THE first of it was Ernst Salza's waking in the morning. Straight to the window opening he went, and saw a sea mist coming in. Then he felt sure that this would be his great day. Mist and a light breeze—they were sheer good luck.

To check his excitement, he smoothed out the blanket on his wall pallet; he cut himself a slice of black bread and spread cheese sparingly upon it with his knife. Drinking a little water, he gave himself the pleasure of eating a few Syrian dates that had come in on his last ship. For Ernst Salza was a careful man.

As he broke his fast there in his sleeping cell, his thin body towering in its black gown, he lifted his eyes to the whip on the wall, the whip that had lashed raw the flesh of his back when he had become an apprentice, forty-eight years before. An apprentice of the Hansa that

outsiders called the Hanseatic League, which he now served as agent.

Beside the whip hung the motto he had picked: "Success comes only with the last farthing."

Once Klas Stortebecker had seen that motto and laughed. "Never try for the last farthing, Ernst," he had giped. "'Tis bad luck, that."

Klas was superstitious. Klas buried the men he killed, and had a Mass said for them, with candle and bell. But Ernst Salza had shed the blood of no man.

But Klas would come as he promised, and the mist would hide his coming.

At the window, Salza could barely make out the masts of his own cogs moored to the Bridge that divided his Kontor, or warehouse, from the rest of Bergen-town. He could not see the fishing fleet clustered in the half-moon harbor, or the quays of his competitors, the Norwegians and foreign merchants on the opposite side.

He had closed, by virtue of the power of the League, all the Norwegian coast to those foreigners except the Bergen port of arrival. He had fixed a high duty on the goods they imported, while the Hansa goods came in to the Kontor free. Still the strangers flocked in, to gnaw at his monopoly of the fisheries and the lumber. . . .

With a key from his chain he unlocked the clasps of his record book. Carefully selecting a quill and touching up its point with his knife, he dipped it in ink, and wrote:

"Declaration. I, Ernst of Salza, Achtzehner of the Bergen Kontor of the Hansa League do avouch and affirm on this day of St. Olaf in the Year of Our Lord 1428, the harbor of Bergen was attacked during the fourth hour—"

He hesitated, thinking whether he should write more.

"—by the masterless men and outlaws of Visby," his pen traced out the words crisply. "Wherefore, I do accuse these men of Visby commanded by one Klas Stortebecker, of piracy. I demand that all Christian ports be closed to them, and victuals kept from them, and that they be hunted down and harried to their deaths."

THIS he read through carefully, and signed his name beneath. Now, whatever happened to Ernst of Salza this day, there would be evidence in writing that the Hansa had neither part nor parcel in the raid. And who would know the hour in which he had written it?

Out in the mist he thought he saw the tracery of a ship's mast moving in. With a tingle of excitement he closed and locked the book. Quickly he carried it

out to his desk in the meeting hall. Over that desk hung his new map of the Northern Sea, marked boldly *Mare Germanicum* and in smaller letters beneath, *oder Nord-See*. For forty and eight years Ernst Salza had driven himself unsparingly to make that inscription a fact.

A glance at the dripping water clock showed him that it lacked a quarter of the third hour of the morning. The time was close.

When he strode out of the hall, the journeymen on the stairs bowed to their belts. At the gate, the Kontor guards clashed their halberds in salute. Ernst Salza kept military discipline within this warehouse that he had built like a fortress. Glancing to right and left as he crossed the courtyard, he noted mechanically that the pack of mastiff dogs were loose, the men-at-arms cleaning their crossbows, as he had ordered.

But out on the quay, where apprentices trundled barrels of pitch and soap ashes, the half-dozen men of the Bridge watch were gathered around something, and that something wore a skirt.

No women were allowed upon the Bridge. Not that Salza cared what might go on between the Kontor's men and Norwegian wenches, but he was jealous of the trade secrets of the Kontor. So his men slept in their cells of nights, like

onks, and the women were kept out. "A redhead, my sir," Bode of the guardsmen explained. "With a trifle to ill."

Red indeed was her hair, hanging long upon her shoulders—so she could not be married. White and clean her small linen tippers, so she could not have walked far. No broad-cheeked peasant lass, but girl with impudent eyes.

"What to sell, woman?" Salza asked.

She curtsied gracefully, smiling, showing him a blue cape, bright with embroidery that she held. "My name, sir, is Kari. And will not the merchants of the great Hansa give me a price for this that I made?"

"No," said the agent, without a second glance at it. The girl Kari drew back the mass of her henna-red hair, and the lustful eyes of the halberdiers went up and down her body. Her long eyes had the green of the sea in them. "We have both, narrow and broad, to sell, not to buy," Salza added mechanically, wondering what had brought her here.

BODE touched his arm, and he saw the square leather sail of a longboat turning in to the quay, with one man at the steering sweep. This stranger let down the board with a crash, and let go an anchor stone. "Ho—good is the landfall," he called, "on St. Olaf's day in the morning."

Jumping up to them, he swayed with the feel of the sea in his legs. Leather covered his long body; a pair of horns projected from a dented and polished iron cap. "I rode the long ways," his voice chanted, "on this steed of the sea."

A gold ring gleamed on his arm, and Salza saw that it had Icelandic runes upon it. He thought that this man might have stepped out of the mist of a century before now.

Suddenly Kari laughed. "By the saints—the hath the look of a Viking. Do hosts, coming out of the mist, have a way of speaking, my sir?"

Vikings, Salza thought, no longer sailed in their dragon ships to raid out of Norway's coast. No, they had lived in a darker age of barbarians. The seararer looked at Kari's hair, and the scar along his chin made it seem as if he grinned. "Ay, woman," he said, "they come back at times from the isles of the sea to the old country."

Reaching down, under the aft deck of the boat, he pulled up a hoop, with a great brown bird, perched upon it, hooded. Its wings lifted restlessly as it sensed the men near it.

"An eagle, that," cried Bode.

"Nay, a falcon of the Green Land that gathers meat for me."

"At sea?" demanded Salza, noticing the white marking on the bird's throat, the grip of its talons. Not for many years had a trading ship touched at Greenland, to fetch back one of these giant falcons, the rarest of their species, and seldom trained.

"The sea or the land—it is all the same to this sky-soarer," the Viking said. Over the water a crane was winging lazily. "Now watch," he said, "for this bird is fast."

Pulling loose the thongs, he drew the hood clear of the restless head. Taking the falcon's talons on his arm, he tossed it up. The brown wings threshed over Salza's head, and the hawk was soaring.

"Hungry it is indeed," cried the Viking.

So swiftly did the brown falcon circle up that it was over the crane before it passed. The wide-winged creature sighted the falcon and swerved, its long beak pointing up. The falcon circled higher, and the crane headed for shore.

Suddenly the brown bird swooped, driving down at its prey. Cutting in from the side, it struck the crane, and feathers sprang into the air. Hawk and quarry shot down, until the brown wings threshed, and the falcon reached the ground tearing at its victim.

"Savage it seems," Salza said coldly, "yet I'll pay thirty nobles in hand for it."

The Viking, watching the bird, shook his head. "Elijah ne'er sold his raven."

"Forty then," Salza nodded. "Coin of Lubeck."

"Not for forty, or a hundred."

The Viking, it seemed, was quick at bargaining. And Salza wanted that falcon the more. His mind quested along its possibilities. The falcon could go with the Baltic convoy, from Lubeck the headquarters of the League, on to Muscovy, or even down the rivers and over the Brenner Pass to Venice, where he could get Eastern jewels for the bird. And those jewels might be cleared in the Amsterdam market for more than a thousand nobles.

"We can give the highest price," he conceded, "because we have a market. Agreed at a hundred."

The Viking only shook his head.

Unreasonably—for he was watching the haze over the harbor intently for a sign of the ships coming in—Ernst Salza craved the brown falcon, as he had never craved liquor. He could see the picture of it so clearly now; himself appearing with the royal Greenland bird, before

the council at Lubeck to announce the triumph of this St. Olaf's day, and the full mastery of the Norwegian coast. "Have it your way," he cried, "and name your price for the falcon. Almighty! Have you no need of monies?"

"That have I," the Viking laughed, "for this is the day of my namesake, Olaf. And I shall be opening up the ale kegs in Bergen-town."

"Well, so—"

"So the falcon is mine, and will be mine, merchant." Olaf the Viking rubbed the scar on his chin. "For I doubt much if the bird can be held by any hand than mine, devil that he is. Here!" He pulled off the gold arm ring. "Lend me a fistful of farthings on this surety."

Checking an exclamation of anger, Salza turned the heavy ring in his fingers, pondering. "There are runes written on it," he murmured.

"Aye."

Salza glanced into Olaf's gray eyes, level with his own, and made his decision. This seafarer, who kept a rare falcon for hunting mate, who knew so little of the power of money, who thirsted after ale from a keg, would not have the skill to read. He handed back the arm ring to Olaf. "As you will, outlander," he said indifferently. "Keep the ring. The Hansa does not deal in pawn. If it is coppers you want, my men will bring you out two score, and a quittance to sign against their repayment."

He called out in German to a passing clerk, and strode away from them into the Kontor gate. Across the harbor he had seen four sailing barges coming in from the fiord, and he had made out the wolf's-head crest of Klas Stortebecker on the leading sail. Olaf was watching his falcon, which had taken to the air again and was coming down in lazy circles to the longboat. Carefully Olaf coaxed the bird to its perch and tied the hood upon his head. He gave the bird water.

WHEN a journeyman approached with a fistful of copper coins, Olaf pouched the farthings without counting them. He took the pen the other gave him, and made a cross where the man's finger pointed, beneath some lines of fine writing on a scrap of parchment.

"Dunderhead!" cried Kari involuntarily, when the man had gone with his receipt. "Did you read what you put your name to?"

"Not I." Olaf stretched his long arms, and picked up an ax with a bone handle and shining steel head from the boat. "I know what was said and agreed between us. And who says dunderhead?"

Taking the girl's chin in his great fist, he tipped up her face. "Red hair dye from Venice," he muttered, "and a lady's slippers on your hoofs."

Crimson flooded Kari's throat and surged up to her cheeks. She had tried to dye her hair for this morning as she had heard the famous ladies did in Venice—who were the loveliest in the world.

"Are you light of love?" demanded Olaf. "I think not."

Kari choked with rage upon a word. Yet the harshness of the Viking frightened her.

"Word maker!" she gasped. "Duck stealer!"

"The falcon steals the ducks, Kari. I think well you have stolen away from the farm for this holiday."

It was true enough. Kari had become weary with tending the cattle up in the mountain *saeter* of her father; she had got together this splendor—as she thought—of garments and appearance, to come to Bergen-town.

"Still, you are lovely enough underneath, girl," Olaf admitted. "And as this

## Your Hospital and Doctor Bills Paid!

### 3¢ A DAY HOSPITALIZATION PLAN

#### SICKNESS or ACCIDENT

Insure NOW, before it's too late! Protect your savings against Hospital expense. Here's an amazing offer of safe, dependable coverage under America's most popular Hospitalization Plan. Family or individual eligible. When sickness or accident strikes, you may go to any Hospital in U. S. or Canada under any Doctor's care. YOUR EXPENSES WILL BE PAID exactly as Policy specifies. WAR coverage included. The Company is under supervision of the Insurance Dept. No agent will call.

#### POLICY PAYS

Hospital Expenses for Sickness or Accident up to \$54000  
Doctor Expense to \$13500  
Time Lost from Work up to \$30000  
Loss of Life \$100000  
War Coverage ... and other valuable benefits.

## WAKE UP YOUR LIVER BILE—

Without Calomel—And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out about two pints of liquid bile onto the food you swallow every day. If this bile is not flowing freely, your food may not digest. You get constipated. You feel sour, sunk and the world looks punk.

It takes those good, old Carter's Little Liver Pills to get these 2 pints of bile flowing freely to make you feel "up and up." Get a package today. Take as directed. Effective in making bile flow freely. For a free package of Carter's Little Liver Pills, also a free book entitled "How They May Help One Feel Better," address Carter's, Dept. C101, 53 Park Place, New York, N. Y. Or ask your druggist for Carter's Little Liver Pills. 10¢ and 25¢.

is my day for wine and women, you can come with me to the feasting."

"If you are thinking that I will sit on your knee and pour your farthing's worth of beer—"

"Ale," said Olaf, shouldering his ax. After consideration, he drew the cape she had brought, over her shoulders, and pulled the hood over her head, hiding the hair. "You will do well enough," he said, taking her hand, "young as you are."

Kari was nearly sixteen years old. Tears of rage filled her eyes, and she pulled away her hand.

She hoped that this booster who had wounded her tenderest feelings would choke on his ale and lose his wild hawk. And she wanted to run away from him quickly.

But at the end of the Bridge, the Kontor apprentices were ranging barrels in a row across the way, and behind the barrels loitered Bode and his men-at-arms, leering at her now that they were clear of the *Achzehuer's* eye. Olaf had to push through the apprentices.

"No weapons on this holyday," shouted Bode, noticing Olaf's long ax. "Put away that woodchopper."

Olaf stopped, turning this way and that. He saw that the Kontor's men carried no arms here, but crossbows and halberds were stacked out of sight back of the heavy casks which made a fair breast-high barricade.

He looked at Bode, and his voice chanted slowly, "Messmate, when I make use of this ax, wolves and ravens are fed, and strife starts, and a war is waged, for I am a fast fighting man. Now what do you say?"

Kari felt a thrill of excitement, seeing Bode's hands grip hard on his belt. But he hesitated, glancing at the Kontor. "Well, take it off the Bridge," he growled, "you and your light o' love."

WHEN they walked through the Street of the Shoemakers, Kari tossed her head. "What war have you seen, seafarer?"

Looking into the open shops, Olaf answered thoughtfully, "In Tsargrad, in Hispania where the Moors are. In Granada and the Isle of Crete, and across the western sea. But this is a day of homecoming and peace."

He headed after the townspeople in festive cloaks, where a merrymaker walked on stilts, and a trained bear danced. Down in the square by the docks, tables had been set and kegs opened. Olaf sniffed the odor of steaming cod and hot punch, and something else.

"Reindeer steak!" he muttered happily. Kari shivered.

Finding a place by the dancing bear, where they could hear the fiddle music, Olaf called for cheese and a horn of ale, and berries and cake for the maiden. At first Kari would not touch the dainties. Then, because she was hungry, she began to eat.

Pushing back his sleeves, Olaf leaned his elbows on the table. "Eh," he said contentedly, "they are singing 'Come All Ye Faithful.'"

When the singing stopped, Kari noticed that the best-dressed burghers and Norwegian shopkeepers went from the tables toward the quays, and a buzz of whispered talk ran around her. Visitors were landing from a convoy—sailors who had lost their way in the mist, and put in for the feasting; Klas Stortebecker and the mariners of Visby island.

The first group of strangers rolled up to the tables, talking with the *meisters* of Bergen. They wore sea capes and some had on mail but their scabbards were empty of swords.

"Stortebecker and his lads fly the peace

flag," called out a Flemish trader. "They come to drink. They bring honey mead."

Klas Stortebecker came up, broad as a bear with half his head bald, and white scars showing on the bare skin. "Fire the pots," he bellowed, "fill the tankards, ye Bergen folk. Kindle up for Stortebecker."

Behind him more men staggered up from the boats, with hogsheads on their shoulders. These they set down by the great open bed of coals where an ox had been roasted.

"They stint not their drink," said Olaf, watching.

Some of the women around them were fearful of the Visby sea rovers, who had put the torch to more than one town. Still, they seemed peaceful enough on this St. Olaf's day, and across the harbor stood the walls of the German Kontor, with a strong garrison. Kari looked at the fine wolf's head embroidered on Stortebecker's tunic.

Olaf had not put his arm around her, or tried to pull her to his knee and for that she was glad. The shouting rose loud about her, as the seamen gulped meat and swallowed beer.

"Bergen beer," said Olaf. "They do not open their own hogsheads."

A giant from Visby kicked away the dancing bear and called for a champion to tug at war with him. The stout Flemish merchant came forward at the challenge.

"The bull's hide, Lefard," roared Stortebecker. "Pull the hide, man."

The Visby gamester took one end of the rawhide stripped from the bull's carcass, and showed the Fleming how to hold to the other end by the legs. Lefard took his stand at one side of the smoldering bed of coals, and, at a word from Stortebecker, heaved at the hide, while the Fleming strained back, across the fire. The taut hide moved back and forth as the giants tugged. Suddenly the man Lefard threw himself back on his heels. Jerked off balance, the merchant plunged into the embers, the hide falling across him.

He writhed up, and fell again and dragged himself clear of the fire, smoking and blackened. A whimpering came from his mouth.

"The goat bleats," said Stortebecker, looking around. The Bergen men were silent, startled. "Let the goats bleat!" Stortebecker roared.

Olaf grinned and drank more ale.

Kari shivered, feeling for the hurt of the burned man. And Lefard, striding back to their table, took the nearest ale horn, which was Olaf's, and emptied it. The big Visby man looked at Olaf who said nothing. Then he bent over Kari pulling the hood back from her head. At sight of the flaming red hair, he crowed.

Two heavy hands gripped the girl's waist and lifted her high. She felt the blood rush through her body. And then she jolted down on Lefard's knee, as he seated himself on the bench.

"Pour out the ale, girl," Lefard said in her ear.

Kari felt cold with fright. She made no move to touch the ale horn. Now she felt ashamed of her red hair.

"For wine or for a woman," laughed Lefard, "I wait not."

HIS shaven head turned toward her and his hand smelled of the wet bull's hide. Beside her, Olaf watched curiously, saying nothing. And Kari closed her eyes as she felt her throat choking. She heard Olaf's chanting voice. "Messmate, you play hard. Let this child go, and pour your own drink."

While the Visby man stared at him Olaf reached down to the ground between them. His hand came up gripping the ax under the head. The head of the ax caught Lefard under jaw and ear knocking him aside.

"Blood!" Stortebecker bellowed. "Be ware and yare, lads. Out with the steel."

Getting to his feet, his ax arm swinging, the Viking called, "You find a quarrel easily."

Kari, gasping at the bellow of voices, saw twenty men of Visby run to the unopened hogsheads. Ripping off the tops they began to pull out swords, shields, battle-axes. Some of these weapons they tossed to their mates at the tables. A wailing rose among the women, and the unarmed Bergen men surged up like cattle startled by a wolf's coming.

"Steel it is," sang out Olaf, vaulting the table, and making for the hogshead.

The nearest swordsman stepped out to him, slashing at his head. Olaf checked his run, poised, braced on his feet. His ax flashed in front of him as the sword came down. This sword and the hand gripping it flew up into the air, cut off by the ax blade.

Stortebecker caught an ax from a man near him. His eyes gleamed red and he

COLLIER'S

GARRETT PRICE

arled as he ran at Olaf, who turned to meet him. Neither man had a shield. Swinging his hands over one shoulder, Klas Stortebecker slashed wide with all the reach of his arms. As he did so the Viking leaped forward, inside the stroke. His hands gripped the ax haft short and the head of the ax smashed at Stortebecker's face. The Visby chieftain bent his head taking the blow on his skull, falling to the ground.

As he did so, his hands clutched at Olaf's legs. But the Viking, quicker than he, was away from him. A glance to right and left showed Olaf that the swordsmen were closing around him, and he leaped clear of them, back to the table.

He came running to Kari, his ax in his hand. Catching her about the knees with his right arm, he heaved her up over his shoulder, and ran on.

Behind him the bearlike Klas hauled himself up shaking his head. "Leave the goats," he bawled. "Fetch back that rifle starter."

As he ran through the Street of the Hoemakers, Olaf heard them coming after him. He headed for the barricade on the Bridge, for the wall of kegs and the men-at-arms. Without slowing his pace, he thrust his ax hand on the top of the kegs and slid over. "There is a lie and cry," he called to Bode, "coming this way."

THE Kontor's men stared at him bewildered, when he raced down the ridge toward his longboat. Kari's breath was squeezed out of her, and she hung on to his swaying shoulders, until she felt him jump down into the boat. Then he lowered her to the aft deck and reached for the rope of the anchor stone. Suddenly he stopped, staring beyond her. The brown falcon with its hoop had come from the boat.

"Hide and hair of the Horned One!" Olaf swore. For the first time anger visited his face, and he swung round to search the quay with his eyes. Down the barricade voices clamored and metal crashed. Two apprentices ran out the Kontor gate with a pack of mastiff dogs. All this seemed to Olaf to have the making of a brawl, but he saw no sign of his falcon.

Taking his ax he ran into the unguarded gate of the Kontor. When he came upon stairs leading up, he took them three at a time, and so he found himself in the great meeting hall of the Kontor. And he found himself not alone—men in uniform lined the wall, waiting, leaning upon staves and halberds.

Behind the table Ernst Salza sat in his high seat calmly, with a massive book before him. Behind him the hooded falcon perched on its hoop in a clerk's hand.

It seemed to Olaf that these silent men were waiting and listening. Through the window opening he could hear the disturbance on the Bridge. Pushing through the attendants, he went up to take his hawk, and he spoke to it. At his voice the bird spread its wings.

But the clerk would not give up the hoop. "Achtzehner," the man exclaimed, troubled.

Salza was listening intently to the tumult below—to the brawling that had passed from the streets of the town to the quay, against his instructions. It was coming closer now, and he wanted to go to the opening to look out, but thought that he should remain at the desk, taking no notice of it. Impatiently, he turned on Olaf, snapping out words: "The Greenland falcon? The Kontor owns it."

Olaf shook his head, startled. "No—"

"Here!" Salza flung open the huge book, taking a parchment slip from between the pages. "The quittance for it." And he read swiftly: "For the value of forty farthings, more or less, paid into my hand, I, Olaf, an outlander, do sell and devise unto the Bergen Kontor of the Hansa League, a brown falcon marked with white, weighing—"

"That was never said between us—"

"Never? You signed to it," Salza nodded at the clerk. "He witnessed."

Before Olaf could answer, a rush of feet came upon the stair, and Klas Stortebecker plunged into the meeting hall with his Visby weapon men wedged behind him. When he sighted the Kontor guards along the walls, and Olaf at the desk, his broad face darkened, and he came forward slowly.

Salza, motionless, watched him without expression. "Well, Klas?"

"Ho!" the sea raider snarled. "'Tis not well, Ernst. Not with the Bridge held against me, and this woodchopper holed up here."

He glared his suspicion, breathing heavily. Salza glanced from one weapon man to the other. "If you want him, Klas, take him." And quietly he drew the record book toward him.

It happened then so quickly that only Olaf saw it all. The falcon at Salza's side moved its wings, restless at the voices. And Salza thrust it away with his hand, unheeding. The hawk's beak flashed down, and Salza, with a cry of pain, struck at the falcon. The threshing

hooded bird rose into the air, clawing at the man.

The talons struck into the man's head, and the falcon's beak ripped across his forehead. Jumping for them, Olaf caught the hawk beneath one wing, and pulled him clear, loosening the hood on the brown head and tossing him up. The falcon threshed and headed out the opening toward the light.

Salza screamed, throwing himself down on the table. Even Stortebecker swore at the sight, for the iron dignity of the Achtzehner had been stripped from him. Hurt, with blood running into his eyes, he groped about the table. But he had no thought of his own pain. His fingers searched frantically for the book.

"Wait, Klas!" he cried. "I will explain—"

One hand struck the book and he caught the pages to close them. Stortebecker looked at the written page, and planted one fist on it. He had seen his own name.

The Viking backed against the wall, feeling behind him, not taking his eyes from the two at the table.

"It says St. Olaf's day," Stortebecker muttered, and pulled the book around to him suddenly. "It says—"

"Wait!" cried Salza again, reaching for the book.

Tracing out the words with his finger, Stortebecker was reading slowly, chewing at his lip, "And that they be hunted down and harried to their deaths," he repeated at the end. And he ripped out the page, dropping the book. "Sold out by the Kontor, lads!" he roared. "Ay—invited hither by this Kontor head, to frolic with the Bergen folk over the bay, and help ourselves with free hands to gear and goods of the merchants' stalls—"

Olaf spoke from the wall, "Well here are gear and goods."

STORTEBECKER glared around at the rich tapestries on the walls, at the silver lanterns hanging over the desk, at the open door leading to the warehouse beyond. "Turn to, lads!" he shouted. He stuffed the parchment page into his belt. "Great liars these merchants be, for we have lifted no hand against the honest Bergen folk. Let them buy back their own goods in Lubeck."

And the sea raiders leaped for the walls.

Hidden under the aft deck of the boat, Kari heard the uproar of battle inside the Kontor. Frightened, and not knowing what to do without Olaf, she lay quiet on a robe of eider-duck feathers. First the brown falcon came down to its perch by her. Then Olaf leaped in.

Without a word he hauled up the anchor stone and shoved off with an oar. Hoisting the yard, he knotted taut the sheets. Throwing himself down beside her, he fastened a hood on the restless falcon. Then he wiped the sweat from his eyes, and shook his head. "It seems that I do not understand trading in the old country," he said.

Kari laughed a little. Now she did not feel frightened. "No," she said, "you do not, Olaf."

Settling down on the feather robe she felt warm and comfortable, between Olaf and the hawk. It was as if this place had been made for her. When she felt the sea breath from the fiord's mouth, she pulled the hood over her red hair, and under its cover her eyes searched the troubled face of the seafarer. "Nor do I," she admitted.

She was thinking, watching the line of the sea, when Olaf asked where he should set her ashore.

"On the isles," she said softly, "of the western sea."

THE END

## MISERABLE WITH ACHING COLD WEATHER JOINTS?

When the icy wind cuts through you, does it lay you up with painful, grinding "cold-weather joints"? Absorbine Jr. quickly eases those aching joints—brings speedy, joyful relief from such winter torture!

Normally, little blood vessels feed lubricating fluid into the joints. Extreme cold constricts blood vessels. Slows up the supply of fluid. Makes joints "grind" and ache. Hinders your movements and work!

Rub on Absorbine Jr.! Feel the warmth spread, as it speeds up the blood flow—helps nature quickly counteract the effects of cold. Soon your joints "glow" with relief! You'll feel like singing! At all druggists. \$1.25 a bottle. Write W. F. Young, Inc., 201 Lyman St., Springfield, Mass., for free sample.

FAMOUS also for relieving Athlete's Foot, and Hot Burning Feet

### ABSORBINE JR.

### EYES TIRED?

### TWO DROPS

### QUICK RELIEF

Eyes tired? Do they smart and burn from overwork, sun, dust, wind, lack of sleep? Then soothe and refresh them the quick, easy way—use Murine. Just two drops in each eye. Right away Murine goes to work to relieve the discomfort of tired, burning eyes. Murine is a scientific blend of seven ingredients—safe, gentle—and oh, so soothing! Start using Murine today.

## THE WAR AGAINST DEATH

**T**HIRTY-FIVE years ago, a young Austrian student discovered something he called sulfanilamide. Neither he nor anyone else knew what it was or how it could be used. Today that chemical and its derivatives are saving the lives of hundreds of thousands of Americans and giving new protection to our fighting men on far-flung battle lines.

The chart printed on this page tells a stirring story of a part of this great human achievement. Five years ago, more than 175 people out of every 100,000 Americans died from pneumonia and influenza. Now the loss every twelve months has been brought down to about 50. Sulfa drugs chiefly have saved these lives.

More than that, sulfa drugs promise health and recovery to the untold myriads of American soldiers and sailors who have been and who will be injured in battle. On his return from Honolulu after inspecting the damage done at Pearl Harbor, Dr. I. S. Ravdin of the University of Pennsylvania reported: "It has been repeatedly said by great generals of the past that an army is no better than its surgeons. If the experience in Honolulu is to be taken as an expression of the type of medical service our Armed Forces are to receive, we can be sure that in the end victory will be ours."

More than three fourths of the men who received abdominal wounds in

the first World War died as a result of infection. After the Pearl Harbor attack, infection was almost nonexistent. No amputations were necessary because of infected wounds. Yet in the first World War, one hospital reported that 47 per cent of the amputations were due to infections.

Although this war is being fought in places peculiarly menacing from the standpoint of infections, lives are being saved and disabilities prevented.

Whatever else is true, this is a great record of achievement. It is not ours alone, although American doctors have been and are pioneers in this development.

Chemists, physicians, industrial laboratories in Germany, in France, in England and in the United States all aided in developing the sulfa drugs. Dr. Perrin H. Long of Johns Hopkins University has the chief credit for bringing sulfanilamide to America.

After the Austrian Gelmo discovered the drug, the German chemical firm, I. G. Farbenindustrie, worked on it. That is the company that sold many inventions to American corporations, and Thurman Arnold, Assistant Attorney General, has been holding the purchasers of the patents up to public scorn because of their purchases.

The Germans made great progress, and so did the British, in following up the clue offered by the Austrian stu-

dent's work. A ten-month-old near death from blood poisoning saved in Düsseldorf in 1933. This became famous. So too was the recovery of Franklin D. Roosevelt, Jr., who was cured of a streptococcal throat by sulfa.

Now at Johns Hopkins University and in many other college laboratories and in the laboratories of the houses, new researches are being tried on. During the last ten years immense strides have been made. Sulfa combinations have been found and brilliant studies are being made the methods by which the drugs accomplish their beneficial effects.

The sulfa drugs are not cures for everything. Their limitations are sharply defined. But the chart of the Metropolitan Life Insurance Company shows how vast is the saving.

In the United States and where American soldiers and sailors and Marines are serving, the chances to cover from wounds and from a group of diseases are bettered because of the work of these scientists in the lands and in more laboratories.

In the table below is the experience of the Metropolitan Life's industrial policyholders.

Literally hundreds of thousands and, before the story is finished, millions will live in health and without mutilation because of these drugs.

Men who are able to do so may be able to apply the same quantities of intelligence and of good will to the greater task of establishing a social order in which the nations live together in peace.

### The Sulfa Drugs in the Treatment of Various Diseases

Disease Organism	Drug of choice	Case Fatality		Death Rates Per 100,000		
		Before chemotherapy	With chemotherapy	Before chemotherapy	With chemotherapy	Per cent
Pneumonia—all forms						
Pneumococcus	Sulfadiazine	25-30%	7-12%	67.6	30.5	55
Streptococcus	Sulfadiazine		15-20%			
Appendicitis				11.3	7.4	35
With peritonitis						
Mixed (B. Coli predominant)	Sulfanilamide	20-30%	5%			
Puerperal sepsis						
Streptococcus	Sulfadiazine	20-25%	5-7%	5.5**	3.8**	35
Cerebrospinal meningitis						
Meningococcus	Sulfadiazine	20-75%	5-15%	1.8	.5	75
	Sulfapyridine					
Other meningitis				2.2	1.4	36
Streptococcus	Sulfadiazine	95%	25-35%			
Pneumococcus	Sulfapyridine	98%	70-80%			
Septicemia (blood stream infection)				1.7	.9	47
Streptococcus	Sulfanilamide	75%				
Staphylococcus	Sulfathiazole	80%	35%			
Erysipelas						
Streptococcus	Sulfadiazine	13-15%	4%	1.0	.2	80
Tonsillitis and pharyngitis				3.7	1.3	65
Streptococcus	Sulfadiazine					
Disease of the ear and mastoid				3.2	2.0	38
Streptococcus	Sulfadiazine					
Pneumococcus	Sulfapyridine					

\* Based upon experience among industrial policyholders of the Metropolitan Life Insurance Company. Before chemotherapy—1935-1937; after chemotherapy—1940, except for pneumonia and appendicitis for which 1941 rates are given.

\*\* Deaths per 1,000 live births, United States.

## Why monkeys hate Monday . . . and YOU!

Well, why shouldn't they? Monday may find them in the clutches of colds caught from the Sunday crowds visiting the zoo. How do chimpanzees catch these colds?

Many medical authorities believe that a virus or bacteria, or both, residing in the throat or nose of man, are carried through the air by sneeze, cough or heavy breathing, and contribute to the infection we know as a cold.

Doctors often call such bacteria the "secondary invaders"—thought by many to complicate a cold and to be responsible for some of its most disagreeable symptoms. These "secondary invaders" include pneumococci, streptococci, bacillus influenzae, staphylococci, and other bacteria.

Apparently, when resistance is materially lowered for any reason (wet feet, fatigue, sudden changes of temperature, drafts), these "secondary invaders" can stage a mass invasion of the mucous membrane.

Our research men reasoned that if such bacteria on mouth and throat surfaces could be killed in suf-

ficient numbers, very possibly the incidence of colds could be lessened . . . and that Listerine, because of its germ-killing action, might be of real therapeutic value.

So, over a period of 11 years, using human beings as guinea pigs, we studied the incidence of colds in people who gargled with Listerine Antiseptic as compared to those who did not. This is what we learned:

Those test subjects who gargled Listerine twice a day had fewer colds and fewer sore throats than those who did not. Moreover, when Listerine users *did* contract colds and sore throats they were usually less severe and of shorter duration.

Such results are due, we believe, to Listerine's germ-killing ability, reflected in tests which showed germ reductions on mouth and throat surfaces ranging up to 96.7% fifteen minutes after gargling, and up to 80% one hour after gargling.

Don't get the impression from the foregoing that Listerine is a sure preventive or cure for colds and simple sore throat. We make no such sweeping claim. But test results have been so consistent that we believe

Listerine Antiseptic merits your consideration as a daily precaution against these troubles and as an emergency first-aid treatment when they are beginning to develop. Lambert Pharmacal Company, St. Louis, Mo.

### Hints On What To Do About A Cold

- 1. Go to bed** and stay there. The incubating period of a cold may be within the first 48 hours. Rest helps nature to throw the infection off. When you carry a cold around with you, you not only weaken yourself, but you may infect others.
- 2. Eat lightly** and drink plenty of water and fruit juices. Use only your own eating utensils and see that nobody else uses them. They may carry germs.
- 3. Don't blow** your nose too hard; you may force bacteria back into the middle-ear passages. Blow one nostril at a time gently.
- 4. When sneezing** or coughing use only disposable tissues, and burn them.
- 5. Gargle with Listerine** Antiseptic regularly, especially in the early stages. It may help you to head off the infection entirely or lessen its severity.
- 6. If you have fever** call your doctor, especially if the fever persists.

## ANY WEEK

THIS week's cover is the Army Engineers poster designed by Jes Schlaikjer of the Graphics Section of the War Department. It is one of four in the first series of posters ever prepared within the War Department for distribution to Army units at home and abroad. These simple, direct and understandable posters (others in the first series covered the Medical Dept., the Signal Corps and the Military Police) have proved such an effective stimulus to morale, among both soldiers and civilians, that the War Department plans to continue the series.

VERY recently a twenty-eight ship convoy arrived in England a little out of breath but quite intact. One of the transports was the City of—oh, well, let's call it Blowtorch. A couple of hundred miles west of its British port the City of Blowtorch discovered that it was being stalked by a German sub. The captain ordered more speed. One of his officers telephoned from the bridge to the engine room. From the engine room came a cheery voice: "Blowtorch's basement, good moooorning."

FOR some reason we cannot isolate, there is a growing feeling that something useful should be made of busted-down politicians. This column has given you many ideas, contributed by readers, about the disposal of Benito Mussolini. One more has arrived—from Mr. Hugo Van Arx of Watertown, Connecticut. Mr. Van Arx, Swiss-born American, thinks that Benito would make very fine ski wax. But now we're getting suggestions about what use might be made of Gene Talmadge of Georgia. A Negro producer would like to hire Mr. Talmadge to play Simon Legree in a "modernized version of Uncle Tom's Cabin."

HOWEVER, we don't believe that one of Washington's most energetic war agency heads asked his secretary to "Call up Harrisburg and find out what the name of the governor of Pennsylvania is." We get this from one of the gentleman's aides. There is entirely too much of this sort of thing going on. It is virtually sabotage. If a general in Washington takes three quarters of an hour long-distance-telephone priority to talk to Camden, Maine, to tell

somebody that he will not be at his house for Christmas, that's no reason why somebody in his office should be hastening the information to us. We're particularly indignant over our informant's postscript: "The real reason the old suet pudding won't go is that they didn't send the cost of transportation with the invitation."

ANYWAY, we much prefer to write little romances. We've got one this week about an elopement. The male end of it got to know the lady through a correspondence club. After several hundred impassioned letters were exchanged, he proposed by mail, was accepted by return (registered). He presented himself in the lady's town, telephoned her, was told not to come to the house, that she'd meet him at his hotel. After both had recovered from the shock, they took a walk out into the country, got caught in a rainstorm, had to take refuge in a barn for four hours. It was late when the rain stopped and the lady told him that her mother would surely murder her for being out so late with a strange man. So he became masterly and married her that night. They arrived at the girl's home at three in the morning. Mother came to the door. "Where have you been and who's that?" demanded Mother. "I've been getting married and this is my husband," said the girl. "Well, why didn't you say so! Come in and go to bed," said Mother. . . . Up to there we think it's quite a touching story. But we go on sadly to tell you that he fled the next day, protesting that her family didn't have any traditions.

WE DON'T know whether the hero of this paragraph is very important. All we know is that he has a very important job in Washington. He also has a secretary who is impressed by neither him nor his job. However, he called her into his private office one morning, having had just two hours' sleep. The rest of the night had been devoted to a night club. "Miss —," said he, taking two aspirins, "when do I speak to that group of manufacturers?" Said she: "Tonight." He groaned, then: "Very well, get your book. I'm going to dictate a few notes about national morale. It is very low." . . . W. D.

## Tires Made with B. F. Goodrich Synthetic Now Rolling on Nation's Buses

*A typical example of B. F. Goodrich leadership in tires*

**Y**OU'VE read plenty about synthetic rubber, about the tires that are *going* to be made with synthetics. But did you know that right now many a bus in Chicago, Boston, Cleveland and New York is trying out tires using synthetic rubber made by B. F. Goodrich?

One of these tires is shown in the picture—an Ameripol Silvertown being inspected after more than 8,000 miles on the wheel.

Varying amounts of synthetic rubber have been used in making these new Ameripol bus tires—but some of them now actually in service contain over 99% synthetic rubber.

B. F. Goodrich was *first* to offer for sale tires made with synthetic rubber for passenger cars—that was in 1940! And now B. F. Good-

rich pioneers with Ameripol Silvertowns for buses. Production is not unlimited. The rubber shortage is still acute. But already synthetic tires made by B. F. Goodrich are helping in the war effort.

The Army and Navy get first call on every ounce of synthetic rubber we make. Right now there is little, if any, for general civilian use. There will be some for essential transportation.

And when synthetic rubber is plentiful, come to B. F. Goodrich for your

tires. You can be sure that B. F. Goodrich will be first just as B. F. Goodrich was first to offer American car owners tires made with synthetic rubber. Remember, nobody makes as good a cake as the cook who discovers the recipe!

**AMERICA WILL MARCH TO VICTORY  
ON THE LEATHER YOU SAVE**

## KEEP UP WITH THE WORLD

By Freling Foster

Of the several dogs in the Army Air Corps to be awarded silver wings for making five jumps from a plane, the best known is "Max," a Boxer owned by the 505th Parachute Battalion at Fort Benning, Georgia. So far, Max has jumped eight times, wearing a special harness with a large chute that is opened by a static line attached to the rip cord.—By Sgt. Frank Freestone, Fort Benning, Georgia.

Of the hundreds of different electron tubes, one of the most sensitive is a certain photoelectric cell that enables a scientist to determine which of two cups of boiling water was stirred for a minute with a strip of metal. The cell readily detects the infinitesimal amount of metal dissolved during the action.

As fragmentation bombs, used primarily against humans and animals, weigh only thirty pounds, a plane can carry a large number and effectively sweep a huge target by releasing them methodically while flying at a low level. As the plane requires time to pass out of the range of the flying fragments, the descent of these bombs is usually retarded by a parachute.

Textbooks on world history used in the high schools of the United States have never devoted, on the average, more than three per cent of their space to China and Japan, which together contain one quarter of the world population.—By Betty Barker, New York, New York.

Our naval vessels are now built in about half the time required in pre-war days. Destroyers are constructed in six months instead of eighteen, aircraft carriers in seventeen months instead of thirty-five, submarines in one year instead of two and battleships in three years instead of five.

Not one of the 221 women who lost their lives in the Coconut Grove fire in Boston had anything on their persons that immediately identified them, having checked their wraps and become separated from their purses and bags. Consequently five days were required to identify all the bodies.

In the United States, the percentage of absenteeism from work in war industries is about three times as large as before the war. In England, absenteeism among essential workers has virtually ceased because it is subject to punishment; about fifty persons have been imprisoned during the past 18 months for being habitually absent without justifiable reasons.

American prisons are now producing millions of dollars worth of war materials. Air-raid sirens are being made at San Quentin; shirting for the Navy at the Alabama state prison; bomb parts at the federal penitentiary in Lewisburg, Pennsylvania; and cartridge belts at the reformatory for women in Alderson, West Virginia. Even large patrol boats for the Army are being built entirely by the inmates at McNeil Island.

One of the reasons why younger men make better soldiers than older men is that their wounds heal more quickly. All things being equal, a wound that heals in thirty days in a man of twenty and forty days in a man of thirty requires sixty days in a man of forty and eighty days in a man of fifty.—By Nelson Dean, Jr., Sacramento, California.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. # TRAINING *with* SAFETY

The outstanding scores rolled up by American Bomber Crews abroad pay tribute to the efficiency and thoroughness of their training. A major factor in this efficiency is the dependability of our training equipment.

The majority of the twin-engine Training Planes, in which the Bomber Pilots receive their advanced schooling (both in the United States and in Canada), are powered by JACOBS Engines,—sturdy, reliable, efficient products of advanced engineering and precision manufacture.

## JACOBS AIRCRAFT Engines

POTTSTOWN PENNSYLVANIA · U.S.A.

COURTESY T. W. A.

## WING TALK

Men of the Army Air Forces learn to repair planes at a postgraduate aircraft mechanics' specialist school. Each man has a separate specialty. In foreground, Private Bert Bailey (left) and Private Edward Castor.

OUT near the Solomons one day after a heavy battle, a U. S. Navy destroyer was on patrol. Suddenly a Jap bomber came rushing at it. The destroyer opened up with its anti-aircraft, and the bomber dropped down on the water. The bomber crew promptly took to their life raft, and the destroyer circled to pick them up.

As the American ship pulled close, a line was tossed over to the raft. A member of the bomber crew reached eagerly for it, but the Jap officer in charge knocked his hand away, growling what was probably a bad word. Better to die, it seemed, than be rescued by the filthy white man.

At which point, another of the bomber crew calmly took out a pistol and shot the officer dead. His body was dumped into the ocean, and the man who had originally reached for the line reached for it again. This time he wasn't interrupted.

AMONG the unsung heroes, the desert flowers doomed to blush under a bushel basket (or something), are the commercial airlines.

The airlines are doing a number of very important things for the Army and still maintaining a civilian transportation system, hauling a great many people between 250 cities in this country at a three-mile-a-minute clip.

The commercial lines are handling the secret modification centers for the Army Air Forces. Planes coming from assembly lines are sent to the centers for last-minute special changes and equipment. A ship going to Africa, for example, will be equipped with a sand filter. Another going to Russia will get gadgets for cold-weather flying. One going to the Pacific will have the armor plate shifted slightly, as protection against maneuvers characteristic of Jap Zeros. If these trivial changes were made in the manufacturing plants, production lines would be gummed up disastrously.

Airline pilots are flying military planes all over the globe. A pilot who flew a few weeks ago between Chicago and Denver is now hopping across the Pacific. Another on the Atlanta to New York run has switched to New York to Cairo. The airlines were a reservoir of experienced transport pilots without whom our air-cargo system could never have operated.

The airlines also have schools for mechanics and flight officers. One line turns out a thousand mechanics every 120 days. The lines likewise have furnished scores of technical and administrative workers for the Army and Navy.

One third of all transports and crews from civilian lines are in military service. Between 38 and 45 per cent of the airlines' equipment has been turned over to the war. Yet the commercial lines are carrying only from 11 to 17 per cent less passenger-and-pound-mile cargo.

So stop grouching because you can't get a seat to fly back home for a week end.

THE R.A.F. has its way of keeping fliers awake. One of the major sins that can be committed by a Royal Air Force pilot is to forget to watch the skies about him. A Jerry plane may come swooping down upon him any time, whether he is making a sweep over the English Channel or ferrying an officer to his country place in the interior of Britain. The pilot must keep his eyes open, even on the most casual trip.

When one pilot sees another dreaming along in mid-air, thinking about that trim little cookie he left behind, the first flier sneaks up behind and above, then dives with a roar at the dreamer. As he flashes under the dazed pilot's plane, the tormentor speaks into his radio. "Ta-t, tat, tat," he says staccato. "You're dead."

It's astonishing how thoroughly it can wake even the sleepest pilot. . . .

ROBERT MCCORMICK

DON'T LOOK NOW—BUT HERE COMES 444 LADIES STOCKINGS

Yes Ma'am!—BOMBYX MORI, that Jap silkworm, has another knot in his tail. Parachutes are being made of cellulose acetate *rayon*. Strong parachutes. *Safe* parachutes!

Sure, the rayon for one parachute would make 444 stockings. But you still have stockings. Right, Ma'am?

The "University of Petroleum," Shell's research laboratories, is very much in the "silk stocking and parachute picture" through research which resulted in Shell becoming one of the principal suppliers of *acetone* to industry.

It is acetone—produced by Shell from a waste petroleum gas — which changes a cotton derivative, cellulose acetate, to a syrupy liquid: the "spinning solution." This is forced through holes of microscopic fineness. Presto! It becomes silky fibers. These are twisted into thread. From then on, you can name what you want—from sheer, glamorous stockings to a parachute!

We're really richer than we were before these wartime "shortages" came along. Scientific ability is applied to our native resources and lo! we have artificial silk . . . or rubber . . . or exotic flavorings and perfumes—to mention only a few that have been found buried deep in the chemical structure of petroleum.

*And the exploration of these new chemical frontiers has only begun.*

## THE MAN WHO KILLED BLACKBIRDS

BY SAX ROHMER

ILLUSTRATED BY ELMORE BROWN

The amazing Bimbâshi Barûk and the sinister Dr. Manoel. The strange case of a man whose evil did not die with him

BIMBÂSHI BARÛK had an insatiable curiosity concerning his fellow men. In consequence of this, Tom Eldon, host of The Bull, at Opley, came to look upon him as a "regular," rarely absent from the corner armchair whenever the bar was open. He had returned to his old quarters at The Bull after an interval of more than a year and seemed to have nothing in particular to do, except that he often went out sketching, so that the cleanly chiseled, vaguely Oriental face, old Harris tweed suit and the stubby briar pipe had become familiar to all Tom's customers. The fact was that Bimbâshi Barûk had formed one of a party of officers recalled home to make personal reports after the fall of Tobruk, and he was now awaiting return transport to Egypt.

It was here, in The Bull, just before closing time on a hot summer's afternoon, that he first set eyes upon the resentful Home Guard.

"Double Scotch," the Home Guard ordered peremptorily.

He wore battle dress and he rested a rifle against the bar while getting out his wallet. A tall, well-knit figure gave an impression of youth, but the lined, dark face and somber eyes belonged to a man middle-aged, to a man who had suffered much or to one who had drunk too deeply of the cup of life.

As Tom Eldon set a glass before his customer:

"I see," came Barûk's pleasant voice, "that they still serve you out with Lee-Enfields down here."

The Home Guard turned. "They do. Does that fact interest you?"

His manner was so provocatively rude that Barûk felt affronted, and when he replied he spoke sharply: "I appear to have offended you, sir. But as a professional soldier I am naturally interested in the arms of all the services."

"Oh, I see. You are a regular officer." The man's tone was less offensive, but his glance no less mocking. "Yours is a sorry trade, sir. In me you see a most unwilling warrior. Two generations of fools have plunged us into this mess. Under a government of sane men there would be no need for armies. A sane government would ignore the armies and strike at those who directed them."

He swung his rifle over his shoulder. "Having publicly proclaimed these views during the past twenty years, I naturally resent being compelled to form part of the bone and muscle."

He went out. Bimbâshi Barûk smiled at Tom Eldon. "Agreeable fellow," he murmured. "Who is he?"

"That's Mr. Peter Gillam, sir," the landlord replied glancing at the clock and then going across to bar his door. "I reckon he hates everybody, does Mr. Gillam. Queer, he is, and mad as they're made. He's what they call a mining engineer and he's in charge of those excavations under the hill, in the old stone quarries."

Bimbâshi Barûk nodded. "He's not a native, then?"

"Not he. Come from foreign parts, I hear. Don't know just where. But he lives in what they call Quarry cottage, on the hillside. Lonely it is; and he's got the prettiest little woman locked up there as I ever set eyes on."

"Locked up?"

"Well, in a manner o' speaking. No

Antoinette was forced into marriage with Manoel, the second wealthiest man on the island, and thirty years her senior. But she never loved him

society, like. Seems to be frightened of everybody. Aye, they're a queer couple."

Somewhat less than an hour later, Bimbâshi Barûk found himself in a narrow winding path, all but indiscernible because of encroaching nettles, a path which traced an aimless way through a wood of firs. This wood possessed one peculiar and unpleasant feature; it contained a number of dead birds, chiefly blackbirds, in various stages of decay and overrun by wasps. The bimbâshi carried water-color equipment, and was bound for a spot which he had long determined to try to paint—a pool opening out from a tiny stream, where there were water lilies.

He was aware that this was private property, but except by rocks, thrushes, squirrels and a rare rabbit, his trespass had never been challenged. The house—Court Oaks—stood at no great distance from the pool, but he knew that most of it was locked up, that the grounds were neglected. Dr. Manoel, its wealthy and eccentric occupant, camped out in two rooms, where he resided alone except for a colored manservant.

Presently, through an opening in the trees which he remembered, the lily pool burst into view. He stood still. His abrupt halt had not been occasioned by the loveliness of the pool, however, but by the fact that a man was seated beside it.

He was sitting bolt upright in a split-cane chair beneath a magnificent lime tree. On the grass beside him lay a book.

He was perhaps sixty years of age, but possessed a slim figure and saturnine good looks. As he wore no hat, the sun quickened his thick, wavy hair to silver, accentuating the yellowness of his skin. Heavy eyebrows, mustache and a small pointed beard remained dark, and he wore a white linen suit; so that, recalling spoken descriptions, the bimbâshi concluded that he was looking at Dr. Manoel, owner of Court Oaks.

And Dr. Manoel, without relaxing that rigid pose, sat holding a gold watch extended before him, his eyes fixed upon it and his expression one of such extreme horror that Bimbâshi Barûk became physically chilled. Although Dr. Manoel's hand was steady, immovable as the rest of his body, perspiration shone upon his high forehead and he presented a perfect study of one facing imminent and inescapable destruction!

AS HE stood there, Bimbâshi Barûk heard a dull, familiar thud. The gold watch fell to the grass; Dr. Manoel came to his feet like a puppet jerked upright on a wire; a speck of blood gleamed, a living ruby, on his wet forehead—and he pitched forward and lay, arms outstretched. The crack of a rifle shot echoed around the valley, and rooks rose, filling the air with their alarm calls. . . .

The first shock of this dreadful killing being conquered (for the fact that he had witnessed an assassination was unmistakable), Bimbâshi Barûk gained the victim's side in a period computable in seconds. Barbed wire intervened, but the bimbâshi had learned all that one may know about barbed wire, in Libya. Breathing rapidly, he stood for a moment looking down. Then, twisting about, he stared up the slope.

From this point of view, owing to close-set timber, no more than a corner

of the east wing of Court Oaks was visible. Otherwise, a stone cottage on the hillside beyond seemed to be the only building in sight. There was, however, ample natural cover. Nothing stirred but the rooks above; their cries and the shriek of a hidden jay alone disturbed a hot silence. . . .

Dr. Manoel had been killed by a first-class marksman. The bullet had passed clean through his brain, back to front. Death must have been swift and painless as that inflicted by a guillotine. His watch lay, dial upward, near his clenched hand; it recorded that the hour was 3:03 P. M. (summer time). The book on the grass beside the chair was a richly bound copy of Cardinal Newman's "Dream of Gerontius."

ALTHOUGH the bimbâshi wasted no time in running up to Court Oaks—an ugly, rambling stone mansion of mid-Victorian design—he met with infuriating delay in gaining admittance. The house presented every evidence of desertion. Many of the windows were shuttered and others clearly belonged to unoccupied rooms. The drive was liberally decorated with thistles, and the main entrance, its rusty bellpull reluctant to function, had long forgotten the smell of paint. A sepulchral note, deep within the house, responded to his ringing.

At last came footsteps. A man, whom he judged to be a mulatto, opened the door. He was dressed in a sort of livery, with black trousers and a striped linen jacket; and his face, yellow like his master's, bore an habitual expression of hopeless despair.

"Are you Dr. Manoel's servant?" the bimbâshi asked sharply.

"Yes. I am José. What do you wish? The doctor is out." José had a slight accent and spoke almost tonelessly; the effect was that of a very old gramophone record.

"Did you hear a shot a few minutes ago?"

"Yes. The doctor is shooting rabbits, I suppose."

"Does he often shoot rabbits?"

"Often. We eat many rabbits."

Bimbâshi Barûk fixed an analytical regard upon the man's dull, dark eyes; but he could read nothing in them.

"Dr. Manoel has been attacked. My name is Major Barûk. Show me the telephone."

José inclined his head and led the way along a gloomy and shuttered passage to an even darker alcove which had the fusty smell of a place where daylight is unknown. Here stood a telephone.

And so in this way the outer world was notified of the death of Dr. Manoel, and on that sunny afternoon the neglected grounds of Court Oaks became peopled by unfamiliar figures: Inspector Horley and Dr. Whittington (both of whom the bimbâshi had met before) and several others who were strangers. Police on motorcycles were soon weaving in and out of that maze of narrow lanes which embraced the grounds of Court Oaks. There was a sharp brush when the inspector suggested that Bimbâshi Barûk had taken no steps to apprehend this mysterious assassin.

"Might I inquire," said the bimbâshi smoothly, "short of throwing a cordon around the neighborhood, what I could have done? Being but one, and indivisible, this maneuver presented certain difficulties."

In fact, Inspector Horley was in a bad humor; it rankled in his memory that the bimbâshi had once succeeded in unraveling a local mystery where he himself had failed; so that at the earliest opportunity which he could decently accept,

(Continued on page 59)

Inspector Horley paused. Mrs. Gil- lam, her delicate color fading, had tottered to a chair, supported by her husband. "Peter," she whispered. Her dark blue eyes seemed to grow black with emotion. "Oh, my dear!"

# Why Meat Must Be Rationed

BY QUENTIN REYNOLDS

An unfamiliar sight nowadays is this 145-pound sirloin of beef held on the shoulder of Emil Feitusch, a New York butcher

**Meat rationing is a military necessity and a protection for the civilian. It does not imply that you or your family will go hungry. On the contrary, carefully worked out plans will provide the home front with all the meat that it needs**

**T**HERE was that week when you couldn't buy a steak in Boston or Providence or Worcester or practically anywhere else in New England. There were just no steaks to be had. Nor was there any lamb or pork, and the meat-hungry New Englanders raised their voices in a collective squawk. They squawked to the Department of Agriculture, to the American Meat Institute and to the packers themselves. Only an embarrassed silence met their lusty complaints and soon meat returned and the complaints died down to low grumbles.

They never knew the reason for the shortage and were quite annoyed because neither the government nor the meat industry would give an explanation.

The explanation was simple: Two large ships set out for northern Ireland loaded to the gunwales with meat destined to feed our troops. But the German subs got there first, and the meat fed the fishes of the North Atlantic.

The War Department explained the emergency situation to the packers; the packers grabbed every bit of meat that was headed for New England and diverted it to ships which were waiting. In no time at all, the ships were loaded and sailed off to allay the meat shortage among our troops in northern Ireland. Yet for security reasons, the Navy could not announce the loss of the two sunken ships, and that was the reason for the embarrassed silence on the part of the government and the packers.

Any time that there is a meat shortage in some parts of the country, a similar incident may be the reason. In December, 1941, there was a terrific meat shortage in San Diego, Los Angeles and all other southern California cities. The native sons were very indignant. But once again there was no explanation.

It can be told now that, when Pearl Harbor was bombed, a warehouse containing one million pounds of meat was destroyed. All meat that was headed from Kansas City and Chicago for southern California was diverted and by December 10th was loaded and en route to Pearl Harbor to feed hungry Army, Navy and Marine personnel. As the war becomes grimmer, more of these incidents are bound to happen; temporary meat shortages are sure to occur.

Meat shortages of another type occurred last summer and fall in some cities, notably in the Northeastern states. These were due to the fact that the March price ceilings were relatively lower in these cities than in other cities. The total demand for meat was greater than the total supply, owing to the high wartime incomes of workers. The meat then tended to go to the places where the ceilings were higher and not to the places where the ceilings were lower. This has been corrected by establishing uniform ceilings, and shortages of this type will not recur.

Even without further such shortages or without sinkings and bombings, there will be a relative shortage of meat during the next year. Of course, what we call a shortage would be sheer luxury to the civilians of either Russia or Britain. I spent three months in Russia without ever seeing a steak, and in London you are very lucky (even in the luxury hotels) to get one steak a month. The people of Russia and Britain long ago learned the lesson of total warfare—to wit: civilians have to fight, too. But one of our less attractive heritages is our propensity to delight in squawking about minor complaints until the real pinch comes. Then there is no doubt that we'll be able to take it as well as the civilians of either Russia or Britain.

Take a quick look at the all-over picture of meat in this country and you'll see why there will be a relative meat shortage. You'll realize, too, why meat must be rationed and why it will be to our advantage to have it rationed. Last year, 22 billion pounds of carcass meat were produced by the packers of the country. Four billion pounds went to our Armed Forces and our allies. This

# WHERE THERE'S A WAY

PHOTOGRAPHS FROM  
INTERNATIONAL

First recognizable part of the wooden submarine chaser is the rib—a single strip of wood which is steamed and put on a rack for bending. The ribs shown right are now ship-shape and are being removed for fitting into the keel. Each rib constitutes a half-section, one for each side of the ship

**Y**ACHT and pleasure-craft catalogues that catered to cruising America are back numbers today, and the small shipyards that turned out the luxury cruisers are now building mine sweepers, subchasers and coastal transports for the Navy.

The glamor of the steel battle wagons and the streamlined efficiency of the cruiser aren't here, but the small sisters of the giant fighting ships, built by descendants of early American shipwrights, are sliding down the ways every day as part of the Navy's program to clear the seas of enemy mines and submarines.

Using wood as the predominating structural material, the old shipbuilders are spending their time and talents on work of lifesaving importance to the armed and armored products of the nation's larger shipyards.

Typical of the present business-before-pleasure yards that dot the New England coast (some of them tracing back over a long history of outfitting the early fishing settlements) are those of William A. Robinson, Inc., and Simms Brothers. These firms, well known to pleasure-boat owners, are making new names for themselves in war production. The workers are recognized shipbuilding craftsmen of long standing, many of them having been called into service recently after years of retirement. Age seems to be no handicap. Some of the shipbuilders are eighty years old.

The photographs on this and the opposite page show steps in wooden-ship building, from the initial curved ribs to a fully rigged subchaser ready to do its part for victory. ★★★

The keel has already been completed and the first ribs of a wooden coastal transport are shown being fitted to the keel. Made up in sections, these ribs are then put together before being hoisted into place on the keel. The rib-work of another transport, farther along the ways, is visible in the background

Resembling the skeleton of a paleolithic monster, the nearly finished ribwork of a small transport stretches out (upper right toward the bow. Workmen with a variety of tools including an adze (extreme left of picture) put the finishing touches on the interior. Many of the men are descendants of a long line of New England shipbuilders. Several of them long since retired, are back at work for the duration

All dressed up for its debut subchaser No. 979 is ready to be christened and slid down the ways for its dangerous but useful career of clearing the seas of enemy pigboats. The two pictures at the right show workmen knocking out the chocks in preparation for the event, and the ship as it slides into the water pennants flying. Another headache for the Axis is about to churn seaward

Beset with gas rationing, wage ceiling and maid shortage, Linda Darnell puts up for sale her Brentwood mansion. Asking price: \$50,000

What her new home—a small, court apartment, near 20th Century-Fox studios—lacks in Hollywood "swank" it makes up for in convenience

# Hollywood Holocaust

By Kyle Crichton

PHOTOGRAPHED FOR COLLIER'S  
BY GEORGE DE ZAYAS

Hollywood has the following: (a) No gas, (b) no hired help, (c) no money, (d) an awful ache in the head. The \$25,000 ceiling depresses them; the gas rationing murders them; they sell their homes; they cook their own meals. The amusement center of the world is definitely not amused

THE ceiling has fallen in on Hollywood, and the screams of the wounded are pitiful. The \$25,000-a-year wage freeze was deadly, but gas rationing really piled woe upon anguish. On December 1, 1942, a famous motion-picture actress sat by the side of her swimming pool in Bel-Air and keened in misery. She was by turn tragic, indignant, mournful and irate.

"Why, this gas rationing," she cried, tearfully bitter. "It's—it's worse than being bombed!"

Allowances must be made for a lady who has been sorely tried. Instead of six servants, she now has two—and she hears strange sounds in the kitchen that convince her she will soon be alone. Her chauffeur has been drafted; her butler is working at Lockheed. Her flower gardens are a wreck because the Japs who once tended them are in internment camps. She sits on her mountain peak, ten miles from the studio where she supplies beautiful allure for the multitudes, and thinks of her gas-rationing card and her puny twenty-five grand, and weeps savagely.

Do you think this is farfetched and merely literary? Well, answer me another question: How much dough have you in the kick, and how high will you go for a castle? For instance, here's a little \$82,000 job owned by a famous actress. It has five master bedrooms, a swimming pool, tennis court, guest house and three acres of ground in a swank neighborhood. Would you give as much as \$20,000 and take in the bargain a few grateful kisses from the harassed lady? Make out the papers, my boy, and the thing is yours.

I have another little bargain here that will make your eyes boggle: a fifteen-room villa, fully furnished, swimming pool, guest house, tennis court, stables. The grounds alone cost the owner \$68,000, containing rare shrubs, rare species of trees and gardens that are extraordinary even in southern California. The whole shebang—house, gardens and five acres of ground—\$28,000. What do you say?

## The Hired Help Goes to War

The point, of course, is that you couldn't maintain a place like that with fewer than five servants—and there are no servants. Defense plants have taken them in thousands. Cooks are running drill presses at Douglas or North American; second maids have become riveters.

There was an advertisement in a Los Angeles newspaper:

"Maid wanted; will pay Lockheed wages."

That gets you exactly nowhere. In the first place, you couldn't find the maid and, with the \$25,000 ceiling, you couldn't afford her if you found her. On October 27, 1942, when the government announced the new wage ruling and added that anybody who had already made a gross salary of \$67,200 for the year couldn't draw any more, it was exactly like the days of the bank moratorium in 1933. People who made thousands of dollars a week were destitute. Since most of them customarily live up to everything they make, there was an actual state of panic, with sundry celebrated individuals milling about like desperate mothers in a food riot. At that moment you could have had any house in town as a gift—and you'd have been a fool to take it. The government finally allowed the usual salaries to be paid to the end of the year, but even so, cases of shell shock were widespread.

Clarence Brown, the M-G-M director, deserted his million-dollar estate at Malibu Beach and moved into an apartment in town. (Continued on page 23)

There's no need for a maid to answer the telephone in Miss Darnell's tiny quarters. Anyway, there's hardly standing room for both in the living room. And in the kitchen-dinette, left, it's exactly two steps from cooking to eating

# Virgie Shanghaies Wainwright

By Frank X. Tolbert

ILLUSTRATED BY  
EARL OLIVER HURST

The strategy was all Virgie's but the tactical execution depended upon Sergeant "Asiatic" Donohoe and General Ho. Another smashing triumph for Miss Grew of the United States Marine Corps

NOT meaning any disrespect, of course, Sergeant Michael J. "Asiatic" Donohoe once passed the remark that General Ho Ma-Feng's head looked remarkably like the flight deck of the Saratoga.

General Ho was pretty bald-headed, but he was very youngish in appearance for his fifty-five years and two hundred and fifty pounds of heft. And he was plenty tough, as he proved during a visit last autumn to the Marine Corps Base at New River, N. C.

Ho was a member of the Chinese military mission to the United States, and he came to North Carolina, as guest of Colonel Elmer Grew, to observe the New River Marines in training. The Chinese officer was interested, particularly, in Paramarines and Raiders. For Ho, a Peiping University chemistry professor before the Sino-Japanese War, had first gained military renown as number one train wrecker for China's Eighth Route Army.

The general had a pleasant stay at New River for the first four days. He watched demolition and sabotage squads at their mischief. And he went on landing parties with the Raiders. He was very happy and busy—until Admiral Becker of the Washington Navy Yard and his son, Wainwright, arrived, also as house guests of the Grews.

On the morning following the Beckers' arrival, General Ho was awakened rudely. In fact, the general hadn't been awakened quite so rudely since the time back in 1939 when a Japanese patrol caught him asleep in a foxhole. (One of the Nips held reveille by jabbing the general on the hip pocket with a bayonet. And Ho let out a yelp that must have been heard halfway across Shansi province. Anyway, Ho's men heard him. They bobbed out of their foxholes and, quickly, erased the Japs with machine-gun fire.)

So, on opening his eyes there in the Grews' guest room, the drowsy Chinese thought for a moment that he was back

in a Shansi foxhole and hands were clutching at his throat. Certainly, someone was pawing his face and forcing his mouth apart. He looked up into the fat, frowning face of a small boy. It was Wainwright Becker.

"Hold still, you old Jap rat," ordered the boy.

According to his birth certificate, Wainwright was seven years of age. But Sergeant Donohoe argued that somebody made a mistake. "For how," said Asiatic, "could a kid get so fat and ornery in only seven years?"

After forcing Ho's jaws apart, Wainwright inspected the Chinese's teeth rather closely. Then he moved to the foot of the bed, jerked back the covers and stared at Ho's toes.

"*Che shih-shih ma ya?* (What is this?)" asked Ho. He was so astonished that he spoke in Chinese.

"Shut up, you old spy," replied Wainwright. "You may fool these eight-ball Marines around this old camp. But I know all about you, even if your toes ain't so big."

Wainwright was a child of deep prejudices. He had lived around naval stations all of his life and he had acquired a deep-rooted dislike for Marines. Wainwright had devoted most of his time, since he'd begun to toddle, toward making life miserable for members of the corps.

Ignoring Ho, the fat boy left the bed and began rummaging through some papers on a desk. He picked up the general's reading glasses and examined them intently.

So the general was relieved considerably when Miss Virgie Grew, the colonel's eight-year-old daughter, rapped once on the door and came into the room. Virgie's sweet, sunburned face was expressionless, except that her full, red mouth was set angrily.

"*Nin lai-la!* (Thankful you have come!)" said the Chinese.

"Get out of here, Wainwright," Virgie ordered. "Breakfast is about ready, and you'd better hustle downstairs."

The little boy smiled at Virgie. He scowled at the prone Chinese officer. Then he left the room.

"I knew I could get rid of that little chow-hound if I mentioned breakfast," said Virgie.

Then she spoke to Ho in the Mandarin dialect that she'd learned from her Chinese nurse during Colonel Grew's long tour of duty in Shanghai and Chungking:

"Forgive this little stupid fat one, sir. He is a brother of the rabbit who forgot the seven virtues."

"It is nothing, Sweet One," answered Ho. "I was only startled. But why did the fattened boy examine my teeth, my

The general came down the stairs hurriedly. In fact, he rolled most of the way with a half-dozen golf balls bouncing after him

toes and my simple notes on the table?"

"I fear to tell you, sir," said Virgie. "But the unlettered boy has the fanciful notion that the general is one of the Monkey People. In the presence of his elders, he has stated that the general is really a Japanese spy posing as a leader of the Kuomintang."

Virgie had on green dungarees, very like those worn by Marines at work and in combat, and there was a green beanie set far back on her red hair. When she spoke Chinese her black eyebrows arched with the effort of pronouncing the monosyllables. But, otherwise, her face remained very grave.

She said: "Breakfast will be ready soon, sir."

# Oil for the Planes of China

By Daniel de Luce

ASSOCIATED PRESS CORRESPONDENT

All the oil the Chinese need can be obtained from Burma—if and when the Allies drive out the Japs. A famous war correspondent tells you here why the enemy will never use the Burmese fields

THE greatest reservoir of fighting manpower to whip the Japanese lies not in the United States, 5,000 miles from Tokyo. It's in free, unoccupied China, with some 250 millions of people, just across a relatively small stretch of water from the Nipponese isles. For five years the Chinese soldier has proved himself every bit as courageous and clever as his Japanese enemy. He has hung on in the face of discouraging odds, lacking modern weapons and an air force.

Anglo-American arsenals should eventually be able to furnish him with these new arms and give him the support of a combined armada of the United States Army Air Forces and the Royal Air Force. However, "the day" is indefinite. In 1943? Perhaps longer. There is a lot of spadework to be done for a great Allied offensive on the Asiatic continent. It is required chiefly in a land of white pagodas and yellow-robed priests—Burma. And it's being planned right now by Generalissimo Chiang Kai-shek, General Sir Archibald Wavell and Lieutenant General Joseph W. Stilwell.

The transfer of a thousand bombers and a thousand fighting planes from America to China could be made in seven days. But once having got the air fleet into China, the Allies would be little better off than before unless they had Burma. For the Air Force would need fuel—not a piddling few thousand gallons flown laboriously over the eastern tip of the Himalayas for the handful of planes already operating under the command of Brigadier General Claire L. Chennault. To strike effectively, the Air Force would require many thousand tons.

And where's the oil for the future planes of China? In Burma. "Oh!" you say. "Weren't the Burma fields scorched by the British? Or was that just another newspaper story?"

Yes, the Burma fields were scorched, thoroughly scorched. At the moment

they're useless. But listen to the man who did the scorching:

"If the Japanese brought in 15,000 oil specialists and 50,000 tons of equipment and machinery, they could get Burma producing again within a few months. But they have neither the specialists nor the equipment. We have both. We can soon have the wells flowing—if and when we recapture Burma."

For the story of the scorching of Burma, let's begin by looking into a little red-cloth-covered notebook which this itinerant war correspondent bought in Mandalay for ten annas before the shops were bombed and burned down on Good Friday last year. I had it in a sweaty pocket of my khaki shirt when I jeepped through Yenangyaung, oil capital of Burma, on Thursday, April 16, 1942.

Yenangyaung (pronounced yeh-nan-jowng), in Burmese, meant "stream of the smelly waters." Some centuries ago silk-skirted natives had first knelt beside a wide, shallow creek near its confluence with the vast Irrawaddy and scooped up the pungent, black fluid which ran slowly down from shale fissures of the brown hilly slopes along the creek. They took the "smelly water" back to their small dusty villages of palm-leaf roofs and grass-mat walls. They burned it in crude lamps at home and in their hpoongyi kyaungs before the shrine of the beneficent Buddha.

Came the white man. In the last sixty years thousands of derricks had sprung up on the drab hills. They became almost as dense as the teak trees in the Pegu forests. Burma oil, a million tons every twelve months, began lighting many a lamp in greater Asia.

Then came the Jap. He was about thirty miles south of Yenangyaung and pressing hard last April 16th when I walked into the main oil-field powerhouse and met a lean, hard, eagle-nosed English civilian loading his army .38 revolver. Walter L. Forster, of the Shell Oil Company at Cairo, had supervised the demolition of the Rangoon refineries the previous month, calmly departed by boat for India at the very moment the enemy was occupying Rangoon, and

(Continued on page 66)

# I'LL BE FOR YOU

By Nancy Titus

ILLUSTRATED BY  
MARIO COOPER

Her only desire was to make him happy. And, in so desiring, she found joy herself

HANNAH awoke, drowsy and happy, with the instinctive pleasure of waking to a new day that is part of being seventeen. She stretched her thin, long legs under the muslin sheets and yawned.

Then she saw on the dresser the little wooden souvenir hammer from the Hotel Belmont and she remembered last night and Bob Huston. And the nagging doubt that had been in her when she went to sleep came back, drumming at her mind again, persistent as a bottle fly against a pane.

She sat up, pushing back the heavy black hair from her pointed, freckle-splashed face.

"But I didn't do anything wrong," she thought.

She heard Mom downstairs in the kitchen, rattling pans, china. She would have begun preparations for the heavy dinner planned for the soldier she had invited to dinner today, through the Y.

Oh, the soldier! Last week Hannah had been excited over the prospect of his coming. But her interest had gone. A lonely soldier in a rumpled khaki uniform. That wasn't what she wanted. She wanted someone . . . glamorous. She wanted the kind of time she had had last night . . . wanted the things that Sally had.

In the bathroom across the hall, the shower came on with a rush. Sally was up. Hannah swung her legs over the bed, her toes wriggling, reaching for her scuffs.

She'd tell Sally about last night. Her sister would understand. She wasn't like Mom. Sally was sophisticated and wise, with a smart cynicism Hannah passionately desired for herself. Sally was engaged to Chandler Lorrان who had obtained a divorce to marry her. She would soon no longer be Sally Wales, secretary to Mr. Lorrان. She would be Mrs. Lorrان, wearing a mink coat; her pictures in the society section of the Holden Times, riding in the Bellevue Hunt, giving big parties. Hannah thought she would rather be Sally than anyone else in the world.

She padded into the bathroom, and Sally thrust her head through the shower curtain. "Hullo, chicken. Up late, aren't you?"

Hannah leaned against the washbasin. "Mmm . . . I was out last night. Sally—"

"Haven't forgotten your soldier's coming today, have you?"

"He isn't mine. He's Mom's. Sally—"

But Sally had withdrawn. "Will you get my breeches and boots out for me, lamb? I told Chan I'd be ready at ten and it's quarter to already. He hates to cool his heels."

It was hard to force the intimate moment for a confidence when Sally was hurrying to meet Chandler. While her sister dressed, Hannah sprawled on the bed, brown legs waving, watching her.

Sally leaned forward at her dressing table, painting on her mouth. She was beautiful. Her face a perfect ivory oval,

its planes and shadows delicate and fine; her eyes brown-wine, behind improbably thick golden lashes; her hair dark honey to her slim shoulders. Her loveliness was so true, Hannah could not envy it.

She could not envy it, but she could wish that some small part of it had gone to her. It was hard to be seventeen now . . . to have come to this breath-taking, trembling, shining moment . . . and to find there was nothing for one.

"I'm all out of tune with everything," Hannah thought.

She longed to be popular; to dance; to have flowers come in square white boxes, in green waxed paper. But who was there who would ask her to dance, send the flowers? So many boys she had known in school were gone; they were dropping out from her class. There were the college boys from Holden University, on the outskirts of the city. But to them she was a town girl. If she had been pretty . . . but she wasn't. She was too small, too boyishly thin; her cheekbones were too high and sharp; her mouth too long; her eyes were neither green nor gray, but both, and so, she thought, nothing. She did not even attract the soldiers from Camp Axton, twenty-five miles away, who thronged the streets on their hours of liberty. To them she was young, a child.

Sally stood up, tucking in her shirt. "How do I look?"

"Okay. Swell."

Hannah did not add: *But tired. Not as much a part of spring as you looked three or four Aprils ago.* There had been a kind of luminous glow to Sally's eyes when she was going out with Tom Fielding. But Tom had been nobody.

"I hope I manage to stay on the darned horse today," Sally said, picking up her gloves.

"Sally—" Hannah began again. Somehow she must tell it now, this morning. She had to be sure.

A HORN sounded loudly outside. "He's here." Sally bent impulsively and touched Hannah's cheek with her smooth red lips. "Wondering about that soldier, aren't you?"

"I am not."

Sally laughed. "You can't fool me." Her booted heels were castanets on the stairs.

"Hannah leaned on the banister. Mom was coming into the hall, her face kitchen-rosy.

"Sally, will you be back for dinner? You know how to handle boys. You can make them laugh."

"I'm a riot, all right." Sally patted her shoulder. "Hannah can do the honors. I'll be back, though. Chandler's coming along afterward with a bottle of wine, in case the military is too difficult."

Mom said nothing. She froze, her mouth tight, but her eyes old and worried when Sally spoke of Chandler Lorrان. Mom was not yet used to the thought of Sally's marrying him.

(Continued on page 62)

Sally's head was down among the perfume bottles . . . the precious bottles, pushed every which way. . . . Hannah said, "Dike's crazy about you. What are you crying for?"

# MISSION OVER KISKA

By Corey Ford

TELEGRAPHED FROM ALASKA

Reclaiming Kiska from the Japs is a job that must be done, but it won't be any cinch. You get the idea after a trip over that fog-shrouded rock in an Army bomber

IT WAS a lucky shot—or maybe it wasn't so lucky. When you're coming in on a low-level attack, some hundred feet above the target, you're open for everything in the books. And the antiaircraft at Kiska is plenty good, make no mistake about that. Already it had done a job on the tough little bomber—shot off the elevator and rudder-trim tabs, sent a bullet through the control pedestal, hemstitched the glass tail, driven a slug through the left engine nacelle and punctured the tire. The turret gunner, looking through the side window, saw the gashed rubber and knew what that would mean when they tried to shoot a landing.

But the shot that did the real damage came in through the right side of the cockpit, blew the copilot's hands full of jagged metal, ricocheted off the window handle and drilled clean through the pilot's foot, before it wound up, spent, on the floor. With a tire flat, the tabs useless, the pilot and copilot both crippled, a landing was impossible—except that in the Air Forces they do the impossible. The copilot, both his hands dangling helpless, handled the rudder and brakes with his feet. The pilot, without feet, fingered the throttles and the control column. Together in perfect teamwork, they wobbled the ship to a safe halt, and the copilot climbed out, the lap of his leather flying pants sticky with blood: "Boy, I was sure scared."

We admitted that was somewhat understandable.

"I mean the weather. I was scared the field would be socked in." He wrapped a handkerchief soberly around his hands. "You know, I'd rather face a Zero in the air than zero-zero on the ground."

For the battle of Kiska—the battle we're fighting in the Aleutians—is not a battle of antiaircraft shells and machine-gun fire and lithe, derisive Zeros, half rolling toward you out of the sun. The battle of the Aleutians is, day after week after month, a battle of weather.

## The Battle with the Elements

Distance and weather—or rather, distance times weather. A battle of fog and sleet and sudden snow squalls—cavu one minute and snabu the next—and frozen clouds that ice up your wings in a matter of seconds, and williwaws and hundred-mile-an-hour gales that rack your ship or drop it a couple of thousand feet in a breath; all of it multiplied by nine hundred miles of the cruelest and coldest and loneliest ocean in the world, through which only an occasional submerged volcano thrusts its jagged crater.

There are no emergency landings in these islands; the radio beams are distorted and undependable, the water is so cold that a pilot who sets down in it can stay alive only a very few minutes. And yet it is over this silent and storm-shrouded archipelago, cursed with the toughest weather in the world, that our land-based planes must fly to drop their occasional freight of bombs on the enemy's well-bastioned fortresses at the chain's western tip.

Understand the weather and you'll understand why it is difficult to blast the Japs off Kiska by intermittent air attack alone. You can bomb and be damned. The Japs simply pull in their necks till the bombers have gone over and then take advantage of the next ten days of fog to rebuild their installations and ready themselves for the next round.

For Kiska is a tough rock to take. Forget those stories of a few bewildered Nips clinging by their finger tips to a slippery cliff; here is a veritable Bering Sea Malta, its sheltered harbor protected by enfolding hills, its base honeycombed by underground passages, its approaches guarded by antiaircraft as powerful as that of a full-size task force. If you think Kiska is easy, fly over it with the Air Forces on a mission some morning. Look down through the glass nose of a medium bomber and see for yourself just what the Japs have got out there.

You come in low beneath the overcast, and the Bering Sea is a flat, gray meadow, and flocks of white clouds, like sheep, browse placidly below you in the wan winter dawn. You are flying in elements of two, the rest of the medium bombers strung out on either side of you, the slim nervous fighter planes in an intent echelon on your tail. Ahead of you Kiska volcano, at the north tip of the island, is a stationary cloud on the horizon, its (Continued on page 30)

## Sorry, the Postman says "No!"

**WE WISH** we could mail you a Four Roses Hot Toddy—just to let you know what a downright marvelous cold-weather drink it is.

We can't. So we suggest the next best thing:

If you haven't a bottle of Four Roses on hand, get one at the nearest liquor store. Then just follow these simple directions:

### **Recipe for the world's finest Hot Toddy:**

*Put a piece of sugar in the bottom of a glass and dissolve it with a little hot water. Add a twist of lemon peel (bruise it firmly) . . . four cloves and, if you desire, a stick of cinnamon. Pour in a generous jigger of that matchless whiskey, Four Roses . . . and fill the glass with steaming hot water.*

Now settle back in your favorite chair before the fire and slowly sip the warm

and fragrant masterpiece that you and Four Roses have created!

## **FOUR ROSES**

*Four Roses is a blend of straight whiskies—90 proof. Frankfort Distilleries, Inc., Louisville & Baltimore.*

# LUCKY STRIKE MEANS FINE TOBACCO!

"Getting ready for auction day." Painted from life on a Southern farm by Aaron Bohrod.

# Hollywood Holocaust

Continued from page 16

Sam Woods, the Paramount director, also left the Santa Monica district, where the blackout is absolute and where driving at night is worth a man's life.

Claudette Colbert and Dorothy Lamour gave up their houses and took apartments. Robert Young deserted his ranch in San Fernando Valley and moved near the M-G-M studios in Culver City. Linda Darnell closed her home and offered it for sale.

But if the salary limitation and the servant problem brought furrows to the brows of the lovely, it was the gas rationing that murdered them. No resident of Hollywood ever lives close to anything. If he works at Columbia studios he insists on living at Santa Monica, fifteen miles away. If he works at 20th Century-Fox, he lives in San Fernando Valley, from ten to twenty miles off. Four gallons of gas a week for a Hollywood movie worker means precisely as much as a pint of water a month for a Marine on Guadalcanal.

People living up in the canyons of Beverly Hills might as well be on a raft in the Pacific. There is no bus service; there are no stores for miles; there is no delivery service—nothing but cliffs, crags and nightly fogs. It is in romantic places like this that our friends, the actors, live. They wanted to be different and now they are not only different but stranded.

But you can't be too sorry for the Angelenos. They know they can't get along without tires and they know also they've been burning them up for over a year, at a ruinous rate. They have what they maintain is the finest climate in the world but it never occurs to them to sit down and enjoy it; they must be riding in it before they're pleased. Out they dash every chance they get, neatly bound up in a four-door sedan so the sun won't hit them.

## Treason in Los Angeles

Leon Henderson was lammed for hinting that people who wasted rubber were traitors, but he should have confined the charge to Los Angeles and stuck to it. It is the largest city in area in the world, and the bus and streetcar service is terrible. Distances are literally estimated in sections of five miles; they think nothing of that. So if they aren't stopped from driving, the tires will wear out and when the tires wear out there, the town stops. There will be very little work at Vultee, North American, Lockheed or Douglas airplane plants, and almost none in the motion-picture industry, another war essential.

But it wasn't the wage ceiling that terrified Hollywood so much as the provision in the original ruling that no deductions for expenses would be allowed in income-tax returns. That was a killer!

Previously an actress could claim her agent's fees as a business expense, as well as part of her wardrobe, her advertising and publicity, entertainment, travel and fan-mail expenses. If that has to come out of her \$25,000 net—WOWZIE!

Since no layman could be expected to understand a disaster of such magnitude, we went to see Mr. Forest Monroe, business manager of many cinema celebrities. Mr. Monroe gave us the case history of an actress who operates in the higher brackets. Assuming that she was under contract to make \$99,500 in 1943, under the wage-freezing ruling of October 27, 1942 (with no deductions

allowed for expenses), this is what would happen to her:

Salary	\$67,200
Federal Tax	\$38,200
State Tax	4,000
Victory Tax	3,330
	\$45,530
	\$45,530
	\$21,670
Agent's commission	\$6,720
Charities, 10%	6,720
Publicity, advertising	6,720
Wardrobe	5,000
Misc. Business Expense	2,500
	\$27,660
Minus, or in the red	\$5,990

Did you ever hear of anything like that? The lady makes \$67,200 a year and before she's had a bite to eat, she's almost \$6,000 in the hole. Without paying the rent or slipping a few bucks to

for radio gratis? Will he work for radio and give Paramount his pictures free? If anybody gives him more than his wage ceiling, the culprit can get heaved in the clink for a year and smacked with a nasty little fine.

Furthermore, if an actor works after his level has been reached, the government doesn't get the money he would have made: the company keeps it. That burns up the actor. According to tax authorities, corporation taxes on such additional amounts would be only 40 per cent, which would allow the studio a neat profit.

The studios insist they don't want the money: they want the actors. The actors say in that case why don't the studios turn the extra money over to charity? Did you read where Franchot Tone refused to work for Warner Brothers? If it was a question of working for the

ber last year were laying off. They will lay off this year just as soon as they have reached their ceiling. They will also look closely to find the medium that will keep them most fully in the public eye during their season of financial hibernation. It may be the Broadway stage instead of the movies. With Hollywood already shorthanded from the great number of players going into the armed services, this new blow will be hard to meet.

The original wage-ceiling ruling—holding that expenses were not deductible—meant the guillotine for the Hollywood agents, those ultrapowerful screen figures, and even now the future is not bright because the large fees are ended. We are pained to report that on at least two occasions, well-known actors have taken us into a back room, closed the door carefully, looked around for dictaphones and then cried:

"Haw! Haw! Haw . . . the agents are ruined!" in the most evil-sounding voices. The truth seems to be that actors have merely accepted agents as a necessary evil and will not be injured to the quick if the 10 per cent gentlemen suffer a slightly complete collapse.

## Clipped Wings

Many actors approve of the wage ceiling and others like it for strange reasons. There is the director who hates his producer.

"The louse," he said, "keeps a love nest up at Arrowhead Springs. Now, two things: (a) he can't afford it any longer, and (b) he won't have gas enough to get up there. So he brings his sweetie down here, his wife hears about it and clips him for everything he has. Put me down as in favor of the wage freeze."

There is a possibility that many of the more important stars may be able to arrange things so they will be employers rather than employees, but that will help in only a few cases. James Cagney had formed his own producing company before the wage ceiling was promulgated and he has now been joined by Jack Benny. Others will probably follow. The hitch to this is that actors trying to be producers have invariably been failures. They may avoid the \$25,000 ceiling and lose their shirts in doing it.

Naturally, gas rationing became a racket almost immediately. Nice parasitical boys and girls turned up with "B" and "C" cards while workers often had to be content with "A" cards. The climax was reached at the Pasadena Rose Bowl game when 30,000 cars were parked around the stadium, 8,000 more than had ever attended the game in pre-rationing days. The uproar over this was tremendous, and movie stars who had moved back to their mountain eyries with the thought that the worst was over, began trembling again at the possibility of government investigations.

There is gas bootlegging already and there will be much more of it. There will be tax dodgers and tax delinquencies. There will be men suddenly turning patriotic to enter the services with a view to delaying their taxes until after the war. There have been profound discussions on the need of discovering "legitimate" means of postponing extra salary payments till after the war.

The movie lawyers and tax experts, sore and chastened from previous tax trials, admonish gently.

"That way, dear children," they say sadly, "lies Atlanta."

THE END

## BUTCH

by CPL. LARRY REYNOLDS

the hired help or dropping the four gallons in the tank, she's broke. Is there a dry eye in the house?

Just when it seemed that a wave of suicides would clutter up the famous bridge at Pasadena, the government in Washington relented. The Treasury Department still maintained that no deductions could be allowed from the \$67,200 wage-freeze level but permitted "an additional salary equal to expenses." This means that actors may again be making \$100,000 a year—but they won't be getting any more than \$25,000 a year when it's all over.

If they can only gross \$67,200 (or something more to cover expenses), are they still going to work after the level has been reached? That question has everybody worried. Take the case of Bing Crosby, for example. His rate for one picture at Paramount is more than his wage ceiling. In addition he makes a fortune on radio. What's he going to drop? Will he make a picture and work

government for free, he didn't mind; but he didn't want to make beggars out of the Warner boys.

The wage-freezing edict has had tremendous repercussions already. Take the matter of contracts, those seven-year affairs by which the company has you for that length of time but can drop you at the end of any six-months period. If the option is taken up, however, the actor gets a raise in salary. Now salaries are frozen. "Oops, sorry!" cries the producer when the option period arrives. "If I raise your ante, the government smacks me." The actor answers very civilly that if the contract isn't fulfilled, obviously it is dead—and goodbye, Mr. Producer. *Oh, no!* screams that worthy, who is already going mad for lack of performers . . . and they've been trying to work it out.

Actors are patriotic but they are also human beings. The latter truth has already become manifest. Stars who had exceeded their \$67,200 limit in Novem-

**EVEREADY**  
TRADE-MARK

The word "Eveready" is a registered trade-mark of National Carbon Company, Inc.

And then she went downstairs. She was afraid the general would be very angry. In the kitchen, she told Creola, the Negro cook:

"Wainwright is not helping international relations any by calling Chinese gentlemen Jap rats. I got to figure out some way to see that Wainwright leaves with his dad tomorrow. We don't want him here for any long visit."

"I don't know nothin' 'bout these inernashnul relations," replied Creola, "but Wainwright is a powe'ful trial to all he close relations, including 'at old admir-ul. Hit was this way back in Washin'ton. He pa was always sending Wainwright over to our house jus' to get shed of him."

"We got to shanghai that little poge," said Virgie, firmly.

Admiral Becker, Colonel Grew and Wainwright were seated at the breakfast table as Virgie and Creola came out of the kitchen. Creola brought in a big platter of crisp brown pork chops. She placed the platter well out of Wainwright's reach. But the boy stood up in his chair and grabbed a couple of the chops.

Mrs. Grew, at the foot of the stairs, called, "Breakfast is ready, General Ho."

The general came down the stairs hurriedly. In fact, he rolled most of the way with a half-dozen golf balls bouncing after him.

Someone had dropped some golf balls on the second step of the stairs.

"I don't know who could have been so careless," said Mrs. Grew. "Elmer hasn't played golf since 1939."

Colonel Grew helped Ho to his feet.

"It is no matter," said the Chinese, politely. "I am not injured."

VIRGIE regarded Wainwright accusingly. The boy avoided her eyes. He was starting on his second pork chop. But he stopped eating for a while and watched the general with a fixed, hostile stare.

Mrs. Grew spoke to the admiral: "It's too bad you have to leave tomorrow. Couldn't you let Wainwright stay for a visit with us? Virginia gets so lonesome here at New River."

"Well," replied Admiral Becker, and he seemed very happy, "I'm coming back here in a couple of weeks on an inspection tour and I could pick him up then."

"We'd love to have you, dear," said Mrs. Grew, smiling at Wainwright, "wouldn't we, Virginia?"

"Yeah," said Virgie. She thought, "I'll get the bulkhead stare if that fat feather-merchant stays here for two weeks. And he'll ruin the general's visit and, maybe, make the general mad at us."

The fat little boy held a pork chop at high port and grinned at Mrs. Grew and Virgie.

"You can stay, Wainwright," said the admiral, "if you'll promise to behave."

Virgie drank her milk and asked permission to leave the table. She'd lost all appetite.

Colonel Grew said, "We're going over to the Parachute School this morning. We'll be in the station wagon, and Virgie and Wainwright can come along."

Mrs. Grew looked troubled. "Perhaps you'd better leave the children here. I don't want Virginia near the rifle range or near those jumping towers. You know how things like that upset the child. And she has been more nervous than ever since we moved to this camp."

"There'll be no shootin'," said the colonel. "The kids won't be in the way. Sergeant Donohoe is going to give us a

demonstration of unloading cargo chutes under simulated fire."

"Simulated," said Mrs. Grew, in a low voice. And she made no more protests.

"Asiatic has been made platoon sergeant since he became an instructor at the Parachute School," said Colonel Grew.

Wainwright made a grunting noise from behind a piece of toast and his round face turned red. Of all Marines, the little boy hated Sergeant Donohoe most. On their last meeting, at the Marine Barracks in Washington, Asiatic had paddled Wainwright most vigorously.

A half-hour later, with Colonel Grew driving, the party started for the Parachute School on Hadnot Point. The colonel stopped the station wagon in the boondocks near the obstacle course. He said to the admiral and General Ho:

"I've got some kinks in my legs and I need exercise. How about running the obstacle course with me? It'll settle your breakfast."

Ho and Becker were in dungarees. So they agreed. And the three athletic veterans set out through the pines. The children stayed in the car—until the men got out of sight. Then Virgie got out and took a look at a Garand rifle in a sling on the side of the car. Wainwright got out and started down the trail after the men.

The little boy caught up with the men at the fifth obstacle, a culvert pipe of galvanized steel. Colonel Grew and the admiral were snaking through the pipe as Wainwright entered the clearing. Then they loped on toward the sixth obstacle, a scaffold. The Chinese officer had stopped after the fourth obstacle to tie his shoe. He had considerable difficulty entering the narrow pipe, and it was several minutes before Ho's bald head appeared out of the mouth of the tube. The general was squirming about, and Wainwright saw that the Chinese was wedged in the pipe. Ho turned in

the tube, trying to get free, and looked up into Wainwright's bold round face.

"Please, some help, little one," said Ho.

But the boy only replied:

"You old Jap rat, you, I wouldn't give you all the hay you could eat if you were a blind donkey in a cement pasture with a muzzle on. Maybe, I can make you confess now."

Wainwright picked up a heavy branch, brushing Ho's face with the leaves. Then he began waving the club menacingly over the helpless Chinese officer.

AFTER Wainwright ran off into the pines, Virgie also left the station wagon. Near by, a group of Paramarines, under the tutelage of Sergeant Donohoe, were throwing dummy hand grenades. Virgie went over to watch the show.

Asiatic, standing erect, was throwing grenades through "windows" at various heights on a scaffold. Then the big sergeant started firing at a small pit far down the field. He'd start from prone position, rise to one knee and heave the grenades with a mechanical sort of accuracy into the target. Before the war, Donohoe had been one of the Fourth Marines' best hurlers in the Shanghai baseball league.

Asiatic stopped and said, "The smoking lamp is lit. You guys can take a few minutes' breather, but I don't want no sky-larking." He said to Virgie:

"You shouldn't be hanging around here, honey. This grenade course, even if we ain't throwing live ones today, ain't no place for a little gal. Your maw thinks you don't even know what a grenade is."

"Aw, this isn't any more dangerous than watching a ball game," replied Virgie. "Asiatic, I was wondering if you could throw a golf ball into a bowl of gravy at fifteen yards!"

Before the Marine could reply to this strange question, Virgie continued:

### MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

"The President has a tendency to pamper me"

COLLIER'S

"I think you'd better hike over there in the pines and take a look around, Asiatic. That little poge, Wainwright Becker, is visiting us. And he's over there trying to run the obstacle course, or something."

Virgie followed Asiatic as far as the station wagon. There, the little girl took the Garand rifle from its sling and began to make a detail strip of the weapon on the fender.

When Donohoe arrived at the fifth obstacle on the course he saw Wainwright dancing around the mouth of the culvert pipe and, occasionally whacking the general's head with the branch. Wainwright was yowling:

"You old Jap rat, if you don't confess I'll knock the hootin'-nanny-hoot out of you."

Asiatic jerked the club from the boy's paws. Wainwright, with his fat little knees hitting together, ran down the trail toward the station wagon. Donohoe could not follow, for he was very busy trying to remove the Chinese from the pipe. Finally, the general was freed, after ripping his dungarees and leaving some hide inside the tube.

General Ho rubbed his head, which was scratched and bleeding a little. He said:

"Was engaged in running this excellent course when unfortunate accident occurred, Sergeant. Would you care to accompany me for remainder of way? It seems I have need of a bodyguard with that devil's brat loose in the woods."

"Yes, sir," said Asiatic.

BACK at the station wagon, Virgie had completed the detail strip, and the parts of the Garand were laid out neatly on the fender. But the little girl cupped her hands and swept together the parts of the trigger group. Next she took a half-dozen golf balls from the glove case and scrambled them among the metallic parts. She dropped the stock group and barrel and receiver group on the ground. She was thus engaged when Wainwright, breathless, came out of the pines.

"What you doin', Virgie? Who taught you to take rifles apart?"

"Anybody with my time in the Marines ought to be able to service a 155-millimeter," replied Virgie. "How about watching these parts while I go over to the course and look for my dad."

"Okey-dokie," said Wainwright. He was so exhausted that he lay down on the fender. And he was picking the golf balls from among the Garand parts when Admiral Becker and Colonel Grew returned to the car.

"What the devil is going on here?" said the admiral, looking at the scattered parts and the golf balls on the fender. The operating rod spring was now lying on the ground, along with the stock group and the barrel and receiver group. The admiral had scratched his leg on barbed wire and he was in an angry mood.

"It looks like what's left of a rifle," said the colonel, and he was angry, too. No one could mistreat a rifle around Colonel Grew.

"I didn't do nothing," sputtered Wainwright, stuffing golf balls in his pockets. "Virgie done it."

But at that moment, General Ho, Asiatic and Virgie came up the trail to the car. And the Chinese officer said, "Miss Virgie has been with us for some time."

"I suppose those are your golf balls, too, Wainwright?" said the admiral, sternly. "I'll attend to you when we get home. One more break from you and I'll take you home tomorrow."

Virgie gathered up the rifle parts, tenderly. And, as the station wagon

sped on toward the Parachute School, she reassembled the weapon.

That evening Creola had prepared a particularly good meal, including barbecued ribs and gravy, candied yams, hot biscuits. Admiral Becker was the last to appear for dinner. And he repeated the general's morning performance on the stairs. Only, this time, the golf balls had been planted on about the fourth step and the admiral did only two barrel rolls on the way down.

The admiral picked himself up from the floor, slowly, and then he fixed a savage glare on his son.

"I didn't do nothin'," said Wainwright, his mouth full of candied yam. "Here's my golf balls right here." And he removed several of the balls from his pockets and placed them beside his plate.

Admiral Becker might have seized his offspring right there had not Creola entered with a platter of barbecued ribs and with a huge bowl of gravy and a smaller bowl of "devil's sauce."

"No bones broken, I guess," said the admiral to Colonel Grew. And then he seated himself at the table and said, cheerfully, "There's no one in the world who can barbecue ribs and make barbecue sauce half so well as Creola."

"Chris-mas gi'f, Admir-ul," said Creola, and she laid the big bowl of gravy carefully between Admiral Becker and Wainwright. Then the Negro girl started back to the kitchen.

"I skinned my hand today," said Virgie, and displayed one of her tanned little paws for the admiral's inspection.

"That's too bad, honey—" began the admiral. He never finished the sentence. For something soared through the air and landed plop in the gravy bowl. Admiral Becker's face and his dress blouse were covered with gravy. The bowl turned over and a golf ball rolled out.

Wainwright dropped a rib, took one look at his father and then headed for the stairs as fast as his fat legs could carry him.

"Excuse me, please," said the admiral, mopping gravy from his face. And he followed his son up the stairs.

FIVE minutes later, Virgie, General Ho and Sergeant Donohoe were sitting on the back porch of Colonel Grew's quarters. They were chewing on barbecued ribs and watching the moon rise out of the broad river. It was a cool night and the pines showed silver in the moonlight. Far out in the timber they could hear boys' voices. Some outfit was on a night combat problem. Too, there were angry yells from the second floor of the Grews' house. Wainwright was getting what his father later described as the "licking of his life."

"It was all well planned," said the general. "Creola laid the bowl in exactly the right spot and opened the kitchen door at just the right time, when the admiral's head was turned, for the throw."

"I guess you know, honey," said Asiatic to Virgie, "that I took an awful chance hiding in the kitchen and throwing golf balls on the colonel's table. If he'd seen me I'd be secured in the brig for the rest of this cruise."

"Speaking of chances," said the general, "I was almost caught leaving those golf balls on the stairs for Admiral Becker."

"Now you can really get down to business, sir," said Virgie, "with Wainwright shoving off tomorrow."

"During the Fattened Boy's visit my time has not been altogether wasted," replied General Ho Ma-Feng, "for you know I came down here to study new methods of sabotage."

THE END

# MIKE MORAN'S MEN

By Frank D. Morris

Part 2 of the story of the cruiser Boise—how Mike Moran and his men and his ship survived a blind half-hour of hell that saw the death of six Japanese warships in the sea battle off Guadalcanal

Reviewing the Boise's part in the Solomons action, Captain E. J. "Iron Mike" Moran follows the cruiser's course on a map of the South Pacific with Lt. Kenneth McArdle (left) and Lt. Nate R. White

U. S. NAVY

THE light cruiser Boise was in plenty of trouble. Two Jap cruisers were blazing away at her and the straddles of their salvos were delivering punishing blows. Two of her forward turrets had been struck by heavy shells, and another shell had zipped through her starboard side nine feet below the waterline and let go in a magazine. A direct hit in a powder magazine—a sailor's nightmare.

Explosions in the magazine forked white-hot flames into the handling room adjacent. Every man in the path of those flames was killed. The hot, acrid gases they ferried covered even a wider area and sent the few survivors choking and stumbling through the narrow exits.

In a space just aft of this inferno, Gunner's Mate Paul Kunkel was busy feeding an ammunition hoist. When the magazine was hit, he was bowled over, but a second or two later, Paul was right back on his job. Then he sniffed gas fumes and traced them to a door leading into the handling room. As he opened this door, flames leaped out, so he closed it in a hurry. He didn't need the warning just then coming over the loud-speaker: "Fire in the forward magazine." He'd seen it.

Smoke and burning powder fumes were thick around him as he corralled the half-dozen colored mess attendants in his crew of powder handlers and guided them aft toward escape hatches. On the way, Gunner's Mate Kunkel came across a Marine wandering aimlessly in a smoke-filled passageway. Placing a hand on the Marine's shoulder, Kunkel conducted him aft to the nearest hatch leading to an open deck. For a while there was trouble with the steel dogs that held the hatch closed, but finally they gave way and Kunkel with his little band piled out on deck.

The Boise's chief carpenter, Harold Thomas, wasn't so fortunate. As leader of Repair Party One, stationed forward, he and his men had just resumed their post after dousing the fire in Captain Moran's cabin and he was waiting for further orders. When these orders finally came through from Central Station, "Repair One lay forward to fire in forward magazine," there was no reply from Thomas or his men. They couldn't answer. All of them had been killed instantly by concussion.

"Flood the forward magazine!"

## The Repair Party Takes Over

Carpenter Kelley immediately took over his chief's job and led another repair party forward. With the help of Boatswain's Mate Donahue, he manned the flood valves of the magazine, but neither was sure they would work because of the terrific damage the blast had caused in that part of the ship. They soon found out, however, that the flooding operation wasn't necessary. Sea water rushing in through the underwater hole that one of the Jap shells had made was doing the job for them.

The men left in the magazine and handling room were beyond help then, so Kelley and Donahue concentrated on the rescue of another shipmate. Ship-fitter Binder was on duty in the pump room in the Boise's bow directly under the flooded compartment. A hatch leading to the pump room was already under several feet of water when Donahue dived down, secured a line to the hatch cover and, with Kelley's aid, forced it open against the heavy pressure of the rising water. Then they hauled Binder up to safety.

At this time, the bow of the Boise was enveloped in flame and smoke. All three forward turrets were out of action and two of them were blazing furiously. "Garf" Thomas, a junior-grade lieutenant, was officer-in-charge in Turret One. When the enemy projectile—a lucky, freak hit—penetrated his turret, Lieutenant Thomas actually heard it splutter before the fuse went off. Over his phone headset, Thomas ordered all of his men below in the magazine and the handling room and on the shell deck to clear their stations. At the same time, he was shunting the turret crew through the escape-hatch opening on deck.

Although his battle station was nearest this hatch, Garf didn't attempt to leave it until most of the men around him in the crowded turret had got clear. Then it was too late. With a thundering roar, the shell

Still showing the scars of her battle wounds, the Boise arrives at the Philadelphia Navy Yard for repairs. She took a direct hit from an 8-inch shell and several hits from 5-inch shells and was set afire. The death toll of her crew in battle was 107

## Seagram's V.O. CANADIAN

CANADIAN WHISKY • A BLEND OF RARE SELECTED WHISKIES

Six Years Old — 86.8 Proof. Seagram-Distillers Corporation, New York

detonated, and flames filled the steel pill-box, killing the 26-year-old officer at his post. Thomas' quick thinking and disregard for his own safety saved the lives of eleven men. The citation accompanying the Navy Cross he was awarded posthumously testifies to that.

Young Thomas, nicknamed "Beaverhead" because he always wore his hair close-cropped, was one of the most popular j.o.'s aboard ship. His disposition was famous in the wardroom; no one could ever ruffle it. Garf, who came from Colver, Pennsylvania, had been on the All-America soccer squad at Penn State where he graduated four years ago.

One hundred and seven of Iron Mike Moran's men died a hero's death that night on the Boise. As the survivors of Turret One tumbled out on deck, they saw the fate they had escaped. Turret Two, directly above the magazine that had been hit, was a holocaust with streams of fire pouring out of all its apertures. Not a man inside was alive. Even the deck they trod was splintered and burning, and tongues of flame shot high up the forward superstructure, past Captain Moran on his flying bridge. The air was heavy with suffocating fumes that caused men dragging fire hoses forward to topple over unconscious.

The Boise was down by the head and listing to starboard as the ocean poured in through the gaping hole in her side. But she was still maintaining a respectable speed, and her two after turrets were still blazing away at the Jap heavy cruiser that had done all this damage.

For three full minutes, the Jap heavy cruiser blanketed this light cruiser with eight-inch and smaller shells. Near misses spouted geysers of salt water over the men fighting the fo'c'sle fire and drenched the gunners on the secondary battery, which also was still in there punching. "The Champ" was groggy and it looked like a certain knockout, but Iron Mike Moran, the fighting Irishman, was never one to quit.

#### Give-and-Take Punishment

When he saw his forward guns shot out of action, however, Mike also realized that the severe damage the Boise had sustained forward might put her out of control, so he swerved out of column to the left. Of all the ships in her task group, the Boise had been the focus of give-and-take punishment, and now Iron Mike was grateful when he saw a heavy cruiser astern close up the column to protect his departure.

This neighbor ship's heavier guns and the sixes of the Boise in her after turrets laid down a barrage on the Jap ship that must have made her skipper sorry she had ever left port. Before Mike had given his final "Cease firing" order, he and his men had the satisfaction of seeing the enemy heavy cruiser shattered by an explosion that caused her to sink a few minutes later.

The Boise had been in action exactly twenty-seven minutes. In that brief span, she had scored direct hits on six enemy ships and, with the aid of the other ships in her group, had sunk each target. Two Japanese heavy cruisers, a light cruiser and three destroyers would try no more sneak troop landings at night on Guadalcanal or any other place. Some 30,000 tons of scrap steel now lay on the ocean bottom, under the deep blue waters of Cape Esperance.

But now you wouldn't bet a nickel on the Boise's own chances to escape that same scrap pile. As she limped away from the task group, the commanding officer of that force took a long look at her blazing hulk and stoically gave her up for lost. He knew the chances of

survival for a ship on fire with tanks of fuel oil and a cargo of ammunition to feed the flames.

Iron Mike Moran and his fighting men, however, were determined to save her. While fire-fighting parties on deck trained their hoses on the burning turrets and fo'c'sle, Carpenter Kelley was busy below with his repair party, patching up the shattered, flooded area surrounding the exploded magazine. Heavy timbers were jammed against forward bulkheads to shore them up against the pressure of tons of water still coming in through the bows. Mattresses and bedding were stuffed in smaller holes in the ship's side, and submersible pumps were rigged to keep the Boise afloat.

Carpenter Kelley, an enlisted man who had been promoted to the grade of warrant officer just a short time before, proved during the next few hours that the promotion had been one of our Navy Department's soundest investments. The damage-control assignment given him and his willing men was a mammoth one. Several separate fires were raging below decks, two shells had penetrated

he turned the hose over to others and worked his way through the darkness to the fan room where he found Seaman Kreth lying on deck, badly hurt by shell fragments. Ward cut away Kreth's clothing, injected morphine to ease the pain and put a tourniquet on the seaman's wounded arm before one of the busy pharmacist's mates took him off to a battle-dressing station.

Ward then made an attempt to enter stricken Turret Two, but the hatch was jammed. Going below, he next put on a rescue breathing apparatus and, taking a flashlight, went into the compartment where Chief Carpenter Thomas and his Repair One had been felled. Ward had volunteered to remove the bodies. The smoke and gas were still thick in here, but Ward decided that the breather wasn't giving him enough air, so he took off its facepiece, exposing his lungs to the poisonous atmosphere. He had succeeded in getting some of the bodies out when, choking and gasping, he was ordered topside for fresh air.

Shortly after this, he was busy again, helping to shore up a shaky bulkhead

the explosion in there, getting a broken nose and a pair of black eyes. Taking time out to report to a battle-dressing station, Moore waited until the doctor had stitched up his nose, then he hurried back to the fo'c'sle to help with the fires.

"Get rid of those lifejackets!" Captain Moran, from the flying bridge, pointed to a pile of kapok jackets burning and smoldering atop Turret Two, showering sparks all over the fo'c'sle. From the group of men on deck, one climbed up on the hot turret, busily cut away the lashings on the lifejackets and tossed them over the side. He had finished this job and had disappeared back in the crowd without anyone ever finding out who he was.

The Boise was now rounding the western end of Guadalcanal. She was strictly on her own as the navigator, Lieutenant "Squidge" Lee, held her on a course for the rendezvous the task commander had announced when the ships set out to intercept the Japs.

Captain Moran and the navigator weren't too sure she would ever keep that rendezvous. Those turret fires were bad. The temporary shoring up of damaged bulkheads might last only so long—they were giving trouble now—and it was becoming a race between the submersible pumps and the water seeping through the mattress-patched holes in the ship's sides. And down by the head as she was, a 10,000-ton fighting ship is hard to handle.

#### A Race with Death

Back in the chief petty officers' quarters there was another race. In the emergency hospital set up there after the Boise's sick bay had been shelled, Lieutenant Commander Kenney and Lieutenant Baxter, the ship's doctors, were running a race with death. As the men more seriously wounded in the battle were brought in, they were placed on the chief's mess tables, now subbing as operating tables. Pharmacist's mates and hospital-corps men were patching up the lesser wounds, and volunteer workers, released from their regular battle stations, were busy with bandages and splints.

At the finish, the race proved definitely one-sided. With but one exception, every man brought there for treatment was saved. The exception was a sergeant major of Marines, Berry Perry. Sergeant Perry, stationed in one of the forward handling rooms, had been severely gassed when the magazine was fired. Impatiently he allowed shipmates to carry him aft for treatment, but as soon as the doctors had finished with him and ordered him to a bunk, he said, "Aw, I'm all right," and went up on deck to join the fire fighters. Subsequently he manned his battle station at every call to general quarters, but the next day he collapsed. His lungs had got more gas than they could take, and death followed.

Gas and smoke fumes caused many more men to keel over during and after the brief battle. But hardly had a victim hit the deck before one of his able-bodied shipmates saw him and leaned over to give artificial respiration. Dozens of men were revived this way. One of them, Junior Lieutenant Henry Clark, had been given up for dead. He had been found lying on deck, and when one of the medical volunteers examined him, there was no trace of a pulse, so the volunteer left him there and went to revive others who did show signs of life.

A short time later, Joe Hanto, a warrant machinist, saw Clark's prostrate body and recognized it as that of his boss in the engine room. Getting down on

the Boise's bow close together, tearing a large hole and flooding the first platform and part of the third deck. A freak hit by an eight-inch shell also had nosed through her starboard side, ricocheted on a thick armored deck, leaving a gouge in the steel inches deep, and had passed through the portside of the ship without exploding. But the holes it left were open to the sea, which now poured in.

The damage-control men worked under the greatest difficulties. After the Boise had withdrawn from action, their boss in Central Station, Commander Wolverton, had cut out all power to the forward part of the ship, to prevent short circuits and possible electrical fires. That meant they had to work in darkness, using electric torches and sloshing through water several feet deep. Stifling gases and thick smoke still pervaded that part of the ship, forcing the repair crews to don gas masks.

#### First-Aid in the Dark

Typical of the men struggling to save the ship was a young shipfitter named Ward. He had helped put out the fire in the captain's cabin and now was standing by with a fire hose at the blazing forward magazine. Word reached him that a man had been hurt in the fan room, so

and managed to get a submersible pump rigged in a flooded compartment. Then he found a man who had been gassed and helped him up to the open deck.

Ward's report on all these activities ended up with: "By this time I had taken too much gas and smoke, and was getting sick. I made my way aft to the after battle-dressing station where I got some much needed water. Doctor Smith made me lie down on a table. For the next two hours, I recall very little."

Mike Moran's men had the fo'c'sle deck fire out in less than an hour, but the fires inside the turrets were still raging. All hope had been given up for the men trapped there, but one man aboard, Edward Tyndal, a gunner's mate, wasn't convinced of that. He had been on duty below decks during the action, but now he stood before flaming Turret Two pleading with his superior officers to let him go inside to rescue any men who might be alive. One of the men in there was his kid brother Bill. Ed was twenty-two; Bill was twenty. Three times, Ed tried to get permission to crawl in through the escape hatch, but wiser minds restrained him. They knew he could never come out alive.

Ermo Moore was one of those lucky enough to have escaped from Turret One. He had been battered around by

# Tough !

Everything that Seiberling has learned through years of pioneering in the rubber industry is going into the tough, husky, long-wearing Seiberling Tires that are serving their country so well on military vehicles.

And Seiberling ingenuity, Seiberling care and manufacturing skill have brought about *new* and better ways of making many *other* rubber products for the war.

For instance, in the building of rubber boats

and heavy pontons, Seiberling engineers have developed and perfected a new process that cuts the "curing" time from two days to thirty-five minutes. And this process has been turned over to the entire rubber industry so that *more* people can make *more* boats—better and *more* quickly.

Today, under the stress of wartime work, Seiberling is gaining a broader knowledge of rubber, rubber uses and rubber substitutes that will result in even *better* Seiberling rubber products after the war.

Then, more than ever, the Seiberling name on rubber will be like Sterling on Silver.

**SEIBERLING** *Experts in Rubber*

Wartime manufacturers of Bullet-Sealed Tubes and Military Tires for our armed forces—Bullet-Sealing Gasoline Tanks—Rubber Floats, Boats and Pontons—Rubber Parts for Gas Masks, Airplanes and Tanks. Also makers of Tires and Tubes for passenger cars and trucks—Sealed Air Tubes—Rubber Heels, Soles and Mechanical Goods.

his knees, Joe tried to resuscitate him. For a half-hour, his strong hands worked unceasingly on the lieutenant's diaphragm, but breathing still hadn't been restored. Joe didn't give up. For fifteen minutes more, he continued to work over his chief and then he felt a feeble pulse beat. With that much encouragement, Joe kept up his pumping until the patient's breathing was almost normal.

Lieutenant Clark is alive today, thanks to Joe Hanto's devotion and persistence. When the ship's doctors examined the lieutenant later, they found him quite intact except for a cracked rib. Joe Hanto, as previously mentioned, had powerful hands.

By 2:40 in the morning, Captain

Moran had received a report that all fires were safely out and that other damage was well under control. Commander Culver, the Boise's executive officer who had come forward from his battle station after the action to direct the repair work, proudly announced the details to Iron Mike. The ship was still maintaining her speed, the wavering bulkheads had been given extra reinforcement, and emergency patches and suction pumps were holding their own against the sea.

That report should have ended Mike's worries, at least temporarily, but it didn't. He had been holding the Boise on a course for the prearranged rendezvous with the rest of the task group. But five minutes after the report was made,

several ships loomed out of the darkness, and neither Captain Moran nor any other man aboard was at all sure whether they were friendly or another gang of prowling Japs. Furthermore, the Boise had been thought sunk and, even if these blacked-out ships approaching were her own, what was to prevent them from mistaking her for an enemy and opening fire? It was a ticklish decision for the skipper of a crippled ship—of any ship.

Abruptly Mike Moran ordered the signal officer to challenge with the Boise's recognition signal. As it flashed on, all hands waited for the answer. In just a few seconds, the challenge was answered—without sound effects. The replies flashed by the other ships admitted

the Boise to their company. But the commander of the task group still thought she was a ghost. From his flagship he sent Iron Mike three additional querying messages before he was convinced that she really was the Boise.

Back in her regular station in column and breezing along at twenty knots, the Boise headed for her base. Shortly after daylight, Iron Mike looking down from the bridge, saw a starboard gun crew manning their five-inch at general quarters. They looked weary, dirty and bedraggled. Mike grinned down at them and raised two stout fists over his head in a hearty handshake. The gun crew grinned back.

THE END

## Mission Over Kiska

Continued from page 20

peak perpetually lost in the ocean-colored sky.

You recognize it at a glance from the charts and relief maps you studied in the alert hut this morning when the mission was briefed. The island is shaped like a lobster claw; the harbor is formed by the pincers of the claw, clutched firmly between the heavily fortified north and south heads. You're surprised by two things as you see it for the first time from the air: how small it is (the total Jap installations, including the sub base, cover only a couple of square miles, and the congested camp area itself is not much more than a city block) and how quiet and deserted it looks. The snow is melting along the volcano's sides, the lowlands and beaches are still brown green and pleasant as a New Hampshire pasture in the early spring.

Still everything is ominously quiet as you come over the ridge. There are no excited Japs running to man the guns, no troops stampeding up the streets, no sign of human life anywhere. You wonder for a moment if everyone has pulled out and gone home. Small and distinct below you are the solidly built structures of the camp area, the buildings well revetted, the orderly streets lined with telegraph poles that had to be lugged all the way from Japan. They are thorough, the Japs.

You see the two big hangars at the water's edge and the ramp leading up to them. You see piles of fresh lumber, trucks, tractors, even a row of rickshas with their empty shafts resting parallel on the ground. Everywhere you see foxholes and zigzag trenches and neat roads leading toward the adjoining sub base, toward the hill behind the camp, toward the gun emplacements along the ridges.

### Surprises for the Japs

A couple of transports squat in the harbor like fat hens, their barges huddled around them like a brood of chicks, and still there is no movement, no sign of life—nothing but the stabbing orange-yellow tracers fanning the sky, the regular scarlet flashes of the heavier artillery like a signal light in a control tower, the increasing puffs of black smoke that materialize silently in the air around you and behind you as you make your run over the target.

The Japs have been handed two major surprises in Alaska. The first occurred on the morning of June 3d, when a group of their fliers proceeding blithely to polish off Dutch Harbor were utterly confounded by the appearance of a swarm of land-based planes from a secret field the very presence of which they had never even suspected.

"And now would you mind pointing at it, to prove you did it?"

That field changed the history of Alaska.

The second surprise to the Japs is the fact that they've been allowed to stay on Kiska so long. At first they must have suspected a clever ruse, but it is possible that they are wondering now whether our tolerance of them has a far simpler explanation.

There's a third reason for cleaning up Kiska. That reason is Russia. As long as Kiska is occupied, we cannot guarantee Siberia a safe conduct of supplies in case of attack.

The first land plane ever flown in the Aleutians was by the Army Air Forces last summer. They pioneered the first winter flying in all Aleutian history, and still they have to fly mostly by guess and by instinct.

A Navy pilot, feeling his way back toward shore in the fog, spotted a duck flying ahead of him through the mist. "I knew that duck wouldn't fly into a cliff," he said later, "so I just got behind it and flew formation on it till we got in."

Another PBY pilot, skimming low over the water with visibility zero, was discouraged to look out his window and see a sea gull flap to a halt and perch on his wing. He set his ship down then and there, and said that if the fog was too tough for a sea gull to fly it was too tough for him.

There's a phrase you hear all up and down the chain. When the sun shines,

it's called senatorial weather. Recently, it seems, a Senate investigating committee arrived on the only clear day in weeks, spent one hour at a field near Dutch Harbor—six hundred miles from the enemy—and departed again in perfect sunshine for the States, where one statesman gave with some rather tart remarks about this so-called one-way weather that favors the Japs but not us.

As a matter of fact, he was right. The weather is literally one-way here. Almost invariably the storm fronts in the Aleutians move eastward. The weather makes up at Attu, like a commuters' local, and Japs who live at the end of the line always get the best seats. Not only can they utilize a storm to repair losses and get in supplies, they know just how long the weather will take to pass over our own bases to the eastward and consequently how long it will be before they can expect another attack. Who holds Attu holds the weather for tomorrow.

Meanwhile, as long as Kiska holds out, our Navy fliers must carry out their perilous patrols, and the weather ship must make its regular milk run to Attu, and now and then, when the overcast lifts a little, our Army bombers must take off on another routine mission to drop bombs in Kiska harbor.

"In case the Japs are running out of fish," they explain to you resignedly, and next day you pick up the newspaper and

read the official Navy communiqué: "A force of Mitchell medium bombers escorted by Lightning fighters was intercepted by Jap Zero float planes which proceeded to attack two enemy cargo ships or transports in Kiska harbor. Two Lightnings and one Zero were shot down during the fighting which ensued. The Mitchells continued to attack the enemy shipping with uncertain results. One of our bombers was shot down."

Well, maybe that's enough. It was just a routine mission; they go on all the time. No need to give it a great build-up. No need of recalling the sight of a sleek Lightning—the most beautiful plane that ever graced the skies—crumbling earthward under the guns of six Zeros that have been hiding upstairs. No need of remembering the stricken bomber, leaving a defiant trail of smoke scrawled against the sky as it exploded on the waters of Kiska Bay. No need of mentioning the lone Peashooter, its gas line punctured slowly bleeding to death as it struggled heavily and more heavily over the icy water in a desperate race back home.

### Return from a Mission

No, a battle's a break from the dull routine. It's fun while it lasts, and lasts only three or four minutes anyway. You get out of it or else you don't, and if you get out of it, you fly home, provided the weather hasn't socked in the field in the meantime. You buzz the field if it's been a good mission, and if it hasn't, you land quietly, and the balance is there to take out the men who can't get out themselves. The ground crews swarm over your ship and reverently count the holes, and you go to mess and eat canned Vienna sausage and lukewarm tomatoes and bread without butter, and someone admires the very elegant furrow plowed across the leather collar of your jacket. After chow, you go over to the hospital to have the fragment of shell taken out of your neck, so that you can keep the piece in your wallet as a souvenir.

It's the weather that's the real enemy here. The solid overcast, the sudden snow squalls, the mud and fog and endless numbing rain, the days and weeks of waiting (no town to go to, no beer, no mail to read), and the mission called off again at the last moment because still more weather has moved in from the west. It isn't glamorous or exciting, isn't stuff that makes movies; but it's the story of our Aleutian war. It's what shows the kind of fliers we have in the Air Corps. It's what trains our fliers—the ones who come through it—to be the toughest and finest pilots in the skies.

THE END

The deadly new de Havilland Mosquito fighter-bomber

## Who puts the buzz in the Mosquitoes?

THEY'RE AMAZING CRAFT, these lightning-fast PT boats the Navy has dubbed its Mosquito Fleet."

Their exploits, in fact, are becoming legendary as witnessed by this message to Lt.-Comdr. John D. Bulkeley from a superior officer . . .

*"Dear Buck: I really think your gang is getting too tough. The latest report is that 'three dive bombers were seen being chased over Mariveles Mountain by an MTB.' Don't you think that is carrying the war a bit too far?"\**

This "kidding" comment referred to the amazing feats of Bulkeley's famous "expendables" and their PT boats in the Philippines.

In these boats, General Douglas MacArthur and President Quezon were spirited out of the islands. Two PT boats aided in the rescue of Captain "Eddie" Rickenbacker and his bomber crew. Off the Solomons . . . off North Africa . . .

\*From "They Were Expendable," copyright, 1942, by W. L. White. By permission of Harcourt, Brace & Co.

in the English Channel, the PT has been in deadly and successful combat with the enemy.

The heart of the mile-a-minute torpedo boat, we're proud to add, is its bank of giant Packard super-marine engines—a precision-built brute of an aircraft-type engine.

That's the buzz that lets the PT boat give the Axis the business!

AND THERE'S ANOTHER MOSQUITO—the sensational new de Havilland "Mosquito" that's been giving the Axis headaches.

Nazis who've felt the lethal sting of its bristling armament or the earth-shaking c-r-rump of its belly-load shake their heads over the double dose of poison this fighter-bomber gives out.

Many a pair of Packard-built Rolls-Royce engines that comes off our assembly lines ends up in this type of versatile new combat plane.

We're not only giving the Mosquito its buzz—but we're turning out gratifying quantities of Packard-built Rolls-Royce engines for the British Hurricane and Lancaster, and our own Curtiss P-40F, the deadly Warhawk.

★ ★ ★

BUILDING PRECISION "JEWELLED" ENGINES by mass-production methods is nothing new at Packard. But this wartime job of ours means that thousands of skilled Packard craftsmen are constantly acquiring new knowledge and precision techniques—experience which is bound to carry over into a still finer precision-built Packard car after the war has been won.

## CHINA FLIGHT

BY PEARL S. BUCK

ILLUSTRATED BY MARTHA SAWYERS

### The Story Thus Far:

LIEUTENANT DANIEL JAMES, of the U. S. Marines, leaves his ship, the *Petrel*, at Shanghai and goes on a house-boating jaunt with the Hatfords—Arnold Hatford and his Eurasian wife, Leone. Two days later, Pearl Harbor is blasted; and, leaving his friends, James rushes back to Shanghai. The *Petrel* has fled! As the young lieutenant makes this appalling discovery, he is arrested. . . .

Seated in the Japanese Foreign Office, in Shanghai, a prominent official—the suave, beautifully educated Shigo Kuyoshi—greets three American prisoners: Lieutenant James; Jenny Barchet, correspondent for a great American newspaper; and a Mrs. Shipman, head of the “Gate of Hope,” where unfortunate girls are given a chance for happiness—fed, protected, mothered.

The introductory remarks over, Kuyoshi tells

the three what their fate is to be. It is all very simple: James is to be imprisoned, for the duration; Miss Barchet is to be interned at her hotel, the *Cosmopolitan*; Mrs. Shipman is to be interned at the “Gate of Hope.”

James and the girl accept their sentences stoically. Not so, Mrs. Shipman—she tells Kuyoshi exactly what she thinks of him. And what she thinks is by no means complimentary! . . . When the victims are led away, Kuyoshi is restless, uneasy. Fully aware that Jenny Barchet is an enemy of his country, and a bitter enemy, he is strongly attracted to her. He realizes that he should have nothing to do with her. But, fascinated by her beauty and personality, he longs to see her again.

And see her again, he does—he calls on her, in her hotel room.

Jenny greets him coldly. Immaculately garbed, he seats himself, begins to talk. And within a few minutes Jenny realizes, to her

consternation, that he is making guarded—and none too guarded, at that—advances.

Badly frightened, the girl implores him to go away. Kuyoshi (always the gentleman, *when he feels like being one*) rises, courteously. Then—after intimating that he will make other calls, later—he goes to the door, opens it, steps through it, and closes it softly behind him.

### II

THREE hundred miles from the city of Shanghai, Leone Hatford smiled at her English husband, as they stepped out of their bamboo sedan chairs before a village inn.

It was night and they had traveled all day. She had said almost nothing through the hours, but Arnold Hatford had thought nothing of that. She was a

quiet woman always, and part of her great beauty lay in her tranquillity. It was exciting to him to be married to a beautiful woman, after all those years with his English wife, Daisy.

Daisy had come out to him from England when he was a clerk in the Hong Kong Shanghai bank. He had met her in London on a picnic when he had been a clerk in the London branch, a very young clerk. When he was offered the post abroad he took it because his parents urged it—there was so little outlook for a young man in England in those days. But he had hated leaving England and suddenly it seemed to him that it would be easier to leave if the young innocent blue-eyed English girl would be

# ★ ★ Elm Street Miracle ★ ★

STOLE up the stairs to Young Bob's room last night while Anne was still bravely fussing around the kitchen. Rowdy trotted after me.

The bed was smooth. The room was unnaturally neat. I opened the closet door . . . There, in the half light, were the things that clutter up the closets of all happy, carefree boys of eighteen . . . broken hockey stick . . . cracked phonograph records . . . old socks . . . a limp gray sweatshirt . . . a mud-streaked football helmet.

Standing there, I was suddenly no longer ankle-deep in war. I was throat deep in a mighty surge of resentment against the sort of sideline American I had been before Young Bob left. The sort who shrugged his shoulders at men taking "extra

days off," who thought that wildcat strikes, business as usual, politics as usual were the other fellow's headache . . . who felt a secret prick of resentment when taxes and war bonds and rationing were mentioned.

*Suddenly I knew the true meaning of a service star.*

And I saw a million fathers standing before a million closets all over the land. Feeling this war for the first time. Feeling it like a white-hot iron in their souls.

And I knew that this America of ours had, overnight, added another mighty force to the million or two Young Bobs who were dropping old shinny sticks to pick up new rifles. A mighty

force for war production, day and night . . . Fathers whose secret shrine would always be a dusty closet, but whose constant battlefield would be that lathe, that office, that farm where the miracle of giving part of yourself had not yet touched.

# "FIRSTS"

## A ZENITH HABIT

A GOVERNMENT official was being shown a new idea in the Zenith laboratories. In passing, he commented upon the outstanding manner in which the radio industry was effecting the rapid and continuous changes necessitated by war requirements. A Zenith official replied—he said:

"... the answer is easy. Radio and Radionics represent a trigger-quick, fast moving business. Concerns that couldn't 'change overnight' are out. In this industry, we're used to fighting with new ideas—only—now we're 'fighting' Japs and Germans instead of each other."

In that statement is evidenced the condition that made possible Zenith's attainment of industry leadership. Ever increasing public acceptance of Zenith name and product resulted from a never ceasing stream of Zenith "firsts"—new features—new devices and new sets which enabled us to truthfully say to the public:

# "ONLY ZENITH HAS THIS"

Today you find as commonplaces—essentials—of most radio sets—features first introduced to the public by Zenith—such as—

## "FIRST"

### Push Button Tuning

Years—yes, years ahead of the industry—(1928) a Zenith set embodied push button selection of the station desired. Our slogan in 1928 was "Push the button—there's your station."

For over seven years, Zenith Radio Corporation has advertised on our short wave sets—"Europe, South America or the Orient Every Day or your money back." It has never been called upon for a refund.

## "FIRST"

### House Current Sets

"Way back when" (1926) all home radios were operated from storage batteries until Zenith offered the first set run by house current.

BELOW—A FEW NEW ZENITH "FIRSTS"—"FROZEN" BY ZENITH CHANGEOVER TO WAR PRODUCTION

## "FIRST"

### Long Distance

### Push Button Portable

1942 saw the national introduction of a revolutionary new portable—the Zenith Trans-Oceanic. Without increase in size or weight it gave push button operation for foreign and U. S. short wave stations—tuned in the same way as locals—and standard broadcasts too. It contained a disappearing fish pole antenna plus dual Wavemagnets—operated from battery or house current—was born of Zenith pioneering in LONG DISTANCE RADIO RECEPTION.

## "FIRST"

### Safety Auto Radio

The only auto radio you can operate WITHOUT TAKING YOUR EYES OFF THE ROAD—or—YOUR HANDS OFF THE WHEEL—the Zenith Safety Foot Control Auto Radio. This remarkable new radio was on the FORD, NASH, MERCURY, LINCOLN-ZEPHYR, HUDSON and WILLYS. Owners of these cars will gladly demonstrate their Zeniths—give you a "preview" of "tomorrow's" radio today.

—AND THESE ARE JUST A FEW OF THE MANY ZENITH "FIRSTS"—

## "MILITARY SECRET"

Today all Zenith production centers on war needs. What we are making is a military secret. But three things we can tell you. First... we are dealing with the thing we know—Radio—and Radionics exclusively. Second... we are learning every day—gaining new knowledge which will reflect itself in Zenith civilian products when the time

arrives. Third... we now know—by first hand experience—that our Army and Navy are more than "up-to-date"—they are alert and progressive in thought and action—almost unbelievably so. This fact is a great reassurance to us here as citizens—it commands our complete confidence as it would yours if you knew what we know.

## RADIONICS

### the New Miracle Industry

Four great industries are destined to lead this country back to normalcy after victory is won.

Planes and Radionics are two of the four. Radio—never a necessity on ship or train—is as essential as the engine itself to that great new form of individual and mass transportation—the airplane.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make.

WORLD'S LEADING MANUFACTURER

coming out to him in a year, and so they had become engaged.

When ten years later in Shanghai he left the bank to found Hatford & Hunt—Hunt had had the money in those days, and he had the caution and the brains—Arnold got rich before he knew it.

Daisy had not been a success as a rich man's wife. She put on airs and she grew thick-waisted and her pink cheeks turned a veined purple with too much food and too little exercise. Of course everybody in Shanghai had servants. But she had felt she had a position to keep up and that had been annoying to Arnold who had no conceit.

It was in those years that Arnold had begun to notice the exceeding beauty of the young Chinese girls as they began to grow modern with Shanghai. Plenty of men took such girls as mistresses, but in his awkward fashion he was loyal to Daisy. He did not love her—he knew now he never had—but he was fond of her. And in a curious way he had been rewarded, for when she died, he had found Leone. He had to thank Mrs. Shipman for that—old Mrs. Shipman whom everybody knew.

THE Gate of Hope had been one of Daisy's charities, and quite often when he came home he found Mrs. Shipman there to tea, and he heard the solemn talk of the two women over the problems of the "girls." He was far too shy to ask anything about these "girls" or their problems, but sometimes Daisy talked to him a bit, with proper reserve as between man and woman. She did not, he perceived, want him to know too much about that sort of thing.

Nevertheless that was how he had first heard about Leone. Leone had been in some peculiar way a protégée of Mrs. Shipman, but still not one of the girls. He had heard Leone discussed sometimes, even while Daisy was alive. The Frenchman who was her father had deserted her mother, and old Mr. P'an, her Chinese mother's father, would not take her back. That was the time when Daisy and Mrs. Shipman did so much talking. He knew now that Mrs. Shipman had asked Daisy to take Leone in for a bit, and Daisy had refused.

The matter had been settled then by Mr. P'an's suddenly saying he would take his half French granddaughter into his house if he could bring her up entirely as a Chinese. And it had been quite ten years later that Daisy died, and quite a full year after that that Mrs. Shipman had come to see him one day and had proposed that he marry Leone, because no proper Chinese marriage could be arranged for her.

"You're lonesome without Daisy," she had said bluntly one day in his office. She had simply walked in, saying she wanted to talk to him. "Why don't you get married, Mr. Hatford? I have just the girl for you. You won't want to marry anybody like Daisy—it would be hard for you. But this girl is as different as can be—there'd be absolutely no comparison."

"Don't be absurd, Mrs. Shipman," he had said.

"I'm not," she had retorted. "I'm only being sensible."

And then she had gone on to tell him about Leone.

"I'm not a native, Mrs. Shipman," he had interrupted her with dignity.

"The Chinese are real sensible about marriage," she had replied. "What else do men want of women and women want of men except to get married—if they're decent? And you're a decent man, Mr. Hatford. I've watched you. You'd be good to poor Leone."

By coaxing and hard sense she got him to come to tea and he had seen Leone. He had been relieved to find so little Chinese. In Western dress scarcely looked Chinese at all. And Leone had been so sweet, so exactly right in her shyness, that before he knew it he had fallen in love with her.

Now when she ordered the chairs down before a filthy little inn in a Chinese town, he came forward anxiously but always fond.

"I say, is this where you really want to stop, my dear?"

"Yes, it is, please, Arnold. It will get better, you know—not for a long time. We're very far from foreign hotels. And there won't be any Japanese here, at least, as there might be if we went on to a bigger place."

Her velvet dark eyes looked up at him with their calm tranquil gaze and constantly he felt the sense of what she said. The inn stood on the edge of a filthy canal, but he supposed that did not matter.

"Very well, then," he said.

He turned to Yang, his number one boy whom he had brought with him. He took the chap everywhere because it was simply impossible to get any decent food or in fact do any business at all without him. All foreigners were dependent on such "boys." He had an easy sense that Leone could have done as well as any Chinese, but this he did not like to think about. Ever since he had married her he was careful to treat her as though she were wholly a French woman.

It had cost him a few friends some of his best—but she was his wife. When the wives of his friends would not come to call on her, he simply dropped his friendship with the husbands. When he got to Hong Kong he'd jolly well tell Hunt that Mrs. Hunt had to come and see her regardless. He had more money than Hunt now, besides being the head of the business.

"Boy!" he called imperiously, "Fetch coolies chop chop and get some chop for us."

Yang, the number one boy, bowed slightly and reached his hand into his bosom for the cash he always kept his belt.

"Masta, Missy, please go inside," said in his gentle, cultivated voice. "Come chop chop makee all light."

THEY stepped into the dusk of the inn and a few men, sitting about the room at the square tables fell silent and looked at them with wide eyes. Obviously they had never seen foreigners before. They did not move, staring though they were images. Arnold turned his back on them and walked over to the oblong opening in the wooden wall that served as a window. It looked out over the canal. Boats were passing below, small, hand-poled boats. The faint odor of cooking food floated upward from them.

His back turned to the room was a regular and square and British. Leone smiled and looked down at the toe of her pretty bronze shoe. She stood gracefully withdrawn from everything, while the men stared at her.

In a moment Yang was there, and a moment more they were being ushered into a bare room, a bed and a table and two chairs the only furniture. The bedding was brought in and unrolled quickly.

Arnold pointed his stick at the bed. "Yang, bugs?"

"My look see," Yang said.

He examined the bed and in a moment brought out a large can of insect powder and sprinkled the bed with

oughly. Arnold sat down on one of the chairs and Leone on the other.

"Not too tired, my dear?" Arnold inquired, twisting his short mustache.

"Not at all, thank you," she said in her clear sweet voice. She turned her eyes on him pleasantly and smiled.

"You're wonderful, you know," he said. "Most women couldn't stand up to this sort of thing at all."

She continued to smile without answering. It would annoy him if she told the truth, that this room was no worse than many she had lived in with her mother in the bad days when her father had left them. But she had never told this English husband of hers about that. Instinctively she was, while she was with him, the sort of woman he liked, delicate and gentle and a little helpless.

She gazed downward, reflecting upon this. How different she had been with Dan James! She blushed slightly thinking of how she felt when she was with the strong young American. She had fallen in love with him the first time she saw him. From then on she had wanted simply to put her hand into his and go away with him, anywhere. But did he love her at all? She could not tell. Yet was he not a man?

SHE sighed, and instantly Arnold bent toward her.

"You are tired, you know, whether you know it or not," he said.

"Perhaps I am," she said.

"Boy!" he called to Yang, who was quite near him. "You fetch hot water chop chop for Missy bath. Then some food."

"Yes, Masta," Yang answered gently.

He drew the rubber tub out of the baggage, and lit a small portable oil stove. "One minute," he said and went away.

Arnold rose. "I'll go out, my dear, until you are ready. But I'll be near the door—in case there's any trouble." Trouble meant peering eyes at knotholes or the door creaking open gently.

"Thank you, Arnold," she said very softly.

He went out and in a moment Yang was back with a water coolie, who carried on either end of his bamboo pole two wooden buckets of hot water. Yang superintended the pouring of the boiling hot water into the rubber tub, and paid the coolie off. Then, glancing toward the door, he poured out a soft rush of Chinese to her:

"If you are determined, mistress, this is the place. It is a canal town, as you see. If you are sure, then I will hire for you a foot boat and tell the man to take

you to the town through which we passed this noon. I have already hired the inn-keeper there and he will expect you. From there he will take you to the village of my family, which is less than ten miles from Shanghai. At my home you will be welcome. I have already sent messages to them."

She did not ask how he had sent such messages. She knew that there were message routes everywhere over the countryside, a wireless as ancient as China itself.

"I am quite determined," she said. "I will not go on to Hong Kong."

She rose and took off her hat. Her Chinese was as perfect as his, and as she spoke it she suddenly became wholly Chinese so that her English tweed suit sat strangely on her.

"But you will be good to him?" she said. "You will guard him and see that he gets safely to Hong Kong to be with the other English?"

"Certainly, I will do that," he said. "Let your heart rest. What time shall you be ready?"

She studied the small diamond-framed watch on her wrist. "At midnight," she said. "He will be sleeping soundly by then."

"I will put something into his soup to make sure," Yang said.

"Nothing to hurt him," she warned.

"Assuredly nothing to hurt him."

He went away then, and she undressed herself slowly and laid her clothes carefully on a chair. She would not wear these clothes tonight when she went away. She took out of her bag a soft Chinese silk robe of dark blue. Arnold did not like her to wear Chinese garments, but she always had with her a Chinese robe. She folded it carefully and hid it under the tweed skirt. It would be there tonight when she wanted it in the darkness.

Then she bathed herself. The water was still very hot, but she loved the sting and the burn of hot water. She was Chinese enough when it came to that. Arnold bathed every day in cold water, and she shuddered to think of it. She stood gracefully in the rubber tub pouring the hot water over herself, and then soaping her body. She laughed a little to herself. The first time she had ever used this tub she had not known that one must not sit in it as in a porcelain Soochow tub lest the rubber sides give way and flood the floor.

Cautiously now she felt in the water when she was soaped and cautiously she washed the soap off. The water sent up clouds of warm steam about her and she

Manhattan's a seasoned veteran in the art of making a fine shirt. Since the first Manhattan shirts, in Civil War days, they've been the choice of well-dressed men. The secret of Manhattan quality is "knowing how" through experience.

Manhattans *must* fit you because they're *Size-Fixt*—average fabric shrinkage is a mere 1% or less. They're *Man-Formed* to conform to your body; collars are hand-measured for accuracy. Wear a Manhattan shirt—and see what **\$2.50** a difference 82 years of "basic training" makes! **AND UP**

## WILL OWN THIS "MIRACLE HOME" TOMORROW

### HOW TO MAKE IT YOURS!

This glimpse of some of the wonders that *can* be yours in the future is published to drive home one fact. Today—when wages are high and things you might ordinarily buy are needed for war—you have the opportunity of a lifetime!

By buying War Bonds now, you accomplish two important goals. Today, your War Bond dollars provide the weapons we must have to sweep our enemies from the skies and seas—to preserve the American way of life and right of men to freedom of thought and worship and work.

At the same time, you're saving money for the wonders victory will bring—money that will come back to you with interest, to pay for comforts and luxuries beyond your hopes in the past.

Architect: George Fred Keck

Complete flexibility for living needs is designed into this plan for a "Miracle Home" of tomorrow. Living, dining, and spare sleeping space can be opened up together or separated in a moment. Living quarters face the south to let in a flood of sunshine and solar heat, to save fuel—a saving further assured by the almost windowless north wall.

Pressed in a single unit—enduringly finished in colors of your choice—leakproof—seamless and easy to keep spotlessly clean! That's the bathroom in your "Miracle Home"! With lighting scientifically planned for the shaving mirror—perhaps an ultra-violet skylight for a sun-bath while you take your shower.

Out of the Celotex laboratory, wartime research has brought many multiple-function products which will contribute to the "Miracle Home" of tomorrow—such as Celo-Roof which combines sheathing—insulation and roofing in one composite material; Celo-Siding which combines sheathing, insulation and mineralized exterior surface; and Cemesto which combines exterior and interior finish plus insulation into a complete fire resistant wall unit.

### FREE!

To help you take care of your precious War Bonds, The Celotex Corporation offers you a beautiful, durable War Bond Container—specially designed to hold all your War Bonds conveniently and securely, with provisions for listing dates and numbers of all bonds. Ask for it at your Celotex Dealer's. It's FREE—to help you save for your "Miracle Home" of tomorrow! Or we will send it direct, if you will check the correct space on the coupon.

# Average American

## ... WITH WAR BONDS BOUGHT TODAY!

IN the white-hot crucible of total war, American industry is telescoping *years* of advancement into week-ends! Old ideas, old materials, old ways of doing things are being outmoded with a swiftness thought impossible only a few short months ago!

Today these great events are concentrated on winning the war. In post-war America, their benefits will enrich the ways of peace. And one of these benefits will be a "miracle home" with undreamed-of comforts and conveniences for the average American family.

This home will be an infinitely better home—in clean, open, healthful surroundings far from congestion, dirt and noise. Low in cost—easily within reach of the average wage earner—this home will provide livability on a scale unknown even to the wealthiest family today! Ingenious new electrical servants will carry the load of tedious tasks. Manufactured weather and "climate-proof" engineering will seal out summer's heat and winter's chills, safeguard comfort and health.

In this home, you will enjoy the revolutionary advances now being created out of the vast war experience of the building industry . . . advances in design, materials, construction and economy made possible by the cooperation of America's architects, contractors and building craftsmen.

Your "miracle home" will not only be better in every way, and lower in cost—but also remarkably easy to own. For you will enjoy the fruits of financing plans that will make your home as easy to buy as an automobile.

Is all this far in the future? Not at all! It is now so close to reality that you can earmark the War Bonds you buy today for down payment on such a "miracle home" of tomorrow. Its foundations are already laid in the laboratories and on the drawing boards of the building industry. They are a part of the blue prints of the new America and its heritage that all will enjoy when victory is won.

### But in the meantime . . .

### Take Care of the Home You Have!

THE MARVELS of tomorrow must wait until victory is won—until today's big job is done. So until then, remember that your present home is better, more comfortable than the average family of any other land has ever known.

And Uncle Sam doesn't want you to let neglect steal the value of that present home. The government has made all necessary provisions to let you keep it in repair . . . and to insulate it for fuel-saving.

To help you guard the value of your home—to tell you exactly what you can do and should do to protect your property—The Celotex Corporation has prepared "A Wartime Guide to Better Homes." This is a complete, clear-cut, easily-understood book, full of valuable and timely information. It contains a simple interpretation of government rulings. Get it FREE at your Celotex dealer's—or mail the coupon.

And if you have a big house which can

be remodeled into apartments to provide living room for war workers, Uncle Sam makes liberal provision for necessary expenditures on such remodeling. Ask your Celotex dealer!

**Roof Repair or Replacement**—is a part of *necessary maintenance*. Ask your Celotex dealer about doing the job with Celotex Triple-Sealed Shingles or Roofing. This means extra protection and beauty without extra cost. You can choose from a wide range of colors and styles.

**New Rooms Can Be Created**—easily and quickly, from waste attic space, with the help of Celotex Insulating Interior Finishes. Also with White Rock Gypsum Wallboard—a good-looking, fireproof material which can be painted or papered as soon as the walls are in place. Ask your Celotex dealer.

**Insulation Saves Fuel**—and fuel-saving is vitally important today! Celotex Cane Fibre Insulation Products or Celotex Rock Wool Products can save up to 40% on your fuel bills. Keep your home warmer in winter and cooler in summer. Get all the facts from your Celotex dealer.

breathed it in. It was just as well to have this good bath now—it would be days before she could have another—days before she could get back to her grandfather's house.

She stepped out of the tub upon a mat that Yang had put down and wiped herself dry and then slipped into her nightgown and a warm woolen robe. They would have their supper here in the room, and she would go to bed while Arnold had his bath. Poor Arnold—he would feel it very much tomorrow morning when he woke and she was not there! She would not leave any message or tell him anything and Yang would pretend to know nothing. Indeed Yang knew nothing except that she had decided to go home. She had told him no more than that she could not and would not go to Hong Kong where all the foreigners were, and if he did not help her to escape she would escape without his help, "or kill myself," she told him.

"You know how the foreign women hate me," she told him, "and Hong Kong is full of foreign women."

He had wholly understood this for he knew that no foreign woman had entered his master's home since she came to it. And since she would return to her grandfather, the rich old Mr. P'an, he had thought it wise to help her.

Tomorrow morning, she thought, imagining it, Arnold would wake up and she would be gone. He would call and Yang would come in and together they would search. Perhaps they would search the canal below the window.

"I'll throw my tweed suit out before I go," she thought. "Oh, poor Arnold!"

But her genuine pity did not move her in the least. She was sorry for him but she did not love him. With all her heart she knew now that she loved Daniel James. As soon as she got back to Shanghai she would find him. She would make her grandfather spend his money to save him.

The thought of him gave her strength and quietness again. She rose and went to the door and opened it enough to call through it:

"Arnold, I am ready."

He came in at once and the slightly grim look on his face vanished.

"I say," he whispered, "how lovely you are—even here!"

She smiled her sweet mysterious smile. Poor Arnold! She would let him make love to her tonight—since it was the last time.

AT MIDNIGHT she rose. Arnold was sleeping heavily, but she had not slept at all, her eyes constantly upon the small illuminated disk of her watch. She rose and put on her garments and over them the Chinese robe. Then she took her tweed suit and dropped it softly through the open window. There was no boat beneath and it splashed softly into the water. She put on noiseless Chinese shoes and into her bosom she thrust a satin purse with money. Then she opened the door and went out. Yang was there alone. He led her without a word to the back of the inn, and to the stone steps leading down to the water. A boat blacker than the water in the darkness was moored at the bottom of the steps.

"I was lucky to find a man from my own province," Yang said in a whisper; "and he knows a man in my village. You need not be afraid. He will take you as far as he can in the boat, and then he will go all the way with you to the village. At the village my father will meet you at my home. You will not be dependent on the landlord at the inn, therefore."

"Be sure my grandfather will reward your family," she told him.

She stepped quickly into the boat and silently and quickly the boat moved away into the darkness. She had a strange sweet sense of escape. She had escaped into her own people. . . .

TWO days passed and already it seemed to her she could scarcely remember Arnold. She was at home along the roadsides, at home in the inn where she spent the night. The boatman had left his boat there with a friend and had come along as her servant. He was a middle-aged man, a man so silent that he asked her nothing and grunted a word or two when she spoke or asked him a question. But he served her well, for some reason that Yang had given him, and what that was she did not inquire. Instead she fell into silence, too, and so the end of the third day brought her to the village of Yang.

It was a large village. There had once been a brick wall about it but this had fallen now into ruin. Only the gate still stood and through this gate they went.

"Better stop, dear. That red flashing signal means a train going by!"

They were on donkeys that the man had hired and they rode down the narrow main street. People looked curiously at them, but the man called out loudly, "We go to the house of Yang the Third!" and so they were not stopped.

At the house they dismounted and the man pounded on the gate and it was opened by a servant girl.

"Here is the one I was told to bring," the man said.

The girl nodded and motioned to them to come in. But the man shook his head. "I will not come in," he said. "I must get back to my boat."

Leone put her hand in her bosom for her purse but he shook his head again. "I have been paid," he said, and went away.

She was alone but not afraid. In a Chinese house she felt always more at home than she ever had felt in Arnold's heavily furnished English house in Shanghai. Now she stood looking about her at the familiar arrangement of chairs and tables, always the same in any Chinese house. The girl shouted, and an old man came into the room. From his resemblance to Yang she knew it was his father. He was the village elder, she could tell by his looks. There was something of the farmer about him, a country look, but he was better than an ordinary farmer. He wore a long cotton robe, and he carried a brass water pipe and he had the small beard of one of the gentry in

a village. He bowed to her in a quick rustic fashion.

"Are you the one whom we expect?" he asked.

"Your son has been so kind," she replied.

"We are honored," he said, "your Outside One has been very kind to my worthless son."

"Your good son has been faithful and useful in our house," she replied.

Thus having exchanged courtesies, he clapped his hands and an elderly woman came into the room. Since he did not look at her, Leone knew this was his wife and Yang's mother, and she bowed.

"This is the one who is to be sent on her way to Shanghai," he said.

The woman smiled and burst into loud cheerful talk: "Oh, how tired you must be, lady, and how can you find any rest in this poor house of ours? But come in—come and drink some of our tea, though it is cheap poor stuff with no taste, and eat some of our coarse food."

Leone followed the woman out of this

They were all kind to her, pressing her with food and tea, and keeping the coals hot in the brass foot stove they insisted she have. But she thought only of the American whom she loved. What had happened to him? Had he reached the city alive? Was she too late to help him? The delay became too much for her.

On the third night when the evening meal had been eaten she went early to her room. She made ready for sleep and then lay awake a few minutes determining that if the next morning nothing were said of her going on, she would ask to be sent on. Then she fell asleep. She was still very tired from the days of cold winds that had blown upon her on her long ride. The uneven jogging of the donkey had been wearisome and she was still aching. She slept deeply.

It was after midnight when she heard the sound of men's voices in the main room next to hers. A man's voice woke her with a shout: "Now is the time, I say!" She woke and sat up, listening. Then she heard the voices of young men. She rose and slipped on her robe and went to the door and suddenly threw it open. The room was full of men and every head turned to look at her. Old Yang was there and his wife, but all the others were young men.

NO ONE spoke. She knew at once that she ought not to have opened the door. These were guerrillas!

"You need not fear me," she said. "I, too, am Chinese."

A tall young man, whose voice she had heard so loudly and clearly above the others, cried out, "You look foreign!"

"I had a foreign father, it is true," she said gently. "But he despised my mother who was Chinese, and I despise him."

Old Yang leaned across the table and whispered loudly, "She is the granddaughter of the honorable one, P'an Lao-yeh."

At the very sound of her grandfather's name the air in the room changed. The tall young man laughed.

"But what is this bright moon doing in your house, old man?" he said to old Yang. "Do you entertain the granddaughters of rich city men every day?"

Old Yang rose to his feet and turned to her. "You must excuse the roughness of this uncouth young man," he said. "He is a good man, and a brave one. He is the leader of—of—" the old man coughed into his beard and looked down.

"I understand what he is," Leone said, smiling. "And I can see that he is brave."

The young man's face turned suddenly red and he looked away, but she could see that he was pleased. "What I do is nothing," he said. He coughed and spat on the floor. "That is, it is nothing to what I shall do," he said loudly.

"I know that," Leone said.

She came into the room and sat down on one of the small side chairs and so all sat down. But still they were ill at ease before her.

"I shall not disturb you," she said gracefully. "But I ask only one thing. Can it be that some of you go toward the city tomorrow? If you do, will you let me follow you until I see the city? Then I can go on alone."

The young men looked at one another, and then the tall one, laughing and clearing his throat and torn with shyness and pleasure, said in his loud voice, "Why, I myself—I will go—why not?"

His men cried out at this that he ought not to expose himself. But he answered them in pretended roughness, "I was planning to go near the city anyway to find out how many guards stand at the gate."

"How much I thank you!" Leone said

room and into a plain bedroom. "It is very kind of you," she said gently. "I shall not trouble you long. Some sleep and a little food, and I shall be ready to go on."

She saw a grave look flit over the woman's cheerful round face. But it was gone in an instant. "Do not hurry—do not hurry—stay a few days," she insisted.

LEONE did not hurry indeed. That day passed, and the next, and there was no mention of her going on. The family was a large one, with four daughters-in-law and their many children under the same roof. But no sons were there. When she asked of the other two, besides Yang, she saw by their answers that they did not wish to tell her.

"My eldest son," Yang's mother said, "is unhappily dead. The enemy killed him. My second son is happily with your own lord. My other sons are—" The old woman looked vague. "They have business," she finished.

Leone heard this with dismay. If all the sons were busy, who would show her the way to the city? The house was empty even of menservants. Old Yang himself was too old to walk far, and the women were old-fashioned women, not used to leaving home. Even the three servant girls were too young to go alone beyond the village.

How then was she to leave this house?

# YESTERDAY...TODAY

# TOMORROW...

## *Always the Same*

ONE of the hardest things we ever have to do is to change our habits. Especially the little habits of everyday life! We get into the habit of picking up our evening paper from the same newsboy, buying our cigarettes in the same store, saying "Howdy" to the same bus-driver, and if they change, we miss them. It upsets us a bit because we like the old, familiar faces we have come to know and depend on.

The same holds true of the things we buy, eat, smoke, drink, wear. Names, brands, trademarks and packages get to be habits in our daily life, because we know just what they stand for in price, quality and satisfaction.

And so when our country's war-time needs force changes and you have to take new packages to save tin and plastics, and when labels and sizes and prices all have to change, even though you're glad to play ball for victory's sake, you can't escape a sense of uncertainty as the old landmarks fade.

So to the discriminating men whose habit it has been to drink the finest whiskies, it is our distinct pleasure to point out that the quality of these five *great* whiskies will *not* change! For generations past they have been great landmarks in America's distilling art! And as they were *yesterday*, so they are *today* and will be *tomorrow*!

*For even in war-time, the strict U. S. Government regulations specifying how bottled-in-bond whiskies shall be produced, are not changed!*

softly, and she rose and went back again to her room. She closed the door softly behind her and crept into bed. That tall fellow—how he had looked at her!

In this way in the morning she came to be walking along the country road behind this tall fellow, who was a chieftain among the guerrillas. She wore her plain long robe and her Chinese shoes, and she walked some distance from him for a while after they had bid goodby to the family at the house of Yang. Then he motioned with his head that she was to come nearer to him, and so she came closer by a few steps, until they were almost side by side.

She perceived then what she had known the night before—that this rough fellow was ready to love her though he did not know it. The knowledge gave her a sort of tenderness toward him, such as she might have felt toward a young awkward boy. He was simple as men in the country are, so that whenever they see a woman it is with the question in them at once whether or not she is one to be loved. But he was afraid of her, too, since she was a woman from the city, and belonged to a rich house.

"You have children?" he asked her.

"Alas, I have not," she said.

"Your man—is he older than you?" he asked.

"Much older," she said gently.

"Is he good to you?" he asked again in his abrupt fashion.

"Very good to me," she said.

"THEN why do you come home?" he demanded.

"He is a foreigner," she said simply, "and he is going to Hong Kong, and since the foreign women who are the wives of his friends did not like me in Shanghai they will not like me in Hong Kong, and so I said to myself that I would come back to my own people." It was better to tell him the truth, for this he would understand.

"Are you leaving your man forever?" he asked.

"Oh, no," she said, "not that. I have my duty to him."

"It is strange that if you are Chinese you married a foreigner," he said bluntly.

"I was very young," she said. Then she told more truth: "Besides, no Chinese man would have me—whom my grandfather would allow."

He fell silent after this for a while and she fell a step backward away from him, but still not far so that she heard him give two or three great sighs.

"After you are in the city you will perhaps never come out again," he said after a long time. He waited for her to come near to him again.

"Perhaps I will," she said, smiling.

"Would you help us, your little brothers?" he demanded.

"How can I help you?" she said.

"If sometimes I should come to your grandfather's house pretending, you see, to sell some fowl, or something, would you tell me what the news in the city is, and how the enemy is—whatever you know?"

She understood completely that in this way he hoped to see her again by asking her to be a spy for the guerrillas, but she was touched, too, by his asking. It would be interesting, she thought, it might be exciting—and then suddenly it came to her that this man—these men, might be of use to her. If she could find a way for Dan to escape, might not they help him to get out of the city?

"Do you trust me?" she asked.

"Why not?" he returned. "We all know P'an Lao-Yeh."

He was looking at her with such frank longing that she laughed.

"Until my lord returns," she said,

"why should I not make myself useful against the enemy?"

He nodded shortly and they went on for a while. Now the city was coming within sight on the flat plains, and once or twice he looked back at her uneasily.

"Have you no poorer robe than the one you wear?" he asked at last.

"I have nothing else," she said.

HE WENT on then but after another mile or two he turned aside toward a field. There, a woman was working alone in the field hoeing sweet potatoes. She was a middle-aged woman with rosy cheeks and a patched blue coat and trousers on, not too clean, and on her bare feet were straw sandals.

"You woman," the young man cried out, "go home and take off your clothes

"Brother and sister," Leone said quietly.

"You do not look alike," the woman said. "He is poor and you are rich."

"I was given to be the concubine of a city man," Leone said.

The woman was satisfied with this, and she led the way to a small farmhouse near by, and there was only an old blind woman sitting there, who lifted her head when they came by and cried out to ask who it was.

"It is only I, good Mother," the woman replied, "and this is a city woman come to buy eggs."

"Have we eggs?" the old woman asked anxiously.

"We have three good eggs," the peasant woman said and she motioned Leone into the room where she slept, and to-

No one looked at her as she passed. The life of the street went on. It was not the old gay life it had been before the enemy came. Men and women were quiet and their faces were grave, and there were far fewer on the streets than once were there. Even the children played silently and near the doors of their homes, ready to hide in an instant if enemy soldiers came into sight. Certainly none looked at Leone except two or three housewives who saw her fuel.

"Good Mother, are you selling your fuel?" they called.

But she answered each time without lifting her head: "It is already promised in the city."

Thus she came to the barrier, and now her tongue was dry and her lips were dry. Yet this only helped to make it easier to let her mouth hang as she panted. Even so she stepped aside at the last moment and went behind a house again into an alley, and tore a piece from her girdle and dirtied it in the gutter and tied it so that it blinded one eye and shaded the other. Then she put on the kerchief again.

There the guard stood beside the barrier, a single Japanese soldier leaning on his gun, and then she saw three or four others, leaning against the wall. She made to pass as though she did not see them, but the man with the gun stuck his bayonet through the fuel, and cried out at her.

SHE paused, and looked sidewise at him, pretending she could scarcely see him.

"Eh?" she said as stupidly as she could.

He shouted at her again, and she shook her head to show she could not understand him. Then he said in broken Chinese:

"Where are you taking the fuel?"

"It is promised," she said, "to a Japanese captain inside the city. His lady wants it."

The soldier scowled at her, not knowing whether she was lying and yet not daring to think she was not. "How did you hurt that eye?" he demanded.

"My man beat me last night," she said simply.

The soldier shouted with laughter. "A good husband," he said, and he took his bayonet out of the fuel and pushed her with his foot.

So she knew she was free and yet she took great care to limp slowly as though she did not know either fear or relief, and thus she came safely into the city.

She limped along until she was well inside the streets she knew and only then did she stop to take out of her sandals the bits of brick, and even after that she still went haltingly, though here there were not likely to be seen any Japanese. She chose the small streets and the hidden alleys. These ways carried her past the Gate of Hope and at that place which she knew so well, she saw what made her turn aside quickly at the west corner of the wall. For there before the gate stood two Japanese guards, their guns held upright and the bayonets shining in the morning sun.

What did this mean? She asked herself the question and then answered it easily enough. Mrs. Shipman was an American, and she would of course be interned. Perhaps Dan, too, was only interned. She turned as the wall turned and came to the back gate. There stood no Japanese, but old Wang, whom she had known since she was a child. When she came near to him she paused and sat down on the edge of the street as though to rest. No one was in sight in this alley. The houses across it were only back gates, too, and all were closed.

(To be continued next week)

"I don't like this business of movie actresses touring the Camps . . . you know how attractive Frank is!"

KIRK STILES

and give them to this one and she will give you hers!"

The woman's round black eyes stood out at this.

"Who are you to tell me such a thing?" she cried.

The young man made a sign and she saw it and without a word to him she threw down her hoe. "Come with me," she said to Leone.

Now at this moment it seemed well to Leone to part from this man and so she said to him: "It is a good moment for us to part." She coaxed him with her smile. "See, there the city is, on the edge of earth and sky. I know my way, now. It is better for you not to come with me closer. I will put on this good mother's garments and put dirt in my hair and dirty my skin, and if she will let me have a load of fuel, I will carry it into the city. I thank you, elder Brother—and I will do what you say."

He coughed and shook his head, but she nodded hers, and so at last he yielded.

"Well, let it be so," he said. "But I will soon be at your gate."

"I will open it to you," she said.

All this time the woman stood gazing at them, and she gazed as the man turned and went away, not back, but winding along a road that edged the city, but did not enter it.

"You are—?" she hinted at last.

gether they took off their garments and Leone put on the peasant woman's, but this one folded Leone's robes carefully and put them away into a red pigskin box which long ago she had brought here with her as a bride. It was this woman who showed her how to mix a mud from the yellow earth by her pond and rub it into her face, and she showed her, too, how to carry the load of fuel on her back and how to put the ropes crossed between her breasts so they would not cut her flesh.

"I learned that when my children were small," the woman said, "and I had to nurse them while I carried the fuel." And then the woman wished her well and so they parted.

NOW Leone went alone along the country road toward the city and as she came near the city gate her heart began to beat more quickly. Would she be able to escape the eyes of the Japanese men at the gate? She had crusted her hands with the mud, and broken off her long nails and rubbed off the red lacquer upon them. A quarter of a mile away from this city she went behind a house and found two bits of broken brick which she had slipped into her straw sandals to make her hobble as she walked, and there she saw her clean white feet and she rubbed earth into them and made them filthy, too.

## "Everybody talks about the weather..."

... but nobody does anything about it." No longer is this famous old quotation true. For Boeing engineers *have* done something about it!

They designed the Stratoliner\*—the first transport airplane built to fly in the stratosphere, *above* the weather—where the air is thin, but smooth—where greater speed, safety, passenger comfort, and economical operation are possible.

In order to open up this new super-highway of the air, Boeing engineers designed the first cabin with automatically controlled atmosphere-conditioning. Thus at 20,000 feet, where the bitter-cold air is too rarefied for sustained breathing, the

atmospheric "altitude" inside the Stratoliner is maintained at a comfortable level. That's why the Stratoliners, built for TWA and Pan American, marked a revolutionary advance in the design and manufacture of commercial airplanes . . . and a guide-post to the future of flight.

Today, Boeing Stratoliners have discarded their gleaming mufti for drab camouflage, and employ their great speed and huge load capacity on errands of war . . . shuttling across seas and continents, hurrying men and materials out to the front lines.

And in another way, too, the Stratoliner is helping to win the Battle of the Skies . . . supplementing

the work of another Boeing-designed and Boeing-built airplane—the Flying Fortress.\* For the engineering and manufacturing lessons learned in building the Stratoliner and the Fortress are today being applied to creating still better military planes.

*The engineering and production know-how acquired by Boeing in many fields—structural, electrical, metallurgical, aerodynamic and a score of others—this know-how will some day be converted . . . from making America victorious, to making the fruits of science and industry available to free men everywhere.*

*Engineering leadership . . . manufacturing efficiency . . . now and tomorrow, these are implicit in the phrase "Built by Boeing."*

# "How many bullets will this make, mister?"

Sacrifice isn't a thing you can weigh in pounds or count in dollars.

It is measured in the brave little gifts of children.

In the heartbreaks of women. In the suffering of men.

But remember—you boys who toss your precious toys on the salvage heap—

They'll be coming back, all gay and new.

And you grown-ups who are giving up so many American comforts and conveniences—

These things will be back, too.

New products of American industry. More of them—finer than ever.

Sparton will have a part in the keeping of that promise.

Today, we are building for war, in all Sparton plants in both the U. S. and Canada.

But we are looking ahead to a peacetime world of greater plenty for all, at lower cost.

There will be new and finer Sparton radios.

There will be other new Sparton equipment for your homes.

All brought to you The Sparton Way—

Through one *exclusive* Sparton dealer in each community.

Meantime—

Thumbs up for Victory!

## SPARTON

## Why Meat Must Be Rationed

Continued from page 13

left nearly 18 billion pounds for civilian use. There is a shrinkage of 10 or 12 per cent in trimming the meat carcass to retail cuts.

There are 114 million full meat eaters in this country, and 14 million babies and invalids who can be termed half meat eaters, which adds up to a total of 121 million full meat eaters. A bit of simple long division reveals the fact that each of these 121 million people in 1942, on the average, could have about two and a half pounds of meat per week. That is the 1942 story, with the government, the American Meat Institute, and the packers all agreeing on the figures. It is hoped that the production of meat in 1943 will exceed the 1942 total by about 3 billion pounds—a total of 25 billion pounds. That's by far our largest annual meat output in history. There is no actual shortage of cattle, hogs, or sheep, but the meat must go further.

Let us assume that our Army invades Italy or France or Greece during the next year. If that happens, the Army will bring surplus food along to pacify and insure the co-operation of the local inhabitants, who can be very useful. Sometimes a pork chop can be a more efficacious weapon than a machine gun. Local inhabitants will be less prone to snipe at our lads if our lads toss them food instead of bullets. Also, our Army will of course be much larger than it is now.

The needs of our Armed Forces and our allies add up to eight billion pounds. Take eight from the 25 billion output. That means we will have nearly 17 billion pounds to feed our civilian population this year, or an average of about 2½ pounds per week per person.

### Lend-Lease in Reverse

Inevitably a few boys and girls will still whine, "Why should we send all that meat to Britain or Russia under Lend-Lease when we have a shortage at home? Let the English feed themselves." Discard for a moment the fact that the British and Russians are our allies who to date have borne the brunt of the real fighting, for such an argument would hardly pierce the isolationist shell of such squawkers. Let us hurry to a more realistic argument as to why we will send so much meat to our allies. It may come

as a wide-eyed surprise to many that Lend-Lease also works in reverse. We send no meat at all to Australia and yet we have thousands and thousands of troops there. All are fed with the beef, pork and mutton from Australia and New Zealand.

In Britain, our troops are supplied with potatoes, bread, fresh vegetables, all bulky food and considerable meat. Britain presents no bill for this food. Happily, the governments and the military leaders of both countries believe in the theory of pooling their resources. An example of Lend-Lease in reverse occurred during General Eisenhower's North African campaign. The operation would not have been possible unless Eisenhower had virtually drained Britain of available military supplies.

To quote some few of the war weapons "given" Eisenhower, we might mention 160 Spitfires; enough 25-pounder guns to furnish a division (more than 500 guns); 200,000 hand grenades; 334,000 antitank mines; 240 wireless sets; 600 ambulances; four complete 1,000-bed hospitals. At least a third of the ships used to transport our troops to Africa were British-made and British-manned. One might add that, for just about a year, 250,000 British workers have been allocated to the use of General Eisenhower and his Army. They have (Britain pays their wages) built barracks, airdromes, hospitals, sea bases and repair plants, which are operated by the British. Besides, all American airdromes and encampments are protected by British anti-aircraft guns manned by British gunners.

One could go on for quite a while, but it is all a rather silly method of approaching the problem of pooling our resources. It sounds like a bargain day at a department store. Actually to win the war, we must of necessity pool everything we have. This is a stern military necessity, and for civilians even to question it is absurd. But it might be the answer to the uninformed critics who six months from now may grumble, "Why send meat to Britain when we haven't enough for ourselves?"

Incidentally, although a great deal of pork is sent to Britain and to Russia, less than five per cent of our beef is shipped and about the same percentage of lamb and mutton, so Lend-Lease can

# CHAMPION SPARK PLUGS are the

dependable source of full, flowing engine performance, so vital to a Navy pilot at that crucial moment when an enemy ship—the never-to-be-forgotten prize—looms large in his sights. Champions are on active duty on every front.

The furious assault on an enemy ship by a formation of Navy dive bombers is a sight reserved for few to see. But a little imagination tells us what a magnificently awe-inspiring and intense moment it must be. Already the record books are replete with glorious achievement on the part of the men who man these avengers of Pearl Harbor. The records likewise show that many of these Navy planes, as well as all other types of planes in use by our air forces, are

powered by engines equipped with Champion Spark Plugs. In performing their respective and vital tasks, instantaneous response to the throttle is paramount. This quality of performance depends on the proper functioning of the all-important spark plugs. The characteristic dependability of all Champions, including those for your car, is directly due to research, engineering and precision manufacturing unequalled in the spark plug industry.

hardly be made the Big Bad Wolf of the meat shortage. In fact, we are under certain obligations to our allies, just as they are under certain obligations to us. Mind you, if the anticipated meat shortage were to result in one single war worker in this country actually going hungry, the whole picture would be different. But there will be no such shortage as that.

The government's policy on this point is clear. Secretary of Agriculture Wickard, the man whom the President has commissioned to handle the distribution of our food supplies among all needs, puts it this way: "There will be no shortage of meat for civilians in the sense of our having less than the prewar normal amount. The civilian supply per capita in 1943 will be a shade over the average civilian supply in the years from 1935 to 1939—the years just before the war.

### Soldiers Need Meat

One of our foundation policies in handling the wartime supply of meat—and of all other foods, for that matter—is to see that the American civilian population has enough for health and strength.

"Any doctor or dietitian will insist that men and women doing manual labor need more meat than the rest of our civilians who do nothing more energetic than punch typewriters, paint pictures, sell dictionaries or take tickets in a movie palace. Our troops, especially, not only need plenty of meat but want it. And our service men average just under a pound of meat a day."

In addition to the military need for meat, there is a civilian desire for meat to a degree we have never hitherto known. People in general will buy as much meat as their purses allow. Hundreds of thousands of defense workers who a year ago were able to afford steak or roast beef only once a week, now by virtue of increased pay envelopes and steady employment can afford it every day. They can't spend their money for automobiles, gasoline, electric iceboxes or other knickknacks which military necessity has decreed must be forgotten until after the war.

To these many thousands, meat, hitherto a luxury, is now an everyday fare. Today, they and their families literally purchase billions of pounds of meat which a year ago was not within their means. In other words, some people who formerly consumed about 100 pounds of meat per year are now purchasing meat at the rate of 260 pounds a year. There is no reason why they shouldn't have all the meat they need: rationing and restrictions will merely mean that they can't have all the meat they want.

This will be (and has already been) the condition in places like San Diego, Portland, Detroit, and a dozen other cities whose populations have mushroomed during the past year or so. The working out of technicalities in equitable distribution and transportation of meat to such suddenly grown cities has lagged behind the tremendous and not easily ascertained increase in population. As quickly as new centers of population arise, the packers and the government get together to adjust supply, transportation and distribution, so that shortages in such areas will be, at worst, temporary.

Now, leaving the over-all picture of meat alone for the moment, let's get down to what the shortage will actually mean to the ordinary housewife. It will not mean any radical increase in price. It should mean no increase at all. Last December, the Office of Price Administration fixed the price of beef.

\* Maximum prices per hundredweight for cuts of steer or heifer, for example, have been carefully worked out for the ten zones into which the country has been divided. These prices make allowances for the established charge for transportation applicable to each zone, based on the zone's distance from the territory where the beef is killed and packed. As to how this works out, one need only look at the prices charged for meat during the last war. Today, they are about thirty per cent lower than they were then.

"But," the housewife wails, "today my butcher has no steak. He has no pork, either, nor has he any lamb. What can I give my old man for dinner?"

When we discuss a "meat" shortage we use the word "meat" as the packers use it. It is a trade term meaning beef, pork, lamb, veal, mutton—nothing else. Nothing that comes from the head or the entrails of an animal is considered to be "meat." That is called "variety meat."

A good supply is anticipated of kidneys, brains, liver, tongue, oxtails, tripe, sweetbreads, pigs' feet, lamb fries and hearts, for these variety meats are not

huge shipments of pork and soya sausage have gone to Russia and Britain. The addition of soya to the sausage extends the nutritional value of the sausage.

Russia has been given a large amount of a combination of dried milk, oatmeal and soya which, with the addition of water, gives one a dish with the combined strength of meat and cereal. In Britain, pork sausage with soya is not only considered a desirable and tasty dish, but a tremendously nutritious dish. In the words of the food experts, soya "extends the flavor of meat and helps to compensate in nutritive value for lessened amounts of meat."

To say that there will be adequate "substitutes" for meat is to fool ourselves with the Nazi philosophy of *ersatz*. There are millions of us who will never admit that any food in the world can equal a good steak. The best we can hope for during the war is to find something "almost as good" and just as vital in vitamins (which wouldn't make a bad advertising slogan). Dishes such as liver, sausage, braised oxtails, broiled pigs' feet, boiled tongue with raisin sauce, and numerous others are going to

is not at all a satisfactory solution in these days when men—and women—work on odd shifts. Twenty-four-hour production has turned night into day for thousands and thousands of households. A housewife who once did her marketing at ten in the morning now, by virtue of her husband's nightwork, might not get to the butcher's until four in the afternoon. And so very often when she got there, the cupboard was bare.

In addition, there were the few crooks who gleefully took advantage of the situation to set up what amounted to a Black Market in meat. In New York, for instance, the price of beef chuck rose to 51 cents a pound in January. Six months ago, the average price was 29 cents a pound. The retail butchers insisted that certain wholesalers had ignored the price ceilings and in many cases they, the butchers, had been forced to "tip" salesmen in order to get any meat at all. Retail butchers were afraid to report such violations to the OPA for fear of being blacklisted by wholesalers.

Mayor La Guardia, in his annual message to the City Council early in January, took note of the situation when he declared, "If food prices keep jumping, I am going to ask that we control the distribution." Whether meat rationing will eliminate such abuses will not be known until it has had a fair trial. In any case, wide-awake mayors can stop such abuses easily enough if given the wholehearted co-operation of housewives and retail butchers who will report violations and out-of-line prices.

Food profiteering is perhaps the nastiest form of illegal money-making, for in the long run the burden falls on the poor and on defense workers.

### Rationing is Fairer

The methods of rationing which will be used are the most efficient that man has been able to evolve. To say that rationing will be perfect is to expect that human ingenuity is infallible. It won't be. But the mistakes made in Britain early in the war and the way rationing finally worked out with reasonable satisfaction to all have been studied, and our rationing should be the more effective for that study.

As long ago as last September, the government realized that meat rationing would be necessary. Since then, rules have been worked out and the mechanics of rationing have been carefully planned.

Here is the view of Secretary Wickard, the man who directed that meat be rationed:

"I don't have any doubt that the American people will be much better satisfied with rationing of meat when it goes into effect than they have been with the situation which has prevailed previously in the periods when supplies for domestic consumption have been short in widespread areas. I think there has been a tendency, in some quarters, to underestimate the patriotic determination of our people to see this war through, no matter what personal adjustments and inconveniences it may mean for them. I think, too, that their common sense has been undervalued. I have gone on the theory that if we told them why food supplies were short and why they were being asked to use ration books, or otherwise give up the free and easy ways of peacetime life, they would respond enthusiastically and cheerfully. So far, I have seen no reason to change my mind."

Claude Wickard used to be a farmer. Farmers have a way of talking more sense than the rest of us. Claude Wickard is no exception.

THE END

used in military feeding or for Lend-Lease shipment; and in addition, chicken, turkey, duck and other fowl are not rationed. They will come from a record supply of animals, and all will remain right here for us. They may be expected to be seen more often on our own tables. Any of them may be substituted for "meat" without fear that the old man will knock himself out from starvation if he takes a deep breath.

It may be that families accustomed to stuffing themselves on steaks, chops and roasts will not take kindly to occasional meals which lack those succulent dishes, but it must be remembered that Britain was a very big meat-eating country once upon a time, and her population has managed very nicely to adjust itself to the new conditions.

### Extending Meat with Soya

There is a little thing called the soybean which is going to loom more and more important in our food program as time goes on. After the oil is taken from the bean, the protein is snatched from it and this (called soya) is going to be seen in one way or another on many a dinner table soon.

Our Department of Agriculture says that one pound of soya has the protein value of four pounds of meat. Already

load down our dinner tables and we won't be any the worse off for them.

Rationing of meat will come almost any day now. We have come to rationing only because everyone concerned (government officials, packers and retailers) agreed that it was necessary and was the only fair method of seeing that every family in the country received as much meat as it needed. The Share-the-Meat movement of the past year was a noble experiment, but like all noble experiments, for it to have been one hundred per cent successful, people would have to be one hundred per cent noble. That is putting too much of a strain on most of us.

Then, too, the Share-the-Meat campaign put too much responsibility on the individual retail butcher. Most butchers were forced to adopt a "first come, first served" policy.

Around the stockyards in Kansas City and Chicago, they have an indelicate but very pungent slogan regarding meat. It is "Sell It or Smell It." The retail butcher, with all the good will in the world, couldn't hold back some of his meat for old and regular customers who might not order it after all—and the meat would be spoiled. You can't keep meat around until a customer makes up his mind.

The "first come, first served" policy

*How American it is... to want something better!*

IT HAS BEEN SAID that the world seeks something *good* while America wants *something better*.

This hunt for *something better* has led a quite sizeable number of Americans to discover a notable Ale.

In fact, this moderate beverage lives up so literally to the "Purity," "Body," "Flavor," inscribed upon its three-ring trade mark, that it has easily come to be—

*America's largest selling Ale*

Le Comte de Badoit moved in procession toward his carriage. And behind came José carrying a sunshade

# THE FORGOTTEN GOVERNOR

by Wells Lewis

Success story of a great master in the unorthodox art of doing absolutely nothing

THE melon had been cooling in the cellar, so the body of it was deliciously chill. But the sun was filtering through the heavy trees of the patio, and the top of the slice of melon was mildly warm. Warm on the surface, chill underneath, the melon was also sweet but sprinkled with salt. It was a harmony of agreeable, gently contrasting sensations.

The Comte de Badoit dug his pointed spoon into the green flesh. In the morning, melons were comforting. It was one thing, in the evening, after bathing his huge body in a huge tub, shaving freshly and armoring himself in fresh linen, to battle with quail and wild turkey, with antelope pie and suckling pig, with *moles* and *chilis*, with large glasses and large decanters of wine, with cigars and pipes and bursts of song and thumping on the table and stamping on the floor and determinations to ride out into the night on immense, vague expeditions. That was all right for dinner. But in the morning, the count preferred melons and stillness and the sunlight meander-

ing from leaf to leaf until it spread in small circles on the brick floor of the patio.

Again and again he dug in his spoon, and with double satisfaction. Bringing melons from Cuba to grow in the palace gardens had not been easy, but French elegance in northern Mexico in the 1830's demanded an effort, even from the governor of a province. Every hour of luxurious laziness had cost the count an ounce—or perhaps an ounce and a half—of his own sweat.

With the last spoonful, José appeared carrying the second course—chicken livers cooked with sherry, in a covered silver dish. Behind the footman, or butler, or valet—José had various titles—came Dr. Lorent, jittering with excitement.

"It is!" he gabbled. "It is! It really is!" Badoit prodded the chicken livers to see if they were tender. "I'm delighted to hear it," he said. "What are you talking about?"

"Why—the—the—" Dr. Lorent stammered, gazing helplessly at José. The elderly little doctor had no tact. But José had tact if nothing else. He smiled reassuringly and withdrew.

"Ah!" said Dr. Lorent, "I couldn't speak in front of that fellow, you know. It's most important! Vital! But secret."

"Secret, indeed. Explain yourself, man! . . . Or shall I assume that you have finally contracted sunstroke?"

"I thought I had sunstroke when I tested it! Almost pure gold! Such rich ore! There's millions in it—millions and millions!"

"Gold? Gold?"

"Yes! That outcropping in the cliff above the Rio Quintano . . . Henri de Badoit, you have a gold mine on your property!"

MONSIEUR LE COMTE began to eat his chicken livers in the most maddeningly casual way, his great shoulders hunched over the table. Between each morsel he thought for a while. After the sixth he said, "A gold mine?"

"A most amazing gold mine, I am sure of it."

"Um. . . And people wish to acquire gold?"

"Of course."

Badoit seemed displeased. "To acquire gold, people will burn, steal, make impolite remarks, sell their grandmothers

into slavery, and annoy me in the middle of breakfast." He sighed . . . a huge sigh from his prodigious, vatlike chest. "I had hoped that this province had no natural resources at all."

To the wrinkled face of the geologist came the expression of a man who has been trying to scale a mountain all his life and reaches the top to find planted there a "No Trespassing" sign. "But this is fantastic!" he exclaimed. "Do you mean to tell me that you have no desire to possess a house in Mexico City and another in Paris, a château on the Loire, a hunting lodge in the Vosges, a yacht, hundreds of servants?"

"No," said Badoit.

The geologist waved his hands like a hysterical windmill. "All right! Be insane if you will. But at least let me dig out some of that precious ore for myself!"

"Hah!" The Comte de Badoit suddenly pushed around his chair, rose to his feet, advanced menacingly toward his former tutor turned geologist. "Listen to me, you misguided old scholar," he said, wagging a big finger. "Do you think you could dig out that ore *alone*? Do you think you could drive the ore to a smelter or build a smelter *alone*? And do you think you could gather workers

# Ivy and the Figurin' Man

By Putnam Fennell Jones

ILLUSTRATED BY EARL BLOSSOM

Young Jotham was slow to action, but when he did move, he was in the right direction

LONG before the others on the porch heard anything, Ivy knew Jotham's truck was out there on the road. Her ears had caught the faint rattle of its tailboard as it bounced down Cedar Hill, and while her father and mother and Ben Ellsbree kept on talking, she sat with her chin in her hands, waiting to see whether Jotham would drive past or would turn up their lane. She guessed there wasn't much chance, for Jotham never visited anybody any more. He just stayed by himself in the old farmhouse across the valley, up among the trees his father had planted. He'd been that way since his father's death.

Ben's dog raised his head and growled. "Hey, Rebel!" Ben said. "What's the matter, boy? Cats?" The hound cocked an ear in the direction of the road, and Ben shrugged. "Somebody comin' up, I guess."

Ivy's father listened. "Sounds like Jotham Trent's machine."

"Huh!" Ben growled. He looked at Ivy, and his fleshy jaw tightened. "He been sparkin' around here?"

"Not once," Ivy answered. "Not once ever."

But her cheeks were warm as the little green truck rolled into the barnyard. Jotham turned the truck around and parked it, then came toward the porch.

He was dressed in the clothes he always wore to Stoneway, the county seat. These consisted of a dark blue suit that hung loosely from his tall frame, a clean white shirt with a knitted tie, and a pair of square-toed oxfords that had been rubbed to a dull black. He had no hat, and his tousled brown hair contrasted sharply with the solemn lines of his face. Jotham was only twenty-five, the same age as Ben, but he seemed older and more mature.

"Evenin', Miz' Jackson," he said. "Evenin', Mr. Jackson."

"Evenin'."

Jotham paused at the steps, and his gray eyes came to rest on Ivy's face. "Evenin', Ivy," he said. He spoke to Ben also, but the latter only grunted.

"Evenin', Jotham," Ivy murmured, trying to keep her voice steady. "Been over to Stoneway?"

"Since mornin'," he answered. "Draft board wanted to see me." He stood silent a moment, evidently thinking about something else. At last he reached into his pocket and brought out a piece of newspaper, which he handed to her. "Wanted to ask you about this," he said. "Found it in yesterday's Gazette-Times. Thought maybe you could tell me what it means."

Ivy flattened the clipping on her knee. It was a drawing called "Strange Facts," and it showed a black cat looking up at Hitler, Mussolini and Napoleon. The lettering underneath said: "Like Napoleon before them, both Hitler and Mussolini are *ailurophobes*."

She stared at the queer word, but it meant nothing to her. "I'm sorry, Jotham," she sighed. "I've never seen that one before."

"Dictionary around?"

"It's in my desk at the schoolhouse. We could go down there now, if you

"So you're worrying about Jotham's cat," Ben grunted. "Well, let's see how she likes this." He stooped, picked up a rock, took careful aim and threw

# U-UMM! Orchard Fresh Fruits in February...mere minutes off the farm!

**1. Take** Birds Eye Strawberries: they're out-of-season visions—sun-ripened! Then cleaned, sliced, sugared, and Quick-Frozen! All midsummer deliciousness is sealed in!

**2. It's like** that with all Birds Eye Fruits! Strictly QUALITY—tasty, tempting! Try Birds Eye Peaches—tree-ripened, sliced, and sweetened! (Simply swell for Shortcake!)

**3. A-ah!** Birds Eye Red Sour Cherries—in a pie! Pitted, stemmed, sweetened—to save you trouble! Quick-Frozen at their tree-ripened, tingling-tart peak!

**4. Quick-Freezing** captures ALL the goodness of Birds Eye Fruits. They come cleaned, waste-free—economical! You can't BUY farm-fresh fruits like these today!

**5. Birds Eye Fruits**—like other Birds Eye products—are naturally rich in Nutrition! Notably so in vitamins A and C, and in Minerals. They're all good for YOU!

**6. Birds Eye** offers you summer's most delicious fruits—ALL Quick-Frozen mere minutes from bush or tree! Buy ALL your fruits at your Birds Eye grocer's!

**PICK OUT YOUR ORCHARD-FRESH FRUITS!**

Blueberries • Sour Pitted Cherries • Rhubarb  
Tru-Blu-Berries • Mixed Fruits • Strawberries  
Boysenberries • Peaches

(This week Feb. 8-13)

**PEACHES • SQUASH**

would like to. Wouldn't be any trouble."

"No, it ain't that important. But some day when you're around there, maybe you'd check up."

"I will," she said, disappointed that he hadn't wanted to take her. "I'll be glad to."

"Much obliged," he said. He nodded to the others. "Night, folks."

Ivy's father pulled a chair forward. "Don't rush off, Jotham. Sit down and visit a while."

"Sure would like to, Mr. Jackson, but I got to get home. Lady's been shut in all day, and she'll be pinin'."

"She had her kittens yet?" Ivy asked.

"No, but she's sniffin' at boxes. House-huntin', I guess."

He turned toward the car again, but Ben called after him.

"Hey, Jotham, what'd the draft board say? You tryin' to skip the Army?"

"Killin' ain't my business," Jotham answered quietly. "I like to make things grow. Draft board told me to keep on raisin' food for people. Logical, ain't it?"

"Sure, if you're scared of the fightin'."

**JOTHAM'S** eyes were steady. "I might be scared or I mightn't," he said. "Nobody knows till he gets there. How about you, now? You goin'?"

"I would, only Pa can't handle the farm alone. The board allowed I'd better stay here."

"So?" Jotham asked. "Your pa been sick?"

Ivy wondered, too, because everybody in the valley knew that Phineas Ellsbree looked after his farm without any help from Ben. Ben spent his days in the thickets and the high timber, hunting rabbits and coons with his dogs. He'd never felt the heft of a plow.

"Pa ain't young any more," Ben said, shrugging. "And besides"—he paused and winked broadly at Ivy—"I'm aimin' to settle down. When you know what you want, there's no use waitin' on a war."

"Logical," Jotham agreed. He smiled briefly. "Well, I really got to get goin'. So long, folks."

Ivy sat frozen to the steps. She wanted to run after him and explain that Ben was only talking, that there wasn't any understanding between Ben and her. But the little truck started before she could move, and its swaying tailboard soon disappeared down the lane. She turned hot eyes on Ben.

"Why did you say that? I never promised I'd marry you."

"Logical, ain't it?" Ben grinned, imitating Jotham's soft drawl. "I don't want him trespassin'. Saves trouble, if he knows beforehand."

"He doesn't come here for that, I told you."

"Can't tell what he might do, bein' a crazy fool."

"I don't think he's crazy," Ivy objected.

"No? Well, listen, then." He ticked off the points on his fingers. "He's a nut farmer—thinks he can make a livin' out of trees. That's crazy, ain't it? Then, there's that cat. Who ever heard of a grown man takin' a cat in and worryin' about it? Doesn't make sense. And now, tonight, he comes askin' what big words mean, like a professor. Logical? Huh! If Jotham Trent's logical, I'm a cock-eyed muskrat!"

"Well, he aims to be logical," Ivy said. "He likes to figure things out, so he'll know what he's doing."

"Yeah, like growin' walnuts all over the place!" Ben chuckled. "Jotham Trent, the squirrels' friend! Ha-a-a-ah! Ain't that a honey? Jotham the Squirrel! Ha-a-a-ah!"

He slapped his thigh and leaned back, roaring.

Ivy stood up. "I've got a headache. I'm going to bed."

Ben grabbed at her arm. "Pretty early, ain't it?" he asked. "I counted on us takin' a walk after it got dark."

She pulled away from him and ran into the house, not stopping until she reached her room. She locked the door behind her and stood there a moment, then lay down on the bed, burying her face in the coverlet.

The window beside her was open, and she could hear the sounds of evening—the hoot owl up on the ridge, the chirping of the meadow crickets, the katydids' endless song. It was the hour when she liked to think about Jotham. Right after sundown, while the soft dusk was gathering, almost anything seemed possible, even a love match between Jotham and herself.

That was her oldest dream, the oldest and the best. When she was hardly big enough to walk, she had trudged across the valley to look at "the crazy Trents," as people called them, and her heart had been won by the awkward, solemn-faced boy who discovered her at the top of the path and took her to see his baby rabbits in the nest beside the barn. Years later, when she was sixteen and the Trents had begun their experiments with nut trees, she had watched Jotham graft the walnut stocks with his strong brown hands, and she had caught herself wondering how a tree felt, inside its bark, when he touched it. From then on, her thoughts of him had a breathless, aching quality that often brought tears to her eyes.

For the dream was only a dream, after all, and she would have to forget it soon. She was twenty-one, grown up, and anybody could see Jotham didn't want her.

She wished she could go to sleep and dream once more, then never wake up again. . . .

**BY TEN** the next morning, however, she had been awake more than three hours. By that time she had walked to the Lower Forks schoolhouse and back, had washed the breakfast dishes and made the beds, had got herself ready for the trip over to Jotham's. The dress she had put on, a soft summer print with a plain neckline, brought out the smooth texture of her skin, with its August tan. She had brushed her hair until it shone in glossy, upswept waves, and her dark eyes were alive with excitement. She made a face at herself in the mirror.

"Ought to have better sense, Ivy Jackson," she murmured. "He's probably forgotten that clipping already."

But on her way across the valley, she kept repeating what she had found in the dictionary, so as to have it by heart when she met Jotham. She hoped he would feel like talking to her for a while.

The path wound down through the bottomlands and across Swamp Creek, then up the other side toward Jotham's walnut groves. She had crossed the little stream and was in sight of the open hillside beyond when the brush suddenly parted at the side of the trail and Ben Ellsbree stepped out, his dog at his heels. Ben eyed her steadily.

"Mornin'," he said. "You sure look pretty, slicked up like that. Visitin' somebody?"

"Yes . . . Jotham Trent."

"Guessed you might, after last night. That's why Rebel and I been waitin'. Thought we'd go with you."

"I don't need company."

"You're gettin' it, just the same. Jotham'd have the wrong idea if you went up there alone. So I'm comin'."

She knew she couldn't keep him from

following her up the hill, and if they arrived at Jotham's door together, Jotham would think they were engaged for sure. There was only one thing to do.

"All right," she said quietly, "I'm going home." She turned and started back down the trail, toward the little footbridge she had crossed earlier. She hoped he would be satisfied and would leave her alone.

But he had no such intention, it seemed, for he caught up with her just short of the bridge. He walked close beside her for a few paces, then slipped his arm around her waist. "This suits me fine," he said. "We can make up for that walk we missed last night. It's nice and quiet down here."

"Cut it out, Ben," she said sharply, pushing him away. She knew what he meant by a walk, which was one reason she had never gone out with him.

She hadn't any choice, she guessed. Before Ben could grab at her again, she turned and fled back along the path toward Jotham's hillside. Better Jotham than Ben, no matter what came of it.

SHE heard Ben's grunt of surprise, then the thud of his boots on the trail behind her. The ground was soft, so that she couldn't tell whether he was gaining or not. She simply kept her eyes on the distant green slope and ran as hard as she could. If she once reached the meadow, she would be in sight of Jotham's house and Ben couldn't bother her.

But with less than twenty yards to go, she was sure she couldn't make it. Her feet were like lead and Ben's heavy breathing was almost at her ear. She expected each instant to feel his hand on her shoulder and to hear his grunt of satisfaction as he gathered her into his arms. It was this last thought that drove her on. She ran blindly, dizzily, trying to escape those avid fingers.

Then, suddenly, the air had a new quality. It was no longer damp, but warm and dry, filled with the sweet smell of clover. She was in the meadow! She halted, panting, and looked up toward the crest of the hill, where Jotham's white bungalow gleamed in the sun.

Ben, who had stopped beside her, followed the direction of her glance.

"Smart, ain't you?" he asked. "Well, runnin' won't get rid of me. I'm taggin' along, like I promised."

She didn't answer him. Though still out of breath, she started up the path, which skirted the northern edge of the walnut grove. Ben kept pace with her,

and the dog Rebel, his nose close to the ground, scoured the meadow ahead. He was running in wide circles, apparently tracing a scent he had found.

Ben yelled at him: "Hey, Rebel! What is it, boy? Rabbits?"

Ivy's heart froze. She turned swiftly to Ben: "Ben! Call him back! Jotham's cat may be out."

But it was already too late. Even as she spoke, the dog gave a sharp yelp. A gray bundle of fur broke out of the tall grass and streaked into the open, making for the walnut trees. Rebel was in hot pursuit, so close that Ivy expected his next bound to end the chase.

Ivy watched tensely, as the gap narrowed, for it was plain that even if Lady got to the tree she was headed for, Rebel would catch her when she jumped. The cat evidently realized this. Instead of jumping, she flashed past the tree trunk, then made a twisting, clawing turn and scrambled up the other side. Rebel wheeled at the same instant, but he was off balance and his teeth missed her hind-quarters by a good six inches. Before he could gather himself for another leap, she was up among the branches.

Ben was laughing gleefully. "Hey, Rebel!" he shouted. "Where's your cat? Go get her, boy! Shake her out of that tree!"

The dog barked wildly and jumped high against the tree trunk. It was one of the smaller walnuts, bearing its first crop, and the impact of Rebel's body made it tremble in every leaf. Lady had climbed to a small limb near the top, where she hung on desperately, her tail fluffed out like a fox's brush, her eyes fixed in terror on the dog below.

"Call him off, Ben!" Ivy pleaded. "Lady's going to have kittens, and she's scared to death."

Ben laughed again, but his eyes were hard. "So you're worryin' about Jotham's cat!" he grunted. "Well, let's see how she likes this." He stooped, picked up a rock, took careful aim, and threw. The rock crashed through the upper branches, nipping a twig beside Lady's nose. She flinched backward, almost upsetting herself, and Rebel's barking rose to a frenzied pitch.

Ivy grabbed Ben's arm. "Please don't, Ben! She's so helpless up there! Can't you—"

She broke off, startled by the sound of footsteps. She turned and saw Jotham striding down the slope. His face was pale and set, and his eyes blazed with a fury she had never seen in them before. He made straight for the tree under

## GREASE for SHIPS -but NOT for SHAVES

Grease is great for sending ships down the ways, but men *hate* to put it on their faces. That's why so many men are switching from ordinary brushless to the new Mennen Brushless Shave—it's a cream, not a grease! Jar or tube.

- wilts whiskers faster
- snowy white in color
- spreads easily, rapidly
- soothes dry, tender skin
- not messy, washes off easily
- goes farther, costs less per shave

**NEW!**  
A CREAM  
NOT GREASE

"I have several requests from a gentleman in Chicago, but I'm gonna sing anyway"

GENE STANLEY

which Rebel was barking. He lifted the dog by the scruff of the neck and carried him back to Ben.

"Don't want to hurt your dog, 'cause it ain't really his fault," he said. "But you better tie him up before I choke him to death."

"You choke him and I'll bust your head in!" Ben retorted. "Anyhow, why should I tie him up?"

"So I can get started bustin' your head in," Jotham answered quietly. "I saw you throw that rock."

Ben's eyes narrowed. "You mean you'll fight me?"

"I mean I'm goin' to thrash you, soon as you tie this dog up."

"Give him here, then. I'd tie my old man up for a chance like this. Always wanted to fight you, Jotham."

Ben was smiling grimly as he took Rebel by the collar and led him to the edge of the field. He anchored him to the fence with a piece of loose wire, then came back and stood in front of Jotham.

"So you're goin' to bust my head in!"

"Aim to try."

During the instant they faced each other, Ivy dug her fingers into her palms, wanting to cry out in protest. This was no match. Ben was known throughout the valley as the meanest, deadliest fighter in all those parts.

Jotham wouldn't have a chance in that sort of brawl. He knew nothing about fighting, and he hadn't even the weight to meet Ben on equal terms. He was tall, but lean and loose-jointed. Ben, with his bulky shoulders and his wrestler's legs and arms, outweighed him by at least forty pounds.

BEN put his weight into play from the start. He took Jotham's first punch high on the cheek, and then, with lips drawn back and eyes smoldering, he made a low, hard rush. Jotham braced himself and swung again, aiming at the big jaw, but Ben's head caught him in the stomach like a battering ram. As he staggered, Ben wrapped his arms around him, bending his spine into a tight arc. They fell that way, with Ben on top, and Ivy tried to shut her eyes. At the last instant, however, she saw Jotham send a stiff right to Ben's body, breaking his grip as they hit the ground. He rolled clear and got up slowly, struggling for breath. His back didn't seem to be injured.

But that was only the beginning. For the next fifteen minutes Ben attacked like a mad bull; he butted and gouged, clawed, slugged and wrestled, giving Jotham such a mauling that Ivy wondered how he stood up. At one point she thought it was all over. After straightening Jotham with a short uppercut, Ben slid into a clinch, then brought his knee up into Jotham's groin. Jotham's face went white, and his eyes were glazed with pain. But when Ben stepped back and measured him for the kill, Jotham beat him to the punch with a stinging left. Ben's fist glanced harmlessly off his shoulder.

Then, for the first time, Ben failed to renew his attack. He was breathing heavily, and his cheeks showed ugly splotches of purple, as if he had suddenly spent himself. He watched Jotham's eyes, and when the latter moved toward him, he gave ground slowly. Ivy prayed that the tide had turned.

Jotham closed in and hooked a right to Ben's jaw. Ben struck back clumsily, and Jotham put everything he had into three solid right-hand smashes. Each found its mark along Ben's jaw. After the third one, he tottered a moment, then slipped to one knee, spreading his hands on the ground for support. Jotham stood over him.

"Get up, Ben. You ain't hurt much—yet."

Ben stirred a little, but he didn't lift his head. "I'm licked," he mumbled. "I can't take any more." The plea in his voice was naked, embarrassing.

Jotham looked down at him curiously. "Why . . . all right, then. Take your dog and get out. But remember, he ain't to come up here again."

Ben nodded without answering. He got up painfully and went over and untied the dog. Holding him by the collar, he led him down the slope, and in a few minutes the two of them disappeared into the thicket at the edge of the swamp.

Jotham turned and limped over to the tree where Lady was hiding. He had a queer, preoccupied look in his eyes as he climbed the tree for the cat.

She kept quiet till he got the cat down, but then she had to know. "Jotham . . . are you all right?"

He glanced at her, and his eyes were

lie about," he murmured. From his tone, Ivy couldn't be sure who he meant was lying, Ben or herself. She made no comment, and after a while he raised his head. "Could we walk up the hill while you tell me about that word? Lady feels scared down here."

"Of course," Ivy answered. She reached across and smoothed the fur along Lady's throat. "Poor little thing! She got a chasing, all right." The cat pressed shyly against her fingers.

THEY started up along the path, walking slowly while Ivy told Jotham about "ailurophobes." She repeated the definition she had found in the dictionary—"A person with a morbid fear and hatred of cats"—and she noticed how intently he listened.

Then, because it had pleased her when she read it, she explained how the word was formed. The first part, *ailuros*, meant "tail-waver" in Greek, while the second

around while other fellows do the fighting. It's my war as much as theirs."

"But what about your crop? And Lady?"

Jotham's eyes clouded, and he glanced down at the cat, which was rubbing daintily against his leg. "I don't know," he said, with a tired shrug. "That's where I get stuck in my figurin'. I'm all snarled up about the crop, about Lady, and about you."

Ivy bent forward, not sure she had understood him. "About me, did you say?"

"About you," he nodded. His eyes were steady, but a tinge of red had crept into his cheeks. "I shouldn't be sayin' it the way things stand, but I've wanted to marry you ever since we were kids. I was ready to kill Ben for his braggin' last night. I figured he'd shoved in ahead of me."

She stared at him. "But you never said a word, Jotham. You never came callin' or anything!"

"Well, I didn't figure I should. Pa used to talk about that. He said I ought to have somethin' to offer before I went courtin'. That's why I've sweated over those trees. They're comin' along fine too. This first crop, when it's ripe, will be worth three thousand dollars. Dealer from Stoneway told me so."

"Jotham! How wonderful!"

"Would have been nice," he agreed. "But it's just squirrel food, now. I ain't goin' to wait."

"Not even for Lady's kittens? What will happen to her?"

THE lines in his forehead deepened and he slowly turned his head. "I been wonderin' if you'd help me, Ivy. Could you take her to your house? She likes you, and she wouldn't be much trouble."

"I don't know, Jotham," she murmured, shrinking from the words she was about to speak. "We've never kept cats over there, and I'm afraid the dogs would tear her to pieces. Besides, she's used to this place. She'd be uneasy having her kittens anywhere else."

She lowered her glance as she finished, unable to meet the disappointment in his eyes. *I'm bad, she thought. I'm just a hussy, and maybe he'll hate me for it. But please, God, make him see what I mean!*

"I guess you're right," Jotham said quietly. "She's got her box picked out, back in the shed."

Ivy looked down along the hillside, with its rows of trees. "Those nuts, too. It seems a shame to let them rot, after all your trouble. You've done the real work. Harvesting would be easy."

"You think I should wait, then?" he asked, frowning. "Gosh, Ivy—"

"No, no!" she cried. "You mustn't wait! I want you to fight, and I'm proud of you!"

Jotham blinked for a moment, and then he fastened his eyes on hers in a concentrated gaze. He leaned forward slightly, his brown hands tight on the arms of his chair.

"Ivy . . . is there a chance you'd marry me . . . now, before I go? I'm askin' you because I love you, and not on account of the crop, or Lady, or anythin' else. Could you, do you think, without any proper courtin'?"

Ivy brushed a tear away. "Of course, I'll marry you, because I love you, too. As for courtin', I'll never want more than the things you just said."

They stood up together, and he took her into his arms. It was quite a while before either of them spoke. At last, however, Ivy turned her face and whispered against his chest:

"Jotham . . . you figure so beautifully!"

THE END

suddenly sharp. "Yes, I'm all right. You better go help Ben."

"But—but I came to see you, Jotham. About that word, remember? The one in the clipping? I—"

"Why'd you let Ben bring his dog, then?" Jotham demanded. "You knew Lady was here."

His voice cut like a knife edge, and she lowered her eyes.

"I meant to come over alone," she said, "but Ben picked up with me down in the swamp, and I couldn't get loose from him. I'm sorry about Lady, Jotham. About the fight, too."

"WELL, that's water over the dam," he said. "Reckon we better forget it." His voice had grown milder, though there were still signs of strain around his mouth. He was silent a moment, looking at her. "Ben won't like this."

"Won't like what?"

"Your stayin' here after the fight. You should have gone with him."

"But why, Jotham? What do you mean?"

His eyebrows came together in a puzzled frown.

"You're engaged, ain't you? Seems I heard Ben sayin' so, just last night."

"Maybe that's what you heard," Ivy answered quietly, "but it isn't true. I wouldn't marry Ben for anything."

Jotham glanced down at Lady, who was curled inside his arm. He rubbed her gently behind the ears, his forehead puckered in thought. "Funny thing to

half came from the word for "fear."

"Tail-waver," she smiled. "Isn't that a nice name for cats?"

"Sure is," he nodded. "Couldn't be prettier. Thanks for all your trouble, Ivy." He spoke with evident sincerity, but there was no smile in his eyes, no outward change from the dark and preoccupied mood he'd been in all morning.

They reached the level ground in front of Jotham's house, and he led her across the yard to the side porch. When they got there, he put Lady down and moved two chairs back out of the sun.

"Sit and visit a while?"

"I ought to get home," Ivy answered, taking the small rocker, "but I want to talk to you for a minute. Are you still cross with me about Ben's dog? If you are, you better tell me, instead of acting strange."

"I ain't holdin' grudges. Not against you anyhow. If I been actin' strange, it's because my head's like a squirrel cage. Can't seem to figure straight any more."

"About what, Jotham?"

"About me and the war, for one thing. I'd figured I ought to keep on farmin' as long as they'd let me, so as to get these nut groves paid for. But while I was up in Stoneway, I did a lot of readin', and I found out what those Germans and Japs have been doin' to other people, and what they aim to do to us." He paused and frowned at the floor. "Reckon I'll join the Army."

"You mean . . . right away?"

"Soon as they'll take me. I can't sit

## A HIGH HONOR FOR YOUR DAUGHTER

**T**HE NAZIS look upon us as a degenerate nation. But they have a great respect for our accomplishments. And, if they win, they may decide that we have something in our blood which they can use in building their master race.

For they're great believers in eugenics, these Nazis. They're strong for selective breeding.

You they may cast aside and put to some ignominious task, such as scrubbing the sidewalks or sweeping the streets. But your daughter...well, if she's young and healthy and strong, a Gauleiter with an eye for beauty may decide she is a perfect specimen for one of their experimental camps.

A high honor for your daughter...

Does this seem a story spun in the realm of fantasy? It isn't. It is now happening, all through

Europe. The latest experiment of the victorious Nazis has been to ship Austrian and Hungarian girls to the Northern countries. The result of these unions...unblessed, of course, by matrimony...will not be known for some time. But the Nazis, you must admit, are not above innovation.

Two, three, four, five years from now they may ship American girls to some far corner of the earth...may select your daughter...if *you* relax, if *you* fail to do your part now. If you say, hopefully, "It can't happen here. We can't lose."

No, we can't lose. We can't afford to. We must not. Else all the terrors, all the degradation, all the misery and suffering that have been loosed upon Europe will be loosed upon us. We of all people will not escape it. We shall be the chosen...we

shall be the elect...in the Nazi scheme of things.

We who have only just begun to win. We who risk the danger of resting on our new-won laurels and considering the job done.

This is no time to relax. This is the time...the opportune time...to do all we can to get this war over sooner.

We *must* measure up to the job!

# The Forgotten Governor

Continued from page 50

and build smelters without having the whole affair heard about in Mexico City?"

The geologist looked worried. "I suppose not," he answered.

"You suppose not! Well, I suppose not, too! I must ask you to remember that I am governor of this unimportant, remote province only because Mexico City has forgotten me or doesn't care about me. I must ask you to remember that the dear old friend of my family who appointed me governor is no longer president; that he has been overthrown, and that there is a very different kind of man who is dictator now. This dictator would do anything for gold to pay the army that keeps him in power, yet you want to discover gold mines. Gold mines! In the name of a donkey! Do you want us to lose all this—" he gestured about the patio, pointed at the breakfast table—"this very pleasant life, and exchange it for a prison or a firing squad?"

The old geologist in his shabby black suit turned away from his patron, filled with insupportable dejection.

"No more about gold mines!" the count shouted after him. "Not a word to anyone!"

Badoit breathed heavily for a bit. He stared angrily at the breakfast table with the silver spoons and forks and dishes brought from France, the two surviving chicken livers. "Tchah!" he exclaimed, and stumped back to his armchair.

The sun had shifted; it came down more directly into the patio, pierced strongly through the trees. There was warmth for the count's bald spot, for the face like a corpulent eagle, for the generous stomach that appeared in the opening of the brocade dressing gown, covered only by a thin nightgown. The sun was soothing on the bald spot and the stomach. The sunlight was golden on the patio floor.

"Gold enough for me," murmured the count.

AN HOUR later, after dressing with care, Badoit moved in procession toward his carriage.

The count and any one other person were enough to make a procession. He wore an official cocked hat with gold lace, a magenta coat reaching to his knees, a light blue waistcoat with more gold lace. He carried a powerful cane with a topaz knob. On his waistcoat were stains of food and wine, imperfectly cleaned by José. Some of the gold lace had loosened itself from the hat and floated upon the air. And behind came José carrying a sunshade. Indians, appearing from nowhere, cheered heartily for their beloved governor.

The carriage which he approached was old, the paint nearly all peeled away, doors sagging, axles obviously repaired, wheels at perilous angles. But hitched to it were six horses and each door bore a faded crest. It had been brought to the province by a Spanish royal governor. There were also outriders and postilions, and these and the coachman Badoit had dressed in liveries he had found in the palace storerooms, liveries various and decayed, but colorful. The servants in turn had adorned each horse with feathers, red ribbons, and fresh flowers. The retinue was better than a circus.

Badoit climbed into the carriage. It complained at his weight. Dr. Lorent hopped up on the seat opposite. José stepped on the footman's board behind

and held the sunshade over the count's head, for the carriage was open.

At the last moment another servant hurried out with a bottle and two glasses. Badoit and the doctor each took some wine to fortify themselves for the twenty-minute journey to the town. Badoit passed his refilled glass to José, Dr. Lorent passed his glass to the coachman. Then with a cry, horses, carriages, governor, scholar and outriders moved off.

AND the Indians cheered again. They were truly fond of Badoit. From laziness, he collected money taxes only from the merchants in the adjacent town, not bothering with the peasant farmers. A few vegetables now and then, a few fowl brought to the palace door—these were tax enough. And a hungry man could always find a meal in the count's kitchen.

Apart from any fondness, however,

"We'd just love to come, but John's a little tired—he just got back from Washington"

COLLIER'S

ED GRAHAM

the Indians cheered because Badoit was, for them, the perfect embodiment of what a governor should be. He was tall, he was fat, he wore a cocked hat with gold lace, he sang in a loud voice (a voice louder than any other voice in northern Mexico), he drove about in a carriage with six horses and each horse was adorned with feathers and red ribbon. Obviously a governor.

So they all cheered heartily again.

The carriage began to descend the mountain. The governor's palace, standing upon its own mountain, was surrounded by the huts of the Indians who worked, periodically, on the governor's hacienda. From the rear, the mountain was joined to the rest of the mountain range by a bridge suspended over a deep gorge. In the front of the palace was a square from which a road wound down to the valley through sharp curves among rocky foothills.

The coachman maneuvered his six horses down the road. Rocks bordered it, commanding each curve like so many gun emplacements. The approach was naturally fortified. . . .

In La Cholla, the carriage pulled up in front of Badoit's office, which was the chief tavern of the town. Badoit wheezed up to his private apartment on the second floor.

It was a large room with a big table suitable for official papers and for roistering, a couch for the siesta, and an awning balcony on which the count could sit and observe life in the plaza.

But today it was too hot for state

affairs or even for observing life, and after the two men had lunched, they separated, for the siesta. Badoit went gratefully to the couch, loosened his cravat, removed his boots, and soon fell into an enjoyable, dreamless sleep. As the gilded hours passed over the tiled roofs of La Cholla, the gentle music of snoring blended with the hum of bees, the chirping of the crickets, the whisperings of the earth.

In time, Badoit's siesta came to its heavy-lidded awakening. He got slowly to his feet, dabbed his forehead with cologne, and summoned Dr. Lorent. "Let us return to the mountain. It is too hot in La Cholla today."

But as the carriage was leaving one end of the town, there dashed in from the other, the southern end, a rider galloping a sweating horse.

He halted in front of the inn, and gave a weak shout for the innkeeper.

Badoit. Forgetting his cocked hat on the bank, he returned to the palace to the terrace, which received a breeze from the valley, and sat down in a chair with an awning top, near the old cannon which was an ornament for the terrace wall.

"That's better," he said. His siesta in La Cholla had not been long enough.

When Badoit began to snore his majestic snore, there was no need for any one about the palace to stay awake. The gardener crawled under a bush. Only in the kitchen the cook began to prepare the evening meal.

GENERAL Fadrique Nuñez de Santa Cruz had studied at St. Cyr, the great French military academy. Though he had not seen many battles, his instructors said that the plans he had drawn up on paper were unsurpassed for brilliance and daring.

People in Mexico City wondered that so distinguished a general should be sent north merely to drive out that Frenchman, the Comte de Badoit. So did the general, until the dictator said, "That traitor, Badoit, is a lion in these mountains of his. We need our finest general to dislodge him. . . . Also I hear there is gold on his hacienda." So off went the finest general with a handsome expedition and six big brass-plated cannons newly bought from the United States.

Nuñez de Santa Cruz began to show his subtlety, his brilliant military psychology, as soon as he approached La Cholla. Riding at the head of his column, he asked an Indian in a torn serape standing at a crossroads which was the way to the town.

"Watch the man's expression as he answers," whispered the general to his aide-de-camp. "Watch him."

The Indian, with no expression at all, pointed up to a signboard which said in large letters "La Cholla," and extended an arm straight ahead.

The general laughed contemptuously at a fierce contempt. "Pah! What childishness! I learned that trick my first year at St. Cyr—leaving spies by the wayside to misinform the enemy. Now look here stupid one! Which is the way to La Cholla, the real way?"

The Indian was bewildered. "Please Your Excellency! Please! The sign—does it not say 'La Cholla'? I cannot read, Your Excellency."

The general laughed again. "Am I to be held back by such foolishness as this?" he hissed to the aide-de-camp. "Cannot read! Pah! Bring my persuader."

A powerful soldier with a hideous, sadistic face, appeared carrying a thumb-screw. He hastened eagerly toward the bound Indian.

"Barbaric things," said the general, pointing at the thumbscrew with his riding crop. He laughed elegantly. "We don't use them in Europe. But they have their purposes. Torture is the only thing these Indians understand."

The Indian, still wholly bewildered, let the soldier seize his hands and thrust the thumbs into the screw. He did not even cry out at the first tightening. He was used to finding pain in this life. But the pressure became intolerable. He shrieked, and shrieked again. Excited by the shrieks, the soldier made two more quick turns of the screw, nearly crushing the Indian's thumbs.

"Mercy! Mercy! Mercy!" screamed the little Indian.

"Will you tell us which is the road

"An army!" he sobbed. "An army is coming from Mexico City! With cannons, with dragoons! They are coming to drive away our good governor. *Madre de Dios*, they may burn down La Cholla!"

The innkeeper was horrified. "You must go after him. At once! You shall have a fresh horse."

The rider stood for a moment on trembling legs, then pulled himself on to the new mount. He set off after the count's carriage, again at a gallop. But not far from the town his horse put a foot in an armadillo hole, fell, snapped a leg, and threw the rider violently against a rock.

WHILE the rider lay senseless, Badoit's carriage drove up before the palace door. The doctor went upstairs, the count went for a walk through the gardens. He inspected closely the melon vines, the bougainvillea he was training against the palace walls. He watched a gardener trim a cactus.

How hot it was! Badoit removed his cocked hat with the gold lace, threw it on a bank. He strolled to the gorge between his mountain and the rest of the range, examined the bridge. "This bridge must be repaired," he called back to the gardener. "The suspension cords are partly rotted. Attend to the matter immediately."

The gardener nodded vaguely. Perhaps he was too far away to hear clearly. But if he forgot, the count was certain to forget, too.

"The sun is still high," murmured

## MORALE IS A LOT OF LITTLE THINGS

"I LOVE MY DAD . . . I'm glad he's mine . . . I want him for . . . my Valentine."

And that, you can be sure, is the most important thing in Mr. Gordon's mail this morning!

We all know why. We all know how much little things can mean to us—especially nowadays.

Small acts of kindness . . . a new tie your wife "just couldn't resist" . . . a picture from Tommy with a new stripe on his sleeve . . .

A lot of little things . . . They help you over the rough spots—they help to keep *morale* up.

☆ ☆ ☆

It happens that millions of Americans attach a special value to their right to enjoy a refreshing glass

of beer . . . in the company of good friends . . . with wholesome American food . . . as a beverage of moderation after a good day's work.

A small thing, surely—not of crucial importance to any of us. And yet—*morale* is a lot of little things like this. Little things that help to lift the spirits, keep up the courage. Little things that are part and parcel of our own American way of life.

And, after all, aren't they among the things we fight for?

*A cool, refreshing glass of beer—a moment of relaxation . . . in trying times like these they too help to keep morale up*

Ah-h-h!...  
that wonderful  
BRIGGS!

You'll get a boost—in pipe enjoyment—the minute you load up with Briggs. When the old briar starts giving out the grand richness of this tobacco that's been cask-mellowed for years (longer than many costly blends), you'll discover you're "that way" about Briggs. But who wouldn't go for such gloriously ripe flavor—such full-bodied mellowness—such relaxing fragrance! Better get started today.

to La Cholla now?" barked the general.

"Oh, yes! Oh, certainly yes!"

"Which way?"

The Indian's thumbs were released from the screw. He started to point at the sign again, but instantly jerked his hand away from that direction and pointed along the road to the left.

"I thought we would find out something," said the general, very crisp and efficient. "This questioning has saved us several hours." He drew out his sword. "Forward!"

The Indian was dragged along, still bound, by the soldier with the thumb-screw. Said the general, "You had better not mislead us again."

Soon, however, it became apparent that something was wrong. The road that should have been the main road to La Cholla dwindled to a pair of tracks, and even these showed signs of disappearing.

"Halt!" shouted the general, and glared at the little Indian. "You have deceived us again." He looked quickly about him—especially at his aide—to see if anyone would contradict him. Then he said, "Hang the Indian on that tree over there. And gag him first."

Soldiers took the Indian to the tree and hanged him with extraordinary speed.

The general would not retrace his steps to the crossroads, but led the troops out across the plain, where there was no road at all. The horses, men, cannon moved forward unevenly, leaving the little figure of the Indian in his torn serape dangling from the tree.

After a while, footsore and ill-tempered, the troops got back somehow to the La Cholla road. They entered the town. The general's good spirits were restored by the terror and obsequiousness of the mayor and other officials. "Excellency! Excellency!" They bowed low to the new governor.

"It is fortunate that we took that roundabout way," said the general to the aide. "Badoit undoubtedly had some trap on the main road. He's a sly devil! I know these Frenchmen—from my days at St. Cyr."

THERE was only one road from La Cholla to the count's mountain. Very soon the palace was in plain view. The general drew up his troops about a hill near the mountain, then with his aide rode to the hill's summit to inspect mountain and palace with a spyglass.

General Nuñez de Santa Cruz was thorough in his inspection. He observed the curves in the road up the mountain, the natural battlements of rock, the ballistical advantages of the terrace. Noticing the ornamental cannon on the terrace he informed the aide that he could make out eight additional cannon partly hidden behind the rocks.

"Badoit is thoroughly prepared," he said. "Observe the fact that not a single soldier is in sight. They are all concealed with remarkable skill." He swept the spyglass upward to the terrace again, all at once saw the magnificent outlines of the Comte de Badoit asleep in the chair with the awning top.

"So!" he exclaimed. He passed the spyglass to the aide. "Look at that, will you!"

The aide looked. He burst out laughing. "The big fellow's asleep! What a joke! They aren't prepared for us at all. Probably don't even know we are coming."

General Nuñez de Santa Cruz turned to his aide with an expression of unutterable contempt. "You are young," he said accusingly, "you have had no military schooling. What you see through the glass is really a triumph of strategy.

The Frenchman is more asleep than am—and less asleep than you are. He luring us on. We see him asleep—apparently. We advance up the mountain. Zoom! He destroys us with his twelve cannon, his deadly hail of musketry. What a trap, what a trap!" He smiled turning up but one side of his mouth. "But not a trap for me." And he rode down the hill.

Dividing his force into two parts, larger and a smaller, the general quickly sent the larger division out of sight, behind the hill, while drawing up the smaller group prominently within view of the palace. He put one of his captains in charge.

"March about, stir up dust, try to seem as numerous as possible," he told the captain. "I will summon you later—from the terrace of the palace, with the Frenchman kneeling at my feet!"

LEAVING the decoy, the general marched with the rest of his troop behind the hill until he flanked the mountain and found a road leading up into the range of which the count's mountain was the spur. It was not easy to drag the cannon up to the road along the top of the range, but the general urged on his men, cursed at them, ordered the dragoons to assist, with their horses, the artillery teams.

Scouts, meanwhile, were sent to explore Badoit's domain from the rear. One of them crossed the suspension bridge, holding shrubbery over his head to disguise himself as a tree. With every craft known to a veteran soldier, he squirmed about the count's garden. At last he spied a hat sticking up behind a bank. With a very extremity of caution he circled the bank. He saw Badoit's cocked hat, but nothing under it.

"Peculiar," he thought, and brought the hat back to the general.

"I knew it!" cried the general. "I knew it! This hat is a decoy, just like the mer I left in the valley. Badoit has concentrated all his men in front of the palace guarding that road; and stationed himself—pretending to be asleep—on the terrace to induce us to attack that way. Empty helmets, empty hats like these have been placed behind the palace to frighten us away from the rear. There were other empty helmets about?"

"Perhaps, Your Excellency. I didn't see any."

"They were there, of course. I know the whole scheme. But I shall outwit the old French fox! We shall cross the bridge, take the gardens, and be inside the palace while Badoit still guards the front."

As the general drew close to the suspension bridge he ordered his men to be as quiet as possible. He made a ferocious grimace at a soldier who seemed about to sneeze. He himself, on tiptoes, stole up to the bridge and peered across it.

Also on tiptoes a few dozen soldiers moved on to the bridge. Three of the cannon came next. The general, leading his horse, advanced cautiously in a nest of soldiers with fixed bayonets. Then came two more cannon. The general, five cannon, and some hundreds of soldiers were all on the long bridge at once.

On the terrace, in front of the palace, the Comte de Badoit smiled in his sleep. He was dreaming about something pleasant, something to eat.

There was a stupendous crash.

The count woke up. "Mon Dieu!" he cried, "what was that? An earthquake?"

But it was only the suspension bridge, the old suspension bridge, collapsing into the gorge.

THE END

# The Man Who Killed Blackbirds

Continued from page 12

the bimbashi withdrew. He had gathered certain information, however, which dictated his course when he left Court Oaks. He went uphill toward that stone cottage which he had seen as he stood beside the dead man on the edge of the pool. It proved to be reached by a bridle path which branched off from a lane winding around the hill crest; and here he passed a constable standing beside a bicycle. A board at the corner bore the words:

PRIVATE  
TO QUARRY COTTAGE ONLY

The place, on close inspection, looked well cared for. The door was newly painted and its brasswork shone in the sunlight. Masses of pink roses rambled over its porch. Bimbashi Baruk rang the bell. A sound of movement followed, there were heavy footsteps, and the resentful Home Guard opened the door. He had discarded his uniform and wore blue overalls. At sight of the bimbashi, his large, deep-set eyes lighted up with that look of mockery.

"Hullo," he remarked. "You here again!"

Bimbashi Baruk nodded, smiling. "And I must warn you, Mr. Gillam, that the police are close behind me."

"The police?" Gillam's expression was one of authentic misunderstanding. "Why the police?" His expression altered; a dreadful possibility seemed to have presented itself. "You don't mean that something has happened to my wife?"

Bimbashi Baruk shook his head; his smile grew broader and became a happy smile. "Have no fear on that score."

Gillam's eloquent eyes registered another change of mind, "Then what the devil do you want?"

"I want to come in for a chat. I am called Major Baruk, and I believe we shall have all our work cut out to save you from arrest."

AT THAT, Gillam's habitual expression of intolerant mockery returned. "You amuse me, Major. Come in, by all means."

He led the way into a sort of workshop-study right off the porch. There were laden bookshelves, a desk littered with papers and blueprints, and on a side table the bimbashi noted a drawing board to which a partially completed plan was pinned. Under one window he saw a bench where a model of a complicated piece of mechanism seemed to be in process of evolution. Peter Gillam,

whose hands were oily, picked up a rifle and peered into the barrel.

"Sit down," he said casually. "I have a job to finish."

"Cleaning the Lee-Enfield?"

"Cleaning the darned thing, as you correctly observe. I was ticked off today by a certain sergeant, on the pretext that my rifle was dirty. The fact is that I happen to be the best shot in the platoon, and my arrival has put this gentleman's nose out of joint. I am now assuring myself that the rifle is clean."

The bimbashi took out his pipe and pouch. "Do you mind if I smoke?"

"Not at all."

As he began to fill his briar, watching this unusual man whom fate had thrown across his path, Bimbashi Baruk observed an odd thing. A bee had flown in at an open window and was blindly endeavoring to fly out again through a pane of glass. Peter Gillam laid his rifle on the bench, captured the bee and wafted it on its way into the sunshine.

"A fellow worker, Major. We must help one another." He sat down. "And now—what's it all about?"

"May I ask if we are alone?"

"Quite. My wife has cycled into Moreton Harbor to buy our weekly rations. Why?"

Bimbashi Baruk replaced his pouch and struck a match. "I am glad. You see, a charge of murder is hanging over your head."

"Murder?" Gillam's mocking voice robbed the word of its significance.

"Exactly. Did you hear a shot recently?"

"Yes—that is, within the last half-hour. Probably that swine Manoel shooting blackbirds."

"Shooting blackbirds? What for?"

The match burned down to the bimbashi's fingers, and he dropped it.

"Just wanton destruction. Sits at an open window picking them off. Slaughters them for fun."

"Slaughtered, Mr. Gillam, not slaughters."

"What do you mean?"

"I mean that Dr. Manoel was murdered in his own grounds at almost exactly two minutes past three."

Peter Gillam crossed the room and locked the door. "I begin to understand," he said, returning to his chair. "Please give me the facts."

Bimbashi Baruk lighted his pipe. "They are simple enough. Dr. Manoel was shot through the head as he sat by the lily pool. Several windows of this

cottage command the spot, at a range of little more than two hundred yards. I gather that you have never troubled to disguise your dislike of Dr. Manoel, and it seems that he distrusted you to the extent of asking for police protection—"

"What!" Gillam stood up. "He asked for police protection against me?"

The bimbashi, using the end of a pencil, pressed down burning tobacco in his pipe bowl. "He does not seem to have named you; but the police apparently had no doubt respecting the person implied."

"They suspect me!" Gillam resumed his seat, watching his visitor. "And you found me with a rifle actually in my hands!"

Bimbashi Baruk nodded, fixing a steady regard upon the drawn, somber face. "As time is by no means on our side, perhaps you would like to make your position in the matter more clear."

"Do I understand, Major, that you are acting for the police?"

"Certainly not. My presence on the spot was accidental—perhaps providential."

"You mean—you saw the crime committed?"

"I was less than twenty paces from Dr. Manoel when he fell. May I take it, Mr. Gillam, in the first place, that you did not regard the doctor as you regard Hitler and Mussolini?"

PETER GILLAM smiled grimly. "You may take it that I hated him more than I hate either Hitler or Mussolini. Nevertheless, I didn't shoot him. But I recognize the fact that I have no alibi, of course. His having asked for police protection practically pins the thing to me."

"Why did you hate him?"

Gillam hesitated. Then: "As well tell you as tell it in court," he said, "so listen: For two and a half years, Juan Manoel treated Antoinette as neither you nor I would treat a mongrel dog."

"Who is Antoinette?"

"My wife. She was Manoel's wife at that time. I was young, and hard working. I had a small business in San Domingo, which brought in a meager living. Antoinette and I were engaged; we should have been married in three months, when her family (she is of old French stock) found out—"

"Found out what?"

Peter Gillam stood up again and stared through the window: he had heard a car in the lane above. He replied slowly, as if choosing his words:

"The de Charnys—my wife's people—and the Manoels, their near neighbors, came to the West Indies in the days of Henry Morgan. They had always prided themselves on their family and their inheritance. My father was a British civil servant; I was born in Devon and I graduated from Merton. What they found out is this: They found out that I had no money and that my paternal grandfather was a convict." He twisted around to face the bimbashi, and his strange eyes seemed to glow.

"The engagement was broken. Antoinette was forced into marriage with Manoel, the second wealthiest man on the island, and thirty years her senior. She never loved him—and he never allowed her to forget that she had loved me."

"I left San Domingo. I thought Antoinette shared her family's prejudices. I was a fool—a coward. It was more than two years later, in Mexico, that I found

CAN YOUR SCALP

## LINCOLN under the Southern Cross

LINCOLN never died, really. His spirit still speaks to every true American, wherever he may be. Up where arctic winds shred the fog banks, or in coral seas "under the Southern Cross," the same spirit is saying: "This Nation, under God, shall not perish from the earth."

Sense this spirit above the metallic clang of shipyards. Hear it above the roar of our fighting men-o'-war. It sustains our men on battlefronts. Wherever common men are, Lincoln's spirit must be also, for Lincoln loved common men. It was of common men that he said, "God made so many."

There are many of these common men of our Merchant Marine. Our Nation, fighting for its life, needs them. Our soldiers need food for themselves, and food for their glutton guns. Common men, needing common men. Lincoln's spirit must be with them, for his is the spirit of common men.

We see this spirit of Lincoln, among those closest to us. Among the men, who man our squadron of freighters and our passenger liners, the LURLINE, MARIPOSA, MONTEREY and MATSONIA. Among the men who make our ships ready for sea.

These are common men, in common jobs. Experience directs the skill of their hands. Courage steels their hearts to give all of both, regardless of known dangers. High purpose steadies all three, in their faithful performance. Some call this patriotism. It is. But, that is the spirit of Lincoln.

This leads us to believe, that our 63 years of experience, our loyal personnel, our knowledge of ocean regions, and our ready fleet of ships, are serving more importantly than ever before, because we realize that serving our Country in this emergency is more important than anything we have ever done.

*Matson Line* TO Hawaii · NEW ZEALAND · AUSTRALIA VIA SAMOA · FIJI

out my mistake. Manoel had property there, and I was silver mining. By accident we met again. I found that Tony (I mean Antoinette) was leading a dreadful life; he tortured her; she was a nervous wreck. I found out something else—that she still loved me." He smiled, shrugged his shoulders. "In plain English, we bolted."

"And then?"

"Manoel—the swine (oh! I hate him no less dead than alive) got his divorce, and we were married, in the States. But he used his wealth, and his influence, to try to ruin me. Time and time again, in the years that followed, he pulled wires and brought me down. Once, when I was flat out, he tried to get Tony to go back to him. I settled the matter with my bare hands, and he had evidence of assault. That made things worse. When the war started, being a Quixotic lunatic, I came home, and they turned me over to the Ministry of Supply."

"That is why you are here?"

"Just that. This cottage belongs to the Court Oaks estate—which was unoccupied. I leased it. A month later, Manoel bought Court Oaks!"

A bell rang.

"The police," said Gillam, and looked out of the window. "Tony is with them!"

AS GILLAM crossed and unlocked the door, his wife stepped in from the porch followed by Inspector Horley and a police sergeant. The bimbâshi had a glimpse of a small and girlishly slight figure, quick but graceful of movement, of a vivacious face characterized by a complexion peachlike in the Oriental sense and lighted by dark blue eyes whose expression conjured up the image of a gazelle. Hair of dull gold presented a mass of close, feathery curls.

"Peter, dear!" she cried, and ran to her husband. "Whatever has happened? What do the police want to—?" She broke off as Bimbâshi Barûk appeared behind Gillam.

"Major Barûk. This is my wife."

The bimbâshi bowed, and Antoinette Gillam forced a welcoming smile.

Inspector Horley addressed Gillam:

"I have a few questions to ask you, Mr. Gillam, regarding the death of Dr. Manoel. After which I must request you to come with me to Moreton Harbor for further inquiries."

He paused. Mrs. Gillam, her delicate color fading, had tottered to a chair, supported by her husband.

"Peter," she whispered. "Peter!" Her dark blue eyes seemed to grow black with emotion. "Oh, my dear!"

"It appears to me, Barûk, to be a clear case." Colonel Brown-Maple, the chief constable, stared gloomily from a window of his car at one of the loveliest landscapes in the West Country. "Here's this fellow, Gillam—brilliant at his job, and a gentleman as far as that goes; but kinked, definitely kinked. He's a dead shot. He has a rifle in his possession. He's alone in his house at the time, and his house overlooks the lily pool. So I can't really see what evidence there is for the defense. Sudden impulse, perhaps. Tragic story. The eternal triangle. Sorry for his wife. Pretty little woman. Most attractive. Fatally so."

Bimbâshi Barûk smoked. Twenty-four hours had elapsed since the death of Juan Manoel. Peter Gillam had been detained for the crime.

"Manoel," the colonel went on, "was a queer fish admittedly. But he had pots of money, and influence. Why he bought Court Oaks in order to live in two rooms I don't know. He was allowed to retain some firearms for dealing with vermin, although everything had been confiscated except stuff issued to Home

Guards. Shot a lot, I hear. Funny notion, because we have learned that he had only a short time to live. Angina pectoris. Harley Street had warned him the next attack would be the last."

"Another mysterious feature," murmured the bimbâshi, "is why he asked for police protection."

"That should be clear enough. You're a hot man at this sort of thing. He suddenly discovered who his neighbor was! Events proved him right, too. You say you have found the bullet. Was it fired from a Lee-Enfield?"

"I think there's no doubt of it. But I want you to form your own opinion—and here we are."

A police sergeant opened the door of Court Oaks and smartly saluted the chief constable.

"Anything you want me to see inside, Barûk?"

"Not at the moment, Colonel. Let's walk down to the pool."

But when, passing through unfurnished, echoing rooms, and going out by

"Let's walk around the pool and I will show you."

In a frame of mind betwixt mystification and annoyance, the chief constable followed Bimbâshi Barûk to the trunk of one of several fine conifers which rose, mastlike, from the farther bank of the pool. A cardboard target was pinned to this tree, pierced by a single shot mark.

"Outer—six o'clock," muttered the colonel. "Isn't this the bullet that passed through the wooden disk over there?"

"The same. And now, note the tree trunk as I found it before I attached my target."

HE REMOVED the square of cardboard. The bark behind it was pockmarked with bullet holes over an area of no more than ten inches in diameter!

"What the devil—"

"On finding this, I knew that *someone* had been practicing rifle shooting from a range of little more than a hundred yards, to judge from the penetration. Now, if you will note the general direc-

way of a French window onto a weed-grown terrace, they began to descend the slope, Colonel Brown-Maple pulled up, shading his eyes against the sun.

"What the devil's that stuck on a tree, Barûk?"

Projecting from the trunk of a magnificent lime, beneath which the cane chair still stood, an object appeared which resembled a white disk—which, indeed, it was.

"That is an alibi, Colonel."

THE chief constable faced Bimbâshi Barûk, and his prominent eyes seemed to be more prominent than usual. "An alibi! What the deuce do you mean?"

"Allow me to explain." Walking to the tree, the bimbâshi pointed. "A round piece of wood, about the diameter of a human skull, and painted white. It is attached to the side of the tree by means of a rod. This rod fits into a slot which I found already cut in the bark."

"You say you found a slot there?"

"Yes. I assumed that some similar device had been used before, and so I extemporized this target. Its position, immediately over the chair, corresponds to the head of a man seated there—and the chair, as you can judge from the marks in the turf, always stood on the same spot."

"But you are merely confusing me, Barûk. Do you mean to say that—hullo!" He adjusted his monocle. "Your target is holed!"

"I know," said the bimbâshi. "I fired a shot through it this morning."

"What the devil for?"

tion of the bullet holes and then glance back up the slope, it will occur to you that if one of those bullets is that which passed through Dr. Manoel's brain, it could not very well have been fired from Quarry Cottage."

Solemnly, now, the colonel inspected the marks, then turned and stared up the slope toward Court Oaks. It was possible from this point, to see Quarry Cottage, but fairly obvious that it lay outside the line of fire. The bimbâshi spoke in a low voice:

"When Dr. Manoel died, I heard the thud of the bullet striking, but I was uncertain of the exact point of impact. Having obtained your permission (after Horley had detained Gillam) I came and searched. Then I remembered the blackbird shooting of which Gillam had spoken. The servant José told me that it took place from Dr. Manoel's bedroom window at the top of the east wing. After several experiments, I fixed the wooden disk in its present position; and from the open window of the east wing, with a borrowed rifle, I fired a shot through it. You saw where my shot registered on the tree."

"Barûk," said the colonel, "I believe you have saved the life of an innocent man. But—who is the guilty man?"

The bimbâshi watched him for a moment, and his regard grew dreamy; then, "Dr. Manoel," he replied.

"Dr. Manoel! But—"

"Remember his record, Colonel; his insensate cruelty; his perverted family pride. Then, remember that he was robbed of his wife (whom he tortured mentally). I believe his latter years were

entirely devoted to that man's ruin, and the ruin of the woman who had married him. Let's return to the house."

"But—"

"Remember (it is important for us to understand his motives) that he knew he had only a short time to live. When Gillam took Quarry Cottage, Dr. Manoel—who probably had Gillam's movements watched—immediately bought Court Oaks. What for? To be conveniently placed for his purpose."

"What was his purpose?"

"To bring Gillam to the scaffold."

"What do you say?"

They had reached the terrace, and Bimbâshi Barûk pushed open a French window. "If you will be good enough to follow, Colonel, I will lead the way to the room from which Dr. Manoel carried out his target practice."

The room at the corner of the east wing had evidently been used as a bedroom. One window commanded a view of the hillside. Staring out of it, Colonel Brown-Maple saw a policeman apparently searching for something in the little garden of Quarry Cottage. The other window overlooked the lawn sloping down to the lily pool. Both windows were partially obscured by masses of untrimmed ivy which had climbed as high as the roof. A rifle lay on the window ledge of the southern window. Court Oaks had stone walls of dungeonlike thickness. The only other object on the ledge was a cheap alarm clock.

"So this was the shooting gallery, eh?"

"Yes, this was it, Colonel. Whether Manoel shot blackbirds because he hated them or just as a blind, I don't know. But from here he did his serious target practice."

THE colonel examined the rifle, and then turned to Bimbâshi Barûk: "Was this the weapon used?"

"No. That is the one I borrowed for my experiment. My discovery of the weapon used was due to a lucky accident. Since Manoel had a resident servant, I wondered why he wanted an alarm clock. Trying to pick up the clock, I found that it was screwed to the ledge. The problem became more odd than ever. Next I discovered that some sort of attachment went down through the base. Accordingly I borrowed tools and removed the oak panel below the ledge. I will lift it out and show you what I found there."

The bimbâshi did so, and Colonel Brown-Maple stooped, peering into a deep cavity at the end of which a certain amount of light was visible.

"Formerly a ventilating shaft, but the grille has been taken out." The bimbâshi directed the ray of a torch into the gap. "A Lee-Enfield, clamped down to an oak beam. There is a simple counterweight fixture attached to the striker of the clock above. The rifle is trained accurately on the target you saw just now, and its barrel is concealed by the ivy."

He stood upright; so did Colonel Brown-Maple. The two men stared silently at each other for a moment.

"Unlikely to be discovered," the bimbâshi added, "until Gillam had paid the penalty. From this window, Manoel could watch all that occurred at Quarry Cottage and choose his time. His pre-occupation with an after-life may have been real or merely another pose. The clock was set to strike at three—"

"But he was actually shot—"

"Two minutes later. Quite so. I understand, now, the agony of suspense in which I found him. By some oversight which we cannot hope to explain, he forgot to put the clock right. It is just two minutes slow. . . ."

"He left one wife for you," she said. "How do you know what he will do to you?"

Sally said, "This time it's different."

It was a year and a half since Chandler had left the first Mrs. Lorrain, and Hannah knew Sally was waiting to marry him until Mom could be happy about it. Sally couldn't hurt Mom.

Hannah went back to her room. She picked up the hammer and tapped it lightly on the bureau.

Well, it didn't matter if she had not told Sally. Sally would have said what Marilyn said last night: "Why shouldn't you have gone? Why not take your chance when you get it?"

It had been so simple. Marilyn and Hannah had gone to Caplan's, the big downtown drugstore, for a coke, and the two college boys had come in. Marilyn thought she knew them, and smiled. When they came to the table, she said she had made a mistake, and they laughed and said, "Was it such a bad mistake?" Hannah knew then that Marilyn had never believed she knew the boys. But that was like Marilyn. Hannah admired her gay, careless daring.

She tried to ape Marilyn's manner, when the boys sat down. But her heart was pounding and her tongue thick. She'd never spoken to a strange boy before.

SHE didn't have to do much speaking. Both of the boys gravitated to Marilyn. Hannah sat with her hands growing cold, her fingers stiff. Of course, they liked Marilyn, tall and blond and wearing her lipstick glossy as a movie star's. Hannah wished she were home.

When the boys suggested dancing at the Belmont, she said, looking down at her skirt and sweater, "Oh, I'm not dressed right," but at once Marilyn cried, "Why not?"

The Belmont. . . . A rumba orchestra . . . a floor show . . . dancing with these good-looking, well-dressed students. Only she didn't know them. She mustn't be a pick-up. They would think . . .

In the end she went, because Marilyn was impatient with her and she could not let the boys know her youthfulness and inexperience. She had to call Mom and invent an excuse for coming home late, and that was hard. She wasn't used to lying to Mom.

But when they were at the Belmont, she was glad she had gone. There was a heady atmosphere to the place. The dim lights, the crowd, the smoke and chatter. And at the hotel, the taller, handsome, fair-haired boy paired with her. The short dark one fell to Marilyn.

Bob Huston. He was Hannah's date. He came from New York. His manner was casual and poised as a much older man's. When he asked her to dance she held back from contact with him, but he laughed and whispered, "Relax, sweetheart," and pulled her close. Excitement sped through her when his hand closed hard on her shoulder.

He asked her where she lived, what she did. Each dance he took her to the dance floor and held her more tightly. They didn't talk much but she thought, "He likes me . . . he acts as though he does . . . he must."

He said, "You know, you're cute. I'll bet you've got a lot of fire under all that ice. I'm going to see you again. Maybe you'll come over to college sometime."

When, between dances, he reached for her hand, she let him hold it. Her pulses

drummed swiftly. She was thinking, Could *this* be it? Could it happen like this? Might this not be for her as it had been for Sally, with Chandler? Love coming from a chance date?

He brought her home, not to the door but to the end of the street. "Would you kiss a guy?" He squeezed her hand.

Hannah, embarrassed by the presence of Marilyn and Frank in the back seat of Bob's car, wrapped in each other's arms, murmured, "If I liked him . . ."

"Don't you like me?"

"I guess."

She did. Oh, she did. But when he kissed her, the thrill for which she raised her young mouth was not there.

He told her, "I may give you a ring tomorrow. I'd like some more of that. You're quite a girl, Hannah. I had you wrong at first."

She had to go down the dark street, alone, to her house. She was trembling then. The kiss had been a quick white light shining on the evening. She had been ready to fall in love. Why, it hadn't been love at all. She knew what it was.

TRIOLET ON  
A FATTY ISSUE

Bring on the rationing of butter!

Too much would only make me fatter.  
That's why I'm not disposed to splutter . . .

Bring on the rationing of butter!

Though other epicures may mutter,  
I claim it doesn't really matter.  
Bring on the rationing of butter!

Too much would only make me fatter.

—MARGARET FISHBACK

No more than payment. He had expected it.

She lay in bed afterward, swept by shame in rushing and retreating waves.

Still she could not dismiss the night. She *had* had a good time. She hadn't done anything . . . bad. Why shouldn't she go out with him again? If she didn't like Bob's kisses, it wasn't too much to give, was it, for dates; for the chance to meet other boys through him? How could she know but that one of them *would* be the right one.

"If he calls, I'm going," she thought now, savagely pulling on her socks. "I don't care." She wasn't as ashamed this morning. In the light of day, the end of the evening might never have been. She couldn't wait for life to come to her. She had to go out after it.

SALLY hadn't waited. Sally hadn't waited for Tom Fielding to make good on his engineering job in Panama and send for her. In the beginning she had, saving and scrimping toward the trip down, from the stenographer's salary which was the support of the whole family . . . all but the small amount of insurance Dad had left when he died. But that was before Chandler Lorrain came to take over the management of the plant where she worked, and made Sally his secretary.

One night he had taken her to dinner, after they had worked late, and Sally had come home, flushed and impressed. She had drunk champagne cocktails, eaten lobster Newburg. Chandler had brought her home in his big black convertible with its white-wall tires.

That was more than two years ago.

Chandler began to ask Sally out a good deal. She never told what happened between Tom and herself. His letters stopped coming. She never mentioned him. She had spoken of him only once since then, when they heard he was in the Army. "If I'd waited till Tom was ready to send for me, where'd I be now? Right back here and probably with children."

Instead, she was going to marry Chandler, rich, romantic, handsome. . . .

WHEN Hannah went downstairs for breakfast, Mom said, "You'd better just eat a bite. I've got the roast in." She did not say anything about the previous night, but you always felt Mom guessed what she had not been told. "If you're planning to go out with Marilyn today, Hannah, you'd better call it off. You ought to be here to help with the soldier. It's no fun for a boy, with just an old woman."

If Bob Huston calls I'm not going to stick around. Not for a general! What good is a soldier, leaving for someplace else right away?

She went to pick daffodils for the table after she had washed up her dishes. She was kneeling in the sunlight, clipping the pale green stems when a voice said cheerfully, "Hello." She looked up and saw a big, rawboned soldier grinning at her over the sparse barberry hedge. His cap was on the back of his head, and he had short sandy hair, a sunburned face. There were a corporal's two stripes on his sleeve.

"Hello."

He's not so much, she thought.

"Is this 400 Highspire Avenue?"

"Yes."

"I kind of suspected it. I don't know why. Maybe it's because the sign on the street says Highspire, and the number on the steps is 400." His blue eyes held a sparkle, like sun-diamonds on water.

"You must be our soldier," Hannah said.

"That's right. I'm your soldier. The Queen's Guard." He gave her a mock salute and came through the gap in the hedge. He was carrying a box camera and a package. He set them on the grass and sat beside her.

"What's your name?" Hannah asked. He was a whole lot nicer-looking than she had thought.

His eyes crinkled. "First, let me tell you yours."

"What is it?"

"Clytemnestra."

"Oh, she was in the Odyssey . . . or the Iliad."

He grinned. "Yes. She was a killer. Clytemnestra was the faithless wife of Agamemnon. Remember?"

Hannah said, "I'm not the type. I'm just Hannah. Hannah Wales. I'm not a *femme . . . fatale*."

"I'm Dike McCann . . . and I'm not so sure you aren't a *femme fatale*. . . . Hannah, may I take a picture of you? . . . No, don't get up. Sit there like you are, with the flowers. I want to put it on my wall and tell the fellows it's Hedy Lamarr."

"You'd have to do an awful lot of telling," Hannah said.

"Listen, honey," he said, "I think you look like Hedy. I think you're beautiful."

It was as though he understood everything about her—how much she yearned to be popular, her longings, her confusion. His words went down into her and burst like exploding stars and, unex-

pectedly, before his clear gaze, she could have cried.

He took the snapshot and went inside with her to meet Mrs. Wales. Mom liked him. Hannah could tell by the darting smiles at the corners of her eyes. He asked to help, and Mom tied a white apron over his uniform.

"I've peeled my potatoes," she said, "but you can fix the radishes and celery."

"I've got a mean way with a radish." He took the rosy root and worked on it with the knife; held up a perfect little red-and-white rose.

"Oh, it's pretty enough to wear in a corsage!" Hannah cried. She leaned close to watch him.

"When I take you to the USO dance next week," Dike said, "I'll send you a corsage of radishes."

Hannah said, "Oh."

He was asking her to a dance! In front of Mom, so he must mean it!

He turned and smiled at her. "You want to go?"

"Yes," Hannah said. "Oh, yes!"

There was no doubt in her now. No worry over last night. Let Sally have Chandler and horses and perfume and mink. Let Marilyn have the dates she found in drugstores. Hannah would have a date with Dike.

They were setting the table, laughing over something Dike had said, and he had opened his package, a bottle of inexpensive sherry, and put it at Mom's place, when Hannah heard Chandler's car.

She snatched Dike's cap and the belt he had removed. "Oh, put them on. I want her to see you in them!"

"Wait a minute. Who's going to see me?"

"My sister Sally. Stand right there. Please!"

"If you say so." He ruffled her hair.

She was so proud of him. Sally must see how handsome he was. He was growing handsomer by the minute. Sally must know that he was hers, Hannah's, and that there was no one in the world like him.

Sally came slowly up the steps, as Hannah danced to the door.

"He's here, Sal."

"Who?" She was dusting off her breeches, limping as she came. Hannah saw her new boots were split. "Oh, Sal, did you fall again?"

"I did. To Chandler's disgust. The horse pushed me. So your soldier lived up to expectations?"

"He's . . . wonderful," Hannah said.

SALLY followed her. Dike stood in the door to the dining room. He had put on his cap and fastened his belt, and he was tall and straight and brown. Sally put out her hand. "Hello, soldier." There was a smudge on her nose, and her hair was whipped all about her shoulders.

Dike stared at her. He put out his own hand slowly, hesitantly—as though there were a film across his eyes he would have first brushed away.

"Hello, Sally."

He kept her hand, holding it in his, his face with a hushed and reverent look; like that of a man stumbling over a chest in the sand and opening it to find treasure.

A cold ribbon of steel began to wind itself around Hannah's heart.

Dike still had Sally's hand. "Looks like you met the enemy and you are theirs," he said. His voice had a different tone than when he spoke to Hannah.

"Horses," Sally said. "I'm only living for the day they mechanize the bridle path. Can you help me off with these boots?"

She sat down, and Dike knelt at her feet, that look growing on his face. Han-

nah pressed against the wall. He didn't know she was in the room.

His hands tugged gently, pulling off the boots, and Sally leaned forward so that her hair fell down and touched his forehead.

"You're all cut up . . . your socks are torn," he said. "The horse must have stepped on you. You shouldn't have put the boots back on."

"In Chandler's sporting lexicon," Sally said, "there's no such word as shouldn't. I'd better get upstairs and change."

"Who's this Chandler?" Dike asked, adding, "I'll carry you up."

Tears were needle points against Hannah's eyeballs.

*It isn't me. It's Sally. He only had to see her once. . . . He'll take her to the USO dance. . . .*

And Sally would go. Something in her had come to life when she saw Dike. Her eyes had never held that light for Chandler.

THROUGH dinner, Dike ate with his eyes on Sally's face. Everything he said was to please her, rouse her interest, bring her laughter. Once he did say, "I took a picture of Hannah. I'm going to pass her off as my sister," and winked at Hannah. "What about it, Clytemnestra?"

But the silly name was no longer a shared private joke. Sister!

They were all in the yard at the back of the house, Sally lying in a deck chair Dike had brought from the cellar, when Chandler came. Hannah did not want to be there, watching them, but she couldn't leave.

Dike had cut a twig from the willow by the fence and made a whistle from it. When he finished, he gave it to Sally. "Blow."

She did. The tiny instrument produced a lovely, liquid, trilling note.

"Oh, Dike, what a heavenly sound!"

Dike put his hand on the arm of her chair. "I read a story once when I was a kid," he said. "The hero gave the heroine a silver whistle. Whenever she wanted him, she blew it and, no matter where he was, he heard it and came to her."

Sally bent her head, fingering the whistle. "He'd have heard it in an Army camp?"

"Across the world," Dike said.

Sally said nothing, but the sun caught a brightness of her lashes.

It was then Chandler came out on the back steps. He was smoking a pipe, and his hands were thrust in the pockets of his slacks. He looked compact, smooth.

"Hello, everyone." He came down, sure of himself, cordial, shaking hands with Mom, though he knew she did not like him. "Mrs. Wales, I brought you a bottle of sherry, Bristol Cream. I left it in the kitchen on the table."

Mom said, "Thank you, Mr. Lorrin. I'll put it by for another special occasion. Corporal McCann brought me a lovely bottle for dinner today."

Dike said, "Old Monk. Ninety-eight cents a quart." His mouth was tight. But Chandler was unperturbed. He shook Dike's hand, said something about always being pleased to meet one of Uncle Sam's boys.

He turned to Sally. "Sal, I'm sure the corporal will excuse you. I'm going to drive out to Cotter's farm. I dropped around at the club for a few drinks and I hear Cotter has a young pointer for sale. I'd like to take a look at it."

"Chandler, can't you go tomorrow? It's so comfortable here. I'm a little lame, after this morning."

"Nonsense. You'll be stiffer tomorrow if you don't move around today."

"All right," Sally said, "I'll go." She rose.

She looked more than tired now. Old;

*"Oop wi' our glasses...  
th' better tae see our absent friends"*

Invisible, too—but quickly discerned—is the distinctive quality of Teacher's that makes it so unique . . .

the blueness under her eyes like blurred thumbprints.

*She doesn't want to go. She wants to stay with Dike. Why doesn't she, then?*

"You'd better get a coat," Chandler said. He took her arm possessively.

Dike stood with his hands in fists at his sides. Hannah felt that under his sleeves, his muscles were tense, coiled. But he did not move—not until Mom went into the house after Sally left with Chandler. Then he turned on Hannah:

"What's this see-a-man-about-a-dog gag? Who is this guy? Why does she have to go on his say-so?" His eyes were burning. "I thought she liked me. I told her I wasn't going to be around long. She said she'd stay here this afternoon."

Hannah twisted her hands together. She didn't want to see his face.

She said, moving her toe, bending the grass so that the light jade under the blades was turned up, "Chandler isn't anybody. She works for him. He's in love with her . . . she has to be nice to him. She . . . I could tell she liked you. She'll come back. You better wait."

She did not know why she was saying it—why she wished to hand Sally to him. She stepped back and raised her chin.

"But I don't like you," she cried. "I hate you. I hate you!" And she ran, stumbling up the steps.

Her suit jacket hung on a chair in the hall. She snatched it and flung it over her shoulders. "I'm going over to Marilyn's. Mom," she called, and rushed from the house.

**M**ARILYN was sitting on her porch when Hannah went up the walk. She wore a silk dress and high-heeled shoes, and her hair done on top of her head in elaborate rolls and curls.

"What's the matter with you, Hannah?"

"Nothing," Hannah said. "What are you doing?"

"Hanging around. I saw Sally go by. Gee, she's lucky. A fellow that can still get gas, too. How'd the soldier turn out?"

"Dumb," Hannah said. "A dumbbell."

"Look," Marilyn said, "did that Bob Huston call you up?"

"Not yet."

"Neither did Frank call me. You know what? Let's us call them."

Hannah put back a lock of her black hair. "It's okay with me." She hoped she sounded devil-may-care.

Marilyn made the call. She talked for nearly half an hour to Frank, fooling, giggling. Bob came on to speak to Hannah.

"You doing anything, Hannah? Neither am I. We might as well do it together."

*They're only coming over because they haven't anything else to do, and they wouldn't have called us. But I'm going to have what I can. Nobody'd like me just for me. Nobody ever!*

When the boys arrived, they didn't get out of the car to come to the house. They blew the horn and opened the doors for the girls.

Bob said, "We can't drive any place. How about we just take a look at some scenery?"

There was no scenery to the well-rutted field where they parked; only the city incinerator in the distance, dirtying the sky with its smoke.

Bob put his arm about her without preliminaries. He did not even bother to say she was cute. He didn't look at her.

She choked. She thought of Dike, holding her face in his hands.

"Don't!" she said.

"Oh, come on. Don't be like that!"

"No. I mean it. Please don't! Let's . . . let's talk."

"The heck with that." He sat away

from her in disgust. "You want to go home?"

Hannah nodded miserably.

"Of all the babies," Marilyn said.

Bob turned on the ignition angrily. "What are you out on the town for? To wet-blanket a party?"

"I'm not on the town," Hannah said.

He let her out at the corner of her street. He did not say goodbye. None of them did. She walked with her head down.

**I** THOUGHT you weren't coming back to see me off," she heard a voice say.

As once before that day, she raised her eyes to Dike's face. He stood before her on the sidewalk.

"You wouldn't really run out on me, Hannah?"

"Aren't you going to wait for . . . Sally?"

She didn't want to talk to him. She wanted to run and hide from him, from everyone.

"Sally came back," Dike said quietly. "I've got to catch the bus for camp."

"It doesn't go for twenty-five minutes."

"Maybe it's upside down to you, but it isn't to me"

"I'll wait. I can't take chances." He put his hand on her arm. "You don't hate me, Clytemnestra, do you? . . . About the dance . . ."

"I didn't want to go with you anyway," Hannah said fiercely. She shook his arm away. "I wouldn't go with you if you were the last man on earth."

She was running from him again. *Why didn't I stay with Bob? If I ever get another chance I'll take it.* But she knew she would not. Not now. Not since she had known Dike.

She went up to her room, but at the door she stopped. She heard a sound in Sally's room. Crying. Sally crying. Why should Sally cry? She had everything. She always had. All the looks. All the men. Now Dike.

Yet Hannah crossed the hall and went in. Sally's head was down among the perfume bottles. The cut-glass, gleaming bottles . . . the precious bottles, pushed every which way, tipped over.

Hannah put out a hand to her sister, awkwardly. "What's the matter?"

"Oh, Han . . . Han . . . he was so sweet!"

Hannah said desperately, not understanding why she must give comfort to Sally, as she had given it to Dike, "You aren't married to Chandler. . . . Dike's crazy about you. He's going to take you

to the dance. What are you crying for?"

Sally raised her head and smiled a little. "No, he's going to take you, Han."

"Me?"

"He said he'd asked you."

"It didn't count," Hannah said bitterly. "It's you. He said it was."

"You don't think he'd go back on a promise, do you? He told me he was taking you. . . . Oh, darling, that's not it . . . It's . . . that foolish whistle. . . . He said he wanted me to wait for him. . . . Wait for him. Me! I've never waited for anyone. I didn't wait for Tom. Remember Tom? He was a lot like Dike."

Hannah said, "But you—"

"But I got sick of scraping and washing out one pair of stockings night after night. And Tom was away. It was wonderful to meet someone like Chandler, who'd put a box in my hand and say, 'This is just for being gorgeous,' and I'd open it and find a dozen pairs of stockings. Oh, it was wonderful, all right! It still is . . . but there's something else . . . I can't explain it to you . . . but it's got to be there with whatever else there is . . . I thought I could get just a few of the things I wouldn't have a chance to when

Dike. Hannah thought of him and what he had said about Sally; his face when he saw her. Later she would feel for Sally. Now she was thinking of Dike.

"He wouldn't care," she cried. "He loved you."

Sally shook her head. "No. It can't happen that quickly. He was half in love with an idea and he tried to fit me into it without knowing anything about me. I told him, Hannah, because I could trust him. I had to cut it off quickly. It couldn't hurt him that way."

"Sally, don't you love him?"

Sally smiled again, that small smile more heart-twisting than her tears. "No . . . If I had . . . why, then . . . he made me think of Tom, remember how happy I'd been. . . . If Tom still cared he might understand. I was real—a person, not an idea—to Tom. . . ." She was rearranging the bottles now. "I'll always owe something to Dike. . . . I'm through with Chan. I can get a new job. Sometime . . . later . . . I can try to write Tom. . . ."

Mom was on the stairs. "Sally . . . my little girl . . ."

Hannah slipped away. Sally had Mom. Mom would understand.

But Dike. . . . *Dike, I wish you could have everything you want.* She wasn't thinking of Sally. She was thinking of Dike, wanting to go to him, offer him the world, hold him in her arms as she'd hold a child.

*If the bus hasn't come yet . . .*

He was leaning on a wall at the corner, still waiting for it, smoking a cigarette.

**S**HE went up to him. "Dike . . ."

"Why, Clytemnestra . . ."

"Don't fool," she said. "Don't fool, Dike. Please. I had to tell you. . . . I'm sorry . . . about . . ."

"It's all right," Dike said. "I fool because I *am* a fool. . . . She's a swell girl. . . . I just . . . I had this idiotic notion . . . it's that first boy with her and he'll be lucky. . . . but I still . . ."

She clasped his arm. "If you still . . . want someone to be for you, I will, Dike. I guess it won't matter to you . . . but I had to tell you. I'll be for you. I'll think of you and write to you and say your name in my prayers. I'll wait for you."

"Oh, Hannah!" He took her hand and laid it against his face.

"If it would help any . . . you'll know I'm waiting, till you find a girl you . . . really hope will wait. And I'll keep waiting even then. . . . Someone like you. Dike. . . . I didn't know there was anyone. . . ."

"Somebody like me, Hannah? Couldn't it be *me*?"

She knew he was only being kind, as he had been kind all day. She knew she was a kid to him, but he had sensed her uncertainty. He had held out, not needing to, a truth for her to grasp, a weapon, an armor . . . a promise.

"Yes, it can be you," she said.

They were both pretending now, but in the pretense, there was something as warm and sweet as reality. And when Dike bent and kissed her on the mouth and she answered the kiss, there in the late April afternoon, there under the red buds of the elm, it was a double gift, precious as love itself.

The bus came lumbering down the street, wheezed to a stop. Dike boarded it. She waved at him and he called through the open window.

"Don't forget the dance. . . ."

The dance . . .

*I will have my hair waved . . . I will have a new white dress . . . I will smile for him. . . .*

The dance. Oh, then, still the chance!

THE END

To his mother and dad it seems only yesterday that he was using the family telephone to call his high school sweetheart. But today the orders he sends and receives over his wartime telephone help speed the day when love and laughter, peace and progress shall again rule the world.

IN PEACE...SOURCE OF SUPPLY FOR THE BELL SYSTEM  
IN WAR...ARSENAL OF COMMUNICATIONS EQUIPMENT

**DRIVE SLOWLY—**  
at 25 miles you get  
**40% LONGER TIRE LIFE**  
than at 35

## P. S. pulls a 5<sup>th</sup> gas coupon out of the hat

**YOUR** ration board told you the number of gas coupons and the number of gallons of gasoline you can get each month—but it *didn't* tell you the number of miles you can go on each gallon. By careful attention to P. S. you can increase your miles per gallon and, in effect, give yourself an extra coupon each month.

The first step toward getting this "extra coupon" is to make sure you're getting the mileage you should. Check the gas you put in against the mileage on your speedometer. And bear in mind now that you're driving slower, your car should deliver 30% more miles per gallon than they told you it would when you got it. (That figure was based on the assumption your average speed would be nearly 50.)

If you're not getting this amount, it's fairly certain something's the matter and that you should have your service man make a Preventive Service check-up to find and cure the trouble. Any number of different parts of your car, when in need of adjustment or repair, can waste your gasoline. The coil is one of these parts.

### The Coil Can Waste Half a Coupon

Stepping-up the 6-volt current from your battery to nearly 15,000 volts is the job of the silent-and-tucked-away coil of an automobile. Of course, this constant strain is bound to have some effect on a coil—and it does. Like anything else, your coil gets "tired" after a while. And a "tired" coil means a weak spark and gas wastage.

Your service man can test your coil in a matter of minutes and tell you if it's

behaving as it should or whether it needs to be replaced in order to save you precious gallons.

### Electric Wires And Cables

Wires and cables that "leak" current are another source of gas waste. Loose connections, corroded terminals, and cracks in the insulation let voltage escape and end up by weakening the spark that fires the fuel. And even though the war scarcity of copper makes it impossible to replace the wiring as often as you used to, your service man has several tricks up his sleeve to keep wiring in shape. By shortening, mending, replacing connections, and keeping terminals and insulation clean, he can make wires and cables last a surprisingly long time—and he may save you as much as a fourth of a coupon each month.

**This Collier's column** has put the P. S. spotlight on two parts of your car's electrical system—the coil and the wiring. Regular P. S. attention to these, as well as other parts of your car will add "extra coupons" to your monthly gas ration. Remember, first check the miles you get per gallon. Then check your service man for P. S.

**There'll be more P. S. columns** in later issues. In the meantime, *send for the FREE P. S. Check List*. This form will help your service man tell you what Preventive Service is needed on your car now—and what can be deferred. To get your free copy, merely write to Collier's P. S., 250 Park Ave., N. Y. C.

## Oil for the Planes of China

Continued from page 18

flown back to central Burma to finish other assignments.

At work or play, Forster liked dynamite. Knowing his specialty, the British government had sent him late in 1941 to Russia to advise Soviet engineers in their program of scorching the earth. He quickly decided that the Russians knew more than he did, but he stayed to learn their methods, visited secret areas of the Caucasus. He remarked afterward that the Reds had carried out factory wreckings in one day that Anglo-American experts had forecast might take six months.

"But I wish the Russians could have seen our job at Rangoon," he mused. "Smoke up to fifteen thousand feet. Vapor up to nineteen thousand feet. Not a drop of oil left for the Japs, nor a piece of workable machinery."

### A Masterpiece of Sabotage

After Rangoon was gone, Forster tackled the pipe line which had run more than three hundred miles down-country from Yenangyaung. He plugged the pipe with cement at river crossings, smashed the section pumps, wrecked bridges. He turned to the oil fields. Acetylene torch crews were busy for weeks. Huge chunks were cut from fly wheels, shafts, hoisting drums, rotary drills, casing elevators—all the equipment which once was enough to drill fifty wells at one time in Central Burma.

In one machine shop alone were fifty huge lathes. Forster had damaged each one critically by a small explosive charge. A three-foot brick wall had been laid around the outside of the shop. Crude oil was piped in until it flooded the floor, and was set afire. The lathes, when the fire burned out, were no good.

But Forster was rather marking time when I encountered him. The last big job, he said, was blowing up the powerhouse.

"Cost a quarter of a million pounds to build in 1923—that's a million dollars U. S. Step up and see the new bellybands."

Up steel steps to the second floor of the big, reinforced concrete building marched Forster, a cork helmet shoved back from his sweaty forehead, followed by Bill Munday, my Australian reporterial sidekick, and me. The bellybands, we discovered, were belts of guncotton tied around bulging generators.

"Got 6,300 gallons of oil in drums stored above the transformers over there behind the partition. Got oil piped in here to the main room, too. And the jets will turn on after the explosion. Nice fire we're cooking up."

Forster glanced at his wrist watch. It was 10 A.M.

"With Corps Headquarters located twenty miles north on the road near Kyaukpadaung and the Japs fighting somewhere near Magwe thirty miles to the south, we're in the middle, as you know," he said. "Frankly, I'd like to blow this powerhouse now, but Corps would rather not, if a chance remains to hold it. It used to generate current for eighty-five per cent of Burma's oil production."

The untiring demolitionist strode into the walled yard where his dilapidated car was parked.

"Let's see if we've overlooked anything at the wells," he invited.

The Yenangyaung field was ten miles long and about a mile wide on rolling hills. Tagging along behind Forster in

my American-made, Chinese Lend-Lease jeep, Munday and I covered most of the area. It was like seeing the guts of hell strewn out in the open, under a smoky sky.

Hundreds of wooden derricks had burned and fallen. But twice Forster stopped, got a can of kerosene from the back of his car, walked over to derricks that curiously hadn't yet been touched, soaked one corner near the boring, extended a piece of burning waste cotton on an iron rod and started a fire.

"The best wells were usually those with steel derricks," he explained. "We didn't bother the derricks, but we put a sweet mixture of concrete and scrap metal down the wells. It would be easier to bore a new well than try to punch through that kind of plugging."

Scattered through the field were twenty-four tanks holding a million gallons of oil apiece. All were on fire, spewing billows of black smoke. Once in a while, a ball of flame leaped up like a cannon shot. There were smaller tanks, also, which had contained 100,000 to 500,000 gallons. These had been the first destroyed earlier in the week. The Big Berthas were the climax.

Like a farmer inspecting his prize 40 acres, Forster took us through the razed machine shops on one hill.

"Figure the equipment in this whole field at five hundred thousand pounds (\$2,000,000)," he said, "and you'll be conservative. To redrill the field would cost probably another ten million pounds (\$40,000,000). The Army moved away one thousand tons of machinery for use elsewhere, but it took eight welders three weeks to cut the rest of it up with torches."

On another hill stood a Burman Oil Company refinery—a tidy plant with American apparatus which had turned out 250,000 gallons of gasoline monthly. But not now. Tanks were broken, gauges smashed. Twisted pipes strewed the floor. Munday and I lifted a fire extinguisher off the wall. A whitish chemical spurled out.

"Hold on," said Forster. "This isn't any place for volunteer firemen."

### Telephone Casualties

Looking at his watch again, Forster suggested a new kind of activity for our tour. We ought to break telephones.

We followed the tireless scorcher, then, into the best bungalows of Yenangyaung—fine, two-story wooden houses with wide porches and green gardens which clustered on a few hilltops where man had not deigned to drill for black gold. Oil-company executives had lived in them, some until only a day or two earlier, when the final evacuation of essential civilian personnel left only Forster behind.

We broke the telephones by the simple procedure of slamming them down on the floors. They made a sharp clatter. Afterward, we looked in the iceboxes for a bottle of water, for it was a stifling day.

In the tree-shaded yard of one house was a swimming pool. Forster saw it first. We were surprised. The pool was temporarily inhabited by a stray black cow. Apparently she'd slipped in shortly before our arrival, but six feet of water was more than she'd thirstily bargained for. With difficulty, she was keeping her nose above water, and her eyes were rolling in their sockets. Forster said we should get her out.

Munday caught the end of a floating

ro: which was tied around the cow's neck and tried to keep her nose up. That heed slightly, but only to slow down the process of drowning. Forster and I went into the house and he spied the big upholstered divan in the front room. We carried it out, Forster skinning his knuckles on the door. We dumped it in the pool, but the mushy upholstery didn't appeal to the cow. She refused to use it for a footing. Then Forster and I carried out the mahogany dining table. We returned for chairs. No dice. We couldn't seem to make the right kind of platform for the cow.

Eventually, Forster found a pipe valve in the garden and turned it, and the pool drained. Down into a dry gully, about six feet of water cascaded like a spring freshet. He looked at his watch one more, expressed the opinion that was done about all we had time to do. The Japs, coming along soon, would

gushed flames. Guards and Forster OK."

I didn't keep notes the rest of the night, but I remember pretty well what happened. Munday and I checked with the guards of the Gloucester Battalion, and they told us Forster had been snugly couched in a dugout a hundred yards from the powerhouse with a captain of the Royal Engineers, W. D. Scott, when he touched off the explosion. The Gloucesters said it was the logical moment to leave Yenangyaung, what with the Japs here and there in the neighborhood.

Munday and I got in the jeep, and Charlie Fenn, an ex-New York photographer who'd come down from China for a look-see at the Burma war, climbed in the back.

I don't know how Charlie was able to sit down, because the back was filled with eighteen cans of gasoline, holding two imperial gallons apiece. But he

ing overhead to strafe this motionless line of stalled transport. A tired company of Indian Frontier Force Rifles, unloaded from the trucks and deployed along a culvert under a small road bridge, would try to clear out the nesting enemy after daylight—but that wasn't much immediate comfort.

A tank officer who'd participated in action at the road block said we could squeeze the jeep past it, if we cared to take the risk. There was room by swinging out on the soft right-hand shoulder to get by the burning truck in the middle of the highway and the disabled tank off under a tree.

Munday, a delightfully belligerent Aussie when he tangled with censors and Colonel Blimps, was the soul of reason now that we were in a pinch. I wanted to risk the road block in preference to a morning strafing. "I'm easy," said Bill. Fenn didn't offer an opinion. He merely climbed onto the gas cans again. We lowered the windshield flat on the hood to see better in the dark and proceeded in second gear.

The road block was as described, the fire of the wreckage dying low, the tank vague in the shadows to our right. For a second, perhaps, we were silhouetted to the enemy—a squat, beetlelike jeep with Munday beside me, holding his bedroll on his knees ("To keep the shrapnel outa my belly," he said) and Fenn streamlining himself on top of 36 gallons of gasoline.

Then, darkness. High gear. Putting distance between us and the Japs.

#### Torture by Thirst

Munday and I congratulated ourselves on having quite a story to write: The Death of Yenangyaung. We didn't know when it would ever be published. Burma had no telegraph line left to the outside world. But maybe the news was important enough, regardless of delay.

We didn't know that we were leaving another story that would be even more dramatic. For during our evening with Forster, the tired remnants of Burdiv (First Burma Division), probably 3,000 men and not more, had piled into Yenangyaung. When the road block was reported from the north, they settled down to wait and fight their way out in the morning.

They didn't get out in the morning. They were there three scorching days, tortured by thirst and fatigue, as the Japs drew ever closer. The last of the huge oil tanks burned out one by one, and the wooden derricks on the brown hills were white ashes.

The sun beat down. The enemy seized the banks of the Irrawaddy and the Pin Chaung. And there was no water. Forster's demolition program, of course, had included the town's storage tanks. Exhausted Tommies dug water pipes from the bottom of gullies and drank the sour, rusty dregs that these still contained. Thirst was a fiercer foe than the Japs.

On the third day, a Chinese regiment, rushed by truck from a reserve camp in the north, attacked the enemy line with the support of British artillery. The Japs cracked. The Chinese carved a big hole. Burdiv poured north and escaped. The Burma war went on, minus at least one potential disaster.

Later, upcountry, Munday and I encountered Forster one morning at British headquarters. He was very weary, but he was satisfied. He had left Yenangyaung a few hours after we did, going up the Irrawaddy in a launch with Royal Marines and stopping off at Chauk to demolish a subsidiary oil field there.

THE END

ive to solve the problem of Bossy's citation.

The little red notebook continues the story:

"Aft. Drove toward Magwe try find out. Went two miles to horse farm on northern ridge. Two Jap fighters strafing road. After strafing, had tea with West Yorks crew of armored car under me. Bombs, gunfire ahead. Front seven miles away—not 30.

"Eve. Helped Forster burn 40,000 lbs. gas. 'Twas emergency supply for armored brigade, which said now unneeded. Also 2 bungalows burned.

#### A Date with Dynamite

"11:20 P.M. Forster been informed Manchurian cavalry across Irrawaddy the westward Yenangyaung, Jap patrols westward. Forster said 10 substations, 10 transformer stations all demolished, only powerh. left. Capt. and lieut. told Gloucester guards powerh. will blow up at midnight, don't let anyone enter compound, hold posts on compound wall. If attacked, keep fighting. 'We'll blow powerh. if we have blow ourselves up with it.'

"11:55 P.M. Hill ¼ mile from powerh. good view. Forster's signals: 1 pistol shot at 11:55 when all 12 guards go places safety. 2 shots at 11:57. 3 shots at 11:59. Then blast.

"12:15 A.M. All OK. Powerh. roof wall

managed. Both Bill and Charlie waded the Pin Chaung, the smelly-water creek just outside town, because it was two feet deep at least and spotted with quicksand, and driving a blacked-out, overloaded jeep across it in the darkness was a bit ticklish.

Getting back on the hard, oiled surface of the Burma Road was good, but we were soon flagged down by crews of a stalled column of army vehicles. We proceeded slowly, lights out, past a couple of hundred cars and trucks of assorted sizes. At the head, we found tanks—the little American "honeys" which the Seventh Hussars and the Second Royal Tank Regiment had brought with them from Libya shortly before Rangoon fell.

The tank boys, talking to us in a night so inky that we couldn't see one another's faces, explained that the Japs had slipped ahead with a mortar and registered it on the road. Mortar shells had knocked out a British lorry, a staff car and a motorcycle at one point, and when a tank had gone on to clear the road block, its track had been knocked off by shellfire, but another tank had hurried alongside and rescued the crew.

It was now about 1:30 A.M. and a Japanese machine gun opened up at targets a few hundred feet behind us on the road. Not too nice. A mortar-made block ahead, a machine gun behind, and every prospect at dawn of Jap fighters com-

MONAHAN

In alpaca-warmed parka, gloves and overshoes a sentry stands guard at entrance to antiaircraft gun pit "somewhere on the Eastern Seaboard"

Here's the alpaca-lined coat with plenty of warmth without weight that looks good and is perfect for commuting—even on a two-wheeler

# GET YOUR GOAT

BY HENRY L. JACKSON

**N**OBODY can deny that it has been a right snappy winter. A lot of wise people have faced it by getting themselves a goat. Not one of the old tin-can goats, but an aristocratic beast known as the alpaca. From an alpaca, you get wool; from wool, you get a coat; when you get an alpaca coat, you can look a thermometer right in the eye and sneer with perfect impunity.

These dandy little animals bounce around in the Andes, mainly in Chile and Peru, 14,000 feet above sea level. The climate is high, cold and wet, and the alpaca has to be cushioned up pretty well, to stand it.

Hence, alpaca is the warmest wool in the world. The climate in the alpaca goats' native mountains is so cold that shearing time for them comes only once in two years. The goats are so bushy by that time the wool is thinned out rather than sheared—the way a barber might do

it. The result is very excellent wool indeed.

Alpaca was originally used in this country by duck hunters as a lining in weatherproof coats. Duck hunters are insane individuals who could use a bit of good sense and most certainly need a trace of warmth while sitting up to their ears in water in a blind. They liked the coat so well that they finally took to wearing pants of windproof gabardine, lined with alpaca.

Next, the college undergraduates, thoroughly fed up on the old sheepskin monstrosities, set up a yowl for the warmer and lighter alpaca-lined coats. These were turned out in regular trench-coat models, double-breasted, and in the shorter, finger-tip length coat, of weatherproofed cotton on the outside, with alpaca inside and on the collar and lapels.

Recently the Army, confronted with

the problem of keeping our Alaska and Iceland troops warm, tested alpaca. It overrode all specifications. They found that it was suitable for weather 20 to 40 degrees below zero; it wasn't bulky or cumbersome (as was previously tested sheepskin), and it didn't cause active men to become overheated to perspire.

Then the ski troops got onto it. Now the Navy is testing it for wear aboard small vessels—torpedo boats, subchasers, patrol boats and similar craft. It's a safe bet that alpaca will shortly be government-approved for naval duty.

Civilians have gone for alpaca-lined coats in a big way. It is a perfect country coat with plenty of warmth without weight. Men like it for shoveling snow, running around in wet weather, performing civilian-defense duties, and waiting for trains on cold platforms.

In fact, they like it so much that alpaca has finally come to town. The weather

gets just as cold in the city as it does in the country. And who cares about dressing up, anyway? Here's the coat with warmth without weight that looks good and is perfect for commuting.

Best of all, it doesn't take much moola to own an alpaca-lined coat. You can get a fine-looking coat with gabardine outside, alpaca inside and on collar and lapels for about \$30. Civilian defense and air-raid workers are grabbing the mackinaw-length model, which sets them back about \$18. A golf-type jacket, alpaca-lined, will run you around \$12.50.

It has now reached the point where alpaca linings are appearing in vests, slippers, shoes, gloves and earlaps on caps. Alpaca wears like iron, won't mat down or water-spot and never changes color. It is undyed wool, the natural shades being brown, tan, fawn, white and oxford. Alpaca can even be dry-cleaned—nothing bothers the King of the Goats. ★★★

It was Jane who led young Harvey into the basement after dinner. "Dads," she said, "I want to get married and this idiot won't hear of it. Maybe he'll listen to you"

## THE SEMAPHORE

By Robert S. Mansfield

ILLUSTRATED BY C. C. BEALL

A SHORT SHORT STORY COMPLETE ON THIS PAGE

**J**OE MICKLEMAUS and Harvey Frater were the richest men in town—and the craziest, the town said; they were also firm friends and had been all their lives.

They had gone to school together and in business later they were friends, and their fortunes had grown equally. Their homes stood side by side and one fence enclosed the two lawns. They married, and to the amazement of the town their wives got along famously. When Harvey junior and Jane Micklemaus announced their engagement on Christmas Day of 1941, the day before young Harvey went to report at Pensacola, it was no surprise to anyone in town. Joe and Harvey spent the afternoon of Christmas Day in their respective basements, dispatching drinks to each other over the complex network of their model railroads and sending each other congratulatory messages on the telegraph hookup which connected their dispatchers' panels.

For Joe and Harvey were mildly insane, although the town put it more strongly, on the subject of model railroading. Starting from the Christmas when Harvey had given young Harv his first electric train and Joe had spent Christmas Eve helping him set it up, their basements had become solidly massed with main lines, yards, bridges, tunnels, by-passes, country sidings, roundhouses, block signals and miniature stations with real grass lawns around them. They had even

caused a tunnel to be dug between their two basements through which a double-track line connected the two major systems, with an interlocking signal network and the direct telegraph contact. They used the straight old-fashioned key, and each had a tobacco can propped behind the sounder to give it volume.

Harvey was a lawyer. It was he, in large, who was responsible for the amazing accuracy of detail in their fun. Joe contributed the special cars for carrying highball glasses. After Pearl Harbor their passenger schedules were cut down and they hauled more freight.

When young Harvey had his first leave and came home with his wings and his assignment to an aircraft carrier, the families had a reunion at Joe's. It was Jane who led young Harvey into the basement after dinner, where Joe and Harvey were doing some new wiring on Joe's layout. The youngsters watched them, their eyes warm, half laughing, their hands clasped. Jane broke it up.

"Dads," she said, "I want to get married, and this idiot won't hear of it. Maybe he'll listen to you."

"No, Jane," young Harvey said. "It isn't that and you know it! Only, things are so uncertain. . . ." He turned to his father. "I don't want to marry Jane now when we'll have just a snatch at happiness. If anything happened to me, it'd make it just that much tougher for her."

Joe walked over and laid a hand on young Har-

vey's arm. "I appreciate that, Harv," he said. "You're right."

Old Harvey grunted. "Keep your nose out of the kids' affairs, Joe. Times like these, they've got to take what they can get out of life."

"If this is all we can have of each other," Jane said "just these two weeks, I'm not going to turn my back on it. Don't you see, Harv?" She turned back to the grave ensign. "I love you. That's all."

"That's right," Harvey senior told her. "You stick to the main line, Jane."

"Wait," Joe said. "You can't put a lifetime of happiness into two weeks. You'd just spoil some thing pretty fine."

"Joe," Jane said, and that hurt because it meant the father-daughter relationship was off and they were man to man. "Joe, I know how you feel, but it's wrong. It doesn't apply to Harv and me. This isn't anything hasty. We've always known we were going to marry some day. And that day has come."

Joe looked at them and he knew from Harv's eyes Jane had won her point. "I won't stand in your way Jane," he said. "I hope you're doing the right thing."

When they had gone, Harvey looked over at Joe drew a long breath and shrugged, and Joe held back his tongue because there was too much tension in the moment. When he trusted himself he said, "Let's try it," and walked to his dispatcher's panel.

Ten minutes later the Coast Flyer of the Mapleton and Western poured through the tunnel and drew up in the Union Station before Joe. He stared at it absently. He knew, deep down, why he had opposed the marriage; he wanted to protect Jane, he didn't want her hurt. Harvey shouldn't have been so shirty about it. He started the train again, glanced at the switch lights, and saw, too late, that he had routed it back through the tunnel against a closed block. A moment later he heard the crash as it piled up over the switch in Harvey's main line. Almost at the same moment came the unmistakable sound of Harvey's way freight plowing into the wreckage.

When Harvey closed the telegraph key two minutes later, Joe had been called everything the Morse code was capable of transmitting, and the tunnel block lifted once and dropped emphatically back to red and stayed that way.

It remained so until the light burned out, and still the semaphore stayed down.

**J**ANE and young Harvey were married, and from the day they left on their honeymoon, Joe and Harvey senior had not spoken. They walked to work separately. They walked home separately. There was a deep anger in Joe's heart, a resentment, and a loneliness. Night after night their trains roared through separate schedules, their rumblings plainly heard in both basements, but the telegraph sounders were still and the tunnel semaphore stayed down, and there was no joy in either house.

It was Jane who brought the news to Joe. A new, different Jane—quiet, calm in her movements, already a little awkward from her burden of life, a straight-backed Jane with tears on her face and courage in her voice.

"Harv's missing," she said. "They wired me. Maybe he's dead." Her chin went up. "I'm glad we married Dad. I'm glad!" She turned and went up the stairs, never faltering, not missing a step. Joe sat as he had been.

He was thinking of Harvey. Jane had within her the consolation and the demand upon her strength that she needed. She was young. Joe closed his eyes and opened them again. The sound of moving trains from the other basement had stopped. Harvey knew, now and he was alone. Terribly alone. Joe knew he couldn't go to him, and he wanted to. His eyes fell on the highball car.

He reached into the cellarette behind him and drew out an ancient bottle. He poured from it, glanced at the siphon, shook his head and filled the glass directly from the bottle. He threw on the current and with a switch engine brought the long unused highball car from its siding and set the glass on board. As he reached for the control levers the Morse key clicked into life, and the distant rumble of a single engine reached his ears.

"Special coming through the tunnel," the telegraph said. "Clear the line to the dispatcher's yard. Missing isn't dead, and no son of an old blown-up balloon like me could sink. Rickenbacker had a rubber boat, too."

Joe started the switch engine, put the power into his trunk system. Over by the tunnel mouth there was a click and, slowly, creaking from disuse, the signal arm raised to vertical. All clear!

## What did *you* do today ... for Freedom?

Today, at the front, he died . . . Today, what did *you* do?  
Next time you see a list of dead and wounded, ask yourself:

“What have *I* done today for freedom?

What can I do tomorrow that will *save* the lives of  
men like this and help them win the war?”

To help you to do your share, the Government has organized the Citizens Service Corps as a part of local Defense Councils, with some war task or responsibility for every man, woman and child. Probably such a Corps is already at work in your community. If not, help to start one. A free booklet available through this magazine will tell you what to do and how to do it. Go into action today, and get the satisfaction of doing a needed war job well! **EVERY CIVILIAN A FIGHTER**

The blond girl was on the verge of hysterics. "Why, Jason? Why did they kill him?" She stared at him. "You've known all along!"

## Five Who Vanished

By George F. Worts

### The Story Thus Far:

EARLY one morning, a girl—an exceptionally beautiful girl—slips into the San Francisco apartment of Jason Amboy, knocks him out, takes a packet of letters (from his brother, Wayne) and makes her getaway.

Jason's valet—an eccentric named Flack—follows the intruder and learns that she is a Miss Topping—Luana Topping—of Hawaii. . . . Jason is notified that Wayne (who has been working in Hawaii for the powerful Grazzard family) has disappeared and that murder is suspected. Acting quickly, he takes a ship, starts for Honolulu.

Old Mrs. Hiram Grazzard ("Queen Bertha"), head of the Grazzard clan, takes the same boat. With her are: her son, Lorrin; Lorrin's fiancée, Luana Topping; Channing Mace, manager of one of the Grazzard plantations, and his at-

tractive wife, Natalie; and one or two others.

As the ship plows southwestward, Jason has a series of exciting adventures which convince him that Wayne has been murdered by the Grazzards. Flack (who, disguised and using the name of "Rodney K. Kitchener," has also taken passage) feels certain of it. Nevertheless, Jason falls in love with Luana and he and Natalie Mace become close friends.

Jason permits a stowaway to share his state-room. The fellow disappears. Natalie tells Jason that she is sure he has been murdered; she says that he was Winfield Grazzard, the black sheep of the family; she says that he and Wayne had tried to blackmail the Grazzards, who had done away with both of them.

"Rodney K. Kitchener" disappears. Unfortunately for Jason, the evidence makes it appear that he had killed the man; and he is placed in the brig for several days. Then Luana informs the captain that she had seen "Kitchener" jump overboard; and Jason is released.

A short time later, Flack shows up. He tells Jason that he, Luana, Jason's room steward,

and a person known as "Singapore Sam" had co-operated in an elaborate scheme (necessitating the disappearance of "Kitchener") designed to save Jason from the Grazzards. He admits that the idea had miscarried. . . .

Jason's boat, the Tasmania, reaches Honolulu. Jason goes ashore and begins the investigation of his brother's death.

### VIII

FLACK and Luana were at a table at the edge of the dance floor when Jason arrived at eight. His valet wore a tropical white dinner jacket. This once humble little man was suave, very urbane, very sure of himself.

Luana was wearing the cerise dinner dress she had worn on the night she had crawled into Jason's bedroom window.

When Jason approached the table, Flack arose and bowed. "You are on

time, Mr. Amboy," he said, and there was, it seemed to Jason, something sinister in his way of saying it, a promise or a threat of dark events in the offing.

"Miss Topping and I have agreed it would be best to postpone our talk until we have dined. Is that agreeable to you?"

"Of course," Jason murmured. He sat down across from Flack.

The orchestra started to play a rumba. "I've ordered dinner, Mr. Amboy—with special attention to your preferences, of course," Flack said.

Luana was smiling at him mysteriously and her eyes were unfathomable.

"Will you dance, Luana?" Jason asked. "I'd love to dance," said Luana.

It was rich smooth music and Luana in his arms was slim and light and sweet. He soon discovered that they danced

beautifully together. There was a sensation of floating to a dreamy romantic rhythm.

"Darling, I don't know what this is all about," Jason said. "I soon will, doubtless to my sorrow, if I'm any judge of storm warnings—but let's skip all that and get down to the important thing. May I say that this is the happiest moment of my life? You are beautiful, you are sweet, you are wonderful and you're in my arms at last and I love you."

He felt the quick pressure of her hand on his shoulder.

"Jason—" she whispered.

He bent away from her and tried to see her face. Her eyes were closed. In the dimness he saw the shimmer of tears among her dark lashes.

"Luana!"

"Please don't say anything more, Cousin Jason. Take me back to the table."

But she was composed by the time they reached the table.

WHEN dinner was over, Flack sat twirling a brandy glass and puffing at the largest, blackest cigar Jason had so far seen him undertake. His manner was one of gravity touched with sternness.

"Mr. Amboy, we three have met here tonight," he said, in the voice of a man getting down to brass tacks, "to discuss some very important matters. If you are tempted to become angry, I hope you will restrain yourself. Perhaps the most important item, from your point of view, concerns your brother Wayne."

Flack paused, as if for deliberate dramatic effect. "Your brother is not dead, Mr. Amboy. He is, at this moment, alive and well—on Kahuna Island!"

"Aren't you surprised?" Luana cried.

He glanced at her. He shook his head very slowly. "No, Luana. Why should I be? I don't believe it."

"But I know he's on Kahuna, Jason!"

He bent forward again. "Did you see him there?"

"No. But he is."

"You mean, someone told you he is."

Luana was staring at him and her lower lip was stubborn. "I didn't think you'd behave like this, Cousin Jason. I thought you'd be delighted. It's true!"

"I still don't believe it. My brother is dead. Who told you? The queen? Channing? Lorrin?"

When she didn't answer, he put his hand in his pocket, and took out Wayne's watch. "Do you know what this is, Luana? It's my brother's watch. It was lost between the head of his bed and the wall the night he vanished from Kokala. Notice that strap. Notice that blood on the back?"

"Yes," the green-eyed girl said coolly. "I know all about that watch. You sent a man over from Honolulu and he found it. But what does it prove?"

"That my brother was murdered."

"Your brother, Jason, went off somewhere almost every Saturday night and came home fighting drunk. He may have lost that watch behind the bed weeks before he left Kokala."

Jason was gazing at Luana speculatively. He suspected where this was leading.

"All right," he said. "My brother is alive and well on Kahuna. Go on."

"He was taken to Kahuna," Luana answered crisply, "on the night he vanished so mysteriously."

"After your brother was rather badly beaten up," Flack put in.

"Who beat him up?"

"I don't know," Luana said.

"You were in Kokala that night, weren't you?"

"No. I had dinner and spent the evening in Koloa with Dr. and Mrs. Water-

house. I got home at one o'clock. Your brother was then on his way to Kahuna."

"With whom?"

"I don't know, Jason."

"But was everyone at Kokala—the queen—Lorrin—Channing?"

"Yes."

"Had they spent the evening together?"

"I presume so."

"But you don't know?"

"No."

"All right. Why was my brother beaten up?"

"I'll tell you," Luana whispered. "It's what I've been dying to throw at you since all this started!" She paused. Her eyes seemed to have glints in them. "Your brother is a blackmailer! Do you pretend you don't know that?"

Jason shrugged. "I've heard that one from other sources. You aren't surprising me. Don't be so tender with my feelings."

Luana looked startled and a little angry. "Your brother spent years in Burma, where Aunt Bertha's brother Colton once lived. Why do you want me to say this, Jason? You know all about it. You know that your brother found out some very unsavory things about Colton Grazzard—and that he used that information to try to extort money from the Grazzards."

"Yes, I've heard that story," said Jason. "And Uncle Colton is now occupying the palatial family doghouse on Kahuna Island, brooding over those sins of his youth."

"Then you're not denying any of it?" Luana cried.

"Of course I deny it," Jason said. "I've been denying it for days. But I want to hear your side of it."

He was aware that Flack was bending forward, as if he were crouching to spring. Luana had settled back in her chair with the air of a girl trying not to seem tense.

"Go on, Luana," Jason said calmly.

Luana came forward again. "You're not only in it with him—you directed the whole horrible thing!"

"Go on," Jason said pleasantly. "Let's have both barrels."

"You're callous!" Luana cried. "You haven't any shame! You arranged it all! Those letters your brother wrote you were nothing but an ingenious code informing you of his progress!"

JASON bent forward now and dropped his elbows to the table. He clasped his hands hard. He glanced at Flack.

"Flack, do you agree with all she's saying?"

"Yes, sir. And I'm amazed at the dexterity with which you pulled the wool over my eyes."

Jason gazed at him. "Flack, I am horribly disappointed in you. I considered you my best friend. And now—"

"He only found out the truth about you!" Luana cried. There were tears in her eyes, and they were not tears of fury.

Jason took a deep breath. "Well, the two of you have made a very interesting point. And I'm glad we're finally in the open on these letters. I want very much to know more about this, Luana. When did you learn that those letters were in a sort of code informing me of Wayne's blackmailing progress?"

"It doesn't make any difference!"

"It makes worlds of difference."

"The point is," she said hotly, "they were."

"All right. Let's approach it from another angle. Who sent you to my apartment for them?"

Luana straightened up. "That doesn't make any difference, either."

He bent toward her and said slowly

**Battlefront** There it is—on the table—your theatre of war.

Those stamps are your bullets—those books are your guns. When you've filled them, they'll speak in tones the whole world will hear—and know that an American home has not failed its sons at the front. As an old family friend and welcome guest in the home, Canada Dry says: let freedom ring—with all the War Bonds and Stamps you can buy.

*If sometimes you can't get all the Canada Dry Ginger Ale you want, please don't blame your dealer. Wartime restrictions on bottle caps, sugar, and particularly on fine imported ginger make it difficult for us to keep up with the growing popularity of Canada Dry, "the Champagne of Ginger Ales."*

MOUTH WASH

and menacingly, "I want to know. Who was it?"

"All right," Luana said, in her melodious voice, "I'll talk about it. I'll tell you just how it happened. I know a girl who lives in that apartment building across that little court from yours. It happens that she knows you."

"Ah," said Jason. "Marion Crookes. So Crookesey is in this, too."

"No, she is not in it. She doesn't know anything about it. We were up on the roof sun-bathing a few days before this happened. You'd taken her to a dinner party a week or so before that, and she was talking about you, and she pointed out your apartment. Then, on the night when I wanted to get into your apartment, I recalled seeing a long plank lying on the roof. So I simply went up the back way, pushed that plank across to your window and got in."

"That isn't what I want to know," Jason said. "I want to know who sent you there."

"Nobody sent me there. I did it entirely of my own accord. I didn't even tell anybody I was going to do it. Lorrin and Channing were talking about those letters. It was the first I'd heard that your brother had been trying to blackmail the Grazzards."

"Just when was this?" Jason interrupted her.

"A little after three that morning. Do you want all the details?"

He nodded grimly. "Every scrap. This is very important."

"All right. I knew your brother had disappeared from Kokala, but I didn't know why. Lorrin was horribly upset because, if there's one thing the Grazzards hate, it's scandal."

"WHERE did this talk take place?" Jason interrupted.

"In the sitting room of Lorrin's suite," Luana said.

"Was the queen there?"

Luana shook her head. "No. Only Lorrin and Channing and I. We'd all been to a late party in San Mateo. Aunt Bertha and Natalie had gone to their rooms, and Lorrin and Channing went into Lorrin's. I heard them talking and I went in. I heard enough to get an inkling of what was going on, and they told me the rest."

"Just what did they tell you?"

"But I've told you, Cousin Jason! That your brother had tried to blackmail the Grazzards and had disappeared!"

"Did they tell you then that he was on Kahuna?"

"No, that was later. They didn't know that your brother had written you any letters, but they hoped he had. They believed that if he had written letters to you, they might contain incriminating statements. It was Channing's idea that if they could secure such letters, they could be held over your brother if he made any more attempts at blackmailing us."

"So that was it," Jason said. "This is very interesting, Luana. Go on. I'm very curious. I've been dying to know just why you walked that plank at four forty-five in the morning." And you haven't explained it yet."

"Very well," Luana said crisply, "I'll explain it. That afternoon Lorrin had tried to find the letters in your office, in Oakland."

Jason's eyebrows went up with surprise. "Did he break into my office?"

"Yes, Jason. There was only that one man there—your foreman. He drove off somewhere on his motorcycle, and Lorrin broke in and went through your desk and your files. But your brother's letters weren't there. Channing and Lorrin agreed it would be practically im-

possible to get into your apartment. But I knew it was possible.

"I said good night to them and went to my room, and I thought about it. I knew I could do it."

Jason was nodding thoughtfully. "So you slipped out of the hotel, and you got the letters. Whom did you give the letters to?"

"Lorrin. I woke him up and gave them to him."

"And explained just how you'd got them?"

"Yes, Jason."

Jason grinned. "How did my favorite aviator take it?"

"He was furious—but he was pleased, too. You see, Jason, Lorrin is proud of me."

"He should be," Jason said firmly. "He certainly should be proud of you." He bent toward her again. "When did you learn that those letters weren't so innocent as they seemed, but contained cleverly coded information?"

"Later."

"It was quite recently, wasn't it?"

"A few days ago."

"Yes," Jason said. "And were you convinced that they were in a sort of code?"

"Of course! Taken with the fact that I knew your brother was a blackmailer—"

Jason checked her with a wave of his hand. "Please don't say that any more. I'm allergic to it."

"But it's true!" Luana said sharply.

"Just as it's true that you sent him there to extort enough money from the Grazzards to finance your airplane engine!"

Jason started out of his chair again, and again settled back. "You mean, Luana, I sent my brother to the Grazzards to demand a hundred and ten thousand dollars?"

"Why," she cried, "are you so brazen? You know very well that that was why you sent your brother to Kokala!"

"I know," Jason said. "I must seem awfully pigheaded and awfully brazen about this. But I'm terribly curious. Please be patient with me. I now want to know when it was you learned that the sum we were demanding from the Grazzards was exactly a hundred and ten thousand."

She looked at him vaguely. "I don't remember."

"All right. Do you recall the day at breakfast when Channing, Lorrin and Queen Bertha were questioning me about financing my engine?"

"Yes."

"Queen Bertha asked me how much I

needed, and I said a hundred and ten thousand."

Luana nodded. "You looked at her very deliberately, when she asked you if it would be hard to raise, and you said, very significantly, 'No, I don't think it will be!' And if that wasn't damning—"

"Things are becoming so much clearer," Jason interrupted her. "Now, can you answer my question? Wasn't it after that conversation that you were told for the first time that the sum my brother and I were trying to extort from her was exactly a hundred and ten thousand?"

"It may have been," Luana said, still with defiance, "but what difference does it make?"

"It's all in the point of view," Jason answered thoughtfully. "I'm still trying to sort this out. There's one very interesting point. The first night at dinner when Queen Bertha asked me all those questions about my engine, and about my father and mother and brother, she knew all the answers beforehand."

"Yes, Jason."

"She's a truly remarkable woman," he said.

"Yes, Jason."

"YOU are a truly remarkable family, Luana. Flack, am I right in assuming that you got in touch with this young lady quite some time before your disappearance; compared notes with her and, on the basis of her testimony, decided to turn against me?"

His valet's spaniel eyes didn't waver. "That's correct, Mr. Amboy. On the day of my disappearance."

"All right," Jason said. "Now! Why did you disappear?"

"There were a number of very sound reasons, sir. I wanted to try to save you from the consequences of your own folly, and I thought you'd be safe if you were locked up in the brig. Knowing how anxious you were to raise money to go on with your engine, I feared you might try to blackmail the Grazzards at any moment. I wanted to frighten you into your senses. Lastly, I was afraid, if you remained at large, you might be badly beaten up by either Mr. Mace or Mr. Grazzard."

"What was the purpose of the smear of blood on that envelope?" Jason Amboy asked.

"That was my blood, sir. I borrowed a pin from Miss Topping, pricked my finger and put the smear there."

"You mean, that was just window dressing—to make me feel a little more horrible?"

COLLIER'S

"Oh you shouldn't have gone to all this trouble"

MISCHA RICHTER

"No, sir. I did it deliberately to make you believe I'd been murdered. I wanted no doubt in your mind."

"But why, Flack?"

"So you'd be reconciled to your fate. You might have insisted on having the ship searched again and again—and I'd have been found eventually. All it cost was a drop of blood. I learned that trick, of course, from your confederate, the stowaway."

"My confederate?" Jason said. He looked at Flack steadily. "So you spilled that, too."

FLACK seemed surprised. "I withheld nothing from Miss Topping, sir. We agreed to confide in each other without stint."

"You both seem to have done very well," Jason commented in a dry voice. He glanced at Luana. "And you, of course, withheld nothing from Queen Bertha, Prince Lorrin and Prime Minister Channing. And they, in turn, permitted you to drag out of them all these facts about my blackmailing scheme. It all works out beautifully, doesn't it? A self-help club, with all members baying on the trail of the blackmailers. Now, Luana, I want to ask the most important question of the evening. To whom did my brother go with his blackmail demand—Queen Bertha, Lorrin or Channing?"

"I don't know. My understanding is that he conferred with all three of them."

"But you don't know?"

"No."

"This," Jason said, "is a great disappointment. Flack, what did you tell Miss Topping about the stowaway?"

"But it's obvious, Mr. Amboy!"

"With you," Jason said, "when anything is obvious, or when you see it as a very clear design, it is either wrong, fantastic, cockeyed—or all three. But go on."

"Your stowaway," Flack said with dignity, "is, as you know very well, sir, still alive."

"So," Jason murmured, "you think Winfield Grazzard is still alive—and my confederate."

"I do, sir."

"What do you think about this, Luana?"

"I don't know anything about it."

Jason shook his head with a marveling air. "Flack, you're making astounding progress. First, you're a miracle man. You jump overboard in mid-ocean and you magically show up a few days later and you're not even moist behind the ears. And now you're a holy man. You've brought a man back from the dead. I suppose Winfield Grazzard is in this blackmail conspiracy."

"What else?" Flack said stoutly. "He was in India with your brother, digging up Mr. Colton Grazzard's unfortunate past."

"Where is Winfield Grazzard now?"

His valet shrugged. "I'm not a mind reader, Mr. Amboy. But I do know that all it cost him to establish the seeming fact that he had been murdered and thrown overboard was four little drops of blood. And I think I can say, with all modesty, that I proved how easily a man can conceal himself on a ship the size of the Tasmania."

"There are some things I will probably never understand," Jason said. "I can't follow the workings of your mind, Flack. So will you tell me why you sent that red-headed gorilla up to the paddle-tennis court to knock my head off? Was that resentment, Flack? Now, come clean."

"No, Mr. Amboy," Flack answered with vigor. "I did that, as I told you before, to confuse the issue. I wanted to establish a doubt in Captain Horngold's mind, in connection with the suicide story I instructed the room steward to tell."

Jason considered him skeptically a moment, then smiled coldly. "I wonder how much the Grazzards paid you for selling me out."

"Spoken," Flack retorted, "by the caliber mind in its ultimate state of perfection!"

Jason glanced at Luana. "You see, my dear, I have a very forgiving nature. But there's one thing I can't forgive—deliberate and calculated disloyalty. A week ago, I wouldn't have sold this little man for the entire cost of the national defense program. Tonight he is yours for a

## Help Kidneys If Back Aches

Do you feel older than you are or suffer from Getting Up Nights, Backache, Nervousness, Leg Pains, Dizziness, Swollen Ankles, Rheumatic Pains, Burning, scanty or frequent passages? If so, remember that your Kidneys are vital to your health and that these symptoms may be due to non-organic and non-systemic Kidney and Bladder troubles—in such cases Cystex (a physician's prescription) usually gives prompt and joyous relief by helping the Kidneys flush out poisonous excess acids and wastes. You have everything to gain and nothing to lose in trying Cystex. An iron-clad guarantee assures a refund of your money on return of empty package unless fully satisfied. Don't delay. Get Cystex (Siss-tex) from your druggist today. Only 35¢.

**Cystex**  
Helps Flush Kidneys

plugged nickel—and I'll throw in a stout piece of rope about ten feet long."

Flack arose with dignity. "I think enough has been said, Mr. Amboy. The check was paid in advance. I wish to tender my resignation, to take effect immediately. By the way, sir, in case it slipped your mind, my parole was up yesterday. I am no longer under any further legal bonds to you. I am leaving tomorrow noon on a transport with Singapore Sam Shay for Samoa."

"That's hot, dangerous country," Jason said. "You ought to do well down there."

"Thank you, sir. I intend to. As Singapore says, I am wasting my talents in this panty-waist civilization. Goodbye, Mr. Amboy. Goodbye, Miss Topping. I wish you every happiness in your marriage to Mr. Grazzard."

"Thank you, Flack," Luana said in a small voice.

The one-time gentleman's gentleman walked away. Jason turned with a wry smile to Luana.

She had covered her eyes with her handkerchief.

"Luana!" he said with surprise.

She took the handkerchief away. She was struggling to control her tears. She mastered them presently. She powdered her nose.

Jason bent toward her. "Everything seems to be neatly solved, doesn't it?"

Luana sprang up. "I've never been so disappointed in my life!" she cried. "Until the very end, I hoped you'd somehow prove it was all a lot of fantastic lies. I wanted to believe in you! I gave you every chance!"

"Keep trying," Jason said dryly. "The shooting hasn't even begun."

"I thought you were so *akamai*!" she cried. "You aren't *akamai* at all!" Her voice was tremulous, but she was no longer crying. "Aunt Bertha wants to see you. Will you come?"

"A battleship of the Littorio class will now plow me under," Jason said cheerfully. "You bet I'll come!"

THE Grazzards were occupying a suite which, in a less democratic territory, would have been called the royal suite. Its lofty, gracious rooms covered one floor of a wing.

Mrs. Hiram Grazzard was waiting for Jason on the *lanai* off her sitting room. She was, in a white satin dinner gown, with her square, yellowish face, her thick black hair, a formidable woman.

She was seated in a huge koa-wood chair. On her left stood Lorrin, darkly scowling. On her right, cool and grim, stood Channing Mace.

She said, in her regal way, "You may sit down, if you wish, Jason." Her dull amber eyes were not friendly, but they were not unkindly.

"Luana, you told Jason where his brother is, I presume?"

"Yes, Aunt Bertha," the girl said in the awed voice that Jason had heard her use only with this woman.

"Did you tell him that we are familiar with his plan?"

"Yes, Aunt Bertha"—in a lower voice still.

Bertha Grazzard studied Jason's serious dark face, his grave attentive eyes. She was playing with the long thin gold pencil which she always carried on the end of a long, rather heavy gold chain. The sapphire with which it was crowned flickered with a hot blue fire as the pencil moved in her hands that were never still.

"We will be perfectly candid, Jason," she said in her imperious way. "I feel very sad about this. After all, you are virtually my own flesh and blood."

She compressed her lips and bent for-

ward. "Jason, you are to be our guest at Kokala plantation and you are to go with us to Kahuna Island, where your brother is, to discuss this situation, and to decide just what we are to do."

"The whole trouble is, you and your brother are still in a position to blackmail us. I realize that. I have given it a great deal of thought, Jason. I have decided to give in to your demands, although I want you to know that I am doing it, not because I am afraid you would do much harm to us with that old scandal of my brother's, but because you and your brother are my own flesh and blood."

Mrs. Grazzard settled back a little in her chair. With her amber eyes, her complacency and her alertness, she suddenly reminded Jason of a watchful yellow cat.

"I wonder," she said, "if you can appreciate what I am doing."

"Don't bother," Lorrin broke in impatiently, "to explain it. And don't expect gratitude."

His mother lifted her hand to silence him. "I am handling this, Lorrin. I want this young man to know just what my feelings are. Do you think you do, Jason?"

"I think I do, Aunt Bertha," Jason said.

"Very well!" she said briskly. "You need one hundred and ten thousand dollars to start manufacturing your airplane engine. You shall have it, Jason. I shall order that amount placed at your disposal at my Honolulu bank. I will not ask you for your assurance that this will be the end of this. It has got to be. Do you understand?"

"Yes, Aunt Bertha. You are being very kind. Now—may I ask a question? I am very anxious to know to whom my brother made these blackmail demands."

When Mrs. Grazzard stared at him without answering, he glanced at Channing Mace, and when Channing Mace said nothing, he glanced at Lorrin.

Lorrin's face was flushed and his eyes were ugly. "That is absolutely beside the point, Amboy."

"I'd very much like an answer to my question. Whom did he approach? Was it you, Lorrin?"

"You've had the answer to your question," Lorrin said angrily.

Bertha Grazzard got up. She had reminded Jason a moment ago of a watchful yellow cat. The quickness with which

she got up—the smooth, effortless flow of the motion—startled him. She was almost as tall as Jason, and this, each time he noticed it, surprised him. He always thought of her as a rather short, rather dumpy woman, and she was neither. Her large, square face gave that misleading impression.

"We are flying to Kauai on the morning plane," she said. "A seat has been reserved for you. The plane leaves Rodgers airport at nine. . . . Good night, Jason."

"Be on time," Lorrin said.

Jason glanced at Luana. She was standing with her hands folded meekly in the folds of her cerise satin dress, with her eyes downcast. Her meekness and Lorrin's arrogance made him suddenly angry. "Good night," he said curtly and walked out of the room.

In the dimly lit corridor, Natalie Mace overtook Jason.

"Come along," she said breathlessly. She led him to a cross corridor which ended in a little foyer. The foyer was deserted. There were settees, chairs and a few tables.

Natalie sat down. "Well, Sir Galahad?"

"It is, indeed, an enchanting evening," Jason said.

"I was eavesdropping, Jason. I heard it all—and I ran out ahead of you. I feel sick. I feel really sick. And you know, if you go to Kokala with them, you're walking into a death trap."

Jason nodded. "Yes, I know. But I've got to see the inside of it."

"They murdered your brother!" she cried. And he realized that the blond girl was on the verge of hysterics. "Why, Jason? Why did they kill him?" She stared at his eyes in the dim light. "You've known all along!"

JASON shook his head. "No, Natalie. I've groped my way to it gradually, but I'm sure I know now what's back of it all. It's so simple, so obvious—if I'm right. But I still can't talk about it. Remember? I'm the guy who can't work without a blueprint."

"But must you go to Kauai tomorrow?"

"Yes."

She was working her hands together. "But, Jason, they'll kill you! Lorrin would like to kill you with his bare hands! He knows Luana has no use for

any more. He knows she's in love with you. You've handled this whole thing so carelessly!"

He bent over and kissed her lightly on the cheek. "Take it easy. You're having the jitters. Have you those answers to my questions?"

"Oh, your questions!" she said despairingly. "Yes, I have them. Hiram Grazzard died on March 3, 1921. Colton Cizzard went to live on Kahuna on March 17, 1921. He hasn't been off the island since."

Jason was silent a moment. "I think," he said quietly, "you've just given me the two cogwheels of the machine that is going to destroy the Grazzards. I think you're going to have your revenge."

"Jason! Tell me what you're talking about!"

"I'll see you on the plane," Jason said. "Aloha nui loa." He walked away.

"Jason!"

He returned to the lobby. There was a note in his box. It said:

"Very sorry to have missed you. Will see you in the morning without fail."

"Carrington J. Hambledon."

Jason could not recall a Carrington J. Hambledon.

When he entered his room, the telephone was ringing. A frail voice, with a quaver of senility, asked him if he was Jason Amboy.

"Yes," Jason said.

"Are you the son of Clark and Mary Amboy?"

"Yes. Who is this?"

"I am an old friend of your father's," the fragile old voice answered. "You were pointed out to me tonight at dinner. I was instantly struck by your resemblance to your father. I was sitting near your table, and I could not help overhearing some of the conversation. I want to warn you to be on your guard

every instant, my boy—every instant!"

There was a rattle and a click as a receiver was hung up. Jason thoughtfully put down the telephone.

The quavering intensity of that unknown voice made him very uneasy. He went to the door. He had forgotten to lock it. He locked it. He would, he decided, have to stop being so careless.

JASON saw the tall, slender man with the trim black mustache getting out of the taxicab just as the plane was taxiing down the field for its take-off. The man ran to the fence and waved a brief case. Then he ran to the gate and talked to the guard. It was evident that he wanted the Kauai plane to stop and take him aboard. But it did not stop.

It took off on a long shallow climb. It circled to avoid Pearl Harbor. No one, Jason had heard, was permitted to see Pearl Harbor from the air any more. The vast reconstruction projects which had been under way since December 7th were secret.

The misted green mountains of Oahu were rising higher and higher.

Jason settled back in his seat. Lorrin sat with Luana in a double seat well forward. Channing Mace and Natalie had the seat just behind them. Mrs. Grazzard occupied a seat across the aisle and Jason sat behind her.

Since he had left the Grazzards' suite last night, Jason had known that his life was in danger—a danger that increased as time passed. He was certain that an attempt would be made to kill him today or tonight. He might, he realized, have pursued his investigation in Honolulu with possibly surer results and with greater safety to himself. Yet his blueprint was complete, he believed, and what he wanted now was action.

(To be continued next week)

"I hate to bring this up, Lieutenant, but you're out of step"

## PAY-AS-YOU-GO

WHY the hesitation by various Congressional leaders to come out frankly for the Ruml plan, or some variant of same, to put all federal income-tax payers on a pay-as-you-go basis this year? Beardsley Ruml's idea (as most of us probably know by now) is to write off taxes on last year's incomes except in a few so-called windfall cases and let us all begin paying taxes this year on income as it comes in.

It is practical, feasible, and the only way yet suggested for by-passing a wave of tax defaults and bankruptcies along about March 15th. Yet a favorite attitude of lawmakers on the proposal is "Yes, but . . ."

We think this coyness must be traceable to the atmosphere that surrounded the adoption of the original income-tax amendment to the Constitution (Amendment 16) in 1913. Though sound in principle, the income tax had been agitated largely by demagogues, with whatever the version of "Soak the rich" was in those days. The income tax at first applied only to persons with large incomes, and only lightly at that, until the rates were steeply hoisted to help meet the bills for World War I. These people could easily pay taxes this year on last year's incomes, just as they paid any other bill.

The picture is changed now, by circumstances and by World War II. Instead of being a "Soak the rich" proposition, the federal income tax is a "Soak practically everybody" proposition. As at present collected, it is also a "keep all income-tax payers in perpetual hock to the government" proposition—because, instead of taxing our earnings as they are earned, the government waits till next year to come around for the tax, regardless of whether any taxpayer then is able to pay.

It is bad enough now, but it will be several times worse during the expected period of readjustment and seemingly inevitable large-scale unemployment following the war.

Congress had better just abandon the 1913 demagogues' demagoguery now, in 1943, and early in 1943, by shifting income-tax collections to the pay-as-you-go basis on which they should have been handled all along.

## Strikes Against Government

THE War Labor Board is right in coming out flat-footed against strikes by public servants, for whatever reason, against the cities, counties or other government organisms that employ them. Calvin Coolidge stated the case in 1919 when, having smashed the Boston police strike, he explained his refusal to reinstate the striking policemen by telling Samuel Gompers: "The right of the police of Boston to affiliate (with a labor union) has always been questioned, never granted, is now prohibited . . . There is no right to strike against the public safety by anybody, anywhere, at any time."

Not that public servants should not be entitled to air real or fancied grievances where they can get an open-minded hearing. They should. Most jobs in public service are none too well paid, many of them are monotonous or downright disagreeable, many a head clerk in some governmental organization is a nasty little Hitler at heart. Ways of remedying such conditions can and should be worked out.

But when it comes to striking, the inflexible rule laid down by Mr. Coolidge should continue to prevail all over this country. A strike by public servants against the public which pays their salaries and the government agency that employs them is a kind of revolution. As such, it cannot be tolerated; because by tolerating it, the struck government agency would be surrendering some of its essential powers to the strike leaders. Coolidge saw all that and gave it the right and the complete answer in the fewest possible words.

## One Soldier's Suicide

A TWENTY-THREE-YEAR-OLD soldier was found dead in a parked automobile the other day in New York City. He had hooked a hose to the exhaust and killed himself with carbon monoxide. He left a note saying he

had contracted gonorrhea, knew it was incurable, and felt this was the only way out. As a matter of fact, he had no venereal disease at all.

The assistant medical examiner who performed the autopsy commented that here was a victim of "the hell-fire-and-brimstone method of sex education"—the method based on frightening youngsters out from under their hats with tales of horrors of venereal disease and dark hints that it can never really be cured.

The incident renews our conviction that we have not more than well begun, in this country, the only sort of fight against venereal disease that has a hope of winning—frank discussion, wide publicity, calling these afflictions by their right names, educating young people to their dangers but not to the fact that they can be cured if treatment begun soon enough and persisted in.

It is reassuring to note that the U. S. Public Health Service is redoubling its efforts, and the Army and Navy medical authorities are doing their utmost to spread the truth about venereal disease throughout the fighting forces.

## How About that Garden?

IT ISN'T too early to begin to think about your Victory Garden for this spring, summer and fall. If you have any ground at all on which you can raise vegetables, better get set. We're going to need all the food we can produce, for our fighting men, our Lend-Lease clients and ourselves. As your food ration book will eloquently inform you.

You can get information from the Department of Agriculture, probably from your local Civil Defense office, or—perhaps best of all—from the man next door, who has long been a garden hand and will be overjoyed to tell you everything he knows about it.

Gardening is a delightful hobby at any time. At this time, it's a public and patriotic service in boot.

# How dramatic nation-wide tire test launched America's synthetic rubber program

**Two years before Pearl Harbor**, a lot of far-seeing Americans knew what was going on. For one thing, they knew about synthetic rubber. They felt that America ought to start a real program for making it. So hundreds of them bought B. F. Goodrich Silvertown Tires in which more than half of the rubber was Ameripol, the B. F. Goodrich synthetic. These were the first tires made with synthetic rubber ever sold to American car owners. Hundreds of leading companies and private citizens bought them and tested them on all kinds of roads. And these new tires passed the test! The Borden Company was one of many reporting more than 30,000 miles of wear!

**Today another test is going on.** In service with our armed forces synthetic rubber is meeting tests that peacetime could never provide. Because of the "know how" gained before the war, B. F. Goodrich is producing synthetic rubber goods today that more than overtake the Axis' 20-year head start. Tires now built with less than one pound of natural rubber, tank treads, airplane De-Icers, bullet-sealing fuel tanks, and hose are just a few uses for America's new man-made rubber. But remember this, please: there still isn't enough. So the Army and Navy are saving rubber, just as you are!

**After victory, your new car** may have tires made wholly or partially of synthetic rubber. That's why you'll want to remember this: Before our country went to war, B. F. Goodrich was the *only* company to offer tires made with synthetic rubber to the general public. Naturally we've more experience building tires with it than anyone else. Naturally, too, we've had more experience testing these tires under actual operating conditions. So we can promise you that our after-the-war tires will be tops in mileage and safety. The name B. F. Goodrich, which has always stood for "First in Rubber," has also taken on the important new meaning of "First in Synthetic Rubber."

A few of the many companies that bought Ameripol tires in 1940 and 1941:

## DU BARRY WAS A LADY

A Metro-Goldwyn-Mayer Picture  
starring

**RED LUCILLE GENE  
SKELTON • BALL • KELLY**

**FEATURED PLAYERS:** Virginia O'Brien  
"Rags" Ragland, Tommy Dorsey and  
his Orchestra

**SCREEN PLAY BY:** Irving Brecher. Ad-  
aptation by: Nancy Hamilton. Addi-  
tional dialogue by: Wilkie Mahoney

**DIRECTED BY:** Roy Del Ruth

**PRODUCED BY:** Arthur Freed

Probably the gayest musical comedy the screen has shown for years is MGM's "Du Barry Was a Lady". Here is one that makes sense and nonsense in congenial proportions. It has taken the best features of the big Broadway show which ran for about a year and added something that only the screen can add.

This story of a mad dream in Technicolor provides every opportunity that clever comic writers and performers could wish for... plus showy proceedings that give a glitter and sparkle not equalled since the memorable "Ziegfeld Girl". Without neglecting comedy for one instant the producers have concentrated feminine beauty and dazzling decor into an entertainment that could be reviewed in the beauty columns of the newspapers as well as on the amusement page.

We are tired of saying that Red Skelton "dood it" but in "Du Barry" he "dood it" again. His able associates Lucille Ball and Gene Kelly deserve top billing and the featured players in the cast provide a problem in selection as to which was the most perfect.

"Du Barry" will appeal to all special tastes and most of the senses. Particularly those of hearing and seeing. The take-off on the Esquire Girl attracted prominent artists to Hollywood to paint their conceptions of the composite American beauty in "Du Barry Was a Lady". If you react to lips and hips and eyes, ankles and profiles, rush to your place in the bald-headed row.

**DITTIES YOU WILL HEAR MORE OF:** Cole Porter's witty and simple tunes give the production musical force: "Do I Love You!", "Katie Went to Haiti!", "Madame, I Like Your Crepes Suzettes", "Friendship", "Du Barry Was a Lady", "I Love a Petty Girl".  
**P.S.** All this and Technicolor too!

**BACKGROUND NOTE:** "Du Barry" is based on the play produced on Broadway by B. G. DeSylva and written by Herbert Fields and B. G. DeSylva.

**NOTE ABOUT FUTURE PICTURE:** From all sides we hear that the William Saroyan story "The Human Comedy" directed by Clarence Brown, produced at the MGM Studios is the most perfect portrayal of American life as yet revealed by the screen. Mickey Rooney stars as the American boy.

## ANY WEEK

OCTAVUS ROY COHEN, the short and long story writer, has just returned from Washington somewhat more perplexed than any of the characters he has created. When he went down, he was still convinced that Winston Churchill's apostrophe to the R.A.F. was about as fine a bit of rhetoric as he had ever heard: "Never have so many owed so much to so few." But during his sojourn in Washington he got quite as much mixed up as a great number of the people he talked to there. Thinking of Washington, of course, and not of the R.A.F., Mr. Cohen now goes about murmuring to himself: "Never was so little done by so many for so much."

WE'VE just had a letter from a young lady whom we may not identify. With her letter, she sends us a short story. If we had time we'd plunge back into our memory, searching for recollections of a less publishable manuscript. But that wasn't necessary after all. Her letter said: "Of course you can't use this. But before we can pass our English course, we must have either an acceptance or a rejection slip from some magazine. Therefore, I have dashed the enclosed story off and ask you to send me a rejection slip as soon as possible because our term is about to end. Thank you."

THE following was overheard on Michigan Avenue, Chicago, by Mr. George Wissert Cronin of Milwaukee, Wisconsin, and we have the letter to prove it. Two desirable young ladies were walking a few feet in front of Mr. Cronin, and one of them said, "I am getting very tired of camp soldiers. I hope we meet a couple who have been fighting in the Pacific or in Africa." The other girl asked her why. Otherwise, the first girl would not have said,

"Because I want to ask them how they made out." We think it only fair to tell Mr. Cronin that we have received a number of variants of that—all of them true, of course. They all indicate that the girls are getting into the second stage of their side of the war. That is, they are getting somewhat fed up with lads who are about to strike a blow for freedom, and they hunger for those who have already struck a

couple. For example, Miss Emma Lusk of Baltimore, Maryland, says that she asked a soldier whom she met at a USO dance whether he had seen service on any of our countless fronts. He had not. She asked him whether he expected to see any. He said that that depended upon the wisdom—or lack thereof—of his commanding officers. "Where would you like to go and when?" she then asked. "That depends on who needs a good man most, General MacArthur or General Eisenhower," replied the soldier, adding, "Lady, where did you learn to dance? In the morgue?"

FROM the Navy Department and Mr. Robert E. Murto of Washington, D. C., we get word that in his article, Referee's Holiday, Dan Parker twice states that it costs the government \$2,700 to make a Navy flier. This was understatement. To convert a young man into a Navy aviator costs us \$27,000, and considering what these young airmen do to ships which Japan is silly enough to launch, it's cheap enough. Either Mr. Parker or the typesetter dropped a zero. You will be very glad to know that we have resisted the temptation to make a crack to the effect that these \$27,000 young men do that, too. Gosh, that's funny!

NOTICE is hereby given to all official orators and job-holding article writers that Mr. Nat Broadie of Indianapolis, Indiana, will hereafter neither listen nor read: "I have heard four government guys talk for more than an hour each on reasons why we ought to shut up and get to work. It has just dawned upon me to wonder why the audiences didn't rise and ask them the same. I have read a couple of dozen articles by congressmen and war-board bosses telling us how to win the war. I am now writing to them, asking them why they don't read their own stuff and stop making the same old blunders. From now on, I'm with old Cordell Hull, our Secretary of State who don't say nothin', but pretty soon something awful happens to the other side on account of what he's been doing while the little guys are making speeches and writing pieces."

THAT makes two of us. . . . W. D.

TSK! TSK! IN HIS DAY  
PRO-PHY-LAC-TIC PAID  
HIM PLENTY!

## KEEP UP WITH THE WORLD

By Freling Foster

In British units of native troops along the Gold Coast of West Africa, the soldiers are permitted to have their wives with them in the barracks, privates being allowed one, sergeants two and sergeant majors four. When the men are transferred to another camp, the transportation costs for the ladies are also borne by the British government.

Owing to the scarcity of merchandise, the 1,800,000 retail stores in this country at the end of 1941 will probably have shrunk to 1,500,000 by the end of 1943. In other words, during this two-year period, about 625,000 shops are expected to close and only 325,000 new ones are expected to open.

Our present need for scientific knowledge is shown by the tremendous increase in the publication and sale of technical books. The number of titles published has grown from 452 in 1939 to 791 in 1942, with the retail demand about five times larger than before the war. Certain of these books have reached a sales volume of 250,000 copies within the past year.

Law schools have been hit harder by the war than any other group of educational institutions. During the 1940 fall term, the ninety-four organizations belonging to the Association of American Law Schools had 19,700 students, while during the 1942 fall term the number was only about 7,100. Today it is probably less than 6,500.—By Edward Klaskow, Jersey City, New Jersey.

On four occasions, Japanese warplanes have dropped packets of rice impregnated with bubonic plague germs over Chinese cities in attempts to start epidemics of this disease, according to the Chinese Red Cross.

The current edition of *Aerosphere*, an aircraft encyclopedia, is the only book whose purchasers must be reported to the federal government. Although costing only \$12.50 and not very difficult to purchase, its contents are so valuable that the War Department wants to know the identity of everyone buying a copy.

The USO now has more than 600 clubs, 300 units and lounges, 100 information centers and 50 mobile units in 500 cities and towns of the country, for the service and entertainment of our soldiers. The organization also maintains 70 road shows, with 1,000 performers, the scenery, salaries and traveling expenses of which will amount to about \$4,000,000 in 1943.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. For years hog bristle made the  
best tooth brushes... then along  
came round-end **PROLON**

Actual Photo-Micrographs

Next time you buy a tooth brush, keep this in mind: Years of laboratory research have produced amazing new synthetic bristles... better, longer-lasting than natural bristle.

And among the new synthetic tooth brush bristles being marketed under various trade names, far and away the best are those made by du Pont.

### PROLON—no finer bristle made

"Prolon" is our name for the very finest grade of this synthetic bristle that du Pont makes. So, when you read or hear competitive tooth brush claims, ask yourself this: *How can the same du Pont bristle, in another brush under another name, last longer or clean better than under the name "Prolon" in a Pro-phy-lac-tic Tooth Brush?* You know

the answer... it can't!

Pro-phy-lac-tic's big plus is that Prolon is the only synthetic bristle that is rounded at the ends.

Yes, under a special patented process, exclusive with Pro-phy-lac-tic, we smooth and round the end of each and every Prolon bristle in the Bonded Pro-phy-lac-tic Tooth Brush. See for yourself how much gentler these round ends are on tender gums!

### Only PROLON has "round ends"

Remember, no other tooth brush has this important feature. So, next time you buy a tooth brush get the best you can buy for your money... get the Bonded Pro-phy-lac-tic Tooth Brush—the only tooth brush, by the way, with a written six-month guarantee.

... and don't miss this new line of  
hair brushes in gleaming Jewelite!

Pro-phy-lac-tic's latest triumph! Dresser sets and toilet brushes in crystal-clear plastic. Choice of four gleaming, jewel colors. Transparent Jewelite backs. Moisture-resistant, snow-white Prolon bristles. \$1.50 to \$10.00—at most brush-goods counters. Illustrated: Roll-Wave, a unique "curved-to-the-head" brush... with comb, \$4.50

PRO-PHY-LAC-TIC BRUSH CO., Florence, Mass.

# *Soldier of Service"*

"The Voice with the Smile" has always been a part of the telephone business and we want to keep it that way.

Even under the stress of war, the men and women of the Bell System are as anxious as ever to see that you get friendly, courteous service. And they are anxious, too, to give the fastest possible service—especially to those who need speed to help win the war.

You can help them by not using Long Distance to war-busy centers unless it is absolutely necessary. For all your patience and understanding so far, many thanks.

**WAR CALLS COME FIRST**

BELL TELEPHONE SYSTEM

*Gilbert Rohde's*

RADIO OF THE FUTURE

"With the limited wall spaces to be found in most living rooms," predicts designer Gilbert Rohde, "artistic arrangement of furniture may be achieved by grouping several major wall pieces into one single unit . . . such as the radio, bookcase and desk illustrated above."

Right now both great Admiral plants are devoted exclusively to the making of communication equipment for our armed forces. Gilbert Rohde's intriguing suggestion for the radio of the future obviously will have to await the war's end. His design, however . . . as well as others to be pictured in these columns . . . are providing Admiral engineers with many stimulating ideas. When victory is won and with it the blessings of peace . . . you may expect many exciting innovations in radio entertainment from Admiral, America's Smart Set. Continental Radio & Television Corporation, Chicago, U.S.A.

AMERICA'S SMART SET

TUNE IN . . . 2:30-2:55 p.m. New York time, Sunday afternoon. Admiral Radio brings you "World News Today" over the Columbia Network . . . with direct short wave reports from the leading news centers of the world.

Asking no favors, Captain (now Admiral) Wm. F. Halsey won his wings the hard way at Pensacola when he was 52

THE victories scored by Admiral William F. Halsey in the Pacific war came as no surprise to his classmates at the Pensacola, Florida, Naval Flying School. They knew all along that he had what it takes.

Halsey, you know, learned to fly when he was fifty-two—which makes the admiration of his class members especially significant. He was one of the "Pensacola Admirals," the group of ranking naval officers who were assigned to flight training in the late '20s and the '30s. They were top-notch surface-ship skippers who were taught to fly and then put in charge of the Navy's Air Forces and aircraft carriers. Some of them took their flying course in stride as a sort of indoctrination class. But not Halsey.

Navy men who were at the Florida air school back in 1934 say that the gray-haired naval officer was the most conscientious student in their class. He was a captain then, but he asked questions of the aviation cadets who had a few weeks' more experience than he. "Pudge" Halsey, in fact, approached aviation in the same manner he had learned seamanship back at Annapolis thirty years earlier, and with the same doggedness with which he had played fullback there in 1904. His four stripes could have carried him through, but he insisted on doing everything the youngsters did. Halsey took the Pensacola course from A to Z, even though he had—at his age—no apparent natural aptitude for flying. He only qualified to fly single-seater fighters after cracking up two of them.

One episode at Pensacola definitely sold Halsey to the men who later were to fly under him in the Pacific battles. There was a custom that the last member of each class to solo at Pensacola would be ducked by his classmates. Captain

Halsey turned out to be the "anchor man" of his class.

When he made his first flight and brought his seaplane back to the base, number of the aviation cadets were loitering around after finishing their own hop. A bit nervously, they wondered what to do. Captain Halsey was a "good guy, but after all, he was a four-striper.

The future South Pacific commander soon solved their difficulty. Getting out of his plane, he approached them, stripped off his helmet, goggles and wrist watch and said, "Well, gentlemen, I am ready.

They dunked him—and have loved him ever since.

HERE'S a problem for either the psychologists or the Gallup Poll: Why do aviators like to fly under bridges? We've observed this phenomenon ever since we started covering aviation years ago. Pilots seem to get no kick out of flying high but they love to fly low. There's something about putting an air plane underneath a bridge that has fascinated all birdmen since the Wrights. Apparently it beats even downing an enemy warship with bombs.

At least, there is the tale told by an airman who has just returned from the war fronts. He relates the story of a young Army flier attached to a fighter squadron at a new American base overseas. The lack of combat action bored the pilot. Daily he flew a Bell P-39 Airacobra, but its 400-mile-an-hour speed did not satisfy him. On the other hand there was a new bridge near the air base under which he longed to fly. Regulations, however, strictly barred this.

Despite this ban, the Army airman announced his intention of taking his plane between the arches of the bridge, but

(Continued on page 52)

## "UNTIL I COME BACK"...

WE'RE over 20,000 feet now (the coffee's frozen in the thermos) and that's the Zuyder Zee below. We must be halfway across Holland.

Funny thing what happens to a fellow . . .

Those are the same old stars and the same old moon that the girl and I were looking at last summer.

And here I am—flying 300 miles an hour in a bubble of glass, with ten tons of T.N.T.

Somehow—this isn't the way I imagined it at all, the day I enlisted. Don't get me wrong—sure I was sore at the Japs and the Nazis—but mostly, it was the thrill of the Great Adventure.

Well, I know now—the *real* reasons—why I'm here paying my first call on Hitler.

It's only when you get away from the U. S. A. that you find out what the shootin's really about and what you're fighting for.

I learned from that Czech chap in London. The refugee, the nice old fellow who reminded me of

Dad except for the maimed hands. I was dumb enough to ask about it. "I got that," he said, "for writing a book the Nazis didn't like . . ."

Then there was the captured German pilot who screamed and spit when Izzy Jacobs offered him a cigarette . . . how do fellows get that way?

And that crazy Polish pilot—the fellow who rammed the Messerschmitt. After the funeral I learned what was eating him. Seems as how he has a sister in Warsaw who had been sent to a German Officers' Club . . .

I hope to hell Hitler's home tonight . . . light and wind are perfect.

Yes, sir, I've met 'em by the dozens over here—guys warped by hate—guys who have had the ambition beaten out of them—guys who look at you as if you were crazy when you tell 'em what America is like.

They say America will be a lot different after this war.

Well, maybe so.

But as for me, I know the score . . . you learn fast over here. I know now there's only one decent way to live in this world—the way my folks lived and the way I want to live.

When you find a thing that works as good as that—brother, be careful with that monkey-wrench.

And there's one little spot—well, if they do as much as change the smell of the corner drug store—I will murder the guy.

I want my girl back, just as she is, and that bungalow on Maple Avenue . . .

I want that old roll-top desk of mine at the electric company, with a chance to move upstairs, or quit if I want to.

I want to see that old school of mine, and our church, just as they are—because I want my kids to go there.

That's *my home town* . . .

Keep it for me the way I remember it, just the way I see it now—until I come back.

NASH-KELVINATOR CORPORATION, DETROIT, MICHIGAN

*Published in the belief that here at Nash-Kelvinator we carry a double responsibility—not only to build the weapons for victory but also to build toward the kind of a future, an American future, our boys will want when they come back.*

# The lure of the Prairies

IN OUR great-grandfathers' day, all manner of men were stirred by the richness and promise of the wild, unsettled West.

RICH MEN, poor men, thrifty householders and ne'er-do-wells: they packed their families and possessions in covered wagons and creaked westward, urged on by stories of gold and incredibly fertile farmlands.

THE JOURNEY they made was a dangerous journey in those days. Any stray clump of weeds or buffalo grass was apt to hide a scout for hostile Indians. The man who traveled alone risked almost certain disaster and death. Not only one-family outfits, but even parties of five or six families were sometimes massacred.

SO OUR great-grandfathers pooled their strength and traveled in large wagon trains. In this way, they could keep a constant watch against a surprise attack, and, if an attack came, there were enough men with rifles to have a good chance of beating it off.

NOW THE DAY of the pioneers and straining oxen is over. But the great-grandchildren of the pioneers still face danger of another kind and it is still necessary for them to pool their strength to protect their lives and families.

THE PROTECTION afforded by firearms has given way to a more peaceful way of protection. That protection is called insurance.

IF YOU should break an arm or a leg, Accident insurance will pay the doctor's, nursing, or hospital bills. Accident insurance will continue to pay you as long as you are laid up.

IF ANYONE gets hurt on your property and brings suit against you, Liability insurance will take the

legal worries off your mind and pay the damages for which you may be held legally liable.

THERE IS insurance to protect you from fire, theft, and windstorm. Through insurance you can pay for your children's education and provide for an income in your old age. Life insurance will also guard your family from want if you should pass away.

IN FACT, no other form of investment, requiring the same small amount of money, can begin to give you the protection and peace and security that insurance does.

IF YOU'D like to find out more about the ways which insurance can help you and your family, the nearest Travelers insurance agent or your own broker will be glad to give you all the information you wish. You will find Travelers representatives very helpful.

MORAL: Insure in The Travelers. All forms of insurance. The Travelers Insurance Company, The Travelers Indemnity Company, The Travelers Fire Insurance Company, Hartford, Connecticut.

The successful voyage of the first mercy ship has led to monthly shipments of food from America to the famine-stricken people of Greece

## FEED THE STARVING NOW

By Herbert Hoover and Hugh Gibson

By sending food to suffering Greece, we have proved that relief is desirable and workable. Mr. Hoover warns that we must give prompt help to our occupied allies who are facing mental and physical degeneration. To wait for the postwar period to help them may be too late

**F**OOD is being sent through the blockade to the starving Greeks. We can rejoice that this heroic people is being saved from annihilation. Occupied by the Axis armies, Greece is being fed through the Allied blockade and under neutral supervision, and the operation is certified by our government not to benefit the Axis. It receives the approval and help of our government. As Americans, we can rejoice in the wisdom that has led to this total reversal of our governmental policy on relief.

It has proved workable in Greece—although on a scale our government describes as “still woefully inadequate”—so we are warranted in hoping for further and early action.

First: It is imperative that there be an immediate increase in the volume of aid to Greece if that gallant people is to be saved.

Second: The time has come to decide (before it is too late) what we are going to do for 50,000,000 starving people (including some 12,000,000 children) in Belgium, Holland, Norway and Poland.

Indeed, the march of events is accelerating at such a rate as to justify the hope of action before this article appears. But if there is no such action, a little straight-from-the-shoulder speaking may be of help in bringing a realization of some moral and political obligations. In any event, this article will serve its purpose: to advocate action if we are still lagging;

to justify and support the government if it is moved to act quickly and decisively.

The slowly increasing trickle of help to Greece began in the summer of 1941. Its beginning is significant. One day in August, the London Times printed a brief paragraph to the effect that the Foreign Office had consented to opening the blockade for certain quantities of food to go to the suffering population of Greece.

The second of the writers of this article was in London at the request of two of the occupied countries, trying to persuade the British to open the blockade so as to allow feeding of the other small democracies. He was at once deluged

(Continued on page 48)

# THE *Guardian Hound*

BY R. G. KIRK

Cumor was no one to trifle with. He was the huge Irish wolfhound who watched over Shannon MacArt and obeyed her—except in a crisis. In a crisis he took orders from her uncle

ILLUSTRATED BY ELMORE BROWN

THE mental stewpot where ideas cook—the old subliminal if you've got to have a six-bit word—hadn't sent up a bubble for a month. So I slapped a shroud on the typewriter and walked out. I headed north for San Vicente, where my brother has a little beach house, to get a change of scenery and some storming rides on the Waikikian surf for which the lovely little San Vicente Bay is famous.

Our old family friend Josh Kitigawa lived in San Vicente, too. Josh was an American-born scion of the far-flung Kitigawa clan, which owned most of the coastal ranches back of San Vicente Bay. He had played water polo on the varsity with me at U.C.L.A., and, five years away from college, kept himself in such shape that he would hop to a three- or four-mile swim upon the slightest provocation. I love a distance swim, but not alone.

In San Vicente all I had to do to get a swimming escort who was about fifty per cent seal was to walk into the Ameri-

can Pacific Sunset Nosegay Shop, which was headquarters for the many Kiti enterprises. There Josh would very likely be, all set to leap up from behind his desk and hustle into a pair of swim trunks.

But Josh was not available when I got to San Vicente. He would be away on business for a day or two. So sorry I would be informed I was in town the moment he returned. So very sorry.

So I got none of the incomparable physical and mental cleanups that hard salt-water paddles give. And December day, feeling that a good workout in the sun might start recharging the batteries that had not taken on a single charge from a whole week on a careering surfboard, I started off for a half-day trip up into the coastal hills.

I had to climb for sunshine that day for a low fog lay over all the coast. In an hour I was above it, standing on the bare, bleached shale of a mountain firebreak. Solitary summits lifted about, high islands in a faery sea of fog. And there was perfect, peaceful quiet very pregnant with the stuff that dreams are made of.

But as I stood and listened to that transcending silence it was broken—rudely, though the voice that echoed through it was a great arresting one. There was savage music in it which I longed in mystic mountains high above the fog. And I recognized the sound. I knew that volume, resonance, authority. People who own the tall wolfhound of Ireland have a saying: "He very seldom speaks—but when he does!" That was an Irish wolfhound's voice.

There was no judging how far it had carried through the mountain stillness. Ahead of me the ridges all were clear. The hollows then—they had to be looked into. I faced the next ascent, lifted a foot to start an eager scramble—then he took that first step, and my breath too; for there, looking down at me from the summit of the slope ahead was no dog in the world but George MacArt's magnificent wolfhound Cumor. Though I had never seen him actually, I knew him on the instant, for I have a picture of him on my desk. He is without a doubt the grandest specimen of his breed.

George MacArt? Unless you know wolf dogs you'll scarcely know him. A couple years ago I didn't. Then I got this concise letter:

"My dear Mr. More:

"I have come upon a fiction piece of yours, done with enthusiasm and some evidence of study, about the ancient wolf dog of the Gael. May I inquire what your research reading brought you about the hound prior to 1352 B.C.?"

"Yours sincerely,  
"GEORGE MACART."

That was the start of a delightful correspondence. The man, it proved, was retired contractor who, as he put it, needed and could afford a hobby. And since it could be an expensive one, and he was Irish, he had chosen Irish wolfhounds.

At his fifty-acre place in the wooded country of northeastern Pennsylvania he bred and owned the best; and he had antiquaries searching old libraries everywhere for lore of the romantic breed—in Iceland, Poland, India, Arabia, where centuries ago the great hounds had been sent to jarl and king and grand mogul.

(Continued on page 21)

Fearlessly Shannon pulled back on the snarling dog's collar. "And what's this all about, big hound?" she said

Lois specializes in sunrise serenades for the early-rising Armed Forces, who call her Reveille Sweetheart

WHEN they offered her a lead on Broadway in Cole Porter's new show, *Something For the Boys*—an opportunity she had spent all her adulthood waiting for—Lois January turned it down, and her heart burst a blood vessel.

"Are you nuts?" he screamed, writhing on the floor in financial agony. "You got rocks in your head? I get you one chance in a million, and you wanna spend the rest of your life getting up at four-thirty in the morning."

"I'm happy," Lois insisted.

"I'm disgusted," the agent said, as he walked out.

But not January. You can still tune her in at 5:30 every morning through the facilities of the Columbia Broadcasting System in New York.

I know what you're thinking. You wouldn't get up at that hour to hear Christopher Columbus broadcast from heaven. But did you ever stop to think for a minute that, at 5:30 A.M., more than three million soldiers are waking the sleep out of their heads, preparing to stand reveille, and that the first thing they do is to turn on the radio?

"January's what makes reveille bearable," a soldier at Fort Bragg says. "She sounds like an angel."

"The truth is," she admits, "I sound like myself."

That means a five-foot three-inch, 113-pound, 25-year-old package of brown hair, gray eyes, curves, a high-pitched, pleasant Texas twang, and a good many other physical assets which add up to a sizable inventory.

Her alarm clock goes off at 4:30 A.M. At 5:30, she's in the CBS studio, spinning records like mad, singing tunes, chatting to soldiers who've written in offering to make, if necessary, the supreme sacrifice of marriage.

The script goes something like this: "Hello, fellows! This is your Lois January. How'd you sleep last night? You did? Well, what's the use of kicking? Tomorrow's another day. I've got a letter here from Sergeant Kleitz at Camp Edwards, Massachusetts. 'Do me a favor, chicken,' the sarge writes, 'and let me hear you sing Dearly Beloved.' You bet I will, sarge, honey. Here it is, especially for you . . . etc."

#### Early-Morning Complainers

In addition to countless servicemen and insomnia sufferers, the January audience consists of farmers and war workers. The few early-rising women who tune her in frequently write and complain.

"You ought to be ashamed of yourself," they say, "stealing other girls' sweethearts."

Lois who hails from McAllen, near the Rio Grande, pays the old girls no mind. She has a husband of her own and is determined to keep the soldiers in good spirits, come what may. To her, all men in uniform are "honey."

Soldiers write in, "Lover, please be tender." Most popular line: "I'm single and I've fallen in love with your voice."

To all these admirers, Lois replies with a portrait of herself drawn by a soldier. Of late, however, a good many farmers have been proposing and sending gifts. A dairy specialist up at Bridgewater, Massachusetts, writes each day. "I have named my prize chicken after you," he reported recently. "I call it Lady Lois of 1943. Enclosed please find a dozen of her eggs."

"I don't mind getting up at four-thirty every morning and playing records," she says. "Really, I don't. I bring a little warmth into the cold morning lives of these people, and I think it's worthy and unusual because they expect January to be freezing."

Not this January. At 5:30 A.M., six days a week, the Armed Forces of the nation insist that her broadcast sizzles. ★★★

# This is January!

# They Do Feel Wonderful

By Victoria Lincoln

ILLUSTRATED BY JOHN HOLMGREN

A lot of men will find themselves in Hank's shoes when this war is won. They would do well to begin their education now

Hank held his son in the crook of his arm as he matched the wet clothes to the dry and folded the clean diaper

THE first time Hank saw Julie was winning a jitterbug contest on the stage of a neighborhood movie house. She danced with her kid brother who had just had his seventeenth birthday, and many people in the audience took her for the younger of the two with her bronze hair flying and the natural color flaring up in her cheeks until they were bright even in the blanching glare of the footlights.

Hank didn't think much of jitterbugging or of girls under twenty, but as he stared at her he felt something funny happening to him inside, as if the elevator had taken a sudden drop. He turned to the man beside him.

"You know everyone around here," he said. "Who is that girl?"

"That's Julie Winslow," was the reply. "Boy's her brother. She's nineteen, nice kid, nice family. Want to meet her?"

"Yeah," said Hank, staring. "Yeah, thanks. Like to."

Julie Winslow, he thought. Nineteen years old. So very young. Julie Winslow. He himself was twenty-six.

"Old enough to be your father," he told her later with a half-rueful grin.

Julie was hurt. "I'm not a child," she said, standing straight and tilting up her small square chin. "I graduated from high. I've been working for a year and half."

"Working? What can you do?"

She laughed defensively and flushed. "I'm a clerk in a toy store," she said. Then, as they both laughed together, "Well, how about you? Why are you in this town?"

"I'm a ceramic engineer."

"Oh." Blankly. "Be here long?"

"Till the dam is finished."

That sounded a nice long time, at first. Time to go to the movies, to go dancing to walk home slowly through the small town streets, holding hands, getting acquainted.

Only Julie was so sweet. After a week or so Hank knew that until the dam was finished was a very short time, that anything less than the rest of his life was a very short time.

But she's such a kid, he thought helplessly. It wouldn't be fair to tie her up before she's old enough to know her mind. Besides, there's a war coming.

There was a war coming.

ON DARK, dull Sundays in December how many, many people just naturally sit in the living room and listen to the radio; Hank and Julie heard about Pearl Harbor as they sat around the radio with her parents, her brother, her Aunt Sue (visiting) and Mr. Wardour from next door whose wife was away visiting her folks. It was a small room for so many, but it was cold out, and raining, and everyone had seen the only good show in town. Someone turned on the radio, aimlessly, not feeling for any particular station, and the tense, excited voice broke in upon them and all their own voices rose, clamoring.

"Come on," said Julie abruptly. "Come out in the kitchen with me, Hank. I want to get some coffee."

In the quiet of the kitchen they sat close together at the alcove table, but they did not embrace or touch each other's hands.

"Well," he said, finally, "here it is. Funny, I sort of feel better."

"Better, Hank?"

"Yes. Having it settled."

"Will it make a lot of difference to you, Hank? I mean, right away?"

"Not much, really. I'll go into the Engineers."

She stood up and went to the stove. She looked small and tired and somehow

# Port of Navy Wives

By Helena Huntington Smith

San Diego, one-time vacation town, is now the overcrowded jumping-off spot for the Navy in the Pacific and the new home for Navy wives. The girls drive streetcars, work as housekeepers, sleep in cars and on cots in lobbies and hallways—and wait

**W**ERE you ever in San Diego? It was an ideal vacation spot once, with its southern California boop-a-doop and the climate, and Ti-juaná right across the border. Nothing serious ever happened to San Diego in the old days, except Townsend Plan meetings and the winter tourist trade; and in peaceful little Coronado across the bay, there were the retired admirals and the green lawns and the palm trees against the sunset.

Well, the palm trees and the sunset are still there, but today San Diego is the jumping-off place for the war in the Pacific, and nothing else matters. It is the biggest naval base on the West Coast and the home of Consolidated Aircraft, maker of giant bombers. No other town in the United States is so close to the war.

You'll see more bronze stars on service ribbons in a day in San Diego than in a swing all around the rest of the country. A bronze star on a yellow ribbon may mean service overseas before Pearl Harbor; it usually means that the wearer has been in action. You never know whom you're sitting next to in a restaurant. The quiet-looking lad in the Marine flier's uniform wears the blue-and-white ribbon of the Navy Cross, but you don't notice it till you catch the words "—just got back from the Solomons." You wonder whom he's talking about, and he continues, "They brought a squadron of us back day before yesterday."

On the street, you see sailors with beards. Why? "Oh, they grow 'em out there. Keeps the sun off, or something."

And since the action in the Pacific is largely the Navy's war, just as North Africa is the Army's show, San Diego is also the port of Navy wives. On the East Coast, Norfolk is the same.

They come there to be with Navy husbands who are taking off for Shangri-la, and when the husbands have gone, they stay on, waiting for news, hoping that some bright day the phone will ring and a voice will say, "I just got in. I've got forty-eight hours."

It happens. And so do stranger things. Ten men, listed as missing and mourned as dead, have walked up the front steps of homes in San Diego or Coronado since the war started. With radio silence enforced on ships crossing the Pacific, there has been no warning that they were alive after all. They have simply come home—with the same fine old thunderclap effect their return would have produced in the days of sailing ships and crinolines. And sailors' wives, being tough, never did faint for joy.

"Out there" is so close to San Diego that when the local society editor calls up some commander's wife whom she hasn't seen lately, to ask about a little social item, she lifts the telephone with a feeling of half dread—"because I'm afraid something may have happened since I talked to her last."

And in Coronado where the concentration of naval families is greatest, mothers have a new problem in child psychology to worry about. For children playing in Coronado dooryards, too young to know what death means, chatter familiarly about this or that playmate's father being killed in action—as though death were part of a game grownups play.

Loss of the aircraft carriers has hit the town hard, each time one of the flat-tops went down, there is no word for the families "on the beach," till the rumormongers first, but no Navy wife ever believes the rumors that her husband's ship is lost. And so there is a chapter after chapter of experiences like that of a girl whose husband was on the Lexington. One morning last summer she had (Continued on page 74)

Ensign Worden shows his wife how to cook vegetables in the Solomon Island manner. Previously reported dead, he turned up at Henderson Field after three months of struggle in the jungle

Below: Hilda Coe works a band saw at one of the most difficult jobs around Consolidated. Here she is trimming a "blister" that will house one of the airplane's machine gunners

Navy wives are driving cabs and busses. Alma's husband is a bosun's mate and she is the mother of three children. Hacking pays well but is more important, Mrs. Collins loves her work

"Was it well for you to leave your husband?" he inquired. "It seemed better if I came home to my own people," Leone said gently

## The Story Thus Far:

ARNOLD HATFORD, a wealthy Englishman, and his fascinating Eurasian wife, Leone, start on a house-boating jaunt not far from Shanghai. They have a guest: Lieutenant Daniel ("Dan") James, of the United States Marines. When Pearl Harbor is attacked, James hurries to Shanghai, where he finds that his ship has sailed! The Hatfords try to make their way to Hong Kong. . . .

James is arrested. With two other prisoners—Jenny Barchet, an American newspaper correspondent, and a Mrs. Shipman, who runs a home (the "Gate of Hope") for unfortunate girls—he is interrogated by a Japanese official: Shigo Kuyoshi. After which, he is imprisoned, and Mrs. Shipman and the girl are interned—Mrs. Shipman at her home, Jenny at her hotel.

Unfortunately, Shigo, attracted by Jenny, makes strong advances; and the girl is terrified. . . . On the way to Hong Kong, Leone

Hatford is far from happy. She is in love with Dan James; she longs to see him again. So, with the aid of Yang, their number one boy, she slips away from her husband. She hopes to make her way to Shanghai in time, and join her grandfather, old P'an Lao-yeh.

Yang's father and mother give her a warm greeting. In their simple little home, she meets a number of Chinese guerrillas, one of them—a tall, powerful young fellow—admires her.

Disguised as a peasant, Leone manages to get into Shanghai, where she goes to the "Gate of Hope" (a friend of Mrs. Shipman, she had once lived there). She finds the front gate guarded by two Japanese sentries. So she steals around to the back gate in an alley. Old Wang, one of Mrs. Shipman's loyal servants, is there. He does not recognize her, and she does not speak to him. Instead, she sits down on the edge of the alley.

No one is in sight in the alley. The place is silent. All the gates around her are closed.

## III

LEONE did not by any sign show who she was. She only sat down as though to ease her burden. Old Wang looked at her, and looked away again. But after a moment he came toward her.

"Is your fuel for sale, old woman?" he asked.

"Perhaps it is," she said. "If I can get what I ask for it."

Then, as he came near, she pushed away the dirty bandage from her eyes and smiled at him and said to him in her own voice, but made very low, "Do you know me, old Wang?"

He jumped a little and covered his mouth with his hand and his eyes grew big. Then he looked left and right. No one could be seen in the alley. He

came nearer to her still and whispered at her:

"It is you! But why are you like this? And where is your lord?"

"I have left him," she said simply. "He is on his way to Hong Kong. He will be safe enough, since he is English."

"But why—" the old man breathed.

"I am Chinese," she said in a low voice. "I am not foreign. The foreigners have despised me and so I am not English. I choose my Chinese blood, and have come back to my home."

"He was very good to you," the old man said.

She nodded. "Yes, he was good to me. But in Hong Kong there would be many English and few Chinese. They would

# BEHIND THE WALL

Life — and death — in Warsaw's Ghetto)

By Tosha Bialer

The author, her husband and son are the only persons ever known to have escaped from the Black Age revival of the ghetto set up by Germany in Warsaw. In this grimly factual narrative she tells the tragic story of Poland's Jews as they suffer and die behind the Wall that has become a new world symbol of German barbarism

THE first thing we felt when the Polish war came to an end was an overwhelming relief from aerial bombing. Only those who have been through air raids with no shelter to hide in will know what we felt. Gradually our men came home from the fighting—those who had escaped death or capture. Many people who had fled eastward during the campaign flocked back with some assurance that life would go on more or less as before.

There was little anxiety among the Jews in Warsaw. Naturally there would be the privations of war to contend with—hunger and cold and perhaps even disease; and then, for us as well as for our Christian compatriots, there was the deep humiliation at having been defeated and overrun by another people. As Jews, we did not expect more than that. The fate of the Jews in Germany should have warned us.

A few weeks after the end of the war, the Gestapo swarmed in and began their work of destruction.

They very soon made their intentions clear. Toward the end of 1939 all Jews were ordered to wear the yellow arm band, and all Jewish stores to display a

discriminating label. In certain streets with preponderantly Jewish population, posters were put up: "Infested Area!" "Beware! Thoroughfare Only!" This—as it was meant to—was an open invitation to all sorts of violence and plunder. The lawless elements of the city took full advantage of the opportunity to loot shops and private houses, break windows, and beat up persons wearing the stigmatizing arm band, encouraged at every point by officials of the secret police and led by the Storm Troopers who had accompanied the latter into the city. Searching for hidden arms was one of the most common excuses for the Gestapo to break into homes and commit any kind of outrage. On one such occasion my brother-in-law was arrested and dragged away in the middle of the night, and we never saw him again. Besides his wife, he left a little boy of six.

In March, 1940, Jews under forty were called up for compulsory labor. Many fled from the country, many more were able to evade the order with bribes or by hiding. But a great number were seized and sent away. Only one man returned to Warsaw to tell the story of that expedition. The labor conscripts were taken to the Russian front and there put to work leveling ground for airfields and roads, working chest-deep in ice-cold water for days. The food was scant, and the accommodations were so flimsy they gave little or no shelter against the Russian winter. Many died from exposure and exhaustion. None of this group was ever heard of again.

Early in 1940 we were puzzled to see gangs of workmen engaged in constructing what seemed to be parts of a wall in various sections of the city. The strange thing was that these parts did not appear to belong to any recognizable pattern but were scattered all over. Many guesses were made, and the general conclusion was that the wall was a strategic meas-

In the picture above are a few of the 600,000 Jews (the entire Jewish population of Warsaw) that the German conquerors have segregated in one of the most infamous ghettos in history. They have gathered in one of the better ghetto streets to listen to loud-speaker announcements and orders from the Gestapo

A street vender sells the yellow arm bands that all Jews in Poland have been required to wear since 1939, and must wear today even in their sealed and guarded ghetto

Below: The Germans made it as difficult as possible for the population of the ghetto to move around even within their own section. The street here is inside the walls but is completely closed off, and the bridge may be closed without notice

To prevent snatching, bread is sold from a locked cage. It is made of adulterated flour, and the bread allowance is five pounds per person each month. Note scantiness of woman's dress under coat

Transportation—except for horse-drawn carts—was completely stopped inside the ghetto. For those who could not walk—who could pay a few pennies, bicycle rickshas could be hired

ure, though directed against what or whom no one could imagine.

In the meantime, the Nazi administration was busy. All property, as well as stores, shops and other business enterprises, were placed under German receivership. The receivers, appropriately enough, were Ukrainians or Poles of German stock, both our traditional antagonists. We were helpless against these open acts of robbery. Scorn and derision were added to willful confiscation: Jews were ordered to remove and transport the "requisitioned" objects. Old and ailing men were deliberately picked to carry the heaviest loads. They had to carry their heavy burdens down many flights of stairs, the use of the elevators being forbidden to them.

The Day of Atonement is the holiest day of the year in a Jewish community. In 1940 it fell on October 8th. On that day the Germans published an order declaring that all Jews were to move out of certain specified sections of Warsaw, and that non-Jews had to leave the sections that were not specified. The deadline for this move was October 31st.

#### A Hegira of Horror

The last week of October was a nightmare of congestion and confusion. Try to picture one third of a large city's population, six hundred thousand people, moving through the streets in an endless stream of humanity, pushing, pulling, wheeling, dragging, carrying all their belongings from every part of the city to one small section, crowding one another more and more as they converged. No cars, no horses, no help of any sort was available to us, by order of the occupying authorities. Every kind of obstacle was invented to hinder us in moving our belongings. Pushcarts were about the only method of conveyance we had, and these were piled high with household goods, furnishing much amusement to the German onlookers, who delighted in overturning the carts and seeing us scrambling for our effects. Many of the

goods were confiscated arbitrarily without any explanation. Warsaw was an open highway, with the highwaymen in undisputed control. Everything that could not be transported in time was left behind after the moving and was declared ownerless and divided up among the Germans and their sympathizers.

In the ghetto, as some of us had begun to call it, half ironically and in jest, there was appalling chaos. Thousands of people were rushing around at the last minute trying to find a place to stay. Everything was already filled up but still they kept coming and somehow more room was found. The narrow, crooked streets of the most dilapidated section of Warsaw were crowded with pushcarts, their owners going from house to house asking the inevitable question: "Have you room?" The sidewalks were covered with their belongings. Children wandered, lost and crying; parents ran hither and yon seeking them, their cries drowned in the tremendous hubbub of half a million uprooted people.

The first days were spent in getting a foothold in our new surroundings, clearing up affairs, and trying to establish a design for living.

And then came the fifteenth of November, 1940, the day that none of us will ever forget.

That morning, as on every other, men and women set out on their way to work, storekeepers, employees, executives, most of whom worked in the non-Jewish sections. As they came to the various points where thoroughfares and streets crossed from the Jewish section into the non-Jewish districts, they ran against barbed wire strung across and guarded by German police who were stopping all traffic out of the Jewish section. Hastily they tried other streets, avenues, alleys, only to find in every case barbed wire or a solid brick wall, well guarded. There was no way out any more!

Quickly the news spread through the section. Other people came out of their houses and stared at the barricades, pathetically silent, stunned by the fright-

ful suspicion that was creeping into their minds. Then, suddenly, the realization struck us. What had been, up till now, seemingly unrelated parts—a piece of wall here, a blocked-up house there, another piece of wall somewhere else—had overnight been joined to form an enclosure from which there was no escape. The barbed wire was the missing piece in the puzzle. Like cattle we had been herded into the corral, and the gate had been barred behind us. The Jewish section was sealed!

Despair swept over us like a cloud, blotting out all hope. This, then, was the fate that had been reserved for us—to be locked up here, our houses taken away, our means of support inaccessible, and left to starve or to perish from the diseases that accompany overcrowded conditions. So the ghetto talk had not been an idle rumor, a pretext to squeeze funds out of us. It had been a definite plan, carefully conceived and diligently pursued.

#### The Lost People of Warsaw

In their own country the Germans had been curbed to some extent by the effect of the opinion of the world, which had its eyes and ears on Germany. Here in Poland, far from the democratic states of the West, they were free to do as they pleased with what they considered the backwash of a conquered nation. There was no friendly observer here in Warsaw to extend a helping hand, no one allowed to witness our fate. We had indeed become the lost people.

By making us captives the Germans automatically and conveniently enacted a robbery on a scale without precedent. The exclusion of stores and business enterprises from the moving order was in reality a deliberate trick to deprive every Jew of his means of livelihood. It was quite simple. After November 15th no Jew could leave the ghetto for any reason. Not having been warned of this order in advance, we had done nothing about liquidating businesses and saving

what we could from the wreck; and now it was too late. Therefore, according to the Germans, since a Jew could not get his business any more, it was no longer his.

The ghetto included the oldest, most deteriorated sections of the city, a district that had been an eyesore for years and should have been torn down long ago.

It comprised many blocks completely destroyed by bombing, without a habitable building left standing—rubble and ruins remaining as the Luftwaffe had left them, a danger to health and safety. With intentional foresight, not one park, not one playground or public garden was included in the area. There was no access to the river banks. The Jewish Hospital, modern and well equipped, erected and run on Jewish funds, had been left outside; so had the Liberal Jewish Synagogue and the Old People's Home. The ghetto was cut up into two sectors of unequal size, the main ghetto and the little ghetto, meeting at a narrow bottleneck—a plan calculated to cause us the most inconvenience and hardship possible, I shall explain later.

The Germans were set on our destruction. Herding us together was one step toward that aim, and the most effective one. By segregating us from the rest of the world, cutting us off from any outside interference, they could treat us like guinea pigs in an experimental laboratory, only in this case without an anesthetist. With cold logic they concluded that overcrowding, inadequate housing, insufficient food without nutrition, lack of sanitation, medicine or recreation and reduction to subhuman standards would produce starvation, disease, pestilence, factional strife resulting in death and mass suicide similar to their experience in Vienna, all of which would save them the trouble and ammunition required to massacre half a million people outright.

Against this unprecedented persecution, against the hardships of the present and the unimaginable evils of the future

(Continued on page 66)

**TROUBLE FOR TOJO!** It's the new Curtiss "Hell-diver," the Navy's latest dive-bomber, designed to carry a bigger bomb-load, at higher speed, for greater distances than any naval dive-bomber in existence. And at the controls in this test dive, photographed above, is Barton T. Hulse, who learned his flying in the Navy...smokes the Navy man's favorite—Camel.

**"There's just one cigarette for me—CAMEL—they suit my throat and my taste to a 'T' "**

*says*

**"RED" HULSE**

**VETERAN NAVY FIGHTER PILOT AND CHIEF TEST PILOT OF THE NAVY'S NEW CURTISS DIVE-BOMBER**

**T**HEY can look terrific on paper. They can meet the most exacting laboratory tests on the ground. But the final proving ground of an airplane is in the air...when you *fly* it.

It's the same with cigarettes. The final test of any brand *is in the smoking*.

Test pilot "Red" Hulse (*right*) and countless other smokers could tell you mighty convincing things about Camels and their remarkable freedom from irritating qualities, but your own throat and your own taste...your own "T-Zone"...can tell you even more convincingly why Camels are such a favorite on the front line—and on the home front.

# Camel

**FIRST IN THE SERVICE**

The favorite cigarette with men in the Army, Navy, Marines, and Coast Guard is Camel. (Based on actual sales records in Post Exchanges, Sales Commissaries, Ship's Service Stores, Ship's Stores, and Canteens.)

**THE T ZONE**

**—where cigarettes are judged**

The "T-ZONE"—Taste and Throat—is the proving ground for cigarettes. Only your taste and throat can decide which cigarette tastes best to you...and how it affects your throat. For your taste and throat are individual to you. Based on the experience of millions of smokers, we believe Camels will suit your "T-ZONE" to a "T."  
Prove it for yourself!

TODAY our armed forces are ordering more and more LIFE SAVERS hard candy for shipment out to **CENSORED**, **CENSORED** and **CENSORED**

So...if you have trouble getting some favorite flavor . . . you will know that some soldier, sailor, or marine is enjoying it somewhere, someplace.

# The Guardian Hound

Continued from page 12

and sheik as the most royal of all gifts. In all this time, I had never met George MacArt—or his secretary either, who was his niece, and who, with the name she signed, Shannon O'Day MacArt, simply had to be beautiful. I got a letter from him finally, saying that he had planned a leisurely motor trip across the country, and that when he got to La Jolla he would look me up. Then I did not hear from him for weeks.

And now, scarcely a hundred yards up the hill from me, watching me alertly, stood a splendid hound Cumor. I stood as still as he awhile, taking in his incredible size and beautiful proportions; and as I did so, other proportions still more exquisite topped the rise behind him. A girl.

As I stood there drinking in this vision of loveliness I felt a sudden sharp conviction. Maybe not just a girl. Maybe the girl.

In spite of unrevealing hiking clothes I knew how warm and white she was, and clean, too, right through to the bones. Late morning brilliance shimmered off a head so black that blue glints lay along the heavy waves of hair like bronze-blue glints along a grackle's bony plumage. And I knew her also, although there never had been sent a picture of her for my desk.

THAT girl was the niece of George MacArt—his secretary. For wasn't that MacArt's great Irish hound beside her? And wasn't she, herself, plainly as Irish as the nose of her face?

"Large morning," I called up the slope.

"Enough for everybody," came right back at me.

I knew her voice would be like that—a river's, singing at some gentle shallow. A smile went with it too—a smile that actually enlarged the morning and made the sun more brilliant and the sky bluer than before. And I found myself speculating, as I climbed that slope, how fortunate a man would be to have a wife named Shannon. And then I was beside her, and I knew how fortunate.

"If it's all right with you," I said. "I'd like to tell you first how beautiful you are before I say how beautiful your hound is."

"How very nice," she said. "Most people seem to use up all their adjectives on the hound, and have none left when they get round to me."

"Most people have no adjectives for you to start off with," I told her. "Remember how the ancient chroniclers felt the same loss of words? They just called you The Beautiful, Yseult the Beautiful, and let it go at that."

At this she looked me up and down with care. Then she said with conviction, "Irish?"

"Scottish," I corrected her.

"Are there Blarney stones in Scotland too?"

"What Scotsman with a tongue behind his teeth has any need of Blarney stones, Miss MacArt?"

"None," she said, "if they're all like you, Mr. More."

We both laughed and both said together, "How did you know me?"

She answered first. "You talk just like your letters, which, as you know, I have answered by the dozens."

I said, "I would have known you anywhere. Remember Tennyson? 'The black-blue Irish hair and Irish eyes'? And then that face and figure that left poets tongue-tied. Yseult the Beautiful. That

was the best they could do—which just about covered the ground at that. So who else would you be? Oh, Shannon too, of course. And I shall need both names. Shannon for sunny hours, with friends about, and horses and dogs and three boys and two girls. Yseult for whispering to you in the night."

"I think we'd better go see Uncle George," she said.

A half-dozen steps revealed a trail that went west from the firebreak, and soon the three of us were dropping by a steep path to the bottom of a canyon. Here a small dirt road, with mighty live oaks reaching their thick arms across it, led toward the ocean. We followed this until we heard the dull crash of the sea, still hidden by the fog. Then we came to a cabin perched against the canyon side.

"It will be good to get you two together," said George MacArt's niece.

We climbed steps, crossed a porch and

tinkering with him for months. Next time that native son-of-a-moron wants to pass a truck right at a hilltop I'll bet he finds out first if the MacArt, of Susquehanna Glen, is touring in his state."

WE SAT and talked wolfhound. The tall fire fell and made a glowing golden heap. The fog came rolling up the canyon from the sea, making the heat feel fine. Cumor lay stretched out on the floor close to MacArt, long as the couch on which the man sat propped. A terrible, beautiful creature, the guardian of this little house. And an exquisite, beautiful creature was the mistress of it, tall Shannon MacArt, busying herself, setting a thing in order here, and moving a thing that didn't need moving there. I had never seen anything as charming as that young woman keeping house.

"Here's a reference to the hound which you have never seen, I'll wager," said MacArt. "The one about Gunnar's

entered. The room we stepped into was small, but held a generous fireplace, set into a corner. Two burning eucalyptus logs stood upright in it, perfuming the whole room with pungent fragrance and a very welcome warmth.

GEORGE MACART was all I'd pictured him—stout and gray and ruddy, with upper lip aplenty and no nose to spare. The sparkle in his eye must have come down from every one of his eight great-grandparents, for that much glint could not possibly have been inherited from fewer ancestors.

He said, "So this is Roger More. You're as redheaded as your letters, and as welcome. I suppose your friends all call you by the Irish, Rory."

"He says he's Scotch. Imagine!" This from Shannon.

"More, of Clan Leslic," I announced. "And there should sound a skirl of pipes at that."

"Scotch!" exploded George MacArt. "Man, you're as Irish as Bobby Burns!"

Tell me what Scotsman's heart would not be warmed by such a brazen insult. Here was an Uncle George for me.

I had pictured him pretty accurately, as I say, all but his leg in a cast. He was plaster, hip to ankle.

"But you ought to see the other lad," he boasted. "It will take weeks to get spare parts for him, and surgeons will be

hound, Asthore." And his niece handed me a book from the library table.

It was the story of Burnt Njal, that saga of old heathen, horse-fighting Iceland, where you may meet Gunnar of Lithend, one of the stoutest heroes that ever walked earth or the pages of legend. I opened at a marker.

"Then Gunnar came to Hjardarholt," I read, "and Olaf the Peacock gave him hearty welcome. . . . But at their parting Olaf said, 'I will give thee three things of price, a gold ring, and a cloak the Erse king owned, and a hound that was given me in Ireland. He is big, and no worse follower than a sturdy man. He can see too in any man's face whether that man means thee well or ill, and he will lay down his life to be true to thee.'"

"You think the Irish wolfhound really has that mystic prescience?" I asked.

"He has," declared MacArt. "As surely now as he had it in Iceland a thousand years ago."

And on the very instant of that statement came a growl that slid a sharp icicle down my spine. No loud growl that might forewarn a foe. A wicked, deep, chest rumble. You could almost feel it shake the air of the room. A growl to warn his people to be on their guard. We listened, heard it then—a small sound that the hound's ears had caught. A drip-drip-drip just outside the door.

A knock sounded. I opened the door. "Well, I will be a cockeyed so-and-so!" I exploded. "Josh Kitigawa!" For that's just exactly who it was—and dripping wet, as usual.

"Where did you ever swim from, you old porpoise, and how did you ever find me here, through all this fog?" I asked. Then I turned to my hosts. "This here, now, Nipponese cetacean, friends," I said, "is Mr. Yoshio Kitigawa, American really, and long known to me. Miss MacArt, Josh, and Mr. MacArt her uncle."

Josh bowed, and with his large-toothed, winning smile acknowledged the introduction. It was easy to see that he had been a long time in the water. His finger tips were pale from long immersion.

"Come on, Josh, give," I urged. "Let's have this latest swimming epic. And also why the murderous snickersnee?"

For fastened to the belt of his brief shorts was an unusual scabbard of some sort of woven grass, out of which stood the beautifully inlaid handle of a dirk.

"Abalone," Josh said, which explained it in a word.

SAN VICENTE BAY used to be famous for these sea delicacies, so high in Oriental favor; and had once been a point of export for tremendous quantities of them, dried, to China and Japan. But the bay had been almost cleared of the big mollusks by the Japanese coastal ranchers before the state made laws for their protection.

"If you folks want to feast on abalone," I explained to the MacArts, "you'll have to do it here in California, for they can no longer be shipped out of the state. And if you want to taste the very finest, you have got to be a friend of Josh, an abalone diver in ten thousand, who always has some secret rock ledge spotted where the best ones cling. Am I right, Josh?"

"You swim along some day and see," said Josh. "A nice two-mile stroll out to Pelican Rocks. I went there with my knife and bag this morning, but less than halfway back the fog sneaked up on me. So, of course, no swimming till it cleared. My bag of abalones interfered with floating, so I dumped them. The fog held, and I thought I might be in for hours of drifting, but after a long while I caught the sound of surf, and was I glad to sprint for that! I had no idea I had been carried clear across the bay; but I recognized this canyon, and I knew about this cabin, so I came here, hoping it would be occupied, with the phone in service, so that I could call San Vicente for a taxi."

He was a perfect little Oriental bronze, was Yoshio Kitigawa, standing there nearly naked, his dark skin glistening from the sea. His flat, wide cheekbones and his very heavy epicanthic fold, which made his narrow eyes seem slanted, gave his face that ruthless, sinister, even treacherous aspect, which I thought I saw in every son and daughter of Nippon before I spent eight years in high school and college with the genial Josh and others of his blood.

But in this room was one who did not share my high regard for Josh. The moment he came in, Cumor, the huge wolfhound, hackles rising, arose and left the couch of George MacArt, and went and stood by Shannon. Clearly, he was on guard.

George MacArt saw this, and he glanced at me, his bright eyes flashing

# SMOKING LESS—or SMOKING *MORE*?

\*GOV'T. FIGURES SHOW ALL-TIME PEAK IN SMOKING!

*You're SAFER smoking*  
**PHILIP MORRIS!**

**Scientifically proved less irritating  
for the nose and throat**

*Here it is—fast.*

Reported by eminent doctors—in medical journals.  
Their own findings that:

**When smokers changed to PHILIP MORRIS, every case  
of irritation of the nose or throat—due to smoking—  
either cleared up completely, or definitely improved!**

Actual men and women smokers, mind you—not  
laboratory "analysis". Proof that PHILIP MORRIS are  
far less irritating to your nose and throat.

NOTE we do not claim curative power for PHILIP  
MORRIS. But, man! What solid proof they're better  
... safer ... to smoke!

And that's in addition to their finer quality—the  
finer flavor and aroma of superb tobaccos. Try them!

*And do they taste GOOD!*

America's FINEST Cigarette

with excitement. "Remember Gunnar's hound?" he asked me.

And I saw apprehension come into the eyes of Shannon as she felt the hatred of the dog toward Kitigawa.

"What a poor hostess I am," she apologized. "Hot chocolate should be good for Mr. Kitigawa, after his long swim."

"So nice of you," said Josh. "I'll not try to deny how marvelous that would be."

"For three?" she asked.

We nodded, and she left the room. The tall hound did not follow her. He stood across the door she had gone through, and kept his eyes on Josh.

"A very exquisite weapon you have, Mr. Kitigawa," George MacArt said. "Ancient, I would judge. A family treasure."

"Quite right you are," said Josh, and pulled it from its sheath.

THE blade was very beautiful and wicked. Tén inches long, maybe, two-edged and of good width but very thin. It must have been of the very finest steel if it could pry an abalone, clinging with its broad powerful foot muscles, from its rock.

"Work of our ancient smith Tsuruga," Josh informed us. "It is called tanto and is the knife for seppuku—what you know as hara-kiri. One of my ancestors in some way failed his emperor, and the emperor, accompanying his gift with words of high esteem, sent him this beautiful knife. And the ancestor, knowing what was expected of him, with dignity and proper ceremony, used it."

Just then Shannon reappeared, bearing a fragrant tray, which I took from her. Over her arm was draped a heavy bathrobe.

"Wear this," she said to Josh. "And do not call a taxi. I have an errand to San Vicente and will take you with me whenever you are ready."

"You are too kind," said Josh. "Would it be inconvenient if we went at once? It would not? Perfect. I offer you ten thousand thanks." And somewhat hastily he drained the steaming cup.

Shannon took down a coat from a peg beside the door as Kitigawa stepped to it and laid hold of the latch.

"I'm sure that Mr. More will want to stay and have more wolf-dog palaver with my uncle," Shannon said.

"With no apology whatsoever to your uncle," I protested, "I'd much rather go with you."

"Nonsense," she said, and stepped toward the door which Kitigawa now was holding open.

But they did not go through. Square in the doorway stood two hundred pounds of dreadful, threatening "No!"—Cumor; a strange and terrible Cumor, snarling direfully, displaying all the frightfulness of jaws that could lift a wolf, full gallop, and crunch its backbone into splinters with one bite.

Fearlessly Shannon pulled back on the dog's collar. "And what's this all about, big hound?" she said.

"He thinks you shouldn't go with Mr. Kitigawa," said her uncle. "And I would trust his judgment. Remember Gunnar's hound."

There came a moment's silence, tense, somewhat embarrassing, somehow ominous; which was shattered by a sound which had no reason to be startling, but which was—the simple ringing of the telephone.

"Will you take it?"

Though I stood nearest to it, George MacArt's request seemed strange. I knew nothing of the MacArt household affairs or social matters. It was as though he shared the great hound's

prescience of something ill, with which he would not want to frighten Shannon.

"Sepulveda Ranch?" the telephone quired. "The guest house near the beach. This is police. We are contacting Japanese who escaped an F.B.I. raid on a short-wave station discovered in Manzanita Canyon. It has been sending in Japanese. The operator knifed man and outran the others to the plunged through the surf, and swam a cover of heavy fog. He is Yoshio Kitigawa—"

"Who?" I demanded, and only the greatest difficulty kept from whirling about to face my long-time friend. "Who says that?" I added, hoping to mend blundering outburst. "The veterinarian. Let me talk to him."

"What's all the double-talk?" asked the telephone angrily. "This is the earnest. Don't talk. Listen. The name is Yoshio Kitigawa, American born, a long a suspect—"

Here it seemed time to interrupt again. "No," I said. "Tomorrow won't be satisfactory. You will have to come today."

"I think I've got you." The telephone voice was suddenly lowered. "But let me finish. Last seen he wore light brown swimming trunks. And doubt he is still armed with one very mean knife. We'll be out there hell-bent. Right?"

"One moment," I replied, turning to George MacArt, but speaking so that my voice would carry to the instrument. "The veterinarian says they can't come out for the hound this afternoon."

MacArt's blue eyes sparkled. He followed my invention without the slightest hesitation.

"Tell him it's got to be today—this afternoon. Those spikes of foxtail grass are dynamite once they have worked down into a dog's ear. Tell him at once."

So I said, "This is urgent. You'll have to come and get him right away."

"Right now, buddy," said the telephone. "Don't get hurt, but nail him down somehow. And just in case you haven't had your radio on, here's something that will let you know the poisonous sort of snake you're dealing with. News has just come in that the Japanese have bombed Pearl Harbor. Good luck, American. Here we come."

I TRIED to take that last shock with a poker face; but I guess my hatred for that slit-eyed, civilized barbarian who stood so close to Shannon must have blazed in my eyes; for as I hung up, Kitigawa left the girl and with a few swift steps was standing by the couch on which MacArt lay helpless. And noticed, with a chill that struck my bones, the way he held his dirk—now with the blade projecting backward from his fist, so he would have to lift his hand before he struck, but forward, for an instant thrust.

"Do nothing," Kitigawa said.

Nobody moved. His plan was all to clear.

"I think I know your message, More," he said. "Anyhow I can't chance delay—or interference. One wrong move and this man knows just how good a tanto is at disemboweling."

At this ominous threat, George MacArt looked up at him, smiling pleasantly. "It seems your Japanese friend doesn't believe that Cumor has a foxtail in his ear," he said. "Well, More, what was that call?"

"Is it true, Josh?" I asked. "You've been short-waving code in Japanese. From California, America—that made the Kitigawas rich? Pearl Harbor? Is that true?"

Why not?" asked Kitigawa. "This soft, pot-bellied country. I hate it. Tell the girl to get a car for me." "All the girl! The American veneer already gone. Now he was Japanese, the domineering male. Women were for bedding purposes. Why should he let himself by having any other deal with them? Just the same his respect for her showed in his actions. He knew that she would never have taken orders from him without a fight. Supple and tall and strong, she would have watched her chance and turned on him, knife or no knife. But his knife now threatened George MacArt, who could not fight.

"Tell her to leave the door wide open when she leaves the room, then to drive the car to the door, leaving the ignition key in place, and the engine running. The thing more: I must have the word of honor of you all that none will try to stop me. Your word of honor given, you will keep it. Fools, but you will keep it. If you will not give it—"

KITIGAWA moved his hand, and a light, like the cold brilliance on an axe, ran from hilt to point along the floor. What was there to do? What were they told, and not another thing. And there a frightened whisper broke from Shannon's lips.

"No, no, Cumor," she ordered. "Steady." Then to me, "Tell him I'll do just what he says, but that he must say that he wants without threatening lives, or I shall not be able to control the hound."

"Into the next room with him," Kitigawa ordered. "Shut him in. Quickly. Next time I move this wakizashi it will be ill—"

"Stand, Cumor!" said George MacArt.

Shannon tugged at Cumor's collar. She might as well have tried to pull the well-known camel through the needle's eye as she hound through the doorway into the next room.

The bleakness that came into Kitigawa's face at the thought of defiance or delay spread cold all through me. But George MacArt's blue eyes flamed.

"Take it from me," he said to Kitigawa. "You don't look like a death's head. You look like a false face. If you want to see death in a face, look at Cumor's."

He looked. I looked too, and I thanked the powers that that dreadful muzzle wasn't aimed at me.

"Here's where your plans went wrong," MacArt said. "He's my hound, not hers. The reason he left me and went to her when you came in the room is because she is the thing I love most and he knows it. He's guarding her for me. He knew you for an enemy at once."

"You can handle that man and woman there with your dirk at my life. They wouldn't make a move against you if I begged them to. But you can't control my hound. When I tell him to charge you, he'll charge you, and no one, friend or enemy, will be able to stop him. So take your two hands off his collar, Shannon. Three pairs of men's hands couldn't hold him. Ready, Cumor!"

"No, no!" Shannon cried. "It's death!"

"It might be that," said MacArt, "if you hinder his spring. And spring he shall. Unless it could be that our small dark guest is more afraid of my hound than I am of his knife. There's one way to find out. Ready, Cumor! Now put that thing down, Japanese, or sure as I lie here now—and surer yet if I should lie here slashed—that hound will tear the head off your body."

I shuddered. I shuddered because

there was no exaggeration in what MacArt had just said. A minute's ghastly worrying, wrenching, and that giant hound would have it done. Hate, like a dragon fire, blazed in his eyes. I saw Kitigawa's hand go up to his throat.

A few minutes later there came the rush of speeding tires on the narrow canyon road, and the harsh grind of a skidding stop, then swift boots pounding up steps and over the porch. Shannon met the policemen at the open door.

"Thanks, people. Nice work," said the captain, after a quick survey. "When you folks are asked to nail a man down, you certainly do nail him. What a dog!"

He stood a short while looking down at the baleful-eyed wolfhound, where he lay on the floor, facing a chair on which sat Yoshio Kitigawa, nailed indeed. Then he departed, with our amphibious caller linked between two of his men; after which we sat through a long grave silence, thinking bitterly of what the murdering Japanese had forced upon us.

Finally I said, "My guess is, the Marines will get first hand-to-hand crack at those honorable back-stabbers. So I think I'll drive down to the post at San Diego right away, to see if they will be taking on any redheaded men. It was very wonderful, being here today. But for that chance meeting up in the hills, I might never have known you people—you, George MacArt, nor you, Cumor, old hero." And then I looked at Shannon MacArt, and looked at her. After which I guess I must have looked at her. "Nor you," I managed to say to her at last.

The sparkle from his eight great-grandparents lighted her uncle's eyes. "Nice taste I've got in nieces, wouldn't you say?" he asked me.

"What I am wondering about right now," I said, "is your taste in nephews-in-law."

"I like 'em Irish," he informed me.

"As Bobby Burns?" I questioned.

"See!" laughed Shannon. "See how your Erse impertinence bounces back at you, Uncle George?"

"At any rate I should like to qualify, Uncle George," I announced. "I heard you say just a short while ago that you would trust your hound's judgment of a man, relying on the gift of the breed which lets him always know if a person means his people well or ill. Do you mind if I make a simple test to find if I have Cumor's approval?"

"Help yourself," said MacArt.

But a man doesn't help himself to kisses from a girl like Shannon MacArt without a bit of coercion. Well put together, that tall young woman is, and supple and strong; and she could say "No" with less speech and more fight than an Amazon. So I had to manhandle her somewhat; which I had counted upon, as being what the proof needed.

I STILL consider that day the most wonderful day of my life; for I look back over more than a year of time and some six thousand miles of Pacific Ocean, and that trial of mine still seems a complete success. For with that girl's arms pinned, and her mouth being sought with what you might call violence aforethought, there came no growl out of the hound whatever. In fact he lay stretched out beside George MacArt's couch with his eyes half shut and no movement at all, except a prodigious yawn and one lazy sweep of his great flail of a tail. Which showed, I am nearly convinced, that he sensed toward the end of that somewhat protracted business, wise hound that he is, that Shannon MacArt wasn't fighting as hard as she really could.

THE END

Jason pressed down on the sapphire with his thumb. For days he had been intrigued by Queen Bertha's gold pencil

## Five Who Vanished

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

### The Story Thus Far:

EARLY one morning, a girl makes her way into Jason Amboy's apartment in San Francisco, knocks him out, takes a packet of letters (written by his brother, Wayne) and makes her getaway. Jason's valet—an eccentric little fellow named Flack—at once does some brilliant sleuthing; he learns that the girl is Luana Topping and that she lives in Hawaii.

A short time later, Jason is notified that Wayne—who has been working for the powerful Grazzard family in Hawaii—has disappeared. So, suspecting murder, he starts for Honolulu on the first boat he can get: the Tasmania.

To his surprise, he encounters Luana Topping among his fellow passengers; and to his even greater surprise he encounters—*Flack!* . . . Miss Topping is a member of a distinguished party composed of old Mrs. Hiram Grazzard, dictatorial head of the Grazzard clan; her son, Lorrin, who is Luana's fiancé; Channing Mace, manager of one of the Grazzard plantations, and his attractive wife, Natalie; and one or two others. Distantly related to the Grazzards, Jason sits at their table.

His adventures, begun in San Francisco, continue when he permits a stowaway to share his stateroom—and the stowaway disappears. Has the man been murdered? Jason feels sure that

he has been. His suspicions are confirmed by a new friend—Natalie Mace, who, hating the Grazzards, tells him that the stowaway had been Winfield Grazzard, the black sheep of the family, who, with Wayne, had been trying to blackmail the Grazzards!

By this time—warned by Flack and Natalie—Jason is convinced that the Grazzards have combined against him, may even be planning to murder him. Nevertheless, he falls in love with Luana Topping. . . . The Tasmania reaches Honolulu. There Flack and Luana (who have been working together) accuse Jason of co-operating with Wayne in an effort to extort enough money to enable Jason to perfect an airplane engine which he has patented. They say that both Winfield Grazzard and Wayne are alive—with "Uncle Colton," Mrs. Grazzard's brother, on Kahuna Island, not far from Honolulu.

Mrs. Grazzard invites Jason to be her house guest at Kokala plantation. Natalie Mace tells him that, if he accepts the invitation, he will be walking into a "death trap;" and someone else—a man—phones him a similar warning. But, on the following morning, he boards a plane, with the Grazzard party, and starts for Kokala. He knows that he is in peril, deadly peril. But his plans are made—he knows what he wants. *And what he wants is action.*

### IX

THE bungalow Jason was to occupy at the plantation was some distance from the others, and, of them all, it was nearest the beach. From its spacious *lanai*, he saw the large sky-blue sampan that was tied up to the private pier, the inshore end of which was less than a hundred feet from the bungalow.

While the Japanese chauffeur was bringing in his luggage, Jason walked out on the pier and inspected the sampan. A dark-skinned boy was polishing the brightwork. Jason did not go aboard, but he looked the boat over with interest, for this was the sampan in which Mrs. Grazzard made her trips to Kahuna Island with provisions and supplies for Uncle Colton.

Affixed to the broad and seaworthy stern were golden block letters proclaiming the name Bertha. Under it was the date 1917.

Natalie had told him something about this sampan. It was larger than he had expected—fully as large as the tuna sam-

pans he had seen impounded for the duration of the war in Honolulu.

He returned to his bungalow and unpacked. When he went out again, the Japanese chauffeur was waiting. Mrs. Grazzard had said that he was at Jason's disposal, and that probably meant that he had received orders not to let Jason out of his sight.

He was a short, thick man, powerfully built, with close-cropped black hair through which his scalp gleamed bluely. His shoe-button eyes were inscrutable and alert. He told Jason as they drove along that he had been born in Honolulu, that he was a loyal American citizen, and that he despised Japan. He spoke English with no accent.

The short-barreled revolver Jason had brought along was a comforting weight in his right hip pocket. He decided that wherever they went today, he would see to it that the chauffeur never came too close to him, and never got behind him. There were a number of people he

# 1-A JOHNSON GRASS

By Roark Bradford

ILLUSTRATED BY WILLIAM MEADE PRINCE

When Cricket went into Uncle Sam's Army, he left a pretty bad situation behind him. It took the combined efforts of Foreman Giles, the Widow Duck, and the Old Ship of Zion Church to clean up the bad mess Cricket left

IT WAS early in July when the draft board called Cricket's name and he left out from Little Bee Bend plantation for Uncle Sam's Army. Other husky young men had been called and Giles, the foreman, had managed to take up the slack. Cricket was the first down-right married man to be called and that complicated matters.

As a field hand Cricket was no great loss to the plantation. May-Lee, the hill-born young woman he had married, was no help at all. They had a crop of cotton but their shiftless work had got them behind in the battle against Johnson grass. Giles had planned to "drap by and straighten out Cricket and May-Lee" for some time. He knew their land was poorly worked, but he had been busy keeping things going in spite of being shorthanded. Anyway, Cricket and May-Lee were the kind of people nobody ever noticed, so Giles had never got around to it.

Then suddenly the draft board spoke and Cricket was gone! Giles knew it would do no good to argue with the draft board and he was too busy to take time out, personally, to drive a crew of workers through the field.

On the other hand, there was the Widow Duck. "Efn I c'd th'ow dat crop off on de Widow Duck," Giles pondered, "I c'd forgit about hit and go on wid my business."

Throwing something off on the Widow Duck wouldn't be easy. Giles had no idea how it might be done, but as he rode to her cabin on the bayou bank, he hoped a way would be found.

The Widow Duck was sitting righteously under a chinaball tree in her yard. Her cotton was clean of grass and her soul free of sin and torment.

"Cricket left out for de Army," Giles announced.

"Cricket?" the Widow Duck repeated. "Oh, yas, Cricket. I 'members him. One er Bathey's chilluns. I didn't figger dat chile was big enough to git in de Army."

"Big enough to git married up and start a crop," Giles said.

"Married?" The Widow Duck searched her mind. "Seem to me like—is he de one which married dat kinder funny-lookin' member f'm de hills? Sho, I minds 'em bofe. Come to church and jest set. So Cricket got to be a soldier in de Army? Well, may de Sperrit march wid him."

"I'd a heap druther dat Johnson grass he got in his field'd march wid him," Giles said. "Efn Johnson grass ever break out in de Army, den maybe Uncle Sam'll learn what I'm up again, tryin' to make a shorthanded crop."

The Widow Duck waved the thought aside. "We makin' out, ain't we?"

"De hard way," Giles said. "I spent all last winter learnin' four boys how to drive a tractor so's I c'd take up de slack. But jest 'bout de time I got dem boys learned rale good, Uncle Sam spoke dey names, and dey ain't hyar no mo'. And you mind old Joe Boody. Good wid a plow and good wid a cotton sack, but not wuth killin' for nothin' else. Well, he laid around all winter, eatin' up his credicks. And quick as he got a man-size debt run up, de draft board call and Joe is long gone! Next was Grant's Texas twins, Dallas and Rio Grande. Dem boys was fixin' to git married up and work dat Cucker-burr cut for me, but de draft board yell, and dat cut 'ain't yit planted!"

"We got us a crop on dis place," the Widow Duck insisted.

"And now dey tuck Cricket, and I'd say hit was good ruddance," Giles concluded, "efn hit wa'n't for dat grass in his field."

The Widow Duck settled more comfortably in her chair. "Giles, you don't like Johnson grass." It was a statement of fact. "And dat's right. Grass sp'iles

"Church dues! Hump!" May-Lee snorted. "I'm gonter git a pair er high heels and do some gittin' about." The Widow Duck reached for a loose singletree. "You'll git yo' sack an' start pickin'—

cotton. But de p'int er what I'm sayin' is dat some folks don't like some thing and some folks don't like de yuther. Yo don't like Johnson grass cause hit sp'ile de cotton, and I don't like folks whic talk agin Uncle Sam's business, cause he sp'iles my pleasure."

Giles said, "How you mean?" "Well, I'm a-settin' and a-studdin' my mind," she explained. "De Lawd i sendin' little breezes dancin' 'long de bayou to fan me cool. I done et me a good dinner, and my ole stomach done settle down for de day. Ev'rythin' i mighty satisfied wid me. Den, hyar you come, like a imp f'm below, growlin' 'bout somethin' dat you know dad-blame well me and you bofe can't do nothin' about. You know good as me when de draft board speak, hit's de law and de prophet. What take place ain't no skir offn nobody's back. Now, you jest go hard and leave me to my pleasure."

Giles determined on a new approach. He sat down, relaxed, and began to talk idly of the plantation gossip. He joked the Widow Duck about B'r Charlie, the

## Five Who Vanished

Continued from page 24

wanted to question and he must remember, he told himself, not to grow careless.

He wanted first of all to have a talk with Blake, the mill clerk who had shared the company bungalow with his brother, and he wanted to see the store where Wayne had worked. He found Blake in the office at the Kokala sugar mill, a dark-skinned man of forty with unfriendly eyes and a petulant mouth.

"Your brother never talked," Blake said. "He was the closest-mouthed man I ever knew. Has he shown up yet?"

"Not yet."

"My hunch," said Blake, "is that he lit out for Australia. I found an Australia clipper folder when I was cleaning up his room."

"Did he ever do any sailing in an outrigger?"

"Yes. He bought a koa canoe from a Hawaiian named Kcaloha and he went out in it every Sunday."

"Was he ever gone for several days at a time?"

"Yes, Mr. Amboy. He sailed around the island once. The outrigger has disappeared. He used to keep it in the bay. I think the Japs stole it." Blake was gazing at Jason curiously. "You make the Amboy airplane engine, don't you?"

"Yes," said Jason warily.

"I read in the Lihue paper you've sold it to the British government."

"That," Jason said with a wry grimace, "was a typographical error."

He next visited the Kokala company store. And from the store Jason went to the office of Dr. Ellery Hustings, the Kokala company doctor. It was Dr. Hustings who had, twenty years ago, signed the death certificate stating that Hiram Grazzard had died of heart failure.

LATE in the afternoon the limousine stopped at a hilltop overlooking, on one side, the sea and, on the other, the green-and-red vastness of Waimea Canyon. It seemed to Jason he could recall being frightened by its precipitous green depths when he was a small boy.

Through the black branches of a dead tree, he saw the island of Niihau, low and desolate with its gleaming, pewter-colored sand shoals, and, beyond it, north and west, purpled by the setting sun, Kahuna.

For a few minutes, until the light changed, Kahuna Island was sharply etched against the deep blue sea and the pale blue sky. He saw the fire *pali* at the northern end—the sheer cliff on which fire signals had been burned to guide the early Polynesian navigators.

Framed by the black branches, Kahuna looked lonesome and forbidding. And he recalled that the name *kahuna* meant "bewitched."

Jason stopped for dinner at a Chinese inn in Hanapepe. It was blackout time when he returned to Kokala plantation.

He waited for the limousine to go before he started down the path. In the darkness, he suddenly felt tense and jumpy. He walked slowly down the path, to let his eyes grow accustomed to the starlit darkness. According to his blueprint, a deliberate attempt must be made sometime tonight on his life. When and how, he wondered, would it be made?

Under the trees by his bungalow, the darkness was deepest.

As he neared the bungalow, a dark shadow arose from the steps of his *lanai* and a voice whispered, "Jason?"

He could feel his pulse suddenly beating against his windpipe. "Yes," he said. "Luana?"

"Yes."

He stopped a few feet away from her. He tried to see her face, but he could hardly make out its shape in the darkness.

"Jason, I've got to talk to you about this."

He wondered how much of an effort she was making to control the tremor in her voice. "Let's sit down," he said, "and have a smoke."

"No. I can stay only a moment. I've just been given the strictest orders all over again to have nothing to do with you."

"By whom?"

"Lorin. He hates you, Jason. He took me to my bungalow and said good night and I think he went back to the house, but I don't trust him. He's so jealous. He's been in one of his black moods all day. But I had to talk to you."

"YES," said Jason. He could see her face a little more clearly. It was still a dark and formless shape, but he was sure he could see the sparkle of stars in her eyes.

"I promised I'd go straight to bed, because I'm really a wreck. And Natalie is worse. I've spent most of the day with her. She insists that you've been telling the truth all along, and that this whole blackmailing charge against you and your brother is nothing but lies to deceive me and everyone else."

"Darling, go to bed and get some rest," Jason said. "There's nothing you can solve now. Wait until morning. By morning, unless I'm mistaken, everything will be cleared up. I know just how you feel."

"Do you?" she said. "I feel terribly unsure."

"You've felt this way all along," said Jason. "You've wanted to believe in me, but the odds were against me."

"Natalie insists they killed your brother and that now they're planning to kill you," Luana said breathlessly. "I can't believe it! I don't know what to believe! I don't know what to think! I can't believe they're so wrong, yet I sense that something is terribly wrong. From the very beginning of this, I've wanted to have faith in you. All my instincts have told me to."

"I love you," Jason said. "All your instincts have certainly told you that."

"That," said Luana, "has confused everything."

"Then why not take this view of it?" said Jason. "What can you expect me to say? That I'm guilty of all these accusations? By tomorrow, you'll know either that my brother is alive and that I've been lying, or that everything they've said about him and me is a lie. We can't solve it now. I'm going to kiss you good night and you're going to bed."

HE REACHED out and took her into his arms. She didn't try to escape. She was in his arms, soft and warm and unresisting. She clung to him. Jason drew her closer. He kissed her chin, then her cheek, then her mouth.

He whispered in her ear, "Darling, I love you very much."

She kissed him lightly and quickly on the cheek, then she slipped out of his arms.

"Luana!"

"No. It isn't fair."

"But you know I'm in love with you. You've said you're in love with me. And you're not in love with him."

"I didn't come here to talk about love,

The BATTERY THAT'S SPECIAL  
SLOW-SPEED, LOW-MILEAGE

HERE'S the battery that car owners have been hoping

With 35 miles an hour now the national speed limit with most motorists now driving 240 miles or less a month — millions of car owners cannot drive fast enough or enough to maintain the normal charge in their batteries. And of course, automobile radios, extra driving lights, electric clocks and other accessories consume battery power.

It is to meet these wartime driving conditions that Firestone now introduces the new Perma-Life — a battery packed so chock-full of power that with reasonable care will retain its charge for several years. **And should you Firestone Perma-Life Battery require recharging at any time within two years after you buy it, this service will be performed without cost to you.**

If your battery is weak or worn or lacks starting power, don't take chances! Avoid delays that may make you late for work and hold up war production! Go to your nearby Firestone Dealer or Firestone Store today and have a new super-power Firestone Perma-Life Battery installed in your car.

*Listen to the Voice of Firestone with Richard Crooks, Margaret Speaks, Alfred Wallenstein, Monday evenings, 10-11 P.M.*

YOU MAY BE  
ELIGIBLE  
TO BUY  
*The New*  
FIRESTONE  
RECLAIM  
WAR TIRE

If your present tires wear smooth and cannot be recapped, you may be eligible to buy the new Firestone War Tire, the only war tire with these exclusive features:

1. **Firestone Non-Skid Tread** — famous for performance and protection against skidding.

2. **Softi-Lock Gum-Dipped Car Body** — built to outwear several treadings. Can be recapped for thousands of miles of extra service.

3. **Vitamic Rubber** — made by adding a new wear-resisting rubber vitamin called "Vitalin."

Ask the nearest Firestone Dealer or Firestone Store about this amazing new tire.

# The SENSATIONAL NEW Firestone Perma-Life BATTERY

BUILT FOR TODAY'S  
WAR-TIME DRIVING

**2-YEAR  
Guarantee**  
**FREE RECHARGING  
IF NECESSARY**

Should any Firestone Perma-Life Battery require recharging during the first 24 months after date of purchase, it will be recharged by the seller, without cost to the owner.

STURDY CONSTRUCTION  
FEATURES THAT ASSURE  
LONGER LIFE AND EXTRA  
STARTING POWER.

**Fiberglass Separator  
Mats** — Increase  
battery life up to  
100 per cent.

**Larger, Heavier  
Plates** — Have more  
surface for greater  
power storage.

**Fil-O-Matic Covers**  
— Prevent over-  
filling. Avoid acid  
corrosion of battery  
cables.

★ Firestone has the largest system of recapping shops in America, conveniently located to give you better service. This nation-wide system is strictly supervised and uniform in workmanship. When your present tires wear smooth, take them to your nearest Firestone Dealer or Firestone Store for Factory-Controlled recapping.

**FIRESTONE METHOD  
OF RETREADING IS**

*Factory Controlled*

# Why You...

## SHOULD CHANGE TO A&P COFFEE!

Because, unlike many coffees, you select A&P Coffee in the bean—then it's Custom Ground to the exact fineness for your very own coffee maker. This is very important, because you get more coffee goodness and flavor! Change too, because the experts who select America's most popular coffee report that no coffee can give you more good cups per pound than A&P Coffee!

### DON'T WASTE EXTRA CUPS!

When coffee is not correctly ground for your coffee maker, you waste coffee. That's because you do not get the full, rich coffee strength—some of it is thrown out with the grounds. Be sure! Buy Custom Ground A&P Coffee. It "fits" your own coffee maker!

**AT ALL A&P FOOD STORES**

Jason. I wanted to try to clear this up, and I've a message from Natalie. The truth is, she's so worried about you that she's ill. She wants you to go. She's afraid they'll kill you tonight—she's sure they will—and she wants you to go to Port Allen, spend the night there, and catch the bus for the morning plane. She says you must get out of here."

"Who does she think will try to kill me?"

"Her husband."

"That's curious," Jason murmured. "Why?"

"He's been saying things that have made her terribly suspicious. And she saw him loading his revolver. And I don't trust Lorrin. Both of them are in dangerous moods and both of them have uncontrollable tempers." She hesitated. She suddenly cried, "You've got to go! I'll take you to Port Allen in my car."

"But what would Lorrin say?"

"I don't care what anybody says!" She was trying to keep the panic out of her voice. "I'm afraid! They're going to try to kill you! We're starting this moment!"

"I love you for this," Jason said gently. "But I'm not going to Port Allen. Stop worrying. No one will kill me. I am going to clear this up, then I'm going to take you away from here. Good night."

**S**HE hesitated. He heard her rapid breathing, and he knew that she was making a determined effort to control herself. He saw the flutter of her hands at her throat. Then she said in a voice so prim that he almost laughed, "Good night, Cousin Jason."

He watched until her figure was an indistinguishable part of the darkness under the trees. A few seconds later, he heard the door of her bungalow close. He opened the screen door beside him and went in.

He turned on the lights in the blacked-out bedroom. Smoking a cigarette, he considered the bedroom thoughtfully.

It was a small room and somewhat stuffy. The windows were closed. He tried the one on the north side—the side on which the trade wind blew. It was stuck. He could not raise it.

He turned out the bedroom lights. In the darkness, he made his way out onto the lanai and to the studio bed against the wall, in the corner.

He tested the bedside light, letting it glow for a fraction of a second. The windows of the bedroom, the little sitting room and the bathroom were neatly covered with black pineapple paper, but the lanai, which was screened, was not blacked out.

The bedside lamp was an important piece of equipment that he would soon need. When he turned that light on, and left it on—at the proper time—if things went as he believed they would, it would attract the attention of the military police, and by that time he might be needing them.

He stretched out on his back with the revolver in his hand and tried to think. But he was still too aware of the sensation of Luana in his arms—that brief exalted moment. There was, he told himself, no need for further thinking. The blueprint was now complete. There was nothing to do but wait.

Lying on his back, with a mound of pillows under his head and shoulders, he tried to relax. . . .

The luminous dial of his wrist watch said two-forty when the sound of stealthy footsteps came from the side of the bungalow where the path was. Then, when they paused, the sound of other footsteps came from the opposite side of the house.

Then he heard someone at the screen door. Careful fingers were working it

open. He saw the silhouette of a head against the thickly clustered stars.

Jason forced himself to relax against the pillows. He closed his eyes to the narrowest of openings and watched the door.

It was opening slowly. He had noticed that the hinges and the spring made not the slightest sound, but he was aware of it now. They had been, supposed, carefully oiled.

The door closed. There was the sound of a footstep, hardly discernible against the hissing of wavelets on the beach.

A pin point of blue light pricked the darkness. It remained on for perhaps four seconds and when it went off, the blackness was complete. In the silence, he was sure he heard other footsteps a little farther away.

He reached for the key of the electric light beside the couch. He found it. He waited. He heard nothing but the hard fast pounding of his heart. Then he heard soft, restrained breathing a few feet away. And at that moment he detected the rustle and the smell of garments—a faintly moldy smell.

Jason turned the light key. The room remained in darkness. For a moment, he was too terrified to move. He had been depending on that light.

He leaped up with the revolver in his hand. He saw no one for a moment, then very vaguely he saw the silhouette of a figure against the star glow. He pointed the revolver and said, "I can see you. Put up your hands or I'll shoot."

He heard a sharp gasp and a quick movement. He drew the revolver closer to his chest and reached out swiftly with his other hand. It momentarily touched a firm warm arm. The revolver was snatched out of his hand. A fist or a club struck his left shoulder. He was unprepared for the force of that blow. It sent him staggering back against the wall.

He struck it, rebounded and reached again. He recalled the light switch on the wall near the living-room door. He started to circle toward it. His right hand, reaching out, closed on a dangling metal tube.

Jason leaped aside, snatching away the slender tube. He heard another gasp, then a sharp grunt. This was followed by a ringing thump as something fell to the floor. There were more gasps and grunts. Feet were scuffling in the middle of the lanai. And suddenly there was the sound of a body crashing against the screen. Then there were quick footsteps. The door opened and closed. He heard someone running under the trees, then these sounds faded.

**H**E MOVED on tiptoe across the lanai. His groping hand found a man's unshaved face. It was oily and wet and cold. The man moved away and Jason stepped back. He crossed the room and groped along the wall for the light switch. He found it. He snapped it. But the lanai remained dark.

In that panicky moment, Jason believed he heard a woman scream. It seemed to come from far away, but he was not even sure that he had heard it.

A hoarse voice said, "Mr. Amboy! Where are you?"

Jason found a match. He struck it and held it over his head. Half-crouching against the screen was the man whose face he had touched. He was staring at Jason with bloodshot eyes. His thin black hair was disheveled. His face was red with sunburn. On the floor near his feet lay a short length of iron pipe.

"Flack!" Jason gasped.

"Are you all right, sir?" Flack asked anxiously.

The match went out.

Jason was suddenly furious. "Flack, what the devil does this mean—more double-crossing?"

"I came here to save your life," Flack said hoarsely, "and I'm proud to say I succeeded. I came only because I knew that you, with your carelessness, would do your utmost to invite disaster."

"You idiot!" Jason panted. "You've spoiled the moment I've been building up to for days! If you hadn't come bumping in here, I'd have trapped the woman who killed my brother!"

"I beg your pardon," Flack's hoarse voice disagreed. "If I hadn't come bumping in here, you would at this moment be a corpse—being dragged out to that sampan to be dropped into the sea!"

"If you hadn't come horsing in here," Jason said bitterly, "I'd have caught her in the act of trying to murder me! I'd have trapped her with the weapon in her hand! That's what I wanted! It's all I wanted! Does that piece of pipe belong to you?"

"Yes, Mr. Amboy," Flack said wearily. "All you wanted was to catch a dangerous murderer in the dark! But it was not Mrs. Grazzard. It was Mr. Mace."

"You're crazy!"

"I am perfectly sane, Mr. Amboy. You've been suspecting Mrs. Grazzard all along. Perhaps you've been right. It's very confusing, but the person who was just here was Mr. Mace and not Mrs. Grazzard."

"Are you sure?"

"I am absolutely positive. I saw him in the blue light of the flashlight. I followed him. He left Mrs. Grazzard on the porch of her house a minute ago. He came straight down the path to this bungalow. He had a short club in his hand. He stopped at the back of this bungalow to pull the main light switch in the fuse box. I followed him in here intending to bash in his head with this pipe, but he was too much for me. He is a powerful man, Mr. Amboy."

A match flared in Flack's hand. He gasped. "What's that in your hand, sir?"

Jason lifted his hand. In it was still clutched Bertha Grazzard's gold pencil—the slender tube his hand had encountered in the dark—without its chain.

The little gold loop to which the chain had been attached had been broken off.

The sapphire sparkled in the yellow light. The match went out.

"Strike another match, Flack."

"Yes, sir."

Another match flamed. Jason pressed down on the sapphire with his thumb. For days, since he had first seen it, his machinist's eyes had been intrigued by Queen Bertha's gold pencil.

As he increased the pressure of his thumb, there was a sharp click. A thin, fluted blade like a stiletto shot out of the gold tube and locked. The blade was about five inches long. The point was as fine as a needle's.

Jason pressed the sapphire again. He pushed the point of the slender dagger against the wall. The blade slid back into the golden sheath against the pressure of its hidden spring. It locked in place.

"Flack, do you still say you saw Channing Mace come in here?"

"Yes, sir," Flack said stoutly. "He must have stolen it from her somehow. Isn't it obvious that he intended to leave it here in case his mission failed—to incriminate her?"

"It's possible," Jason answered thoughtfully, "that someone is trying to double-cross someone else."

"I hope," said his valet in a hurt voice, "you aren't referring to me, Mr. Amboy."

"I think," Jason said, "we ought to have a little talk."

"Yes, sir. By all means. I'm very anxious to explain everything. But—did you hear a scream a moment ago?"

"I thought I did," Jason opened the screen door. He started toward Luana's bungalow.

HE RAPPED on the lanai door. When she did not answer, he went in. He called again. He went through the blacked-out living room and into the bedroom. The bedside light was burning. The bed, at first glance, looked unused; then he saw the slight depression in it.

He said sharply, "Have you a gun, Flack?"

"No, sir. But it occurs to me, Mr. Am-

boy, that she is in no danger. Why should she be? Isn't it likely that she was too upset to sleep and heard the commotion on your lanai and ran to Mrs. Mace for help? She's run somewhere. Shall we wait under the trees for safety's sake? We can talk there with impunity. I am very anxious to explain things to you before there are further developments. Anything may happen tonight and I want you to feel quite safe in trusting me, sir."

They went out under the trees near the water, found a bench and sat down.

"How did you get here?" Jason asked.

"In a sampan."

"From Honolulu?"

"Yes, sir."

"Alone?"

"No, sir. Singapore Sam is along."

"Where?"

"We're anchored just about off this tree—just offshore, sir. I told Sam to be in readiness in case we wanted to get away in a hurry. I sneaked ashore when you were talking to Miss Topping. I've been waiting ever since."

"Now, just a minute, Flack. What you've said you did is impossible. Ever since the war, all small craft have had orders to remain in port. If Mrs. Grazzard takes her big sampan out of here tomorrow, she will have to have special permission from the commanding officer of this district. Stop lying. It would have been utterly impossible for you to sneak out of Honolulu past the Coast Guard and the Naval Patrol."

"Yes, sir," Flack agreed. "But we had special permission. You see, sir, the regular interisland steamer service was suspended when war started. Those ships now run very irregularly and when they do operate they carry troops and military equipment almost exclusively."

"A very up-and-coming young man who lives near the Honolulu Yacht Harbor has permission from the Coast Guard and the Navy to charter small boats for carrying urgent necessities to and from the other islands. He rents these boats, then hires crews to man them. This island, it seems, is very short of yeast. Without yeast, it is impossible to make bread. The Quartermaster Corps needs bread for the troops here. Singapore Sam is an expert navigator. So we signed up to bring over a load of yeast."

"Get on with your story," Jason said. "I am fascinated."

"I think I know just how you feel," Flack said. "You don't know whether to thank me or to sock me. Strangely enough, Mr. Amboy, I have nothing to apologize for. Everything I have done in the past few days, from the moment of my disappearance on the Tasmania until now, has been dictated solely by my loyalty to your interests."

"I'd like to know what started all this business," Jason said.

"I'll tell you, sir. It began with an incident the night the stowaway vanished. You will recall that I slept on a mattress that I placed on the floor against the door in your stateroom."

"Yes."

"DURING that night, while you were asleep, someone pushed the key out of the lock from outside. Someone unlocked that door and tried to open it against the mattress. By the time I could get up and get the mattress out of the way, the corridor was empty. It was then that I hatched the scheme to disappear. During the next day I made and carried out my plan. I wanted you safely in the brig where the killer could not reach you."

"How did you worm your way into Miss Topping's confidence?"

"That was very easy. I merely told her I was convinced she was right in thinking you were a blackmailer. I wanted to kill several birds with one stone. And I did. I knew the Grazzards were suspicious of me. I wanted to disarm them."

"And I wanted to awaken you to a full sense of your danger," Flack went on earnestly. "By seeming to turn so viciously against you, I thought I would accomplish that. But in that respect I failed. Incidentally, it was I who phoned you in the hotel last night and said I was an old friend of your father's. I was making every effort to sharpen your awareness of danger."

"But why," Jason said protestingly, "did you have to go to such lengths? Why didn't you merely tell me about it? God knows I'm a reasonable man and an open-minded man."

"I don't deny that, Mr. Amboy. But you are, except where your engines are concerned, the most careless man in the world. Time after time I warned you to be more careful, and you told me I was flying high, or going off the deep end, or running wild. But as much as anything else, I wanted to bring Mrs. Grazzard's clever blackmail argument into the open. I forced her to play all her cards at once."

"That was clever," Jason complimented him. "But—"

Jason checked himself. Flack's hand had closed warningly on his arm.

Jason heard the voices—very low voices. One was Aunt Bertha's. The other was a man's. He didn't recognize it. They stopped talking as they passed his bungalow. For a moment he thought they had gone in, then he heard the faint scuff of a foot in the path. They were coming toward the bench.

The pressure of Flack's fingers on his arm increased. Jason stopped breathing.

Aunt Bertha and her companion passed within six feet of the bench. They stopped again a few feet away.

The man whispered, "No, you'll never have another chance at that fellow. He's too *akamai*."

There was a long silence, then Aunt Bertha said softly and thoughtfully: "Yes. Come along. There is only one course."

They walked on. A moment later, Jason heard them on the pier. Flack released his arm. "Wait right here, sir," he whispered. "I have a little errand."

Puzzled, Jason waited. He heard Flack's shoes as he crossed the sand toward the pier. He stood up, straining his eyes against the night, and his ears

against the soft hissing of the ghost green waves near his feet.

He could not see the big sampan in the darkness. He presently heard a splash into the water, then the sudden muttering of the Bertha's Diesel.

The exhaust struck a harder, higher note, and a plume of phosphorescent shot out from the screw. The big sampan was under way.

Jason ran out onto the pier. He intended to jump aboard, but the distance was already too great. The sharp drumming of the exhaust receded. The fume of burned fuel drifted past him. He could not see the Bertha. All he saw was the glowing green wake. It described sharp curve as the sampan headed for the mouth of Kokala Bay.

Jason was certain that Bertha Grazzard, with Channing Mace or Lorrin was on her way to Kahuna, and he was certain he knew her purpose. Having failed at killing him, she had no alternative but the exceedingly desperate one of killing Colton Grazzard.

Aunt Bertha was, Jason believed, a very desperate woman making a final attempt at escaping the trap she had built for herself. Uncle Colton was, according to Jason's blueprint, her only living material witness. She must, therefore, eliminate him before Jason could reach him.

And he wondered if her plans included an explanation of the sudden death she was planning to visit on her brother. Doubtless, they did. Colton Grazzard would vanish.

HE CALLED softly, "Flack!" Flack did not answer.

Alarmed, Jason shouted, "Flack! Where are you?"

The big sampan must now be at the mouth of the harbor.

A voice called softly, "Is that you, Mr. Amboy?" It seemed to come from the water near the beach.

Jason peered into the darkness.

"Who is it?" he demanded sharply.

"It's me—Singapore Sam Shay," came the reply.

Jason's pulse went down twenty beats to the minute. "Oh," he said, "so it's you, Sam. Can you come alongside?"

Jason heard the engine start. He presently saw the phosphorescence at its screw, then, vaguely, the silhouette of a small sampan against the reflection of stars in the glassy water.

It came alongside the pier and bumped hard. Jason jumped aboard.

"Flack's on that sampan," Jason said, "and there are a couple of people aboard

COLLIER'S

"Oh, Jim—you remembered!"

RODNEY DE SARRO

# Third floor back...

It's 4 p.m. on a quiet street in a big city.

A slip of a girl, with a suitcase a little too heavy for her, climbs the brownstone steps and rings the bell.

Her heart is beating a little fast, but it's not from the weight of the suitcase.

She's wondering what it will be like, living in a furnished room, so far from home.

She's hoping she'll make good at her new job.

She's thinking that maybe now she understands a little bit of what Tom must have felt when he said goodbye and left for camp.

But she's not going back till it's over.

Millions of men and women today are finding themselves in strange surroundings—in situations they couldn't have imagined a few years ago. They're giving up their pleasures and comforts—and often much more—to bring future good to the whole world. And they don't mind—too much—because it will be worth it.

Industry, too, has put aside for the duration its never-ending job of supplying those pleasures and comforts which have helped to make life fuller and better in America than anywhere else in the world.

Industry is working today with strange new materials, toward grimmer goals—but working with the *same ingenuity and skill, organization and experience, initiative and resourcefulness*. For these things are as much a part of American industry as they are of Americans.

And because they are, we have not found today's production task, big as it is, too big. Because they are, we shall not find tomorrow's challenge, great as it will be, too great. With new materials like plastics, new sciences like electronics, offering hope and fuller opportunity; but with the old American ingenuity and courage and enterprise—we shall face the task of building a better world. General Electric Company, Schenectady, N. Y.

★ ★ ★

*The volume of General Electric war production is so high and the degree of secrecy required is so great that we can tell you little about it now. When it can be told completely we believe that the story of industry's developments during the war years will make one of the most fascinating chapters in the history of human progress.*

who will kill him if they find him. Have you any firearms aboard?"

"No, Mr. Amboy. What's it all about?" Shay let in the clutch. The sampan began to move.

"We're heading off a murder," Jason answered. "I'll explain it all in a moment. Let's get going!"

Kahuna Island was rising against the stars—a stripe of blackness against the blackness of the Pacific. The sampan was nosing in at throttled speed.

Jason, in the bows, was trying to see the shore. Above the tumult of his heart, he heard the soft, smothered roar of surf, and this puzzled him. The wind was from the north—the trade wind—and the landing at Kahuna was at the south end of the island. It was a sheltered shore—there should be no sound of surf here. Yet there was.

The redhead Shay was at the wheel, repeating the commands Jason called.

The offshore wind brought no sound but that of the unseen surf.

Obscurely, against the stars, Jason saw the fire *pali*—a cliff that rose sheerly from the far end of the beach to a height of six or seven hundred feet.

THE sampan crept closer. He could not see the Bertha, although when Sam Shay had stopped the engine less than a half minute ago, the big sampan's exhaust had sounded dead ahead.

A ragged fringe of palm fronds was moving slowly against the starry northern sky.

With the engine hardly turning, Jason now heard the Bertha's exhaust—still ahead but off to the left and close aboard. It stopped.

Sam Shay promptly stopped the engine. The roar of the surf became louder.

The red-haired man came forward with a boat hook with which he began to take soundings. "Sand!" he whispered.

The sampan was ghosting toward the unseen beach.

"That surf," Sam Shay whispered, "is on the other side! The island is mighty narrow here. Do you see anything?"

"No."

The keel ground into hard sand and the sampan came to a gentle stop. Off to the left, Jason dimly saw the black loom of the Bertha. He heard a faint splashing in the water near the big sampan.

A man on the beach called inquiringly in Hawaiian and the deep voice of Mrs. Grazzard answered. She was, Jason realized, wading ashore. One of the native sentries had hailed her.

Her voice answered. The man on the beach spoke again, respectfully. He laughed. The laugh was brief.

Sam Shay touched Jason's arm. He whispered: "She doesn't know we're anywhere around! She doesn't suspect anything! She told him to go back to sleep. I guess that was sarcasm. But where's that other guy? Where's Flack? She's alone!"

Jason let himself over the side. Grasping in his right hand the stout ohia-wood club he had found in the paint locker, he eased himself into the blood-warm water.

In water chest deep, he waited and listened.

His heart was hammering again. He saw the glimmer of the white sand between the water's edge and the palm trees, but he saw no one.

Suddenly, far away, to the southeast, a deep drumming became audible. He walked slowly toward the beach.

Lights sprang on a hundred yards away through the trees and a house with a low roof appeared out of the darkness, and somewhere behind the house an automatic electric light plant began to hum.

Jason saw Mrs. Grazzard silhouetted

on the *lanai*. She was alone. Puzzled, he waited a moment. He heard Singapore Sam's cautious progress through the water near him.

The exhaust of the motorboat he had heard was now closer and louder.

In the faint illumination from the *lanai*, he saw a tall man standing on the beach just ahead of him. The man called sharply in Hawaiian. Sam Shay answered in the same tongue. The sentinel on the beach spoke more sharply.

Jason heard the rush of Sam Shay's feet in the sand. He heard the impact of a fist. The sentinel went down and rolled over twice.

Singapore Sam Shay kissed the knuckles of his left hand and said: "Where's Flack? Where's that other guy? There's something very funny about this." And then with dismay: "Look! That baby's adrift! She's floating out!"

Jason turned about. In the faint light from the *lanai*, he saw the Bertha clearly. She was evidently caught in a current and was drifting to the south.

"Get aboard her," Jason directed him. "If Flack's aboard, bring him to the house."

"Yes, sir."

The powerboat Jason had heard was closer. It was coming fast. It was, Jason suspected, either a Coast Guard or a Navy Patrol boat.

A searchlight in its bows came on and a long blue-white shaft went stabbing along the beach.

He crossed the beach and started up the path at a run. As he neared the house, he heard a muffled shot, then another. A woman screamed and a man with a shrill voice shouted.

Jason entered a long room lined with bookshelves. From floor to ceiling, the shelves were solid with books. A table lamp with a green glass shade filled the library with a curious cool glow.

Three people were struggling in the middle of the room. One was Bertha Grazzard. Another was a fat, very brown Hawaiian woman in a pink Mother Hubbard. The third was a thin, tall white-haired man in sleeveless white pajamas. He was almost as brown as the native woman.

He was saying, in a shrill, hysterical voice, "You crazy woman! You crazy, crazy woman!"

Blood was running down his skinny brown arm from a wound in his right shoulder, and another thin red stream from the wound was running down the front of his pajama jacket.

JASON snatched the gun out of Mrs. Grazzard's hand. The Hawaiian woman was trying to force Bertha Grazzard into a deep white chair.

Mrs. Grazzard saw Jason and she stopped struggling. Her amber eyes stared at him. They opened wider and wider. He thought she was about to scream, but she didn't. She permitted the brown-skinned woman to force her into the big white chair.

Two brown-skinned men in dungarees came swiftly into the room from different doors and started for Jason. They stopped when they saw the revolver in his hand. The woman in the pink Mother Hubbard was panting. She backed away from the woman in the chair, then she turned to Jason. She said something rapidly to him in Hawaiian. She was panting and she was sweating, but she was, Jason thought, remarkably composed. She saw the two men and yelled at them. One of them answered her with an air of stubbornness and anger. She yelled again. They retreated and went out, the one who had objected still protesting.

(To be concluded next week)

Continued from page 16

not be good to me there. And he too is better off without me. He tries to pretend he does not care when the foreign ladies never came to call on me. But he cares."

She dropped her head as she spoke, so that he could not see her face.

"How did you escape?" he said, after a moment of thinking over what she had said.

"We were at an inn," she said. "It was easy enough. The town where we stayed was on a canal, and while he slept I went away and hired a boat to bring me far out of our path, backward, by ways he would never know."

"So now you go to your grandfather's house again," old Wang said.

"There I go," she agreed. Then she lifted her head. "But what of Mrs. Shipman?"

"A prisoner," he said, "and all in the house prisoners. But she has stood off the guards. Three times those devils that stand at our gate have come in and three times by her own power, which I cannot myself understand, she has turned them around again. Nevertheless I am put here to open the back gate the moment she calls to me, and at her word the girls are to flee along the ways she has shown them on pieces of paper. Each girl has a paper of her own, and at the end of the escape there is a friendly house for each."

"How good she is," Leone said. "How wonderfully good—how better than a mother!"

"I know," he said, "and I often ask why. These girls are made of clay and water. They will never reward her."

"She was good to me, too," Leone said. She pondered a moment whether to ask him of Dan, and then did not. How could any in this house know him? No, she must find him in other ways.

She rose and pulled the kerchief over her face again. Then she unbound the ropes from her shoulders and left the fuel on the street.

"Take it," she said, "without price. It has done its work for me."

"We need it," he said simply, and hoisted it on his own back, and they nodded to each other.

"You know where I am if your mistress is ever in any need," she said.

"I know," he said.

And so they parted, he to enter the

gate with the fuel, and she to go on toward her grandfather's house.

It was less than half a mile away and she would soon come to it, and she circled through a street or two until she came to the back of the house instead of the front. She might have been forbidden to enter the front gate of a house like her grandfather's, a rich house where a gatekeeper stood to keep out the beggars and the vendors. But here at the back gate she gave hard knocks with a stone she picked up out of the street. One or two doors opened at the noise, but seeing only an old woman they closed again.

At last she heard footsteps and the gate opened a little and she saw the round pock-marked face of the man who was the cook in her grandfather's house.

"Fing, it is I," she said.

He knew her voice and without a word he reached out his arm and drew her into the gate and barred it.

"You, young mistress!" he whispered.

"Yes," she said, "I have escaped."

"But your lord?"

"He is safe," she said. "He is safe enough. But I am come home. Where is my grandfather?"

"He is in his book room," the man said. "He is sitting there reading his old books. It is all he does nowadays."

"Tell him I am come," she said. She pulled off the kerchief from her head as she spoke, and her long black hair fell down her back. "Tell him I will come to him as soon as I have made myself fit."

"Yes, yes, young mistress," the man cried and he hastened to do what she had bid him, and she went through a court and into her own old room.

OLD Mr. P'an sat in his study reading. He had not for many years read a new book and it was his determination not to do so as long as he lived. There were too many new events in the world with which he had to cope; there was no use in adding to his difficulties by finding new ideas from books. Of new ideas he had more than enough.

The first new idea had come upon him with force and terror many years ago when his young daughter, Ai-lan, had insisted upon an education. She was his only child, and he had never taken another wife in spite of the importunities of Madame P'an when she discovered

# Tired Kidneys Often Bring Sleepless Nights

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness. Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

Rubber, including Ace Hard Rubber, is critical war material. No more hard rubber combs may be made until Victory. Take good care of Ace Combs you now have.

she could bear no more children. Mr. P'an was delicate and ascetic and even his marriage to a delicate gentlewoman was a trial to him. If it had not been his duty to marry, since he had been an only son, he would have become a Buddhist priest. He was the son of a scholar and had lived always with books about him and usually with one in his hand. Among his servants and dependents his nickname was Book Fool. It was affectionately given, and in his house all were zealous in looking after his practical needs which, left to himself, he neglected entirely.

Ai-lan was to him an unknown and inexplicable character. He was proud of her extreme beauty and her brilliant mind. He did not want to teach her to read, for he did not believe in women knowing how to read; but because he liked to have her near him, he taught her to read before she was five. Thereafter he allowed her to read his books in order that she would stay near him. For otherwise how could she have found any attraction in sitting quietly even for ten minutes? Together, his gentle, half-invalid wife and himself had produced a perfectly healthy child, whose strong body and quick brain were at once their joy and dismay. They yielded to her every demand because neither of them had the strength to cope with her temper.

On only one matter had he stood firm—she could not leave the house and go to school. He would not allow her to walk on the streets or go to strange places. The only way to insist upon this was to invite tutors to teach her at home. Thus the Frenchman had come into this house.

Of course not for one moment was his daughter supposed to be left alone with a man. When he found that she had bribed her nurse to leave her alone, the woman's wailing excuse was a valid one: "But how could I dream that she would love a foreigner?"

None could dream, indeed, that Ai-lan who had been reared in the strictest Chinese traditions, could love a white man, and one who could not even speak her own language. But she had so quickly learned French that Mr. P'an had to suppose that almost immediately they had conversed in French, and of course the nurse had not known what they were saying.

THUS under her very eyes they had doubtless planned the errand for the woman, which left them at the beginning of the full lesson hour so long a time for their escape. It was true that the woman had grown uneasy while she had gone to buy the special tea, which, it seemed, the Frenchman wanted to send home immediately to his mother in France, who so loved Chinese tea. She had hurried back, the silver coin her mistress had given her for a bribe still unspent in her pocket, and had found the room empty. It was to her honor that she had come at once to Mr. P'an, tearing down her hair as she came and wailing the cry of those who mourn for the dead.

Mr. P'an never would willingly remember the ten days that followed that dreadful moment. Ai-lan would not come home. Instead she remained with the Frenchman and for two years Mr. P'an heard nothing of her. When a stranger asked him in common greeting how many sons he had, he always replied in his stately fashion that Heaven had granted him no children.

At the end of two years a white woman whom he had never seen before came to his house. She brought him news of Ai-lan. Ai-lan was in her house—a house of refuge. The Frenchman had left her to return to his home. Now, the white

woman insisted, Mr. P'an must allow his daughter to come home because she had a little child—a girl.

"I have no daughter," he had told Mrs. Shipman.

"You have," she said bluntly.

The controversy had lasted many days. In the midst of it Madame P'an, always ill after Ai-lan went away, quietly died. She had never tried to persuade him to take back their daughter, for she was an obedient wife and always listened first to him to find out what she wanted. She hid her scholarship from him, ever knowing that he disliked learning in women. Nevertheless after her death he found a short poem that she had written. It was under her pillow and a servant brought it to him. The few delicately brushed lines conveyed to him the cause of her lack of will to live:

*A plum tree bears a single flower.  
The flower falls—there is no fruit.  
Why then should the tree  
Continue to live?*

He had sat holding the thin sheet in his hand, and at that moment Mrs. Shipman had come to his door, without announcement, having forced her way past the intervening servants. She held by the hand a minute girl, barely able to walk. "This is your granddaughter," she said.

His eyes met the eyes of the child. By some accident there was no resemblance in this child either to Ai-lan or to the foreigner. Her eyes were the eyes of Madame P'an, but young and healthy and gay, as he had never seen his wife. Between the paper in his hand that seemed actually to quiver of its own accord, and the child's gaze, he was not able to speak.

"Go and bow to your grandpa, Leone," Mrs. Shipman said, in her wretched Chinese.

The small girl understood her, how-

ever, and moved forward to obey. P'an crushed the paper in his hand, let it drop, and he put out that hand the child. She came forward and without fear she laid her own hand in his. He looked down at that small hand in his own dried palm.

After a long moment, gazing at scrap of a hand in his, he said in a low voice, "Let her stay."

IT WAS Leone he allowed to come home, he always argued, to himself not his rebellious daughter. When, after a few days, he was already foolishly fond of the child, and it was obvious that he was fretting for her mother, he sent word that only for the child's sake Ai-lan could come home. Nor did he relax. When Ai-lan returned, silent and sad, he tolerated her presence. When in less than two years she died of tuberculosis he was relieved. He lived in the child.

And yet who would believe the trouble he had had with Leone? It was not because she was less than a good granddaughter, but because as she grew older he found that no man whom he would endure as a son-in-law would marry her. His friends made strange excuses for their sons. He was too proud to inquire of them. But he knew the reason was that Leone was only half Chinese. No would he allow for one moment the possibility of a small tradesman or an upper servant as his son-in-law. In desperation when Leone was seventeen he accepted the aid of Mrs. Shipman, with whom he had continued a curious, unwilling friendship because of Leone's devotion to her, and he allowed Leone to be married to the wealthy Englishman. At least it was a proper marriage. But he saw the Englishman only once and that was at the wedding.

It was obvious to him on that occasion that the Englishman did not like the idea of a Chinese father-in-law any more than he himself liked the idea of a fo-

sign son-in-law, and so Mr. P'an returned to his own lonely life. When Leone came to visit him, as she sometimes did, but not often, they did not speak of her marriage. He saw that she looked well in her always delicate fashion and that she wore expensive garments. He was relieved that she had no children. As a man wholly Chinese he preferred not to think of the further mingling of Chinese blood with French and English.

In the last few days, however, he had been extremely anxious. War had broken out in a new form. It had been bad enough when Shanghai fell to the enemy. But by remaining assiduously obscure he had been able to avoid any more trouble except the now heavy taxes laid on him. And for a while it was perhaps an asset to have an English son-in-law who was a man of some position. It was always possible that if anything should happen—if, for instance, he should be kidnaped as many wealthy men were, on one pretext or another—the Englishman would help him.

All that was changed. In the last few days he knew that it only was disaster that he was allied in any fashion with the English. He had remained in his home, therefore, not going out even to the tea-house, and had hoped that Leone could not communicate with him.

When now his personal manservant came in to announce that his granddaughter had come home, and apparently to stay with him, he was thrown into terror, which he did not try to conceal from the faithful servant.

"Is her husband with her?" he asked in alarm.

"He is not," the manservant replied.

Mr. P'an put down his old book. "If he comes here, he must not be admitted," he said in agitation. "I cannot allow a foreigner in the house at the risk of my own life."

"Calm yourself, old sir," the servant replied. "I have heard that all foreigners are being put in jail."

Mr. P'an did not hide his relief. "Ah," he said, "then that is why she has come home. Tell her I am here."

HE TOOK up his book again where he had left off and tried to compose his mind by murmuring out loud the words of ancient poetry. He was almost entirely composed when some few minutes later Leone came in. She looked, he saw to his relief, almost entirely Chinese. She was in Chinese garments and her hair was coiled on her neck, and a jade pin thrust in to hold it.

"Grandfather, you are here," she said in graceful salutation, as she stood.

He nodded, took off his brass-rimmed spectacles, and motioned to her to sit down. She did so, sitting sideways on the chair in respect to him and his heart softened. A good child, he thought, always a good child! He must not refuse her any shelter he could give her.

"What is your situation?" he asked her.

She answered him then, telling him where she had been when the new war broke and what had happened to her. He grew very grave as she went on.

"Was it well for you to leave your husband?" he inquired.

"In these times it seemed to me better if I came home to my own people," she said gently.

He could find no fault with this repudiation of her foreign blood. "Of course I am glad to have you here," he said. Thus he approved the repudiation.

She wanted above all else at this moment to be alone, and so she returned to her own room and shut the door and pulled the satin curtain across it as a guard against a servant opening the

door. It was midafternoon. The was too far spent to do anything. Besides, she must think what to do. Must plan, plot if she must. Where Dan James? Had he caught his ship? he had not, how would she find prison? Her cheeks burned at thought of him and she put up her hair to cool them. She had forgotten Arnold as though she had never seen him.

ARNOLD HATFORD had not wakened until long after sunrise. Then and again Yang had come to lay his head against the cracked panel of the wooden door of the room and had heard only deep, heavy breathing of the Englishman. By the time Hatford called him he was quite at ease. His mistress would be so far on her way that, whatever master told him to do, it would be late. He hastily poured into a teapot boiling water he had ready and waited in a kettle on a charcoal brazier in main room of the inn, and putting the pot and two tea bowls on a tray he entered the room where Hatford had ceased to shout.

Hatford was sitting up in bed, his grey hair tousled above his half-bald crown.

"Where is Missy?" he demanded.

Yang opened his black eyes wide. "No have see," he said.

"You must go see, chop chop," Hatford retorted. "Here—put down the tea and go out and see where she is. She probably waked—" he muttered to himself as he poured the tea. "She's probably waked and gone out to walk a bit." Yang disappeared and Hatford sipped the hot tea.

Leone was secretly restless, he had begun to think, under that fine surface calm of hers. She often woke early and slipped out of bed, without waking him to walk. But in a strange place like this she ought to have taken Yang or at least left word.

When Yang did not come back he got up and washed himself in cold water and then sat down in great impatience, angry and alarmed. He was a tall thin man, except for a slight incongruous pouch below the belt. His red innocent face betrayed his thoughts. Just now he was trying to make up his mind whether would do him any good to leave the room himself. He decided against it. He could not speak a word of Chinese, and if he wandered about in a strange Chinese town he would be lost in a few minutes and quite helpless.

A bad position for me to be in, he thought severely. Without either Leone or Yang, what would happen to him?

He sat motionless, his large red hands on his knees, until at last Yang came in. At once Arnold saw that he was disturbed.

"My no can find Missy," Yang said excitedly.

"No can find!" Arnold shouted.

"My look every side, my talkee ever body—no have see!" Yang said. He shouted unintelligibly and through the door there came a ragged fisherman holding in his hands a sodden mass. "This man, he take Missy's coat-skirt in his net this morning," Yang said.

Arnold groaned. He got up and adjusted his pince-nez and examined the mass. Yes, these clothes were Leone's. "But what—whatever—" he began to stammer. His face worked and his mouth hung open. Leone! But she had been quite happy!

"Missy no wantchee go Hong Kong side," Yang explained gently. His eyes were sorrowful. "Missy talkee my 'Yang, my no wantchee go Hong Kong side. English lady she b'long velly close to my!'"

"Cross to her!" Arnold echoed. "Why

# HUDSON OWNERS! At a meeting back in '41 WE TALKED ABOUT YOUR CAR!

## HERE'S A REPORT OF THE MEETING!

"There won't be any new cars"

It was evident, months before Pearl Harbor, that the growing demands of war production would cut the supply of new cars far below normal replacement needs. A staggering problem for a nation accustomed to traveling over 200 billion miles a year by automobile!

"We've got to think of present owners"

What about cars already in use? They must be made to last longer—must be kept in better condition—must be serviced more regularly. Hudson recognized a clear-cut responsibility to every Hudson owner.

"Get our dealers set for wartime service"

Hudson had several advantages in this situation. An enviable record of dependability and low operating cost, for example—as proved year after year in official endurance and economy runs under American Automobile Association supervision. But service needs were bound to increase as cars grew older, and Hudson dealers must be set up to handle them.

"Parts must be available everywhere"

Our unique system of distribution provided the solution of the problem. It made possible a nationwide chain of parts depots—assuring prompt delivery of needed replacement parts and accessories everywhere, and conserving critical materials by enabling dealers to hold their own stocks to a well-balanced minimum.

"It's our job to keep Hudsons rolling"

Hudson's first duty, of course, was to the war effort—speedy conversion of plants and personnel to war production. But, hand in hand with this, an expanded service program was launched, to prolong the useful life of every Hudson on the road—to effect vital conservation of gas, oil and tires—and to assure owners of expert service at moderate cost.

OUR PLANTS ARE DEDICATED TO WAR PRODUCTION... OUR DEALERS TO MAINTAINING WAR TRANSPORTATION!

# Triple Check this New Paint...

**1. It's Pure White Lead**

**2. It's Dutch Boy**

**3. It's Ready to Use**

**2 FORMS**

(1) Special "EXTERIOR PRIMER" for a First Coat with extra sealing, hiding and covering power. (2) "OUTSIDE WHITE" for Finishing Coat and General Painting.

## This New Paint—like the Famous Paste—Gives Your Home The Long-Lasting Protection of Pure White Lead

Today America's irreplaceable homes need the protection of good paint. And good paint's other name is *White Lead*.

Since the Nation was born, down through the years, this rugged home guard has fought the weather—and won.

Yet paint made from White Lead costs no more than regular quality paints. And it never cracks and scales...saving you the expense of burning and scraping off the old paint at repaint time.

So it's timely news that Dutch Boy White Lead—supplied for generations in PASTE form—can now also be had as a ready-to-use PAINT!

This new Dutch Boy Paint, sold by leading paint dealers, is Pure White Lead—all ready to spread. It comes two ways: (1) special "Exterior Primer" for a first coat with extra sealing, hiding and covering power and (2) "Outside White" for finishing coat and general painting. It assures sparkling whiteness and long-lasting protection.

**Remember**—there is enough white lead for both military and civilian uses. *No shortage exists.* And its good quality is unchanged. Remember, too, whichever form of Dutch Boy goes on your home—the famous paste or the new paint—"you're money ahead when you paint with white lead."

## Lifting high!

HEAVIEST WEIGHT EVER LIFTED OVERHEAD BY ANY MAN'S HANDS WAS 382 POUNDS! SMOOTHEST DRINK EVER LIFTED BY ANY MAN'S HAND IS TODAY'S TEN HIGH, THE WHISKEY WITH "NO ROUGH EDGES"

## Bronc-busting high!

AN ARIZONA COWBOY TAMED A WILD-EYED BRONC IN 3 MIN. 2/10 SEC. . . A FEAT ALMOST AS REMARKABLE AS THE WAY HIRAM WALKER KEEPS "ROUGH EDGES" OUT OF SUCH A ROBUST STRAIGHT BOURBON AS TEN HIGH.

# ..and Ten High!

A new high in whiskey smoothness!

Please be patient. If your store or tavern is temporarily out of TEN HIGH there are two reasons: (1) Since all distilleries are now making war alcohol instead of whiskey, the available supply of TEN HIGH is on quota "for the duration." (2) Railways must give war materials and food the right of way, so your dealer's shipment of TEN HIGH may sometimes be delayed.

This Straight Bourbon Whiskey is 4 years old. 86 proof. Hiram Walker & Sons Inc., Peoria, Ill.

stone. When Daniel spoke to him there was not the slightest flicker of understanding or of intelligence.

By the third day Dan was beginning to talk to himself in a low monotone, muttering through his teeth: "What the hell are they going to do to me? Why don't they go on and do it? It's cold as a grave in here. Maybe it is a grave. If they took me out and shot me it would be better. I could make a break for it—or even if I got shot it would be better."

BY THE end of the fifth day, time was getting mixed in his mind. Night and day were almost alike in this cell. The rafted roof was high and unceiled, and his only window was two panes of glass let into the highest point of the roof. The walls were smooth and he could not climb them. On the second day the guard had put chains on his ankles. The chains were fastened to an iron ring in the wall. He had worked on this ring but it had long roots that seemed to go through the wall itself and be twisted outside. He had only exhausted himself. Besides, he was tired all the time—too tired to try any more—not hungry but half faint.

"I must think," he told himself sternly, "I must plan how to get out of here." But he could not think. He had flashes of clarity when he saw the face of that beautiful girl going away with Mrs. Shipman. He saw her very clearly and he remembered her name—Jenny Barchet. But what could he do for her? Where was she now?

On the morning of the twelfth day, or the thirteenth—he had lost all count—the door suddenly opened and three American sailors were thrust into his cell. He had been sitting on the edge of the bed, his head sunk in his hands, trying to think. They came jostling in, one pushing the other from the pushing guards behind them and then the door clanged and the lock screeched. He looked up.

"Quit pushing," he said irritably.

A sailor laughed with fury. "Here's a nice welcome from a fellow sufferer—'Quit pushin'," he says!"

"And I mean *quit pushing!*" Daniel repeated with great effort and distinctness. Today his eyes did not focus quite clearly. He was not sure whether there were three sailors or four.

"The fellow is sick!" one of them exclaimed. He was white-haired. "Here, you—eat a piece of this!"

The old sailor put into his hand a piece of moldy chocolate. But after the thin insipid rice gruel it tasted good and Daniel chewed it eagerly.

"Haven't got—a drink?" he asked.

"Not a drop," the old sailor replied—"But here—here's my one treasure." He reached into his ragged sock and pulled out a paper. In the paper was a crushed cigarette and a package of matches with two matches left in it.

There was utter silence as he put the cigarette into Daniel's mouth and lit the match. The first one burned.

"There's luck," the old sailor said.

They stood for a moment, taking stock of what they saw.

"Poor diggin's," one of them said suddenly. He was a young boy, his beard blond and uneven on his chin. His blue eyes were haggard.

Daniel James did not answer. The tobacco was clearing his brain. He felt better than he had in days and suddenly he was ravenously hungry.

"You fellows bring in anything to eat?" he asked.

"Ain't you just had something?" the old sailor said in an injured voice.

"He means beefsteak and fried potatoes," the blond boy said. "He means

coffee and hot biscuits and peach ice cream. No, sir, we didn't think of it."

"Quit it," Dan said roughly. "I've been here—days."

"Sure thing," the blond boy said in a low voice.

And then suddenly, before he had time to ask them where they had come from or how they had been found and sent here, they heard the sound of steady marching along the cement floor, the marching of heavy leather-clad feet. The lock screeched again, a raucous voice shouted orders, and Japanese guards crowded into the room and pushed them out. Only Daniel, whose ankles were chained, was left. The Japanese shouted again and the stone-faced prison guard came in and stooped and with a key he unlocked the padlock that held the chains.

Oh, the blessed freedom of having those chains off! Daniel stood up, his ankles rubbed and bleeding, but free. Then the guards prodded him ruthlessly, and in a moment he was outside the prison, marching with the sailors down the corridor. He turned to the one next him.

"Where—" he began. But a sharp prick in his back stopped him. There would be no talking.

They marched in silence along the dark damp corridor. The stones beneath their feet were wet and the close air was bitterly cold with dampness. It lay on their flesh like a wet garment, and its cold stink crept into their nostrils. No one spoke. There was the sound of their shuffling feet and the heavy breathing of the guards. Daniel James glanced at the short stocky guard at his side. Why did they all breathe through their mouths and breathe so hard? He caught the man's eye and saw the dull face contort into a hideous grimace whose meaning he did not comprehend. Was it a smile or only a bad boy's face?

He turned his eyes away from it, whatever it was, and then in a moment they came to the end of the corridor and then into the room where he had first been brought. Here a uniformed officer behind the desk examined them and compared them with photographs he had, wrote down their names and nodded with a harsh grunt. The door opened again and they were pushed into a closed truck and the door was shut and barred.

"Gosh!" the blond boy breathed, "where are we goin' now?"

The words were innocent enough, but the guard at his side turned on him in a gust of fury and seized him by the hair with both hands and shook him.

"Hey!" the blond boy yelled.

But the old sailor said in a low voice out of the corner of his mouth: "Take it, Mike—take it—you can get worse than a hair pullin'."

IT WAS over in a moment. The truck turned and threw the guard half off his feet and he sat down, red and panting. No one spoke then until the truck stopped and the door was unbarred. They filed out, and Daniel saw the house where he had left Jenny Barchet and Mrs. Shipman. In less than five minutes he was back in the room where he had stood with them. It was empty, but the guards forced them together in a line before the desk, and then stood at right angles, their guns on the floor, bayonets fixed, watching them.

In this strange silence they waited. The room was spotlessly clean. The mahogany of the desk shone in the sunlight of the morning. Daniel had not known until now that it was morning, but the silver desk clock said quarter to eleven. Someone had put a blue porcelain dish of blooming Chinese lilies beside the

lock. He could smell the faint sweet fragrance of them as he waited, and reathing in that odor he felt exhausted with hunger and weariness and he gathered his strength together to keep from sinking to the floor where he stood. If he fell, he was sure that he would be helped up with a bayonet.

Then suddenly the door opened smartly, a cheerful voice broke off its conversation, and Shigo Kuyoshi came into the room. He looked extremely handsome. He had put on a new gray suit which a Chinese tailor had just finished, and he wore a new silk shirt of pale gray with a pin stripe in it. The wine red of his tie, made of Chinese satin brocade, threw into clarity the clear pallor of his skin and his fine black eyes and smooth black hair. He looked well fed and as though he had slept well, and as he passed them to take his seat behind the desk the smell of perfume came from him.

"Good morning," he said cheerfully. In their silence he sat down and looked at them, his smooth oval face smiling and quizzical. "You haven't slept well, I fear," he said.

None of them answered. Their eyes, blue, gray, brown—American eyes—were fixed on his face. There was no fear in any of them, only cautious readiness for whatever might happen.

"I have seen you before, Lieutenant," Shigo said gaily to Daniel. "Excuse me for disturbing you again. But the fact is I have a special job for you—one that only you can perform. Please—stand to one side." He threw a command at the guards and two of them stepped forward and jerked Dan by the arms and pulled him a few feet from the others.

"As for you," Shigo said sharply to the sailors, "what were you doing, hiding in a Chinese brothel?"

The sailors did not answer.

"Didn't you know you were supposed to report yourselves?" Shigo demanded. There was still no answer.

"Answer, if you please!" Shigo said imperiously.

"We didn't know it was a brothel when we went in," the blond boy said slowly. "We was wanderin' around the

city like, and a couple of girls told us to hurry up and hide—there was Japs comin' down the street. After that we just kept hidin'."

"A pleasant place to hide," Shigo retorted. "I suppose you planned to stay there for the duration?"

The blond boy stared at him. His fine skin, dirty and unwashed, flushed. "I don't understand Jap talk," he said coldly.

"Leave him alone, Mike," the old sailor growled. "Take what's comin' and keep your mouth shut."

"A wise man," Shigo said pleasantly. "a very wise man. But you see, my friend, I happen to want him to talk. Now, you, Blond Beast, what's your name? No, Blond Beast, that is good enough for you—tell me why you were wandering about the Chinese city. How is it you did not know that it was dangerous for you? Perhaps you were deserters from your ship?"

The blond boy looked at him with flaming blue eyes and pressed his lips together. Shigo flicked his eyelids and a guard stepped forward and with a quick jerk left the boy's arm hanging in a strange contortion.

IT HAPPENED so quickly that none of them could see how it was done. The boy gave a yell of agony, and there it was. His face went white and he rocked back and forth.

Daniel sprang forward. The guards jerked him back and he hit out at them. His anger made him suddenly strong.

"Come on, fellows!" he shouted. At his word the sailors sprang together. They fell upon the guards and two were knocked down. But quicker than they could proceed, Shigo had touched a bell. Instantly through the building an alarm sounded. Every door to the room opened and guards came pouring into the room. They were encircled by the enemy. In a moment it was over. Leather thongs trussed their arms to their sides. The blond boy had fainted and he lay on the floor, his broken arm upthrust.

"How foolish this is," Shigo said gently. "how unnecessary!"

(To be continued next week)

## Recipe for deep, restful sleep-

**WAR-TIME EFFICIENCY DEMANDS IT.** Enjoy sumptuous luxury and supremely healthful comfort too. Sleep on a gorgeous new Serta 4A Tuftless Mattress. Don't delay. Have your Serta dealer show you this remarkable mattress today. Also see Serta 1A, 3A and Tiny 4A mattresses, matching box springs, couches. Here are five outstanding features of the new Serta 4A Tuftless Mattress:

*Velvety, smooth, softness*—no tufts, no bumps, no hollows to disturb you.

*Two luxurious mattresses built in one.* Soothing posturized support—promotes easy, healthful relaxation.

*Longlasting comfort*—reinforced inner roll—never shift, never stretch construction.

*Sertaseptic coverings*—long-wearing, permanently germ and odor repellent.

FROM OUR GALLERY OF GOODYEAR VETERANS

**STILL IN SERVICE—AFTER 43,150 MILES**

This actual photograph of one of Mr. Schroeder's Goodyears shows how all four look today. After 43,150 miles, treads are worn down, but evenly—evidence he has kept wheels aligned and balanced. Freedom from sidewall breaks shows he has maintained proper inflation. No cupping indicates proper brake adjustment.

BUY MORE WAR STAMPS AND BONDS

# Takes WARTIME to show how good TIRES are

As a Goodyear dealer I've always talked plenty about the extra value in Goodyear tires.

Maybe in ordinary times some people thought that was just "sales talk," even if it did come from the heart.

But it's different today — now my customers are telling *me* how good Goodyears are!

## New Yorker calls it "Unbelievable"

Just to show how quality proves itself in wartime, take the case of Mr. Walter W. Schroeder, Belcher Road, Hartsdale, New York. Back in 1940 I sold him a set of four Goodyear All-Weathers.

To date these Goodyears have run 43,150 miles — and they're still good for several thousand miles, as the picture shows. "It's unbelievable,"

Mr. Schroeder told me. "I never imagined tires could be safely driven so far."

I told him it wasn't so unusual; that the home office has records of many Goodyears still in service after going fifty, sixty thousand miles and even more. Now that folks have to get everything out of their tires they're discovering how much extra mileage has always been built into Goodyears.

## What about future tires?

That's going to be true, too, when you can buy tires built of Goodyear's own synthetic rubber, Chemigum.

I don't know when they'll be ready — maybe in another year. But I do know this: the tire-building "know how" that has made Goodyears the world's first-choice tires for 27 years will insure the same standout service from them.

So if you've got Goodyears now, you've

got tires that are worth taking care of. You should see your Goodyear dealer right away and have your tires inspected. You'll get a real reward in extra mileage if you follow wartime driving rules. And when treads wear smooth, a Goodyear factory-method recap job will add thousands of miles' longer wear.

See for yourself, and as the months roll by you'll find yourself saying, like millions of others, "*As soon as I can buy new tires again, you can bet they will be Goodyears!*"

## IMPORTANT—IF YOUR TIRES ARE READY FOR RECAPPING

Quality workmanship and materials are just as essential in recapping as in new tires. The facilities of Goodyear's coast-to-coast system of factory-method recapping plants are available to all Goodyear dealers. Your work is done by tire experts — using "natural shape" molds that prevent tire distortion and insure a longer-wearing rebuilt job.

# GOODYEAR

THE GREATEST NAME IN RUBBER

Dr. Frank Bruce Robinson in a moment of repose, "catching spiritual impulses." Out of his "talks with God" has developed a profitable religion, Psychiana. It has paid the doc off handsomely, including his pride and joy, the 700-pipe organ, on which he makes recordings to sell to his followers

# The Shepherd of Moscow, Idaho

By John Kobler

Psychiana is both a business and a religion. Its founder, Dr. Frank B. Robinson, has put his hometown on the world map and himself in clove. And it all began with a little chat with God.

OF ALL the formulas for quick victory, perhaps the most original—certainly the one involving the least bother—is known as the American Fifth Column. It promises Hitler's collapse in a twinkling, and the only effort required consists of intoning the following rubric three times a day: *The unseen forces of God are bringing about the speedy defeat of the Axis.*

The genius behind this strategy is Doctor Frank Bruce Robinson, who for fourteen years has been selling a spiritual cure-all called Psychiana. Doc, who claims frequently to have chats with God, circulates thousands of pink post cards pleading with people to join his mystical blitzkrieg. The post cards also carry a plug for Psychiana, and replies to them augment Doc's files of prospective customers.

"If ten per cent of the population belonged to the American Fifth Column," he figures, "the war would end overnight. As it is, I have thirty-five hundred signatures and I'm not sure that won't do it. Ever since the movement started, the Axis has taken a beating."

To the high priest of a cult with 2,000,000 followers and a fat annual gross, winning a war overnight is difficult only in degree. Take Doc himself. In his buckeye ads, now appearing in 700 newspapers and 86 magazines, he proclaims

## I TALKED WITH GOD

(Yes, I did—actually and literally, . . . Before I talked with God, I was perhaps the world's No. 1 failure . . . and now?—well, I own control of the largest afternoon daily newspaper in North Idaho. I own the largest office building in my city. I drive two beautiful cars. I own my home, which has a lovely pipe organ in it, and my family are provided for after I'm gone. . . .

And that isn't all. The unseen forces, manifesting themselves through Doc, so he reports, have enabled him to summon his dog through two locked doors, to cause goldfish to leap in and out of their bowl, and to discuss politics with his mother, who's been dead for forty-eight years.

Among its other distinctions, Psychiana is the only mail-order religion in the world. It guarantees satisfaction within 45 days or your money back. Specifically, it purveys a series of 20 lessons in how to talk with God at \$28 (\$8 off for cash); three advanced courses at \$10, \$40 and \$100; fifteen books at \$1 to \$5; one-dollar Psychiana emblems, and 40-cent phonograph records with Doc talking on one side and playing the organ on the other.

Boiled down to essentials, this multimillion-word gospel preaches the literal existence on earth of a Power, variously called the Great Without, the God-law, the Living God, and sometimes just plain God. Anybody can use it to attain his heart's desire. All he has to do is to believe in it. To set the Power in motion, Doc prescribes a set of simple, Coué-like exercises. For example, you repeat 30 to 100 times, "The Living God is making me whole." Then, *jump suddenly to your feet* and say three times out loud the same statement, clenching your fists at the same time.

"You will have a 'flash' from the skies, one might say, and you will be supremely happy, I assure you," Doc maintains, adding cautiously, "I cannot say to you definitely when this experience will come—maybe months or years."

As proof, he cites testimonials from "students." A St. Louis housewife attributes a whole sequence of little family miracles to the Power: "Before, my (Continued on page 62)

Psychiana requires a staff of twenty-three, and a mechanically rotating table, to assemble the 25,000,000 pieces of literature mailed annually. Doc Robinson, dictating, thinks best in his shirt sleeves. He promises students a "flash from the skies;" carefully refrains from saying how soon

## AFTER THE WAR

## WILL YOU BE FISHING FOR FUN —OR FISHING FOR FOOD?

If we should lose this war, it COULD be that you'll be fishing for food instead of fishing for fun. If we should lose this war, it could be that you'll be fishing for food—for somebody else.

Freedom from want, freedom from fear, freedom to follow our chosen pursuits—these are what we are all fighting for. And these are the things that move men, money and management to turn out more and more of better fighting equipment.

Normally we devote our abilities to the manufacture of deluxe outboard motors that double the fun of boating. It is our business normally to help you "fish for fun." We can't help you to do so now because the Johnson plant is given over to war work (one hundred percent). "Sea-Horse precision" is now applied to war products. Johnson management and men are working

harder at this job than any at which they have ever worked before. All to the end that none of us will ever have to "fish for food."

## Feed the Starving Now

Continued from page 11

with questions from the exiled governments as to the foundation for this report. He was as puzzled as others, but was given an explanation that same afternoon. He received a visit from the Turkish ambassador, an old friend, who came to talk about another problem.

On being asked if the report was true and if he knew how it had come about, the ambassador replied that it was true and that he had brought it about himself. He said that although the Turks and Greeks had been age-old enemies, they had settled their quarrels and were both determined to go on being friends.

When disaster overtook Greece, and wholesale starvation spread throughout the country, the Turkish government considered it had a moral obligation to its neighbor; the ambassador was instructed to approach the British government and urge that relief operations be allowed for the Greeks. In due course, he received the customary reply, enumerating the usual arguments against any help for populations under Nazi occupation.

### Turkey Makes the First Move

This unfavorable reply was forwarded to Ankara, and, a short time later, came a telegram instructing the ambassador to inform the Foreign Office that on such and such a date, such and such ships loaded with food would sail from such and such ports in Turkey for such and such ports in Greece. This did the trick.

Most countries could not have carried it off in this way. But Turkey is a highly important neutral that could not be antagonized. Not only were the ships allowed to go through to their destination, but when experience proved that the operation involved no danger to the Allied armies, that it in no way benefited the Nazis, the volume of relief was increased, and financial facilities were provided by Britain and America. The whole operation was regularized by agreements set up by the Swedish and Swiss authorities and placed under the guardianship of the International Red Cross, exactly as the writers of this article had proposed eighteen months before.

Civilization may well be grateful to the Turks for opening the door to reason and compassion. The whole problem was bogged down in governmental refusal to examine the possibilities of relief. This was all the more baffling because the whole question of relief had been thoroughly tested during the last war by the feeding of ten millions of Belgians and Frenchmen living under the German armies of occupation.

Fortunately, the success of the Greek relief operation has served to confirm the experience of the last war and to demonstrate that it is possible to help our friends and allies without weakening the war effort. In the light of this, our government has come out categorically to defend Greek relief against criticism with the soundest of arguments. We have no hesitation in approving and applauding these arguments which are those we have been advancing for over two years.

With such a clear-cut governmental attitude having been adopted as regards the Greek problem, both compassion and loyalty dictate that we should try to do as much for other allies in desperate straits.

Time will prove how tragic was our failure to institute suitable measures of relief while we could still have saved

millions from tuberculosis, rickets, and physical and mental degeneration.

Recent reports give the following figures of combined meat and fat rations in some of the occupied countries:

Norway—3 pounds per person per month.

Belgium—2 pounds per person per month.

Poland—1½ pounds per person per month.

In the United States we consume an average of 20 pounds per person per month. The full horror of starvation in these Allied countries will not be brought home to us for years.

This situation is not "food shortage." It is *starvation*. Starved people degenerate in their resistance to disease, and such disease is rampant. There is typhus and tuberculosis in Polish cities. In one of the Belgian industrial districts recently surveyed, 30 per cent of the children are now tubercular—and an additional 40 per cent pretubercular. And there is an appalling increase in mortality of the children, the women, the aged and weak.

These are grim clinical figures and they represent more than cold figures. They represent children like yours and mine, with the same right to life and health and happiness, now slipping toward a miserable end for lack of food.

But a great ray of hope has come into their lives with the knowledge that at last food is being sent to the Greeks; that our authorities have recognized relief as desirable and workable. The hope of help, fast waning in the third winter of suffering, has revived in the belief that it will be their turn next. But the decision involves even more than dying children and starving millions.

If we take the right turning, we may save all that remains on the continent of Europe, that stands for what we stand for—the forces on which we must count if liberty and decency are to prevail again—for these nations are the only areas of freedom in Europe.

We make a grievous mistake if we assume that the small democracies are willingly leaving this problem to our decision. This is not the case. They feel strongly and bitterly on the subject.

### Norwegian Sailors Protest

One instance may be given: Since 1940, the Norwegian merchant fleet has been used to carry food and supplies to Britain and to fighting fronts. Only a few months ago, the Norwegian seamen in New York, through their organizations and unions, made strong representations to their government in regard to the food problem in Norway. After consultation with the authorities, they took the stand that they would not "at present" take drastic action and strike. They were, however, emphatic in saying that they did not propose to go home at the end of the war and "have to go to the churchyards and find the crosses of their dead ones who have died of hunger"; that in that case, their present efforts in the common cause would have been in vain.

If we take the wrong turning, we shall come one day to find a strange Europe in which our defeated enemies alone have health and stamina, in which our friends are weakened in health and character—and perhaps embittered. To take the wrong turning is to adopt the course best calculated to thwart our own efforts at building a better world after the war.

We are fundamentally a just people

and we want to have our country take the right course. It might be well to put ourselves in the place of people in occupied territory looking across the table at starving children and try to imagine how they feel.

They know that relief is feasible, for many of them owe their lives to its successful operation in the last war.

They know a great part of their food comes from overseas in peacetime and that they cannot hope to live unless it is allowed to come from overseas again.

They know the Greeks are being fed and that they, too, could be fed; and they have the bitter knowledge that the enemy in Germany always has the option of surrendering if they do not want to starve, but that the allies of Britain and the United States are deprived of even this miserable privilege; that they are helpless and must starve if the blockade continues.

They are not moved by broadcast promises that they will be fed when the war is over or when they have thrown off the Nazi yoke. They know they will be fed when the war is over, but that does not save their children from starvation now.

#### Help Must Not Be Delayed

We must be honest with ourselves to the extent of remembering that these wretched people are our allies and that they have a claim upon our loyalty and help; that it does not suffice to tell them they will be fed when the war is over and leave them to their fate in the meantime. If we proceed logically from the Greek experiment, we shall be following a course worthy of our high tradition in such matters.

There is no doubt in our minds that the American people desire that these people be helped. There are ample facts to support this statement. It is worth while to review some history of the efforts to save these people during the present war. The effort to secure our government's attention to this matter was

supported by 2,000 committees of leading citizens of the United States under the leadership of the Committee on Food for the Small Democracies—itsself a committee of 1,000 leading citizens.

Our Congress has long been on record. A joint resolution was introduced into both houses of Congress requesting the President to take up the problem to see what can be done about relief for the small democracies. This resolution was signed by a clear majority of the House and by a large minority of the Senate, equally Democrats and Republicans.

From the beginning, the major religious organizations have supported the idea of relief—Methodists, Baptists, Lutherans, Catholics, Jews and many others. There were some minor and vociferous church leaders devoid of pity, who opposed it. They must have been surprised to see the non-Christian Turk take an effective stand for compassion.

Finally in December, 1942, the Federal Council of Churches of Christ in America added to the record by passing a resolution favoring action to save the peoples of the small democracies.

It may be added that in October, 1942, the Church of England, previously opposed, began to be moved. The High Chamber of the Synod of Canterbury, meeting in London, unanimously voted an order of the day which calls the attention of the British people to the tragic situation of the invaded countries. This resolution was proposed by the Right Reverend George K. A. Bell, Bishop of Chichester, who spoke of the misery of the Belgians and the Greeks. The Archbishop of Canterbury, who presided over the meeting, stressed the fact that competent authorities realize that vitamins or powdered milk, even if allowed through the blockade, would not suffice to save those who should be helped. He concluded by emphasizing the need for an effort to bring about some improvement in this dreadful situation.

For a long time, the refusal to allow relief—even of an experimental charac-

ter—reposed upon a single statement made in the House of Commons by Mr. Churchill in August, 1940. In answer to a question, he stated in plain, blunt language that there would be no relief—and this was stated as a matter of British policy.

We can recognize that this statement was made at a time when Britain was herself in a desperate situation. Churchill was carrying on under great anxieties and pressures, when it was not easy to concentrate on any problem aside from the immediate problem of survival. However, there have been many developments since that time, and in view of these, particularly the success of the Greek experience, it may well be that Mr. Churchill himself would be ready to reconsider the whole problem from the broader aspect of saving our allies.

But in August, 1940, it did not appear in that light to the small democracies and their officials. They were frankly shocked that a problem involving the lives of millions of their citizens should be disposed of as a matter of British policy. There they were, recognized as Allied governments, contributing their armies, navies and air forces, their merchant marine, the resources of their colonies to the common effort. It seemed to them not unreasonable to look upon this as an inter-Allied problem which should not be settled out of hand without their being heard. But that is how it was settled and how it remains settled.

For a long time, our American government acquiesced—unwilling to say or do anything that might embarrass Britain in her epic ordeal. Even when we began participating in the struggle with Lend-Lease, we continued to treat this as a British problem and to refer the official and unofficial advocates of relief back to the original source of refusal. But with Pearl Harbor, our status definitely changed. We became allies not only of Britain but also of the small democracies.

Since that time, we have had a more direct responsibility. We can no longer shrug it off with the assertion that this is a British problem, although anybody advocating relief is, even today, laying himself open to the charge of being anti-British. Curiously enough, this charge is not leveled against the many British subjects and British organizations professing the same views.

This is not a British problem. We Americans are also blockading these people. It is an Allied problem, and we are an ally. From the form of the recent announcements, it would appear that the relief problem had been transferred from London to Washington.

### "To Save a Heroic People"

As Americans, we can be glad that once the Greek experiment proved itself practical, our government came out with an unreserved statement of the facts. On August 3, 1942, Mr. Sumner Welles, Undersecretary of State, wrote a letter to the president of the Greek War Relief Association, expressing the satisfaction of the American government with what he described as "feasible attempts, with adequate safeguards, to save a heroic people from annihilation." On August 7, 1942, the State Department issued a statement to the press giving further details of this successful operation.

These documents will be worth remembering, for time may show that they mark an important turning point in the history of humane action in this war. The conditions indicated for passage of supplies through the blockade are obviously similar to those tested by experience in the last war. The reservation to

the civil population of native crops and the condition that the work should stop in the event the Nazi authorities violated their agreements are the same we suggested in submitting the plan eighteen months ago. The statements of our government constitute an eloquent appeal for public support of Greek relief.

The declaration from our State Department goes far beyond the Greek problem. It disposes officially of the arguments previously advanced against relief operations in general and would seem to open the door for the other small democracies.

All the arguments in favor of relief having been proved up to the hilt in actual practice in Greece, on what conceivable ground can we refuse to do as much for our other allies? What answer can we make to the Belgians, for instance, when they ask why we left them to starve, after establishing all over again in this war that they could be helped without danger to the war effort?

This whole problem has been so distorted by propaganda that our national thinking needs to be straightened out before we can hope to make sensible decisions. We need a mental and moral housecleaning.

We owe it to ourselves to look at this problem from the humane point of view, to recognize that this is no cold question of figures, but a problem affecting the lives of suffering women and children, depending on us if they are to be saved from lingering death. If there were no other reasons for feeding these people, compassion for their suffering should be enough. In the parable of the Samaritan, the greatest leader of mankind did not inquire into political consequences.

A letter just received gives a striking account of a visit to a Belgian village: "I went on an independent mission to Belgium; I took an ambulance into Belgium, filled with food that had been given to me by Americans leaving Paris.

"Conditions as I found them in the few towns of Belgium I was able to visit were far worse than described. I had not expected to be greeted on my arrival like a savior angel or anything; on the other

hand, I did not expect what I saw. In the first town I entered, Douache, a town of maybe 5,000 people, I think, the inhabitants stood on the market square, completely quiet, completely immobile until the ambulances stopped; then they threw themselves at us, tearing our clothes into shreds, several times almost upsetting the ambulances in their effort to reach the food.

"When, through the window of one of the cars, I screamed for them to be quiet, a woman in a momentary silence answered, 'Quiet? It is easy for you to say quiet; our children are starving—starving, do you hear?' And at that, the whole thing started all over again, only worse.

"Finally the five town elders managed to get them to line up and wait until their turn came. I visited many houses in this town; a woman told me that the death rate until then was something near 560; but I gather that in those, she included the children and old people who had been paralyzed and blinded. I remember her also pointing at a child with a water stomach, saying 'Il est mort,' though the child was not actually dead."

### The Case Against Relief

For more than two years, there has been a systematic campaign carried on to defeat the relief movement. This campaign has been characterized by irresponsible and reckless talk, deliberate misrepresentation of fact, and hysterical denunciation. One of the basic claims of the antirelief people was that they were defending the British blockade against those who sought to break it down.

Another stand-by is the statement that the exiled governments of Belgium, Norway, Holland and Poland are opposed to relief for their people. This is nothing less than a clumsy lie—although by dint of repetition, it has gained considerable credence.

Another assertion is that the people in occupied territory are opposed to relief—that they would deplore the sending of food. Does it sound strange that

"I have something for you, if you gentlemen will share a room"

COLLIER'S

BARBARA SHERMUND

5 WAYS TO GET

# a jolt in the Pocketbook

... as shown by actual cases from U. S. F. & G. files

## SLIPS ON ICE, SUES FOR \$10,000

It was only a small patch of ice on the sidewalk, but Mrs. — of New York State valued her injuries at \$10,000 when she slipped. It would have meant financial loss and courtroom headaches for the property owner, but thanks to a public liability policy with U. S. F. & G. the owner was protected and relieved of trouble and expense. You may get a jolt if someone is injured on your premises and sues you for damages.

## PLATE GLASS WINDOW SMASHED BY CAR

The shopkeeper wasn't pleased to have an automobile in his display window . . . because it had skidded in, out of control. But within 24 hours U.S.F.&G. had replaced the broken . . . but insured . . . glass. The life of display windows averages 8 years, and the cost of plate glass has been rising. You may get a jolt if your plate glass windows are smashed . . . and not insured.

## ONE BURGLARY CAUSES 30 CLAIMS

Pity the poor tailor! Not only was his shop burglarized, but he was faced with 30 irate customers demanding full value for their stolen clothes. Fortunately his burglary insurance with U.S.F.&G. paid all of the claims. Today, with crime on the increase, you may get a jolt in the pocketbook unless you are adequately insured against burglary, robbery and similar hazards.

## HOW SHIPPING CLERK EMBEZZLED \$34,500

When a shipping clerk turned salesman, stealing merchandise and selling it, he cleared \$34,500. His employers were only partially covered, having failed to take the amount of fidelity insurance recommended by their U. S. F. & G. agent. So the partly insured employers had to assume a large portion of the loss. If war is making you use new and untried workers, you may get a jolt unless you review your insurance in the light of today's conditions.

## INJURED BY EXPLODING BOTTLE

Just three days after he mailed his U.S.F.&G. agent a check for the premium on a new \$10,000 accident and health policy, a ginger ale bottle exploded, completely blinding the insured in one eye. The U.S.F.&G. paid the claim. You may get a jolt from injury or illness unless you carry adequate accident and health insurance.

## Consult your Insurance Agent or Broker—as you would your Doctor or Lawyer

To help you avoid serious financial jolts, your local U. S. F. & G. agent places at your disposal knowledge of insurance and how to use it—plus on-the-spot service in the payment of losses. He will be glad to make a Graphic Audit of your present insurance program—to help you guard against wartime risks which make an insurance audit imperative. Your U. S. F. & G. agent is one of thousands serving communities great and small throughout the United States, its possessions, and Canada. Consult him today.

starving people should take such a stand? But the zealous campaigners say they have thousands of letters from occupied territory protesting against relief.

Has anybody seen *one* of these letters—to say nothing about thousands of them? The writers of this article have not, although they have expressed their incredulity and their readiness to be convinced. On the other hand, they have seen multitudes of letters, cables and resolutions of all the relief agencies inside those countries—all of them praying for relief in terms the pathos of which would melt stone; *not one* clamoring to be allowed to starve to death or even expressing doubt as to the feasibility of relief.

American thinking has been confused by many leaflets and statements emanating from officials who are sadly uninformed on the subject.

## An Unfortunate Utterance

For instance, at the last Herald Tribune Forum, an official of the British embassy in Washington made the categorical statement that "the conquered allies have never asked for the blockade to be lifted."

It is unfortunate that an important official should be sent out to make speeches without being more adequately informed as to the facts. In this case, the authors of this article could have furnished the speaker with documentary proof that many of the conquered allies have not stopped asking that the blockade be lifted to let food through to their peoples.

Another so-called objection to relief is the statement that such matters should be left entirely to the military. Judging

from the expressions of military leaders, that might be a good way of securing favorable action. Here are two of them:

General Pershing:

"I wish to send my greetings to those who are endeavoring to find a method by which food supplies can be furnished to the democracies in Europe occupied by the German armies. There is no doubt that millions are in jeopardy unless they are given aid from somewhere. From my own war experience and some knowledge of problems involved, I have every confidence that the salvation of these people can be worked out along the lines proposed by Mr. Hoover without military loss or benefit to either side."

Admiral Pratt:

"I have no hesitation in saying that this aid can be given under Mr. Hoover's proposals, without any damage to Great Britain. Taking the long view of the future of constructive forces in the world and America's relation to it, it is of vital importance to America that Mr. Hoover's plans be carried through."

With all these voices, with the actual successful experience in Greece, why wait longer to express the compassion of the American people and their solicitude for the future of civilization in Europe?

Our government has taken an admirable step in appointing ex-Governor Herbert Lehman of New York to organize American aid to reconstruction from the war. It would seem that the first step in this great task is to save the small democracies from future destruction. This would be a glorious inauguration of his mission. It would justify the religious faith for which we are fighting—for that faith lives only through action and compassion.

THE END

## Wing Talk

Continued from page 8

his commanding officer, hearing of it, warned him not to try it under dire penalties. The flier fretted under the prohibition.

Then a few days later, the air command received a combat assignment. An enemy submarine was lying outside, attacking approaching Allied supply ships. American planes made several attacks without sinking the enemy craft. The United States fighter commander then loaded a 500-pound bomb on each of his P-39s and set out after the enemy pigboat.

They got it on the surface and blew it sky-high. Every bomb, it seemed, found its mark. Coming back, the American air commander was feeling very good. He had carried out his mission successfully. Then his wingman asked over the radio, "Hey, Skipper, how about flying under that bridge?"

It might not have been good squadron discipline, but the skipper relented. Down went the pilot. He made a clean sweep through the arch—barely wide enough for his wings—and came in smiling, more tickled about this than sinking the submarine.

Yes. You're right. That's why we're winning the war.

ATTACK, they say, is the best defense. Two Allied pilots found this out in a meeting with some Jerries over the Mediterranean recently. One of them was Captain Reade Tilley, 24-year-old Army Air Forces flier formerly with the Eagle Squadrons of the R.A.F. Tilley is back in this country after two and a half years flying for Britain, part of the time from Malta.

Accompanied by a British pilot, Tilley went on a mission over Sicily and was returning to Malta when he sighted what he first thought were birds up ahead. In a few moments, they were on them. They were birds all right—50 Messerschmitts. The two R.A.F. pilots had about two seconds to decide what to do. If they went up, down, back, or to either side, they were lost.

So they did the only thing that gave them a chance. They flew straight into the Nazi formation. This put the German fighters at a disadvantage. If they fired at the R.A.F. planes, they would hit their own planes. In a flash, it was all over. The Spitfires were clear, heading for their home base, outdistancing the enemy planes, and two of the Messerschmitts burst into flames and crashed into the sea.

AMERICAN pilots of the Umpty-aught Bomber Group moved into their new British base. The new field looked all right, and their quarters seemed quite satisfactory. They were taking over the buildings and grounds of what had been one of England's best women's colleges in prewar days.

The officers took their belongings into the girls' dormitories. The rooms seemed good-sized, and the pilots occupied them by two's and three's. Suddenly, bells began to ring all over the halls. They went unanswered save for an adjutant who rushed over to see what was the matter. He went through the corridors and found why the fliers were ringing.

Behind every door, there was a button, with the sign: "Ring twice for the mistress."—John G. Norris.

# WHERE WILL YOU GET YOUR Victory "Drive"?

**T**HIS war won't be won by the driving force of fighting men alone.

It's going to take the same "push" and efficient use of energy at home—in factories, mills, mines—in every useful task and occupation.

The way you eat has a lot to do with the way you discharge your part in the war-job. One of the essentials is for you to get adequate energy-foods.

By all means eat plenty of such essential foods as vegetables, fruits and eggs. But be sure, too, you get enough solid, substantial, stay-with-you foods such as milk, meat, potatoes and bread.

Bread, for example, is more than 50% carbohydrate

—a food element the body readily converts into energy. It is therefore one of our best energy-foods.

Especially is this so of enriched white bread because its carbohydrates are balanced with adequate Vitamin B<sub>1</sub>.

You don't have to turn to the dietary charts for proof of the value of bread in times like these. We had hardly gotten into the war when bread consumption began to increase—clear indication of how people instinctively turn to this basic food when energy requirements go up.

Your energy, your drive, is needed now. Plan your diet carefully—eat more bread every day.

## MAKE HARD-TO-GET FOODS GO FURTHER RATION-EASING RECIPE No. 1 BAKED TOMATO, BREAD AND CHEESE

6 slices bread	2 eggs
1 cup cheese cubes	1/2 teaspoon salt
2 cups tomato juice	1/8 teaspoon pepper
1 tablespoon minced onion	

Plenty of good useful vitamin foods here make a main dish that will serve 6 persons.  
Butter bread and cut into cubes; put cubes of bread and cheese in baking dish in alternate layers. Beat eggs slightly, add tomato juice, salt, pepper and onion. Pour over bread and cheese and bake in moderate oven at 375° F. for 50 minutes.

## MOST GOOD BREAD IS MADE WITH FLEISCHMANN'S YEAST

More commercially baked bread is made with Fleischmann's Yeast than with all other kinds combined, for reasons such as these:

1. Fleischmann pioneered the methods of yeast manufacture which make possible the uniformity, potency and dependable quality not only of Fleischmann's Yeast, but virtually all others as well.
2. More than 400 different strains of yeast, selected from thousands gathered all over the world, are kept under constant culture and study in Fleischmann's laboratories. This assures bakers of the yeast best suited to American flours, methods and conditions year after year.
3. Fleischmann research on vitamins brought about the yeast method of enriching bread with Vitamin B<sub>1</sub>.

excluded. Her muscular little hands shook as she poured the coffee.

She sat down beside him again. "It can't make any difference to us, Hank," she said.

He was startled, as if she were putting into words something that he had left carefully unspoken. He tried to be flip: "Long war with short furloughs, Julie. Ever hear that absence makes the heart grow fonder for somebody else."

"Don't talk like that, Hank."

She pushed her cup away and placed her hands over his. Her hands were icy cold, but at the contact their trembling stopped. "Hank," she said, "about your going into the Army, that's all right. Only I think we ought to get married first. I couldn't ever love anybody else the way I love you."

They were both perfectly still for a minute. Then Hank said, "Let's get out of this hole so I can stand up and look at you."

They stumbled to their feet and stood facing each other in the middle of the kitchen floor.

"I want you to marry me," she said. "I love you."

Her eyes, light tawny brown, a little too wide set, were turned on him with a clear, earnest attention. She was open, she was without defenses, but she was not in the least abject.

If I refused her, he thought, she would still have her dignity. I might break her heart, but I couldn't nick her pride. "Well," he said, "don't say I didn't try to tell you better."

They moved forward and stood close in each other's arms. After a long time he drew back his head and looked down at her. "Funny thing," he whispered, "I feel as if I'd been tired for a long time and now I was rested."

"Yes," she replied, low, "I feel like that, too."

They were married within the fortnight.

THEY went to Washington, which had still, in that December, a few yards of floor space yet unoccupied. They took a two-room apartment in an old remodeled house in Georgetown, and they had four months together before he was sent out of the country.

They were both happy, but she was the happier, for she had been blessed from childhood with a valiant gift for living in the moment.

Their housekeeping was eccentric.

"I ought to keep things nicer," she would say dubiously, when the kitchen was a shambles and the living room was littered with misplaced clothes and tableware.

"Oh, kick it all under the sofa till the cleaning woman comes," he would say. "We haven't got the time."

Hank worked long hours, he could not always have dinner with Julie; but when he could, they often cooked together, experimenting wildly, delighted when the result was edible, laughing and throwing it down the incinerator and running out to the cafeteria, hand-in-hand, when it was not.

Occasionally they went dancing in the evening, but more and more often they stayed at home together, sometimes laughing and sometimes quiet, seldom talking very much, and increasingly in love.

Two months before he was to leave, Julie was quite sure about being pregnant. The idea had no immediate reality for Hank.

"Does it worry you?" he asked. "Do you mind?"

"Mind! Hank, you're just fooling, aren't you?"

He tried to think about it then, to make it real, but he couldn't, not with Julie so unchanged in body and spirits, slender and gay, her bronze hair flying as she pranced around the apartment to the music of her newest record.

Julie, on the other hand, accepted it with a sort of matter-of-fact bliss. Hank, she observed, said very little about it for a person who was always trying to talk about his feelings, but after all, there wasn't much you could say, actually.

"If it's a boy," she remarked one day, apropos of nothing, "I want to name him for you, Hank."

"Henry's a stuffy name," he replied. "I'd rather name him for my father, James Harper Shaw. Jim. He left my mother pretty comfortable for a man who died so young and didn't have much to start with."

She looked at her husband's face, the earnest eyes remembering the dead man. Good fathers make good sons, she thought, and good sons make good fathers. Hank will be a very good father. "Okay," she said. "Jim it is."

That was almost the only time that they ever spoke of the child as anything more than a factor in her health. ("Do you feel up to a hike like that?") "Why, sure, darling. I feel wonderful."

And when the telegram came to him, seven months later, in Alaska, his only feeling was a crashing wave of relief that Julie was well, Julie was all right. When his leave came, when he got back, the baby would be eight weeks old, and Julie would be feeling just like herself again, and they'd be together, and going ahead: with their life just where they left off. . . .

Just where we left off, he thought, watching the platform whirl by as his train pulled in. Just where we left off.

It was not likely that she could have got through to the platform, he told himself, preparing his hungry eyes for disappointment. Though perhaps, if she explained and coaxed, if she just slipped through—and there she was, there she was triumphantly past the gate and waiting, just as he had remembered her, with her face raised and her hair tossing back.

Only somehow it had never occurred

to him that perhaps the baby would be with her. His eyes, straining back as the car he rode in overshot the mark, stared with bewildered incredulity at the bundle on her shoulder.

Then he had his arms around her, his hands on her waist and her shoulders, remembering, his mouth on her mouth and all the forgotten darkness and peace pouring over him again.

Her voice came muffled under his lips: "Darling, look out for Jimmy!"

He drew back at once. The child in her arms was a pink and white bundle, a singularly small and unresponsive, though quite human, face showing at the upper end of it. A sudden misery of self-consciousness weighted Hank's cheeks.

"Hello," he said. "Look, I'm your father, Daddy."

"He'll catch on," said Julie, comfortably. "Had we better get a taxi?"

HANK'S hand went under her arm. She could feel a heightening in his spirits, as he led her, a rising pitch of gaiety. It takes you a few minutes to realize things when you've looked forward to them too long, she thought, sympathetically. The guess was loving but quite incorrect. Hank's gaiety was that of a man granted a reprieve. For he had suddenly remembered that in wartime Washington taxis are shared. It would be much easier, he was sure, if he was in their own house before he really had to take to the mat with the baby.

An elderly gentleman rode with them. They were the first to leave the cab. They were not alone until they stood inside their own home.

But the apartment looked strange, much bigger and very different. Hank set down his bags and looked around him slowly, his face deeply puzzled.

"Why," he said at last, in a tone of amazed discovery, "why, it's all picked up."

Julie, settling the baby in his laundry basket on the table in the sunny window where he spent the day, did not listen. He took a few steps into the room and stood still staring around him. "Why, look, darling," he said, "you didn't have to fix it all up for me. Why, you've worked terribly hard."

"Ahn? Nh?" asked Julie. She removed the safety pin from between her teeth. "What's that?" Then she understood and laughed. "Why, it's like this

## CORNS GO while YOU carry on!

Doctor's 4-Way Relief  
Acts Instantly

- No Other Method Does All These Things For You!
1. Sends pain flying
  2. Quickly removes corns
  3. Prevents corns
  4. Eases tight shoes

LOSE no time these precious days! Dr. Scholl's Zino-pads speedily relieve your misery from corns and gently remove them—while you carry on! Instantly stop tormenting shoe friction; lift painful pressure; make you truly foot-happy.

NOTE: If corns have formed, use the separate Medications supplied for removing them. For sore toes from tight shoes, the pads alone will give you immediate relief—another advantage of Dr. Scholl's Zino-pads over old-time caustic liquids and plasters. At Drug, Shoe, Dept. Stores. Cost but a trifle.

**Dr. Scholl's Zino-pads**

all the time, dear. I wrote you how I was catching on."

"All the time?" said Hank. He looked around him at the immaculate order, the hospital neatness, with eyes that were both incredulous and reproachful.

"I thought you'd be surprised," said Julie.

She crossed the room to him, putting her arms around him and holding up her face. They stood close against each other, lost in stillness. At last she turned her head aside and spoke. "Do you like spoon bread?" she said.

"What? Oh, I don't know. Why?"

"I was just thinking about getting supper."

"Oh, not tonight! Tonight we step out. Got to spend all the dough Papa dug up thar in the Klondike."

"But Hank, we can't. I've got things all planned and started, and besides it's too late to get a girl to stay with the baby."

"Won't he sleep? I mean, don't they go to bed early at that age?"

"Leave him alone? Hank, you're fooling!"

"Okay," said Hank curtly.

He was exasperated by the shocked voice, the assumption of authority. It was wrong, it was all out of keeping with his lovely girl and their warm, fluent life. It was a stock situation, the newlyweds and the baby, *The First Misunderstanding*.

"Well, maybe you'll be able to arrange it for tomorrow," he said shortly.

They stood still in the middle of the floor, staring at each other. What was it that was changed, he wondered. The sherry-brown eyes, the full mouth that he had remembered so vividly, they were the same, and the beautiful hair, and the rather stubby little hands, with their trick of lifting before her, in a gesture oddly graceful and artless. But her arms were fuller, like her breasts, and her face was a little thinner, the modeling in it more clearly articulated. The formless beauty of extreme youth was passing into an individual distinction, a greater loveliness.

BUT it was not the same, it was not what he had expected. It troubled him and put him off. His eyes returned to her lifted hands. "Didn't you use to put red stuff on your nails?" he asked, vaguely.

"Chips off too much, washing didies. I will again if it's the style when Jimmy's bigger." As she spoke her face kindled and softened, and she turned away, drawn back to the basket on the table. "Oh, look," she said. "Look, he's waking up."

Hank sauntered to her side and looked down. The baby had opened his eyes and was now studying a point in space somewhere above their heads.

"Ghli," said Jimmy. "Rghla. Hlla."

"Oh," said Julie, "oh, him says such smart things. Why him is so smart, I guess they all cry because they don't know as much as Jimmy. Yes, they do."

Hank put his hands in his pockets. "I thought they only talked like that to kids in comic strips and farces," he said. He sounded like someone talking to himself. "I thought it was a gag. Like Blondie and Dagwood." He walked to the pantry. "I'd like a drink before supper," he stated. "Is that still all right, or will I be setting my child a bad example?" His voice had a sharp edge.

Well, for goodness sake, thought Julie. She straightened her back and stood, her hands pressed against her thighs, thinking. "The gin's just what you left, dear," she replied, cheerfully, "and the bitters. But I got more vermouth, and the olives are in the icebox."

Well, she thought again. Of all things. He can't get used to the baby.

She drew her underlip between her teeth. Now what will I do? she thought. If we had time, I could just take time. But in two weeks!

She walked out into the kitchen and took her apron down from the hook. "Make one for me, too," she said. "And just wait till you see what comes after."

She was not at all sure of what to do, but that there was something to be done she never doubted. The sense of helplessness never assailed Julie. Only she hoped it wouldn't take what she called "managing." She didn't like managing people she loved.

Well, there wasn't anything to be done right then and there. Best thing to do now was just to get supper and enjoy having Hank there again.

Immediately she felt happy. "Darling," she said, "sit out here on the step-ladder and watch how wonderful I am about French-fried potatoes."

Hank, Martini in hand, felt suddenly relieved. At least she wasn't disappointed in him, she wasn't angry. Perhaps she hadn't even noticed how he didn't feel much one way or the other about the baby. He finished his drink and sat still in his corner, feeling the relaxing warmth rise slowly under his ribs, watching his wife, and smiling.

"When did you start wearing aprons?" he asked.

"Didn't I always? Well, they save cleaners' bills."

"Don't you want me to help you?" he asked, remembering their tremendous experiments.

She laughed easily. "Heavens, no, I want something fit to eat!"

The dinner was a success.

"Leave 'em, dear," he had said, as she started to clear away the dishes after they had eaten, and heard his mother's very words and forgotten intonations in Julie's brisk "Just as easy to get them done now and not have them staring us in the face at breakfast!"

And it was doubtless silly, he told himself, to feel this curious resentment over a well-cooked meal, a kitchen clean and in order, an apron hung back in its corner, waiting for morning.

"Darn it," he said suddenly, "even when you aren't noticing that child you look motherly. Can't we kick up our heels any more and be irresponsible? Look, Julie, we're just the way we used to be, aren't we?"

For answer she came and sat on his knees, kissing him, her hands on his back.

It was the same. Of course, it was the same. Only the baby had to have his bottle at ten, and then Julie was pulling off her stockings and saying briskly, "You won't mind waking up early? He gets his breakfast at six or he hollers."

"No," he said. "No, of course not."

But there it was again, that tone, that

new quality, coming between them, making love self-conscious, taking the spontaneous gladness away. Lovers can't live by the clock, he thought. And all the time, there was the baby, that embarrassing stranger. He found himself trying not to look in the direction of the basket. He was profoundly relieved to learn that it did not accompany them into the bedroom, but remained in the living room all night. For a little while, at least, they would be alone.

They were alone and they were happy. The forgotten words came back to their lips, the forgotten gestures, doubly sweet for being recaptured after disuse and long waiting.

Hank was smiling as he settled himself to sleep.

JULIE slept too, at first, but after a little time she started broad awake. I can't wait till morning, she thought. I've got to figure it out now.

The thing, is, she thought, I got to be a mother little by little, and if Hank had been here he would have got to be a father the same way, waiting. Real feelings don't come out of the air, they grow out of happenings. Like I wouldn't have got to love Hank if we hadn't walked home from the movies holding hands, and sat close together on the davenport looking at my snapshot book, and things like that.

She turned her head to look at her sleeping husband.

He feels so bad about not loving Jimmy, she thought. He thinks things just happen, the way they do in books, bang! and there you are. He hopes I won't notice. I never saw him scared before.

Pity and tenderness welled up in her.

Dear Hank, she thought, worrying about my apron, because it's all part of the same thing. But it's not as if he was one of these people that want to stay kids themselves. He'll be all right.

She closed her eyes again, calling up images. What is it about babies? she asked herself. Why do you love them?

Then she almost laughed aloud. Why, I know, she thought. They don't look like much at first, till you get used to them, but they feel so good. They do feel wonderful.

Yes, that was the clue. The rest would be easy. She settled herself to sleep again. But suddenly, once more, she was wide awake.

No. That's not all, she said to herself. The most important thing of all is how they need you. How they can't do anything for themselves, but you can. I could have him do things for Jimmy, but it wouldn't be enough, not if he knew I was right there and knew how better. He has to have Jimmy need him, too.

I could have a sick headache, I could burn my hands. . . . No, I won't. I've

# A Report to the Nation

## ..on the Beverage Distilling Industry's Part in the War Effort...and the current Question of Rationing

by **H.V. Kaltenborn**

NOTED COMMENTATOR AND JOURNALIST

IN RECENT MONTHS I have received a number of letters from my radio and movie audience asking me this question... "Will our distilleries continue to produce alcoholic beverages during the war?"

Frankly, I did not know the answer. I investigated and here is what I found out. No distiller is making whiskey today. The beverage distilling industry is engaged 100% in producing war alcohol for the government.

As a matter of fact, I discovered that individually and collectively the beverage dis-

tilling industry offered its facilities to the government one year before Pearl Harbor.

Here's another interesting point. While distillers have substantial stocks on hand, made during peacetime... enough to last three years... they have, in fairness to all, self-imposed a system of rationing. This will assure anyone interested in purchasing these products that a reasonable amount will be available over a period of time.

During my investigation I also learned the answers to several other questions. I am telling you about them below.

**1 Why is alcohol so important to production and how is it used?**  
Alcohol is a basic ingredient used in manufacture of smokeless powder, chemical warfare materials, medical supplies, and synthetic rubber. Half the government's 530,000,000-gallon quota is supplied by the beverage distilling industry.

**2 Didn't conversion of distilleries to war alcohol production require much critical steel, copper, and bronze?**  
Practically none. The industry's engineers were able to utilize tile, wood, glass, porcelain and other substitutes. And the industry voluntarily began this conversion long before the government actually requisitioned its facilities.

**3 Just how much synthetic rubber can be produced from the distilling industry's alcohol quota?**  
The industry's facilities for producing grain alcohol make it possible to include 200,000 tons of rubber from grain in the government's 870,000-ton synthetic rubber program.

**4 Is sugar used by the distilling industry in the making of whiskey or war alcohol?**  
Sugar is never used in making whiskey... it is distilled from grain. And the beverage distilling industry is likewise producing its war alcohol quota exclusively from grain.

**5 Will this use of grain deplete the reserves needed for food?**  
There is a tremendous surplus. The distilling industry is able to transform 100,000,000 bushels of it into war material. This enables farmers to contribute even more directly to the war effort and frees much needed granary space.

**6 With the industry 100% converted for war alcohol, won't the federal and state governments lose the tax revenue from alcoholic beverage sales?**  
No. The industry can still supply the public from reserve stocks made during peacetime and continue to account for over a billion dollars in taxes yearly.

**7 The fact that, when war came, we had a full-fledged beverage distilling industry in existence made this contribution to the war effort possible. Otherwise, it is easy to understand how the government would have been forced to spend months of time and millions of dollars in building and renovating distilleries and training personnel.**

**When sometimes you may be unable to obtain your favorite brand... please remember...**

- 1 No distiller is making whiskey today.
- 2 Every distiller is using his plant 100% to produce war alcohol for the government.
- 3 This alcohol is necessary for smokeless powder, chemical warfare materials, medical supplies, and synthetic rubber.
- 4 The supply of alcoholic beverages in storage must be made to last longer than originally planned.
- 5 Therefore—in fairness to all—rationing has been self-imposed to assure a reasonable supply over a period of time.

Note the  
**CARBINE...**  
"a weapon of great merit"

"Little has been said of the new army carbine, but we believe it to be a weapon of great merit. It is a short rifle, 36 inches long, and 5 pounds in weight, half the weight of the ordinary rifle. All the men and the officers in the infantry who have been armed with the pistol will carry the carbine instead. That includes sergeants and all commissioned officers up through majors. It holds 15 cartridges in the magazine and is semiautomatic, like the Garand rifle. It fires a .30 caliber cartridge and is accurate up to any distance that soldiers usually fire at the enemy. We are beginning to get production in volume."

never played tricks on people I love, and this would be a fine time to start outsmarting him, right at the start of our three lives together. Three people as nice as us don't need tricks and lies. No, I'll just walk out.

And now, perfectly confident, perfectly happy, she moved closer to her husband, and comforted by the warmth of his sleeping body, she too slept.

Hank woke at eight. The apartment was still.

"Julie?" he said. There was no answer. "Julie?"

He swung out of bed, looking in the bathroom, the kitchenette.

"Julie?"

Then he saw the note. It was pinned to the baby's basket.

"Darling," it said. "We have such a short time that I want to get things right as quick as I can. I am sure that this is the way to do it. Please take care of Jimmy today. I will be back in time to get your supper and there's plenty in the icebox for lunch. So are Jimmy's bottles. His next are at ten and two. I love you very much. Your own Julie."

Hank was too scared to be angry. "Good Lord," he said aloud. "She's crazy. I can't."

HE READ the note over three times and at each reading the wave of absolute panic mounted higher.

He looked into the basket. The child was asleep, but his hands were right up level with his face and his fists were clenched. That couldn't be right. What did it mean?

Desperately he reached for the telephone book. There, in the yellow section, would there be something about nurses? The nurses' registry.

"I've got to get a nurse," he said to the bright voice at the other end of the wire. "For my kid. It's an emergency."

"Is the child ill?"

"I don't know. He's asleep with his hands up. His mother has gone away."

"We have no nurses on call. You know, the nursing situation is very bad, the hospitals are all understaffed. The war. And there's a flu epidemic, quite severe."

"But you've got to send me someone!"

"If you will leave your phone number we will do what we can for you."

Well, she had hung up on him. Was Julie crazy? She loved the kid, did she want it to be killed?

No, that didn't make sense. She loved them both. And she was brave, but she had never been foolhardy. If she thought he could do it, perhaps he could.

Only you couldn't do anything in a panic.

"Pull yourself together, Henry," he said. "Eat your breakfast."

Orange juice squeezed and on ice, coffee on the stove, eggs in the right saucepan, bread by the toaster. No, she had not been trying to punish him. In the way she had tried to make everything easy, the table set, the chair in place, he could see her love and foresight. It heartened him more than anything else could have done. It showed so clearly that she hadn't just rushed off in a hurry, that she had thought things out.

He was half through his breakfast the first time Jimmy screamed. He stumbled to his feet and hurried into the living room. Jimmy's face was scarlet, his mouth perfectly square. From time to time he would catch his breath in a long, shuddering gasp, kicking his legs straight out and pulling them up again, and then the screaming would burst out once more like a nightmare freight whistle.

Hank was white to the lips. He bent down over the basket. Of course, there had been something wrong. People don't

sleep with their fists up. He started the telephone again, but the screams paralyzed him.

They couldn't get here in time to do much good, he thought. "Listen, feller," he said aloud. "Listen, I don't know much. Only please shut up. Shut up and I'll try to do something."

And firmly, courageously, he put his arms under the small armpits and lifted his son out of the basket.

A gasp, a gulp, a sigh, silence.

Hank stared, bewildered by the incredible quiet. "Are you all right?" he asked feebly. "What was it, feller?"

The baby looked at him. The small hands waved before his face.

"Ghli," said Jimmy.

"What?" said Hank. And then, soothingly, "That's right. It's all right."

He laid him down again. Jimmy screamed as loud as ever. Hank understood. Hank laughed. "You like me, do you?" he said, picking him up again. "Well, I'll be darned."

The baby was very wet. But he liked his father. He stopped screaming when he was picked up. He was wet, he'd been feeling terrible, but he liked his father so much that he stopped screaming the minute he was picked up. And if he was wet, he could be dried. After all, though Hank, I should think that an engineer who was once a machine-shop apprentice could change pants as well as a toy-store clerk.

Holding his son in the crook of one arm he pulled up the long nightgown (soaking, too) and examined the arrangement beneath. Well, square! In the funny papers they were always triangular. This looked easier. Dry things in that dresser probably. And now to copy the folds of the wet one in the dry one.

He took out pins, untied strings. Jimmy, his son, was stark naked. Very small, quite bare and helpless, but surprisingly human. A small male human, kicking across his father's knees. The skin smooth and warm to the touch, the flesh pleasantly solid, not at all squashy. Mustn't let him get cold. A little thing that size could chill quickly. So much surface in proportion to the volume. He wrapped a blanket around his son and continued to hold him in the crook of his left arm as he matched the wet clothes to the dry, folded the clean diaper.

The vest fastened in the front, the nightgown (wasn't that sort of a sissy thing, or didn't any of them have pajamas till they were bigger?) fastened in the back. Neither Hank nor Jimmy had been told that the baby should lie flat and be turned not more than once during these operations. The dressing was completed to their complete satisfaction.

Bed wet, too. Find a dry pad.

"There now, you shut up till I finish my coffee."

AT TEN Hank remembered the bottle. Jimmy was quiet, but that was no sign he wasn't hungry. How many people you know scream when their meals are due? Few, thank God. Get hungry all the same.

He withdrew a bottle from the icebox. Babies' food, he remembered out of somewhere, is supposed to be sterile. Well then, stand the bottle in water to heat it. And just about body heat, of course. You could spill a little out and see if you got it right. Nipples, right there in that jar.

How do I know all this stuff? Hank demanded of himself at this point. Whole thing is, I suppose, I haven't got anybody here to rattle me, and Jim hasn't caught on. He has confidence in the old man. Well, why not? It only takes common sense.

But when the bottle was ready, he hesi-

He started at the door. Did you sit them up? He closed his eyes, hunting for pictures. He was ten when Dabby Sullivan's mother had a new baby. "First one I didn't nurse myself," she'd said. He'd see it, lying on its back in Mrs. Sullivan's lap. A woman like that, with many, all healthy, he assured himself, being comfortably into the armchair, would have done things right. The man had fallen asleep over the last drop in the telephone rang. He laid the child aside and lifted the child gently on his shoulder as he went to answer it. A large belch, and quiet breathing again. "Sure, I remember, he thought, happily. She used to say, "Now I'll bubble up." Lucky the phone rang.

Hello?" This is the nurses' registry. About infant: we have someone who can care of it for the remainder of the night. "What?" said Hank. He had forgotten the nurses' registry. His large hand supported his son's small back, giving and giving comfort. "I was just going to call you," he lied. "I have found someone who will stay with the child until his mother returns. Thank you." He hung the receiver back on the hook. "You sleep now," he said, unsmiling, holding his son back in the basket, settling a blanket lovingly about his shoulders. "We aren't going to have some darn fool that doesn't know anything about babies in here pushing you around, Hank."

It was almost evening before he first realized that Julie would be pleased when she got back. How pleased he did not know, for in the long day he had forgotten a good deal. She had been impatient because he was a little shy with Jim the start, he thought. She should have known that he'd catch on in another day, so, anyone as good with kids as he was. Nevertheless, he wouldn't have missed it.

He stood by the basket looking down. The round head, the soft hair, straight and brown, so smooth to rub, nicer than spaniel, was turned to one side. Nice ears, they lay right back. Nice hands, too. Very big hands for his size. He'd be tall.

Long-legged pair we'll be. Wonder if I'll be another engineer. Let him make up his own mind, though. Mutual respect, best part of love. He rubbed the small head again, gently.

Julie came through the door. "Hank, darling, how are you? How's Jimmy?" "Hush. Fine. He's fine. We both are." She looked around the room. "I expected an awful mess."

"I figured this was a job that called for system."

"You had someone in to help you?" "I did not."

But she was not quite sure. She hesitated, looking at her husband. He looked so exactly the same, and everything was so quiet and in order. She didn't know just what she had expected, but certainly not this. Hair on end, maybe, and a new light in his eye, and things spilled all around.

"Did you mind?"

"I missed you, and the whole idea was a lot of nonsense, but we had a swell day."

A lot of nonsense?

What did happen? thought Julie. I've got to find out where we are.

"Hank," she said, "I've been thinking things over, and I guess I was foolish last night. I'll go out with you tonight if you want to. We'll just get him settled down first."

Hank stared at her. "You're crazy," he said. "If you want to run out all the time, make your mind up in time and we'll get a responsible woman to stay here for the evening."

We can't tell the truth all the time, she reflected. She drooped her head to hide her eyes. "I know, darling," she said. "I didn't think it was a good idea. I only wanted to please you."

Hank was annoyed. "Why, Julie, I hadn't been home five minutes when I said that. I just hadn't caught on. You didn't take that seriously?"

"Well, I did."

She looked so ashamed of herself that he forgave her at once. He put his arms around her, pushing back her bright hair, kissing her quietly. "Tomorrow," he said. "Tomorrow we'll step out. Tonight we'll just lie around and talk and be glad we're all together, eh, dear?"

Happiness rose in her, flood-tide happiness welled over her. It's all right, she thought. We aren't going to waste any time. I did the right thing.

She went out into the kitchen and filled the kettle. She took it to the stove. "Time to start supper," she said.

He followed her, his face relaxed and content. He reminded her.

"Put your apron on," he said.

THE END

"There go those lucky Thompsons, still running on the rims"

...is shoulder as he went to answer it.  
...arge belch, and quiet breathing again.  
...y, sure, I remember, he thought, hap-  
...y. She used to say, "Now I'll bubble  
...i." Lucky the phone rang.

Hello?"  
This is the nurses' registry. About  
infant: we have someone who can  
care of it for the remainder of the  
...z."  
"What?" said Hank. He had forgotten  
nurses' registry. His large hand sup-  
ported his son's small back, giving and  
ing comfort. "I was just going to call  
," he lied. "I have found someone  
o will stay with the child until his  
ther returns. Thank you."  
He hung the receiver back on the hook.  
ou sleep now," he said, unsmiling,  
ing his son back in the basket, settling  
blanket lovingly about his shoulders.  
e aren't going to have some darn'  
ol that doesn't know anything about  
bies in here pushing you around,  
n."

...T WAS almost evening before he first  
realized that Julie would be pleased  
en she got back. How pleased he did  
t know, for in the long day he had for-  
tten a good deal. She had been impac-  
nt because he was a little shy with Jim  
the start, he thought. She should have  
en that he'd catch on in another day  
so, anyone as good with kids as he  
as. Nevertheless, he wouldn't have  
issed it.  
He stood by the basket looking down.  
ne round head, the soft hair, straight  
id brown, so smooth to rub, nicer than  
spaniel, was turned to one side. Nice  
rs, they lay right back. Nice hands,  
o. Very big hands for his size. He'd  
e tall.  
Long-legged pair we'll be. Wonder if  
e'll be another engineer. Let him make  
p his own mind, though. Mutual re-  
pect, best part of love. He rubbed the  
nall head again, gently.

Julie came through the door. "Hank,  
darling, how are you? How's Jimmy?"  
"Hush. Fine. He's fine. We both are."  
She looked around the room. "I ex-  
pected an awful mess."  
"I figured this was a job that called  
for system."  
"You had someone in to help you!"  
"I did not."

But she was not quite sure. She hesi-  
tated, looking at her husband. He looked  
so exactly the same, and everything was  
so quiet and in order. She didn't know  
just what she had expected, but certainly  
not this. Hair on end, maybe, and a new  
light in his eye, and things spilled all  
around.

"Did you mind?"  
"I missed you, and the whole idea was  
a lot of nonsense, but we had a swell  
day."

A lot of nonsense?  
What did happen? thought Julie. I've  
got to find out where we are.

"Hank," she said, "I've been thinking  
things over, and I guess I was foolish last  
night. I'll go out with you tonight if you  
want to. We'll just get him settled down  
first."

Hank stared at her. "You're crazy,"  
he said. "If you want to run out all the  
time, make your mind up in time and  
we'll get a responsible woman to stay  
here for the evening."

We can't tell the truth *all* the time, she  
reflected. She drooped her head to hide  
her eyes. "I know, darling," she said. "I  
didn't think it was a good idea. I only  
wanted to please you."

Hank was annoyed. "Why, Julie, I  
hadn't been home five minutes when I  
said that. I just hadn't caught on. You  
didn't take that seriously?"

"Well, I did."  
She looked so ashamed of herself that  
he forgave her at once. He put his arms  
around her, pushing back her bright hair,  
kissing her quietly. "Tomorrow," he  
said. "Tomorrow we'll step out. Tonight  
we'll just lie around and talk and be glad  
we're all together, eh, dear?"

Happiness rose in her, flood-tide hap-  
piness welled over her. It's all right, she  
thought. We aren't going to waste any  
time. I did the right thing.

She went out into the kitchen and  
filled the kettle. She took it to the stove.  
"Time to start supper," she said.

He followed her, his face relaxed and  
content. He reminded her.

"Put your apron on," he said.

THE END

By Hector Chevi

He was a killer at heart. The knife was his favorite. These facts made possible only decent act of h

ILLUSTRATED BY GEORGE SH

"Don't make no noise. Don't 'stuh at all," Billy breathed. "Oh, Lawdy." . . . "Stand back!" com Frank. Billy heard a peculiar gr hind him, felt a breath brush his

**F**RANK VARGAS lay indolently on his bunk as he raised the knife by its blade and flipped it, but it bit again into the same beam above the opposite bunk, and in the same tiny crevice. It didn't quiver, either; it was thrown too truly.

His cellmate, the huge Negro Billy Pease, again obligingly rose to extract it and hand it back. "Daw-gone," said Billy, "if you ain't the handiest boy with that pig-sticker."

"Thanks," said Frank indifferently, accepting the knife. He closed his eyes. The clean, whitewashed cell in the strong little brick jail was like an oven. It can get hot, summers, in Montana—hot and humid. Billy Pease was stripped to his waist and his big ebony torso ran with sweat. Frank's thin shirt was streaked with it, too. Billy looked at his cellmate and frowned, trying to estimate Frank's age. With his eyes closed, like this, he looked maybe eighteen, a kid who'd read too many crime stories. He looked old enough when he opened his eyes, though, as old as thirty, sometimes. Frank smiled faintly, as if he knew he was being scrutinized. Without seeming to open his eyes, he raised his hand and again threw the knife. It stuck in the same crevice.

A moment passed. "Get it for me, will you, Billy? It's too hot to move."

Billy obligingly again retrieved it and handed it back, but he did not smile. "Le's put it away, huh?" he suggested.

Frank's eyes opened wide and he stared at the huge Negro. "Why?" He suddenly looked all of thirty again.

Billy tried to return the stare but had to drop his eyes. You didn't stop to wonder about Frank's age when he stared at you suddenly, that way. It was like running into somebody's fist, unexpectedly, with your chest. His eyes seemed to have no color. Billy's fingers fumbled with a thread in his dungarees. "Because," he answered, "it might spoil the blade."

Frank laughed. "I'll sharpen it again. Don't you fret."

"Put it away. What if the sheriff comes in and finds you playin' with it?"

"He'll wish he hadn't." Frank twirled the knife rapidly between his hands.

"Might git Zilma into trouble fo' bringin' it to you." Frank frowned and stopped twirling the knife. Billy hastily changed the subject. "Hope Miss Zilma gets up some mo' that chicken-meat fo' suppuh."

"You stick close by me when it comes

time to use this knife, Billy, and I'll buy you all the chicken you can eat in the first town we can light in," said Frank, confidently.

He resumed twirling the sharp weapon. It made Billy restless. He wished Frank would put it away. Billy had a wholesome respect for Sheriff Dodd Macmillan.

"Know something," said Frank, twirling the knife very rapidly, now. "She ain't so dumb at that." He meant Zilma Macmillan, the sheriff's daughter. "Most people got no idea of the kind of knife throws best. This is just what the doctor ordered."

Frank stopped his twirling and regarded the weapon with satisfaction. He seemed to find comfort in the perfect balance of the heavy bone handle and his experienced thumb seemed to thrill at being run along the blade within an ace of drawing blood. "I'll bet she filched it out of her dad's collection of stuff taken away from guys like us."

Raising the knife by the blade as if again to hurl it at the same beam, he altered his aim slightly and sent it singing a quarter-inch past Billy's woolly scalp. It hit the wall, dug out a fleck of white-wash and fell to the mattress on Billy's

bunk. Billy's smile vanished. "You that, now," he said.

"Why should I?" asked Frank, retrieving the knife.

"You stop showin' off. I kin say good."

Frank pretended to take care. "Whaddya mean, showin' off? You ter apologize for that one, Billy." A he raised the knife as if to hurl it

"I apologize," said Billy, and an arm as if to shield himself. I knew his cellmate would not real injuring him. The raised arm was in propitiation.

"Okay, then," said Frank, re again. "But watch out how you around criticizin' people, see?" I back again on the bunk and drew of tobacco from his shirt pocket but the knife dangling from the crook little finger.

Billy Pease considered his cellmate gravely. He was certainly a puzzle fore he'd gotten that knife he'd been of the most worried white boys had ever seen. Billy liked him worried. To look at him now think he was just a two-bit kid pring to be a bad one. But he need

# This is the way to win a battle in the desert

and North Africa made it clearer than ever:  
IS A WAR OF SUPPLY.  
1918, an American soldier could be equipped  
maintained on 5 tons of supplies each year.  
t today, for every soldier sent abroad, 10½  
of shipping space must be provided for  
ment alone. And it takes an additional 18 tons  
ipping to supply a single soldier for a year!  
pply is a matter of ships.  
d ships need electricity.

Vast quantities of electric power, for a thou-  
sand vital tasks that must be done to take a con-  
voy safely across the seas . . .

Electricity to steer the vessels and operate the  
radios and signal lights.

Electricity to detect the approach of enemy  
subs and planes, to sound the alarm, to organize  
the defense.

Electricity to power great cargo winches, and  
delicate navigating instruments.

Electricity to make magnetic mines harmless, to  
provide invisible "black light" for reading charts  
at night. Electricity to keep food fresh, to cook it,  
to ventilate the ships, to provide comfort for  
the crews.

*Electricity in every freighter, every tanker, every  
Navy escort vessel—to help win the war of supply!*

We of Westinghouse take tremendous pride in  
building so much of the electrical equipment, so  
many of the great turbines and gears and elec-  
tric drives, for the ships of America's Navy and  
Merchant Marine.

Into every piece of that equipment go all our  
"know-how," all our skill, all our determination  
to *do our share* in this war—and if possible, a  
little more.

### No unpleasant Scrubbing! Cleans Toilets FAST!

For over 30 years, Sani-Flush has been the quick, easy, sanitary way to keep toilet bowls sparkling-clean. Use it at least twice a week. Every application cleans away recurring toilet germs and a cause of toilet odors. Removes unsanitary film.

Don't confuse Sani-Flush with ordinary cleansers. It works chemically. Even cleans the hidden trap. When used according to directions on the can—Sani-Flush cannot injure septic tanks\* or their action and is absolutely safe in toilet connections. Sold everywhere. Two convenient sizes.

#### \*FREE for Septic Tank Owners

Septic tank owners don't have to scrub toilets, either! Tests by eminent research authorities show how easy and safe Sani-Flush is for toilet sanitation with septic tanks. For free copy of their scientific report, write: The Hygienic Products Company, Dept. 27, Canton, Ohio.

**Sani-Flush** CLEANS TOILET BOWLS WITHOUT SCOURING

### WAKE UP YOUR LIVER BILE —

#### Without Calomel—And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pints of liquid bile onto the food you swallow every day. If this bile is not flowing freely, your food may not digest. You get constipated. You feel sour, sunk and the world looks punk.

It takes those good, old Carter's Little Liver Pills to get these 2 pints of bile flowing freely to make you feel "up and up." Get a package today. Take as directed. Effective in making bile flow freely. Ask for Carter's Little Liver Pills. 10¢ and 25¢.

husband wore glasses for his work, now he does not. Tom was fixing the electric socket. Something went wrong. He forgot to turn the electric switch off. All of a sudden, fire sprang up, touching his hand and hair. He was surprised to find the fire was cold."

Other letters tell of blind men restored to sight, the dead raised, businesses saved from bankruptcy. Doc offers \$100,000 to anybody who can prove these testimonials spurious.

Despite frequent investigation by federal agencies, Psychiana flourishes as lustily as Father Divine or Jehovah's Witnesses. It has students in sixty-seven countries, and Doc claims many of them in high places, notably the late Senator Borah of Idaho, a warm personal admirer. During a visit to the White House, Doc reports, President Roosevelt told him, "You and I are trying to do the same thing—make people think."

At fifty-six, Doc Robinson is a beefy, handsome man, standing six feet and weighing 225 pounds. His eyes are lake-blue, his hair iron-gray, and he has the look of a tired matinee idol. His fondness for dramatic, broad-brim hats adds a touch of the Old West medicine man.

Doc's excursion into mysticism started at a remarkably tender age. "At three, I peered beyond the clouds," he recalls. "I knew I had a mission to perform." The years between this precocious discovery and his emergence as a mail-order messiah, however, were earthy ones. He was born in Stratford-on-Avon, Shakespeare's birthplace, the oldest of four boys. His father, Reverend John Henry Robinson, was a hell-fire and brimstone Baptist preacher, whom Doc describes as a hard man, given to jumping up and down on his children for discipline.

Mrs. Robinson died when Frank was eight. Soon after, his father married a fetching young lady of his parish named Haigh, who turned out to have an equally picturesque temperament. One day, in revolt, the future prophet knocked her flat. His father ordered him to join the British navy and he wound up at fourteen on the training ship Caledonia.

#### Just Like an Alger Hero

Disliking nautical life, he jumped overboard, hoping to contract a dischargeable illness. He succeeded with rheumatism. Rather than keep him around the house, the Robinsons shipped him, steerage, to Canada.

Landing with \$2.50 in his pockets, Doc began a Horatio Algerlike economic struggle.

"I was tossed hither and thither like a piece of driftwood on the bosom of the stormy ocean of life," he says.

He turned his hand to pitching hay, logging, beating a Salvation Army drum and collecting dead horses for a glue factory. In Toronto he worked as a drug clerk. His most useful asset, salesmanship, showed itself when he persuaded a customer who wanted an ounce of mineral oil to buy five gallons.

Dropping in of an evening on local Baptist gatherings, Doc occasionally delivered impromptu sermons, Billy Sunday style.

"I can hold an audience spellbound as long as I care to," he says.

One listener was so spellbound that he offered to pay Doc's tuition through the Bible Training School in Toronto. He was duly ordained to the Baptist minis-

try, but in the process, he concluded that Baptist theology was false. He has since extended this opinion to all other religions except Psychiana, flaying them in purple language.

Disillusioned, Doc quit before completing his Bible training and launched himself on an extended beer jag. In a lucid interval, he joined the Royal Northwest Mounted Police, but he was ousted for chronic alcoholism. The U. S. Navy, in which he served as Hospital Apprentice, First Class, discharged him for the same reason. He next tried the Army, serving briefly in the Philippines. He was court-martialed for "willful disobedience of orders."

In 1928, Doc was drug-clerking again, this time in Portland, Oregon. He had meanwhile married Pearl Leavitt, the daughter of a circuit judge. They have a son, Alfred, now a Naval flying cadet, and a daughter, Florence. It was in Portland that the gates of salvation suddenly swung wide to Doc.

"Singing to myself," he relates, "I lay down on the bed and closed my eyes. I was always 'talking with God,' as my advertisement states. . . . I saw everything in a flash."

Regenerated, he went on the wagon for keeps.

To find leisure to preserve this revela-

## BOOKS FOR OUR FIGHTING MEN

The "readingest army in the world" (to quote a high-ranking officer) is sorely in need of books. That's why the 1943 Victory Book Campaign has been organized—to see that our fighting men get the books they will enjoy. Not all a soldier's or sailor's time is spent drilling or fighting; he has plenty of leisure time on his hands when an amusing or instructive book can be a godsend.

What kind of books do soldiers, sailors, Marines, coastguardmen and merchant seamen read? The same kind of books you read. They want adventure yarns, novels, topical books by war correspondents, Westerns, mysteries, biographies; books by Sinclair Lewis, Pearl Buck, John Steinbeck, Ernest Haycox, Agatha Christie.

You can't expect a man headed for combat duty to take a feverish interest in the State Papers of Grover Cleveland or the Ladies' Guide to Home Needlework. Don't make this Victory Book Campaign an excuse to clean your attic of those tired-looking, dusty books no one has looked at since the turn of the century. If you've enjoyed a book, that's the book to give.

You will find boxes in libraries, stores, theaters. Fill them with books and fill them wisely. You never can tell what will happen when your book joins the fighting forces.

tion for posterity and earn a living the same time, he cast about for a drugstore which closed early in the P.M. was closing time for the Drugstore in Moscow, a tidy little community of 6,000 people, amid the pine groves and wheat fields of the Wasatch foothills. The Rol arrived by the next train, and cinched the job at \$15 a week.

It was a year of great psychic fads in America. Father Divine's Headquarters, Sayville, Long Island, was over with angels. In Los Angeles, named Dingle was selling son called Mentalphysics as transcribed the Tibetan sage, Ding Le Ming. a Moscow boardinghouse, Doc's son composed the first ten instalments of his correspondence course in fiction.

#### A Prolific Author

Borrowing a typewriter, he poured them out, 150,000 words all told, in days and rushed them to the printer. The result was a lively brew of Buck F science, historical fallacies and v attacks on existing religions.

Fellow citizens of Moscow refer to Doc as "that druggist who's crazy." Undaunted, he formed a corporation and sold stock around town with promise of quick profits. His own capital at this time was \$40. Five investors advanced \$2,500. A clear manifestation of the Power, Doc feels. With \$40 it, he placed his first ad in Psychiana, a pulp magazine. It fetched \$24,000 of customers, the first orders arriving on April Fools' Day. Doc opened a room office of his own.

He still lacked a name for the movement. Confident that the Power would reveal it in the night, he retired, pencil at his bedside. Sure enough, testifies, a man appeared in his dream making mystic passes over a corpse, murmuring, "This is Psychiana, the Power which will bring new life spiritually dead world."

Not long after, Doc, whose practice it was to swap photographs with subscribers, recognized, in the morning mail, the man of his dream. The man was Geoffrey Birley, a British cotton porter of Alexandria, Egypt, and wrote: "I received Lesson 4 yesterday. . . . No words of mine can adequately express the glorious thrill it gave me."

Doc promptly replied: "You are to be associated with me in business. Please send \$40,000."

Two weeks later, the Spokane Eastern Trust Company informed him that that sum had been deposited to his credit. The balance followed in smaller amounts. Doc doesn't know where Birley is now.

Within a year of the Birley apparition Psychiana was booming. Doc bought back the stock, paying the investors 12 per cent on their original stake. He then obtained from the state of Idaho a charter certifying Psychiana as a non-profit religious corporation. Under this happy concession, it remains tax-exempt. Its surplus reverts to the corporate treasury while Doc's personal withdrawals are limited to a salary, as president, and expenses—in what amount a board of directors fixes at its discretion. This board consists of Doc himself, Mrs. Robinson and Bill Marineau, an old family friend. In 1942, it approved a salary of \$9,000, \$3,000 expenses and a \$4,000 car.

Today, Psychiana, Inc., is a major Moscow industry. The corporation is

"Thanks very much. I don't know how I can ever repay you!"

LEO GAREL

own international headquarters, a red brick, factory-size building staffed by 23 employees, its own printing plant, the highest private pay roll in the county, and an annual advertising bill of \$150,000. Donations from the faithful have swollen the gross take by some \$200,000. "Remember the Movement in your own name," Doc urges hopefully.

In new customers last year, he counted about \$197,000 worth. Of these, half went up for one or more of the three advanced courses," another \$129,000. Sales of Doc's books, Psychiana emblems and phonograph records brought the grand total to around \$400,000, and Doc expects to double that in 1943.

Psychiana aside, Doc's personal holdings aggregate half a million. His bank credit is high and by shrewd borrowing he has acquired a forty per cent interest in Moscow's only newspaper, the Daily Bohonion, a prescription pharmacy, an office building renting to doctors and dentists, and numerous minor properties. A sizable portion of his income he devotes to local good works.

### The Enemies of Psychiana

Such heights are not scaled without reverses, and Doc's have been extensive. He blames most of them on a sinister cabal of church leaders and envious businessmen, who, he feels, are chiefly responsible for the numerous investigations of Psychiana by the Treasury Department, the Post Office Department, the F.B.I. and the American Medical Association, to name a few.

"But they can't get anything on me," he says confidently. "My ads never claim anything for Psychiana—only for the living God."

Less easily dismissed was a federal indictment in 1936, charging him with passport falsification. A few years earlier, preparatory to a European junket, he had given America instead of England as his birthplace. In a nine-day trial, Moscow's biggest sensation since the last Indian massacre, Doc testified that his parents once lived in New York and gave him to understand he'd been born there. Why they so misled him puzzled the jury, but it acquitted him.

No sooner was he free, however, than the Immigration Department opened deportation proceedings. Doc was saved by his most distinguished student, Senator Borah, at whose intervention a review board worked out a compromise. Doc agreed to reside outside the country temporarily, to re-enter on a visa and apply for naturalization. Only last year did the

prophet finally become a full-fledged American citizen.

In the face of Doc's bounty, Moscow has taken a mellower view of him. It regards his teachings with amused tolerance (Psychiana's files contain only nine Moscow students), but on Doc as a citizen, opinion is evenly divided. Many are inclined to endorse his boast: "Moscow was unknown. It is known all over the civilized world today."

The prophet's day begins at 5:30 A. M., when he bounds out of bed to breakfast with Mrs. Robinson, a comely, silvery-haired woman who considers her husband a "soul from beyond." He reaches his office by seven. It is a snug, lushly carpeted room, plastered with morale boosters like: WHEN YOU GET INTO A TIGHT PLACE AND EVERYTHING GOES AGAINST YOU TILL IT SEEMS AS IF YOU CAN'T HOLD ON A MINUTE LONGER, NEVER GIVE UP THEN, FOR THAT IS JUST THE PLACE WHERE THE TIDE WILL TURN.

Doc, who has been in plenty of tight places, keeps a sound-recording system behind the paneling. "I have many interesting conversations in my private files," he confides.

At least two hours a day Doc spends behind his locked office door, thinking. "I am a natural-born thinker," he says. As an aid to meditation, he burns incense and plays organ recordings on the phonograph.

Across the hall, stands the accounting room, where two girls total the day's receipts and dump them into a cannonball safe. In the mailing room, another team sits at a mechanically rotating table, assembling packets of literature. Anybody who answers a Psychiana ad, customer or not, gets 67 separate pieces over a period of 22 weeks. They total 25,000,000 mailings a year, an opulence which has lifted Moscow's post office from second to first class. Not until the 67th mailing fails to take does Doc abandon his prospect as spiritually irredeemable.

It is in these promotional follow-ups that the prophet, a master of upper-case, gee-whizz prose, really spreads himself.

"Have you seemed as a piece of flotsam or jetsam in life's troubled sea?" he asks in blood-red letters half an inch high. "The most significant discovery of the age is WHAT? . . . It's POWER. DYNAMIC—PULSING—SURGING—THROBBING. POWER to achieve anything you want . . . poverty to abundance . . . sickness into health . . . miserable defeat into marvelous success. I have CHANGED THE LIVES of thousands."

One of the world's most prolific writers, Doc personally types, hunt-and-peck

system, every syllable of these rousers, not to mention the lessons, the books and the advertising copy. Averaging 5,000 words a day, he has worn his index fingers to the nub and now tapes them when working. He never revises anything and consults neither lawyers nor ghost writers.

He also used to answer personally the telegrams requesting help which pour in regularly from ailing students. This duty now occupies his assistant, an excommunicated minister of doleful countenance named De Bolt, who receives \$50 a week for his efforts. Formerly, De Bolt would consult a collection of sixty form replies suitable to every emergency, lest he involve the corporation in an indiscretion. But now Doc trusts him to compose his own replies.

DOWN WITH BACK. PLEASE HELP, reads an appeal from Nevada. To this De Bolt wired back: EXPECT SPIRIT OF GOD TO HELP. WILL REMEMBER SPIRITUALLY.

When not meditating or writing, Doc concentrates on the corporation's business problems. With Lesson No. 3, the flow of spirituality is interrupted by a practical note: "Do not let a single remittance lapse, as you cannot expect the God-law to work unless everything you do is honest and straight. Don't break the LAW."

Doc bombards laggards with a series of thirteen dun letters, each one rising in emotionalism. No. 13 kisses dead beats goodbye in these words: "Now in parting I wish you the very best of everything. I question if many good things will come to you. For, you will remember, the Law of God never forgets. I wish you peace. I wish you joy. I wish you happiness. I do not believe these things CAN EVER come to you for the reasons stated before. If you ever feel that you want to square this account . . ."

In extreme cases he has used collection agencies.

### A Prophet in Shirt Sleeves

Doc usually gets home for supper around six and immediately strips to his shirt sleeves. The Robinson house, a Moscow landmark, is a glossy, nine-room structure, verging on modernism. It is crammed with gifts from students. One of the costliest features is a burglar-alarm system which he installed after somebody heaved a brick at him through the window.

"Crackpots have often threatened my life," he says. To protect himself, he keeps a deputy sheriff's badge, a Colt police special and a tear-gas pen.

Every evening at nine, he sits down to a 700-pipe organ, his pride and joy, and plays by ear. His favorite selection is Tales From the Vienna Woods.

"Do you catch the spiritual impulses?" he asks students. "Try listening for them."

As befits a "soul from beyond," he avoids social life, going out only Monday nights for the weekly Rotary Club get-togethers. His only intimate friend is Bill Marineau, who manages the Idaho Bohonion. He hasn't seen a movie in two years, takes no exercise whatever, and confines his recreational reading pretty much to pulp detective fiction.

After listening to a ten o'clock news broadcast, he prepares for bed by drinking coffee, always out of the saucer. Should the few visitors, whom Mrs. Robinson occasionally invites, overstay this limit, Doc is likely to start undressing in the living room.

"Some people think I'm a roughneck," he says.

The prophet no longer observes the Psychiana ritual before retiring.

"I have passed beyond that stage," he explains. "I just think."

**J**OE KENNEY was eighteen when he tried to enlist, though to be on the safe side he said he was twenty-one. That was all right. From a military point of view everything was all right except his occupation, which was all wrong.

He was a stockman. He had been born and brought up on a cattle station on the border of Queensland, and the working part of his life so far had been spent driving cattle over and down the thousand-mile-long stock routes out of Queensland, and the Northern Territory into South and West Australia. It had not occurred to him to lie about this, and it is doubtful if he could have done so successfully, for his trade was stamped upon him with the impress of sun and desert dust. It had shaped his sapling body and burned and hardened the skin of palm and foot and flank.

"No go for the army then, son," the officer informed him. "That's a reserved occupation. For the present, it's more important to the country to keep you on the stock routes than to have you in service. Food's as big a part of this war as fighting."

When he had absorbed this information, Joe managed to deliver what he thought would be a devastating answer to it.

"It's not just me I want to enlist," he said. "It's some horses too. I got a mob of 'em over in the Territory, four or five

There are places a tank cannot go, nor a jeep nor a peep, for that matter. There was a job for Joe Kenney's tough little rock-bred horses

ILLUSTRATED BY PERCY LEASON

hundred. I was thinking we'd all join up in the Light Horse."

It was as if he had led with his chin. For the moment, however, the officer did not swing at it.

"What's a kid like you doing with four or five hundred horses?"

Joe blushed. "I suppose it's what they call a hobby."

It was slightly more than that, but he could not speak freely about things so deep in his heart. Horses to him were a faith, a way of life, a reason for living.

He kept these four or five hundred in a southwestern tract of the Northern Territory. Only one had cost anything in money, the stallion Red Devil. The rest had cost only the work of rounding up wild horseflesh and slapping a brand on it. Joe had taken the trouble to muster the mob because he believed that out of it would come horses to carry men farther between dawn and dusk than they had ever ridden before.

It was a horseflesh laboratory, a great,

beautiful experiment. The basic element in the experiment was the brumby, the wild horse of the Australian plains. The brumby does not rank high, but it does have staying qualities and an ability to thrive on desert herbage, to go long periods without water. Give it spirit and intelligence and you'd have something. That was what Joe was aiming for, that was why he had bought the great stallion, Red Devil. Thick-barreled, heavy-boned Red Devil was, but he had a world of spirit and fierce pride. He was unbroken. Joe had not bought him for riding; he had bought him for the saddle horses he would bring out of brumby mares.

The officer sat for a while in silence, no doubt casting around for some way to soften the blow he must deliver.

"Son," he said at last, getting up to put a hand on one of the boy's slim shoulders, "war's mechanized these days, and I'm afraid we simply don't need horses. You go back and try to remem-

ber that you're fighting the war just sure as if you were wearing an e feather in your hat."

This interview took place in a coast town, where the solace of a few pints of beer was available; but Joe had no taste for it. He sought to drown his sorrows in a rarer brew. There was a theater in the town and he spent the rest of the day in it. He had strong preferences in films and, as it happened, the program this day was exactly suited to his taste, since it involved a great deal of riding and shooting. He saw the picture three times, but when he left, misery still gripped him by the throat; if anything, the picture had made it worse.

It was as if Australia had turned in a foreign country before his eyes, as the men who led Australia's fighting men were strangers.

He could not understand it. And if he could not, how could he hope to make Saltbush understand?

Saltbush was his friend, his working companion, a dour youth of Joe's own years. If he had ever had another name he did not know it; and it was not clear if he had been set adrift by the death of his parents, as Joe had, or if he had set himself adrift by running away from whatever home he might have had. He was slow and moody, he spoke seldom, he had no enthusiasms except in the

# STORY OF A 9-YEAR BATH

- It started in 1934—when a ligno-cellulose hardboard was submerged in water. It ended the other day.

- What had happened in that 9-year bath?

- This remarkable material, known as Masonite\* Presdwood,\* had retained 80% of its original strength.

- The board, when dried, was within 1/10,000 of an inch of its former dimensions.

- Its appearance was practically the same as when submerged.

## MASONITE PRESDWOODS

THE LIGNO-CELLULOSE HARDBOARDS

**T**HE secret of Presdwood lies in the two basic elements of natural wood: the tiny *cellulose fibres* of which wood is composed, and the *lignin* which holds them together.

The Masonite process starts with *exploding* wood, neither removing the lignin nor damaging the cellulose fibres. The result is a mass of fibres of varying degrees of plasticity.

The next step is to interlace the fibres to provide equal strength in all directions. And

then they are welded together again under varying heats and pressures, using lignin's own great bonding power.

*Masonite Presdwoods—made in this way from ligno-cellulose fibres of varying degrees of plasticity in different weights and densities—are suitable for many special purposes and uses.*

Today in America's War Program, Presdwoods have more than 500 different uses—saving

steel, aluminum, rubber, asbestos, and many other critical materials.

Although Presdwoods are not readily available for civilian use, if your company is engaged in essential production, and you need a superior material to replace other scarce materials, write: Masonite Corporation, 111 West Washington St., Chicago, Illinois.

\*Trade-mark Reg. U. S. Pat. Off. "Masonite" identifies all products marketed by Masonite Corporation. Copyright 1943, Masonite Corp.

BLATZ BREWING CO., MILWAUKEE, WIS. • IN OUR NINETY-SECOND YEAR

we held grimly to one determination: the will to survive.

It was first of all necessary to be practical and set up some kind of daily life. No matter what the circumstances, children had to be attended to, the family fed, the old and sick taken care of. Each of these natural functions of a normal daily routine presented enormous difficulties which had to be overcome. The Jewish Council came to the fore as leader of the community. This had originally been a religious institution with little personnel and no experience in communal administration. Overnight the members found themselves faced with the responsibility for 600,000 people, their relations among themselves and with the outside world. They bravely shouldered that burden and went to work with energy and determination. The president was a Mr. Czerniakow, a fine man with a strong sense of duty. I say "was" advisedly, because a few weeks ago we learned here that he committed suicide last summer when the Germans asked him to draw up a list of 100,000 people for deportation.

## The Overlord of the Ghetto

The administration, sketchy at the start, had to be set up in a hurry or we could not have lived even through the first weeks. The council was to conduct all dealings with the outer world, which for us had shrunk into one figure, was incorporated in one man: Auerswaldt. This was our overlord, the Commissar for Jews in the German government. I never saw him and know few who did. He was a remote personality, but his shadow fell darkly across our lives. His office had complete charge of any question connected with Jews, and his assistants went in and out of the Jewish Council's office, issuing orders, shouting at our officials, pounding on the table with the riding whips they always carried, abusing the men who worked there so hard and under such duress. The place was like a madhouse, with the madmen in control.

All banks and exchange offices were outside the ghetto. Any financial business had to be conducted through the office of the commissar. All our legal affairs had to be handled by a non-Jewish attorney. The court building is marked on the map, showing its two entrances, one from the ghetto and another from the narrowing indentation of the Jewish town. This courthouse was the only place where the two worlds still met. Here Jew and Christian were allowed to see each other for the last time, and many a grim and tragic scene of farewell took place within that setting. Here the Jewish and non-Jewish worlds were to be severed under the law. Here men terminated old partnerships started by fathers or grandfathers. Here women took final leave of lifetime friends. Here, hardest of all, husbands and wives met, to see each other no more. The Nuremberg law had been applied in occupied Poland, and marriages between Jews and non-Jews had to be dissolved.

All the makeshift arrangements, which we had considered temporary when forced to move in so hastily, became permanent. One room only could be allotted to a family. In this room everyone slept, ate and lived. Cooking and washing also had to be done there, and it was beyond human effort to maintain order and decency under such conditions.

We had no electricity any more aside lamps and candles had to serve for lighting purposes, while electric appliances such as irons, heaters, cleaning machines the like became obsolete and so scrap. We had no gas for cooking except from 1 A. M. to 6 A. M. The wife at work all day could not possibly stay up so late or get up so early. Therefore we cooked over wood fires in iron stoves. As the rooms naturally had no flues, the stove would fill them with choking smoke and cover everything with soot.

All radios were confiscated and phones removed. Musical instruments, pianos in particular, were requisitioned. Streetcars no longer operated in the ghetto. They were replaced by a horse-drawn wagon which ran through the main streets, stopping occasionally to lower a pair of steps for a passenger.

Whoever could afford to pay hired a ricksha pushed by a man treading pedals.

The streets were always jammed with pedestrians, so that one had to fight one's way through the mass. The Germans had laid out the ghetto with the idea of making it as difficult as possible for us to get anywhere. The worst congestion of all was at the point I mentioned before, where the two entrances of the ghetto meet at a sharp angle at the corner of Zelazna and Chlonska. This was a point all of us had to pass many times a week because the Jewish Council was situated in the little ghetto. The Germans showed great skill in systematically blocking traffic at this crossroad.

A Jewish post office was organized with two branches, one in each section of the ghetto. These would handle nothing but post cards. No letters, parcels, or anything else could be sent out of or into the ghetto. Every card was examined by the German censor.

## Persecuting the Sick

One of the worst hardships we had to bear was the fact that all pharmacies had been moved out of the ghetto and that every prescription had to be submitted to the commissar through the Jewish Council. The needs of the sick were thus deliberately delayed by red tape. Furthermore, we were obliged to pay for this red tape; every prescription granted—and they were by no means granted—carried a special handling charge in addition to its cost. To make up for the loss of our hospital, we adapted several small houses to take in sick people. It was a poor arrangement, for the buildings were unfit for their purpose and were far apart, while we had no equipment beyond what we could smuggle. At the end of 1941, when spotted fever raged through the ghetto, we still had to struggle with the same insufficient conditions.

The most vital problem for us was food. During those long months the word on every person's lips, the thought in every mind, was food—where to get it, how to get it, how much was there. For food a man would take the most fearful risks, would incur the most frightful punishments.

Because nothing could be grown in the ghetto, every bit of food had to be brought in from the outside. An Office of Provision was set up within the Jewish Council to receive what the Germans allotted to us and distribute it to the

## Which is your type... Jolson, Hildegarde, Goodman?

**JOLSON?** Famous Al, whose Tuesday night radio show is the joy of millions, is the discerning type. "Regent is better tasting", he remarks. That's because Regents are made from choice Domestic and Turkish tobaccos, specially selected for finer flavor!

**HILDEGARDE?** This international singing star gets a kick out of collecting water colors. She's the economical type. "I like Regent's King Size", she observes. "In times like these, value's important. Regents are over 20% longer...naturally mean more value!"

**GOODMAN?** One of Benny's eight clarinets is reserved for the classics. The practical type, he says: "That Regent crushproof box is right in the groove! It's practically a personal cigarette case!" That's one reason why Regents are always in perfect smoking condition.

**ALL THREE AGREE...** that Regent, with its streamlined oval shape, is a mild smoke. Regent, you see—and only Regent—is Multiple Blended, an exclusive process that makes it extra mild! Try Regent yourself. Costs no more than other leading brands.

Quality tobaccos... *Multiple Blended*  
make **REGENT**  
*The milder, better tasting cigarette!*

Common ghetto street scene: a shoeless pauper, his feet bound in rags, carries a tattered coat he hopes to barter for food

Our official bread ration was pounds a month per person. Enough for this was delivered to the council which then apportioned it to the members. The flour was dark and sticky, while the bread made from it tasted like chips and was indigestible. The diet forced upon us was calculated to starve us. It contained no fats, no eggs, no meat or fish, no fruits or vegetables, and was, therefore, almost completely lacking in calories and vitamins. Naturally, in these circumstances we took matters into our own hands. A flourishing black market sprang up, supported by highly organized smuggling, and this enabled us to keep from starving to death.

The smugglers were tough characters, ruthless and unafraid. The penalty if caught was death, but there were always placements to be found for their dedicated ranks. Well organized and disciplined, they worked on a large scale. Moreover, the smugglers were fortunate in two respects: food was plentiful in the country around the capital, and they could generally count on the corruption and greed of the Germans.

The black market sold white flour out of which bakers secretly baked rolls and bread at night. The wheat grains for this were smuggled in and ground privately on hidden hand mills. There was a mill in the house where I lived, and so well guarded was the secret that I never learned where it stood. There were even a few privately run dairies in the ghetto, each with a few cows. I don't know whether the cows had been there before or whether they were driven in just before the closing of the wall. Their fodder also had to come in through the black market, the salt from breweries. Once a live cow was smuggled in, it was the talk of the ghetto for days, as was also the extravagant bribe that had to be paid to the guard who let it through.

A single day's food for a medium-sized family came to the equivalent of twenty dollars on the black market. Since our prime interest in life was get-

ting food, any money we earned, any funds we possessed, any valuables we were able to sell, were all dedicated to that supreme purpose.

The majority of the ghetto population lived on a monstrous and unprecedented sell-out. We consumed whatever substance was left. Those who still had money spent it. By far the greater part had nothing but the valuables they had been able to carry away with them. These we sold one by one so that we could eat. There were always Germans and German sympathizers who jumped at the chance to buy *objets d'art*, precious stones and the like, for a pittance. The agents who brought about these deals lived entirely on their commissions, which they used to buy food. They had to have helpers to smuggle the valuables out of the ghetto, for the wall was a barrier both ways.

### Exploits of Young Smugglers

Small children were trained for this trade. They would creep through holes in the brickwork or climb over and jump down. Once on the outside they would run away on their errands. They made marvelous smugglers, for they could be taught easily and it was the sort of game their imaginations would seize upon with delight. They loved to outwit the sluggish Germans and were thoroughly familiar with every winding street and back alley through which they sped with their burdens. They were seldom caught, because children under fourteen did not have to wear the Jewish arm band.

Those who had no valuables left sold their last miserable belongings out on the sidewalks before their lodgings or hawked them through the streets. When these were gone, they sold their miserable bodies, their last strength, to menial services for a meal, for a piece of food. And those who had no more strength, died.

The second part of this article will appear next week.

# Married on Monday

By Roy Wheeler

ILLUSTRATED BY WALTER KLETT

SKIP walked to the outskirts of Blandinsville and took up position where the Lincoln Highway curves across North Main Street.

He didn't have long to wait. A roadster with a middle-aged man in it pulled up in a few minutes. "Don't mind giving a soldier a lift," the man said as he swung open the door.

"Thanks," Skip said and got in.

The man started the car. "Going to the Rapids?" he asked.

"Yes, sir," Skip said and then added, "that is, if you are, sir."

The man nodded. "On leave?" he asked presently.

"Yes, sir," Skip said, "fourteen days."

The man glanced at his wrist watch. "At thirty-five we'll make the Rapids in about an hour," he said. Skip stretched out his legs.

It would be swell seeing Mom again, too. She'd probably have supper waiting. Anyway, *she'd* be waiting. As she had been every day since he marched away.

His throat grew a little tight and he let his thoughts shift to the other side of town. Gwen would probably be waiting, too. Or would she? It had been weeks since she'd written him. Weeks.

The roadster hummed on monotonously. Skip stopped looking at the landscape and let the picture of Gwen fill his eyes: tallish, sleek and at first appearance cold, a coldness that Mom used to think was avarice or something, but which . . .

Skip frowned and his thoughts went back to his last night with Gwen. A night under the winter stars in a deserted corner of the park. "I'll be true to you," he'd told her. "Every day, every hour. I'll never forget how lucky I am—to be engaged to you. I love you, Gwen, with my whole heart."

And then she'd taken a step closer to him and put her arms around his neck and said, "I'll wait for you, Skip—always."

Just that and a quick, hard kiss. But knowing Gwen as he did he couldn't have asked for more.

The thrill of that cold winter night was still sharp in his memory. He wondered about Gwen. A lot of things had happened since he went away. A lot. Had she waited as she'd promised she'd do?

Skip shook his head unhappily. If she were still waiting she'd have written. Of course she wasn't married or anything. Mom or someone else would have written. But, suddenly, an appalling fear took hold of him. Suppose she were ill. Or had met with an accident. Suppose . . . He shrugged the fear away. None of these things could happen to Gwen.

THEY came to the edge of the city. "It won't be long now," the man said. "Where would you like to get out?"

"I live on Delaware," Skip told him. "If you're going that far, sir."

The man inclined his head. Ten minutes later he pulled over to the curb. "This is Delaware," he said.

As he remembered it later, it seemed to Skip that he was still a block away when the door of the little frame house flew open and Mom was silhouetted against the lamplight inside. But Skip didn't know. He'd covered the distance to Mom's arms in almost a single bound.

Mom cried a little, of course, and Skip knew that both joy and fear were in her tears. Joy for his homecoming and fear for the day when he'd have to go away again.

Supper was ready and it was a supper to dream about. All the things Skip liked. "I knew you'd be coming tonight," Mom said. "A little bird told me."

After it was over, Skip pushed back from the ta-

ble. "I . . ." he began and hesitated, "I," he began, "don't suppose you've seen or heard of Gwen?"

Mom stopped midway to the kitchen, her hands full of dishes. "No," she said shortly, "I haven't."

"I guess I'll go over there for a while," Skip said.

"I expected you would," Mom said and went out to the kitchen.

An hour later, bathed, shaved and in a fresh shirt, Skip caught a streetcar across town. It took him within five blocks of Gwen's home.

There was a young man in a camel's-hair coat on the sidewalk ahead of him, but for a block or so Skip paid no attention to him. His concern for Gwen was too absorbing. But then he began to notice the young man's walk and something about that was strangely familiar. Was it Don Bradley? Ed Gowen? Or Fred Huston? Yes! Fred Huston! It must be Fred, Fred still claiming deferment on account of the mill.

Skip's heart missed a beat. What was Fred doing in this neighborhood? He'd always been crazy about Gwen, but . . . Skip dropped back and at the corner crossed the street. Then he speeded up again.

THE young man in the camel's-hair coat was walking rapidly. *Maybe I could get there first if I hurry.* Skip thought and kept on down the opposite side of the street. It probably wasn't Fred anyway. Even so, he wouldn't be going to see Gwen. No.

But outside the big brick house where Gwen lived the young man turned in.

"Geel!" Skip gasped. "He's—he's going to see Gwen!" Breathlessly he tried to shrink into the shadow of a tree. Into a spot where he could see and not be seen.

It seemed an age the time the young man took his walk to the house and up the steps.

And then it happened!

From his point of observation Skip saw the front door being opened. By a girl. He saw the young man take off his hat and put his arms around her. For a moment they stood there and then they moved away. The door closed behind them.

"Gwen," Skip cried. "It—it must have been Gwen." He was clenching and unclenching his fists without knowing what he was doing. "But I've got to be sure," he cried. "I've got to *know*." He began to steal stealthily to cross the street.

As he came onto the lawn that surrounded the brick house his face was grim. There were curtains at the windows but by coming close he could see. They might jail him for this, but at least he'd find out.

A girl was coming across the room. Yes, it was Gwen. She paused at a little table and picked up a cigarette. And then the young man came forward to light it for her. Yes, it was Fred!

Gwen laughed and blew a little cloud of smoke toward the young man. And then he put his arms around her and their lips met.

When they came apart, Skip never knew. He was racing down the five blocks to the big drugstore at the car line.

As he burst in the door he hurled three paper dollars at a clerk and demanded change. Then with the change in his hand he ran through the entire customer file and ducked into a telephone booth at the back of the store.

Three minutes later a heavily laden spinster lady paused near the side door. Her packages were bulging and her feet hurt. She had forgotten to bring an empty tube and they wouldn't give her any toilet paste. But from inside the telephone booth was coming a thrill to make her forget her troubles.

"Betty . . . darling!" Skip was saying. "I got it the discharge. . . . When? Five minutes ago. . . . Honorable? You bet, honey! I love you, too, darling. . . . You'll come up tomorrow? . . . Gee, that's swell! . . . We'll be married Monday. . . . Gee! . . . Mom's going to love you, honey. . . . Gee . . . I'll do. . . . It's a great war, honey. Gee. . . ."

"I'll be true to you," he'd told her. "I love you, Gwen." "I'll wait for you, Skip—always," she'd said

A SHORT STORY  
COMPLETE ON THIS PAGE

# "How I clipped the barber... with the Raleigh bet."

1

"Here's one time my barber wished he *hadn't* talked! I was telling the manicurist that all cigarettes *aren't* alike, and that I could pick my Raleighs from any other popular-priced brand just by looking at the color of the tobacco.

2

"'Bet you a shave you can't!' he pipes up. So he took my Raleighs and several other brands, covered the labels, and showed me just the open ends of the packs. He folded up like a wet towel when I picked right at first glance.

3

"But he's a temperamental cuss, so I thought it best to tell him the secret. The tobacco in Raleighs is more *golden* in color. That color difference stands out like grandpa's sideburns. Try this Raleigh bet on your friends, and win!"

Raleighs are more golden

4

Golden color is proof of *quality*. At the great tobacco sales, the ripe and mellow golden leaf always brings top prices. It's the *expert* way to pick a milder smoke.

*Tinfoil is out for the duration of the war. Our exclusive new laminated moisture-proof paper keeps your cigarettes fresher than any other package on sale today.*

RALEIGH IS THE PACK WITH THE COUPON ON THE BACK. B & W coupons (also packed with Koal Cigarettes) are good in the United States for War Stamps, cash or worthwhile premiums like these:

TUNE IN Red Skelton on Tuesday nights, Tommy Dorsey and his orchestra Wednesday nights. Coast-to-coast NBC Network.

U. S. WAR SAVINGS STAMPS—any denomination—by redeeming coupons for cash value ( $\frac{3}{4}$ ¢ each). 133 coupons equal \$1.00 War Stamp.

CORY COFFEE BREWER. 8-cup model. Wide mouth bowls for easy cleaning. Fast-flow cloth, glass rod filters. Use on any heating device.

MAGAZINE RACK. Fine walnut finish. Two roomy compartments for books, magazines or other periodicals. Goes with any furnishings.

SCATTER RUGS of long tufted chenille. 30" x 54". For bedrooms, and living rooms, too. Specify blue, green, dusty rose or natural white.

FREE! New catalog #21. Color illustrations. Full descriptions. New premiums. Brown & Williamson Tobacco Corp., Box 599, Louisville, Ky.

## 1-A Johnson Grass

Continued from page 26

ne-legged preacher-blacksmith. Neither the foreman nor the Senior Usher liked B'r Charlie; but Giles tolerated him because he could make a shovel plow sharper than any other blacksmith in the Red River bottoms and the Widow Duck defended him because he was her pastor. Presently, the talk got around to the church itself.

Giles and the Widow Duck were constantly feuding about the church. Giles was a sinner and, officially, the Widow Duck had small patience with sinners. On the other hand, Giles was interested only in the sort of work people did in the field, not at all in their church activities.

"Ain't too much down-right sin takin' place, I reckon," the Widow Duck replied to a question. "De young mens gittin' called in de Army kinder cuts hit down." She laughed. "Still, as long as ole Newman Dyke keeps ramblin', I reckon hit'll be enough sin goin' on to keep B'r Charlie preachin' agin hit."

"Young mens goin' off cuts in on de collection, too, don't hit?" Giles asked slyly.

The Widow Duck shrugged casually. Collections were getting to be a sore point, though there was no need to tell Giles so. "We s'pend de dues er de members which git caught in de draft," she explained. "We'll git hit back quick as dey come home and hit a lick wid a good crop and high prices."

"What about de mens which go off and leave dey wife behind—like Cricket and May-Lee?"

THE Widow Duck chuckled. "You sho got around to Cricket's grassy crop again, didn't you?"

Giles feigned self-reproach. "I reckon I ain't got nobody but myse'f to blame," he confessed. "I knowed better den let Cricket bring a hill woman on de place. But he begged so hard and he loved her so good—"

The mention of young love set the Widow Duck's big old heart to bubbling over. It had been many a year since she had taken Big Jim Haley away from a frail brown on Duke's Bend, but romance ever lurked in her soul. "Ah, Lawd, Giles," she said. "Hit ain't no denyin' sweet love."

Giles continued as if he hadn't heard: "Den when May-Lee put on like she was ailin' 'bout de time hoein' got tight and Cricket started gittin' behind in his crop, I didn't had no business lettin' you talk me outn runnin' 'em bofe off."

The Widow Duck dived into the foreman's trap. She didn't know May-Lee had "ailed" during the working season and she had never discussed the question of evicting the young couple. Nevertheless, she could not allow Giles to blame her without defending her position even though it had never been her position.

"Sho you can't run 'em off," she snapped. "Cricket was bawn on dis place and, good or bad, he got a right."

"His woman ain't got no right to ail, jest cause hit's mo' easier to stay in de house and groan den hit is to git out and fight Johnson grass. I couldn't 'a' runned her off, less'n I run Cricket off, too."

"Trouble wid you, Giles," the Widow Duck said, "you don't understand a woman wid love."

"Man, woman, or mule," Giles declared, "when you lays in de shade and grunts jest cause de sun is hot and de grass is high, dat's laziness. Pyore-D laziness."

"Pyore-D love," the Widow Duck in-

sisted. "Hit's like dis: de mo' May-Lee didn't work in de field wid her hoe, de harder Cricket had to work wid his plow. Ain't dat right?"

Giles admitted it was true.

"And de mo' harder Cricket got to plow, de mo' he show May-Lee he love her good. On account er no man ain't gonter work dat hard for his woman efn he don't love her too good."

"Hunh!" Giles snorted.

"Don't you 'hunh' at love," the Widow Duck warned. "Love is holy, right outn de Bible. I don't keer efn you is a on-redeemed sinner and a low-down church-don't-goer, you can't do dat. De Book say, 'Feed me tharfo' on pyore love for verily de lamb shall lay down on de line and eat de apple er Eden's Tree.' Be not disencouraged, son. God will change conditions."

Giles grinned. "Love and Cricket and May-Lee all mixed up wid de church, hunh?"

"Sho. Dey's all good members at my church. De way dem chilluns love is a

est. The result was a field full of tall grass with deep, tough roots.

The Widow Duck put the pressure on, hard. Mamie T, the best cotton chopper on Little Bee Bend, was soon to come before the church board as a candidate for Chief Usher. The Widow Duck let it be known that "committee" work in May-Lee's field would definitely influence the board's decision. This brought Mamie T's hoe out.

WORD was spread that a reorganization of the choir was contemplated; and unless a number of the singers showed more enthusiasm about committee work they would wind up as mere Water Sisters in the Left Hand Pew instead of Mocking Birds over the Altar. There would also be added to the list of church officers a few Acting Junior Deacons, provided some interest was displayed by boys big enough to learn the deaconing business and strong enough to hold a cultivator in a grassy furrow.

After the first day's work, it was ap-

as the Widow Duck went on: "Me and Giles got strung out in a argyment 'bout c'd I git Cricket's and May-Lee's crop worked and hit look like Giles got me down."

"De Creek it I know, yas," Modom Aw-bear sighed heavily. "For him I make one love toby. De May-Lee? No."

"Don't nobody else know her, neither," the Widow Duck said. She wrinkled her brow and thought hard. "Dat set my mind thinkin', Cissie. Maybe you done put yo' big mouf on de trouble. I bet dat's de p'int. Efn ev'ybody knowed May-Lee good, dey'd pitch in and work hard. But dey don't know her. Dey been workin' for her, cause dey knows me. She's gittin' de work secondhand and secondhand work ain't no good."

"Dees May-Lee, do she have *le je ne sais quoi*?" Modom Aw-bear made a suggestive wiggle.

The Widow Duck laughed. "She might do in a rush efn a man couldn't do no better," she said. "But I'm got womens and mens bofe workin' for her."

"Mmm," groaned Modom Aw-bear. "You got de troubles, yas."

"You's mighty tootin' I'm got troubles," the Widow Duck admitted. "But I'm got me a idea, too. Good night all and thank you for de company."

FROM the hoodoo woman, the Widow Duck made straight for May-Lee's house. "Git dressed in yo' fancy Sunday clothes and come wid me," the Widow Duck ordered.

When May-Lee was dressed, the Widow Duck inspected her critically. "Twon't do," she said firmly. "Whar yo' high heels?"

"Ain't got none," said May-Lee crossly.

"Whar at yo' weddin' shoes?"

"Dese dey," May-Lee explained. "I didn't never had me no high heels. Cricket promised me some but he never got around to gittin' 'em."

"Come on home wid me, anyhow," the Widow Duck told her. "I'll do some borrowin' in de mawnin'."

The next day the Widow Duck introduced a new and somewhat bewildered May-Lee to the handful of committee members who were struggling with the grass. May-Lee wore high-heeled shoes, open-work stockings and a black slinky dress. Draped from her head like a bridal veil was one of the Widow Duck's lace curtains held in place by the old woman's long silver hatpin which also secured a spray of red zinnias from her flower bed. "May-Lee a widow-bride," the Widow Duck announced. "And she got love dat's so holy dat whosoever do's good unto her shall be cast on de waters of life seven times seven and shall abide tharin'!"

It was apparent almost at once that May-Lee did not have the *je ne sais quoi*. She stood stupid and wall-eyed as the women stared through narrowed lids and the young aspirants for Acting Junior Deaconships searched in vain for glamor.

The Widow Duck knew. "Git home and take dat stuff off," she told May-Lee. "And den git yo' hoe and start choppin' grass like you ain't never done. Onderstand?"

"Yas'm," said May-Lee.

"And you, Mamie T, you keep dese young'ns choppin' and y'all boys do de best you kin wid de cultivator to I gits back. Ain't nothin' gonter git dis grass but work. Pitch in hard and heavy whilst I goes for mo' he'p."

The Widow Duck went off to find

COLLIER'S

"Onderdonk! Karlonis! What am I paying you for?"

COLIN ALLEN

blestin' in sheep's clothes and few abide tharin'." Then as if to drive home the point, the Widow Duck added, "And I'm fixin' to move we s'pends May-Lee's dues outwell her man git home f'm de draft."

"And dat will jest 'bout fix ev'ything," Giles said sarcastically. "Y'all git over at de church and tawk about bein' holy and s'pendin' dues! Who gonter s'pend de grass outn dat crop, so's hit'll pay off for what Cricket and May-Lee done et and so's May-Lee kin eat dis winter? Church got somethin' to do 'bout dat?"

The Widow Duck bristled. It was a challenge thrown to the Old Ship of Zion by as rank a sinner as ever sprouted. "Ain't no member er my church skeered of a little bitty Johnson grass," the Widow Duck snorted. "Us members'll whup dat grass outn dat good sister's crop in a committee. I'm gonter ush up a meetin' of ev'y woman big enough to swing a hoe, and ev'y man stout enough to hold a plow, and us'll whup dat grass jest like us whups ole Satan!"

GETTING May-Lee's cotton cleaned of grass took a week of the hardest work the Widow Duck had ever done plus every bit of influence and imagination she possessed. Cricket's crop was, she soon discovered, a complete mess. Only a fair plowhand at best and with Giles too busy to keep watch, Cricket had plowed sloppily and May-Lee's hoeing had shown an appalling lack of inter-

parent to the Widow Duck that the people did not have their hearts in it. She stopped by the blacksmith shop to discuss the matter with B'r Charlie.

"What dem members needs," she told the preacher, "is a soul-splittin' sermon and prayer, right out in de field. Whyn't you drap by along 'bout sun-up and pitch a meetin'?"

B'r Charlie fidgeted uncomfortably. "Hit's a fur piece for me to crutch down de turnrow," he objected.

"You crutched a heap mo' fur den dat," she reminded him. "And not on church business, neither." But she didn't press the matter.

After supper, she went to Modom Aw-bear's cabin. The Widow Duck had no belief in and scant patience for the hoodoo woman's strange practices. She had known Modom Aw-bear when the Modom had been plain Cissie Ringgold—long before she talked in the French dialect of Cane River or pretended to have magic powers. But the Widow Duck knew that many people on Little Bee Bend believed in Modom Aw-bear's power and the Widow Duck was desperate.

"Set, Cissie, and quit suckin' yo' teef at me," the Widow Duck commanded as she entered the gloomy cabin. "You ain't got as much sense as me but you knows what's takin' place cause de people runs to you wid dey troubles."

Modom Aw-bear moaned and hissed

Newman Dyke, her favorite sinner. "Go catch Eagle and Lightnin'," she commanded. "Hook 'em to de newest cultivator in de lot."

Newman backed off, grinning. "Look, Mis' Duck," he said. "I knows 'bout you tryin' to git dat grassy field cleant up. I went down and peeped around. I never seed such tough-lookin' grass and I know I ain't never seed as hard a lookin' lady as dat gaggle-laigged May-Lee. Ain't nothin' in dat field dat appeals to my favors."

The Widow Duck was stern. "Yas, de grass is tough and May-Lee sho ain't nothin' to look at. You and yo' mules is de onliest team which kin whup dat grass and y'all gonter do jest dat." She glared at him. "Or else," she threatened. "bad luck sho gonter overtake you all de days er yo' life."

Newman capitulated, the Widow Duck got her own hoe into action, and two days later she invited Giles to inspect May-Lee's field.

"De cotton done got stunted some," she said, "but hit ain't no grass dar."

Giles nodded approvingly. "Come a shower and I'll wage-plow hit th'ough one mo' time and hit'll make fair. I reckon," the foreman said. "But you better keep in behind May-Lee—"

"Not me," the Widow Duck snapped. "I said I'd git de field clean and I done hit. From hyar on out May-Lee is yo' business. Satisfied?"

"Satisfied," Giles agreed.

THE Widow Duck promptly forgot May-Lee and when a man from the guvmer came to question her about May-Lee, she was no more than mildly curious. "Yassuh," she replied, "I knows Harding Daingerfield dat got caught in de draft. His call name is Cricket and his wife is name May-Lee. Dey got married up wid a pair er cou'thouse licenses on New Year's Day. Him and May-Lee was makin' a crop up to de time de draft call his name and he lef' out for Uncle Sam's Army. You kin find Cricket's name on de book at de commissary for three-and-a-half for dem cou'thouse licenses and you kin find May-Lee in her field. Follow de turnrow to de last house on de lef', den go down de grudge ditch to you sees a dark lady choppin' in de field by herself. Dat'll be Cricket's wife."

Slow hot weeks passed. The cotton grew tall and the stalks spread across the middies. There was no room for Johnson grass to grow and no more work to be done in the field. The cotton crop was "made." The blooms dropped off, squares formed and out of them grew the hard, dark green bolls. The people sat around and waited for the bolls to pop open so the cotton could be picked.

Around the middle of August, when a few open bolls were reported, Newman Dyke came to see the Widow Duck. "I been peepin' about some," he told her, "and f'm whar I'm settin' hit look like dat May-Lee gonter make a fair crop."

"And so?" challenged the Widow Duck.

"I put in two of de hardest days' plowin' I ever done, in dat field," Newman said. "Seem like she gonter make enough to pay out at de commissary and den have some to pay wages, maybe."

"You aimin' to charge a widow woman wages?"

"May-Lee got a husband."

"You knows he off in de draft."

Newman was insistent: "I'm got me a rule I don't never do nothin' for no lady less'n de lady do somethin' for me. Yutherwise de ladies will forgit who I'm is."

"You done dat plowin' for me," the Widow Duck reminded him. "And I ain't gonter pay you no wages. But

de next time some lady's husband shoots you, I'll pick out de buckshots."

"Go 'haid, Mis' Duck," Newman laughed. "I wa'n't meanin' to charge you. Only I jest don't want de news to git about dat I worked May-Lee's crop for free. Dat be's bad, any way you looks at hit."

Once started, the cotton opened rapidly. People mended their old cotton sacks or sewed new ones from the long bolts of lowells. Rumors sprang up about the date picking would begin. A feeling of festive excitement was abroad in the land—cotton-picking time!

Then Giles rode through the fields and looked. That was on a Monday. "Pickin' fixin' to start Wednesday mawnin' quick as de dew dry off," he announced. "Ev'y picker git a dollar fo'-bits a hund'ed. Satisfied?"

No objection being offered, the people settled down for one more day of rest before the cotton would start rolling to the gin.

Wednesday morning found everybody busy in the field.

At noon, while the pickers were eating their lunches, May-Lee became the cen-

"Of course I shouldn't like to be too warm, either"

COLLIER'S

GARDNER REA

ter of attention. The R. F. D. postman, who drove down the black-top each day, stopped and called out to know if anybody named Mrs. W. Harding Daingerfield was around.

"Cricket's book name is Daingerfield," Giles told the postman. "Whar dat gal—what's her name—you!" He pointed to May-Lee. "De R. F. D. callin' you. Git out to de black-top."

May-Lee dragged herself to the highway and stood talking a long time to the postman. By the time she returned, everybody was ready to resume work. May-Lee was not dragging her feet, now. Instead, she was stepping high and held a long white envelope in one hand and a blue piece of paper in the other.

"Good news?" asked the Widow Duck.

"Good news," said May-Lee.

"Well, git yo' sack stropped on and you kin tell me about hit whilst us picks cotton."

MAY-LEE stopped and glared contemptuously. "My sack?" she demanded. "Humph! Lemme tell you somethin', big ole fat lady. I'm got mysef a big guvmer check and I picks no mo' cotton!"

"Well, knock me down wid a sludge hammer!" exclaimed the Widow Duck.

"Cricket been gittin' paid wages whilst he in de draft," May-Lee continued haughtily. "So he sont me twenty-two dollars outn his wages."

"Twenty-two dollars!" the Widow

Duck was astonished. "You got twenty two dollars, gal?"

"Nawm," May-Lee said. "I'm got fifty dollars. De guvmer likes de wa Cricket work so good dat Uncle Sam sont me twenty-eight dollars, too. And dat makes fifty, quick as I writes my name on dis blue paper and gi' hit to de man at de bank."

The Widow Duck breathed deeply and thought rapidly. "Dat's a right smart pile er cash money for a gal to have before she sell her cotton. Efn you works hard and git dat sorry crop er yo'n picker clean, you might have enough money to pay out at de commissary and git kitched up wid de church dues, wid what you gits for yo' crop on top er dat fifty."

"Church dues! Humph!" May-Lee snorted. "I'm gonter leave out for Shreveport and git mysef a pair er high heels and git on my Sunday clothes and do some gittin' about."

The Widow Duck reached for a loose singletree. "You'll git yo' sack an' start pickin'—"

"Hold ev'ything!" Giles ordered. "She got a right, Mis' Duck. Hit's her money and she kin do like she want."

"Hit ain't wrote in de Book dat a gal got a right to set flat of her chair and git money in de mails," the Widow Duck said.

"Maybe you ain't been readin' in de right book," Giles pointed out. "She got de money. You can't argy wid dat."

"WHAT about her crop?" the Widow Duck asked Giles.

Giles turned to May-Lee. "What about hit?" he asked.

"I ain't studdin' my crop," May-Lee said.

"Well, I'm is," Giles declared. "You and Cricket et and wored clothes on dat crop ontwell a mont' ago, and you been eatin' on hit ev'y since. Dat crop ain't too good, but hit'll pay out wid some lef' over."

"Den keep de change," May-Lee said magnanimously, "cause I'm a windin' ball and Shreveport bound."

"Dat's okay wid me," Giles told her, "but when you leave out f'm hyar, you's lef' f'm now on. Understand?"

"She owe me some money," Newman Dyke put in. "I plowed two days—"

"She don't owe you nothin'," Giles said. "Her crop owe you two days' wages and de crop kin pay."

"She owe church dues," the Widow Duck added. "Her and Cricket bofe."

"Nawp," Giles ruled. "Dat crop don't owe nobody's church no dues. Not even efn hit's a hund'ed dollars lef' over. You knows me too good to think I'm fixin' to pay somebody's church dues outn somebody's crop."

The Widow Duck eyed the foreman scornfully. "Onredeemed church-don't-goin' sinner!" She threw the epithet at him.

Giles laughed. "But on de yuther hand, hit ain't nothin' in my book which say anybody which work ain't intitled to dey wages. And efn I don't dis-remember, hit seem to me like a church committee worked might' nigh a week hoein' an' plowin' in dat field. And efn hit's any money to pay wages wid, I'll pay 'em to Old Ship's Senior Usher for her committee's wages. Hit ought to be enough to make up dem dues you s'pended for all de draft members!"

"I'm on to you, Giles," the Widow Duck chuckled happily. "And I bet de Lawd is, too. You hyppercritted de church into workin' dat field and now you's hyppercrittin' a way of payin' off widout makin' like you's hepin' de church. For a hyppercrittin' sinner-man, may you abide tharin!"

THE END

# a young lady who's *All Alone* these days

**1** We know how you feel with so many of the boys going away these days. And there are so few places that you can go yourself without gas for the car. But cheer up. There are lots of things to do that will help bring the boys back sooner, things that will make you forget you're *all alone*. Here's one of them.

**2** You can keep busy and happy by taking up home nursing. It's easy to learn in a short time in your own home town. Then, with doctors and nurses so busy right now you can be a real help to your family, your friends and to the war effort. Call your local Red Cross Headquarters or Civilian Defense Office about it now.

**3** There's a *Silver Lining* in the war clouds. When this war's over you'll be *going places*, on trips all over the country, in hours instead of days. Yes, you'll be flying as sure as you're born, cruising sunlit skyways in your own Cessna Family Car of the Air. An easy afternoon's ride will take you from New York to Cincinnati. And you'll find that flying your Cessna is as easy as driving an automobile. Today, of course, we're busy day and night building planes for Uncle Sam. But remember, if you can't *go places* now, you'll more than make up for it after the war in your Cessna Family Car of the Air.

# Cessna

**Priority Delivery by Buying War Bonds Now...**

You can be one of the first to own a Cessna Family Car of the Air after the war. Orders are bound to exceed production. But you can get a preferred listing for early postwar delivery. No postwar obligation to buy. Costs you nothing. Write us today for the simple priority plan. CESSNA AIRCRAFT COMPANY, Box 1616-C, Wichita, Kan.

# Port of Navy Wives

Continued from page 15

a phone call from an officer she knew, who was stationed on North Island at the naval air station.

"Nancy, I want you to be prepared," he said. "The Lex was lost in the Coral Sea. The transport is coming in now with the survivors, and we won't know till she docks whether Jim's on her or not."

Well, he was. But she didn't find it out till an hour and a half later, when he stepped out of a Navy station wagon at the door.

That is the romantic side of San Diego. But you can look at it another way and see in this seething, throbbing city, with its streets colored Navy blue, the biggest problem town in the United States.

Washington, D. C., regards itself as a madhouse. But Washington hasn't seen anything at all. Compared to the madhouse of the Pacific, our national capital is just Sunday afternoon on the farm.

Yet two years ago, San Diego was just a pleasant, middle-sized city with two hundred thousand people and not a problem in sight—or not much of any. It was famous for the old folks who had sought out its southern California climate, and who rooted for the Townsend Plan and were known as the Geranium Growers because that was all they did; just raised geraniums on the window sill.

## A Town of Countless Problems

Today it has more headaches than a porcupine has quills. Its population has easily doubled, but the figures are obscured because no statement can be made as to its numbers of military personnel.

Besides Consolidated Aircraft and a huge, expanding naval base, it has a Marine base and an air station and a couple of Army camps. It is bursting at the seams with transients. It is struggling with transportation problems and housing problems and trailer-camp problems and recreation-for-sailors problems and every other known variety of problem which springs from violation of a fundamental law. In the words of Edgar N. Gott, Consolidated vice-president, the error of San Diego is simply this: "You can't put two gallons in a one-gallon jug."

On top of everything else, there are the Navy wives. Wives of officers, newly ordered to duty in San Diego, come with their husbands, and they come after their husbands. They come alone, or with babies whose formulas have to be mixed (and you can't do that in the ladies' washroom), and with older children who need the comforts of housekeeping. A few of the men are assigned to shore stations, but for the great majority, San Diego is merely a breathing space of a few days or a few weeks, the last stop in the land of peace and freedom before shoving off for trouble in the Pacific.

Families of enlisted men arrive in swarms, to catch one more glimpse of their darlings before the take-off, but since most of the boys of the Navy are in their early twenties, the female contingent in their case runs rather more heavily to mothers than to wives. The boys are none too good at letter writing; half the time a bevy of eager relatives will land in town knowing only that he's "somewhere in San Diego" (if he hasn't been shipped out); and it's up to the

USO, the Army and Navy, the Y, the Red Cross and other agencies to explain all over again why needle-hunting in haystacks is a difficult game. Meanwhile, they repeatedly broadcast the plea to relatives to "Stay home till you know where he is!"

Mothers move on, but wives remain, using up housing space which is needed desperately for war workers. The term Geranium Grower was shortened some time since to Geranium—meaning any resident of wartime San Diego who isn't doing some work toward winning the war.

There is a feeling that Navy wives, at least those whose husbands have pulled out, are Geraniums. San Diego wishes heartily that they'd all go back where they came from—or if they won't do

thing else. Her ad was answered by an ensign's wife, who pleaded to be allowed to do the housework for the sake of a place to stay.

On Saturday nights, the town is so crowded that people are sleeping in their cars, in the park and in the all-night theaters. Not bums, you understand, nice people. The hotels put out cots in the halls or let them sleep sprawled uncomfortably in the chairs in the lobby. One hotel not only lets them sleep in the lobby but provides the women with pillows, and when the first guests check out in the morning, the stranded ladies are invited up to the vacated rooms, to freshen up and have a bath free of charge.

From the point of view of a Navy wife, there are strong incentives for staying

home some day; and meanwhile at great naval crossroads of San Diego may see a man who was in his square or on his ship and who will fill in the dreadful void with news.

But all too often, when the report comes, it is only to say that he was seen waving from his about-to-be merged plane or bailing out over empty sea or that he was on the hangar deck when the bomb hit it. Those pictures reach home often enough there is not much comfort in them. A dive-bomber pilot off the Lexington radioed that he was out of gas and down at sea two hundred miles from the nearest hope of rescue; that he was badly wounded and his radio operator dead.

"But don't forget I got two hits on Jap carrier," were the last words heard from him.

Even then his wife wouldn't give up and months later the distant rumor of a flier being found sent her telephoning frantically all over the place. He is missing.

Yet the miracle does happen. It happened in the case of Ensign and Mrs. Worden.

Early last September, Mrs. Worden, who is young and red-haired, received one of those telegrams. "The Navy Department deeply regrets to inform you . . ." and so on. Her husband was missing.

## The Faith that Never Failed

At first she was stunned. Then she acted like the rest of them. She wouldn't believe it. Three weeks later, came a letter signed by Admiral Tower in Washington, offering in the Navy's sincere phrases his condolences on the "death" of her husband. This would shake anybody. It shook Nola Worden considerably.

Next, a squadron mate of her husband's came home, bringing a fragment of news. Her husband's fighter plane had been shot down in the Pacific the first day of the Solomons battle, after downing a Zero; and those in the air had seen him getting out his frail hope of a rubber boat. That was all.

Mrs. Worden tended her baby and tried not to think. In the meanwhile, Mrs. Worden, having floated two days on a rubber raft, had landed on an uninhabited island where, in spite of severe injuries, he had managed to save his raft and rations. A few days later he had pushed off again and made Guadalcanal, landing on an isolated beach thirty miles (as it turned out later) from the American positions.

With his injuries, it took him almost three months of alternate rest and struggle, with the help of the natives, to make his way through those thirty miles of jungle. But on October 3d he turned up at Henderson Field.

Mrs. Worden was painting kitchen chairs the afternoon he landed at North Island, four weeks later. When he called the house, she had stepped out to the grocery, and another Navy wife who lived with her answered the phone. He wouldn't give his name at first. He called again, but on his second try, the foolish woman was still down the street buying groceries.

"Tell her it's her old man," he said "and I'm at North Island, and to come get me."

The friend ran screaming out of the

ALFRED

by FOSTER HUMFREVILLE

"Don't be so jealous, Alfred! What difference does it make if Milton's gun makes a louder bang than your gun?"

that, then for heaven's sake, learn to run a streetcar or drive a cab.

But the girls can't see it. At least they can't see moving away.

"Leave San Diego? I should say not!" said one whose husband is hunting Japs in a submarine. "A friend of mine went home to visit her family and she'd no sooner left than her husband got in with forty-eight hours leave, and she missed him. And after she'd been back here a few months, her family talked her into going East again, this time for Christmas, and she missed him again. I'm staying right here!"

## They Sleep Everywhere

There is no place to put them. A Naval Reserve ensign and his wife who arrived from Boston slept nine nights in a station wagon; they finally got a place to stay only because Navy Relief found a woman who was fixing up the basement of her house for a playroom. She was persuaded to put cots down there instead.

A captain's wife advertised in the paper for a maid—San Diego having a shortage of domestic help as of every-

in San Diego. For one thing, there is the misery-loves-company feeling. Girls whose husbands are busy fighting the Japs would rather be with other girls who know how it feels. And there are other reasons.

I met the wife of a certain lieutenant commander who was somewhere in the South Pacific. ("He's had one ship shot out from under him and he's waiting for another.") She said, "You stay in San Diego because maybe you'll meet a man on the street who saw your husband last month. Or maybe he'll turn up himself some day with forty-eight hours leave. Old Navy wives or new brides, it's all the same—it doesn't take 'em two weeks to learn that."

There was another lieutenant commander's wife whose husband was supposed to be in the Solomons. She left home one morning planning to spend the week end with friends in San Francisco. As she was about to board the Coronado ferry, she met him coming off a Navy launch.

If a man is listed as missing, his wife clings to San Diego harder than ever. She won't give up; she clings to the hope that he's alive somewhere and will come

# DID WOMAN FLIER STRIKE FIRST U.S. BLOW AT JAPS?

What was this round-the-world girl flier's amazing mission in the Pacific? Why was her desperate romance America's state secret?... Here's explosive excitement that would have been dynamite before the war... but today it's TNT!

"The Japs would suspect a man. You, a famous woman flier, can get away with it. We *must* have a reason to photograph those fortified islands."

Tonie, suddenly faced with the shocking knowledge that the Japs know her secret, must make a life-or-death decision for her country.

*The Scotch with Character*

BLENDED SCOTCH WHISKY • 86.8 PROOF

house for Nola—who went and got him.

A missing Marine flier walked in on his sister in Coronado to find her reading letters of condolence from their friends. Like Ensign Worden, he had made his way to a Guadalcanal beach, had lived for weeks in enemy-infested jungles and finally, with the aid of natives, had made his way back to the American lines. His home-coming had a curious effect on his sister. Up to that time she'd been doing voluntary war work—AWVS, Red Cross, and so forth. Whether it was the joyous shock of his return that did it, or what he told of life and death in the Solomons, no one seemed to know. But she went out and got a job at Consolidated next week, and she's now working eight hours a day welding B-24s.

Widows are very apt to go to work at Consolidated—or so an admiral's wife told me—and it's not always a case of financial need. It's simply that when you've lost a husband through enemy action, knitting, canteen work and other voluntary activities, useful as these things are, don't seem to fill the bill. Widows want to make bombers.

If that idea spreads, the problem of Navy wives will be solved and so will the problem of San Diego. With the town in crying and desperate need for every sort of labor and service, the woman power represented by Navy wives would make a big difference.

Many have stepped in already. They are working at Consolidated, they are doing office work for the Navy, they are running busses and driving taxis. I talked to one cab driver named Alma Collins. Her husband was a bosun's mate; she had three children in school and she hired a woman to come afternoons and look after them.

"I don't want you to think I'm doing this for the money," she said. "My husband's been in the Navy twenty-four years and he makes good pay. But San Diego's hard up for transportation and I figured I could drive a cab as well as anyone. It's nice work and I love it."

### Proud of His Lady Drivers

The manager of the company, C. A. Pratt, is one of the best-working feminists I've ever met. He has fifty or sixty women drivers—half of those on the day shift are women. He is proud of the fact that his was the first cab company in the United States to introduce women on a large scale; proud of their low accident record and the way the public likes them; proud because the success of his experiment helped persuade the streetcar company to put women on its bus and car lines.

There are over one hundred women driving streetcars and busses in San Diego right now, and the company is training more as fast as they can be

found. But it's tough work in the hours, and they have to be husky—least five feet four inches tall and weighing 135 pounds. About a third of women now in service have Navy connections.

It's wrong to give the impression all Navy wives with husbands in the Pacific try to stay on the Coast. They don't. In Coronado, there is a huge, old hotel whose turrets and gables of the same vintage as Lillian Russell's pompadour. A famous winter resort peacetime, it has now become a sea headquarters for the Navy (particularly for the flying Navy), and its immense rambling porches above the blue-sea have been taken over by Navy Marine fliers and their young wives. These wives are transients, most of them. When their men leave, they're home.

### They Took Chances—and How

One day I sat at a table with five men and three girls. The men were all members of a patrol-bomber squadron that had just come home from the Solomons; they had been in the battle of Midway before the one next to me had an Air Medal for rescue work at Midway; a sixth one stopped by the table briefly was Catalina pilot who had found the fleet. The three girls had been married to three of them for periods ranging from two weeks up to nine months. The second pair were named Larsen, their story was typical of the rest. May, he had landed in San Diego and had called her up—she lived in Iowa. "Would she like to take a chance and come out?"

She dashed for Omaha, not knowing until ten minutes before the plane whether she could get on it or not. She landed in Los Angeles with the realization that he might be gone.

But he wasn't gone, and they were married, and they had five days.

Other Navyites were of the opinion that "they were very lucky."

It's getting harder and harder to reach your husband by means of one of the breakneck dashes across the country. Plane travel is very tight, and the chance of a flying hero gets no priority. Another girl in the group, Betsy Nichols, had similar luck. They were married in March when he came back from Pearl Harbor. (He'd expected two months in this country, and had three days.) May, he too had had leave, and she had flown out to join him.

"I told the girl at the airline why I was going, and she worked awfully hard to get me on that plane. I think she must have had some experience," said grateful Betsy.

Who knows? Perhaps she had.

## The Weasel

Continued from page 60

practice, as Billy knew, having seen him in the action that brought them here. Billy was born for trouble, thought Billy. Frank finished rolling his cigarette, tucked it in his trousers for a match. "You know, it ain't so bad at that, bein' in a place where they don't have many customers. Clean, anyway." The knife still gleamed from the little finger. Billy knew he kept the knife there to show him. That was another thing, this streak since he got the knife. "It ain't no jail seems nice to me," said Billy. He walked to the small window looking out on the jail yard. "Whyn't I go in Texas?" he asked, miserably. Frank blew out a cloud of smoke. "You know what I told you." "I ain't in this town a week but I gits in trouble," lamented Billy. He omitted to say it had been altogether Frank Vargas' fault. He dropped his voice and nodded plaintively a moment. The naming formed into words:

*"Pickin' peaches in the summuh,  
Pickin' apples in the fall.  
Califo'nia to Montana—"*

"You know what I told you," repeated Frank. "Stick by me when the times comes and you'll be home again."

BILLY abruptly closed his mouth on his singing. A stubborn look came over his broad, black face.

"I need a friend," said Frank, conversationally. "Two of us can do it easy. There won't be a sound—that's the nice thing about a knife. Ain't like a gun. A gun brings 'em all on the run. Nobody'll know what happened to Macmillan 'till long after we're on that fast freight out of Missoula." Billy turned from the window. Frank suddenly gave him that wide-eyed, colorless stare. "Or maybe you're too yellow?"

Billy didn't even try sustaining the size, this time. Nor did he answer. "Knew you'd be," said Frank, turning the stare off. "Then just don't get in my way when the time comes."

"I won't git in nobody's way," said Billy, sullenly.

"That's good," said Frank, and smiled to himself. In his mind he was already on that fast freight out of Missoula.

"If you hadda ask that gal fo' anythin', whyn't you ask maybe fo' her dad's keys? No—you hadda ask fo' a knife, to put th'ough his th'roat when he come a heah one day."

"Damned right," said Frank. "If that rakeman back there dies, I got a murder rap hangin' over me—and so do you, maybe. You know how far anybody'd get from here with that Macmillan on his rail."

Billy looked hard at him. He wished Frank would turn on that colorless-eyed stare again. He felt sure he could push it back, this time. "Just nevuh thought of nobody but yo'self in all yo' life," he said.

He got the stare. "I suppose you're a prize specimen? I seen you corned up, once."

Billy shook his head. "Some black folks got no sense, come they git likered up. Make too much money, pickin' them apples."

"That's your trouble, all right," said Frank. "That and bein' yellow when you're sober."

"Does I git home," said Billy, "I gits in the Ahmy."

"You would," said Frank.

"Keep out of trouble, in the Ahmy."

Wish I was in it now. With Texas boys," he added, wistfully. "Wish I'd nevuh come pickin' them apples."

"Army's goin' to have to come get this boy when it wants him," said Frank, confidently. He looked almost with affection on his knife. "Could show 'em a thing or two about gettin' Japs on the quiet, though." He enjoyed this thought a moment, then he reverted to the subject in hand. "Well, you comin' with me or stayin' here and goin' to the pen, like a sheep?"

"Ain't gittin' into mo' trouble," said Billy, stubbornly.

"Then forget it," said Frank. As if to close the subject for good Frank turned over on his stomach and opened a tattered copy of *Actual Detective Tales*.

Billy was at the window, staring at the world outdoors. The window had heavy iron bars about four inches apart, set deep in the brick and mortar of the wall. They were almost hot as a stove to the touch, but Billy clasped them in his enormous black hands as he stared. Despite the heat shimmering and dancing over the landscape it was a delectable world he saw—or at least what he could see of it above the high board fence enclosing the jail yard.

Green, pine-clad hills rose, tier on tier, until they melted into the distant Bitter-root mountains. And all around them in the surrounding valley, Billy knew, were orchards heavy with fruit where he might still be working if he hadn't gotten corned up and into trouble with Frank Vargas.

*"Pickin' peaches in the summuh,  
Pickin' apples in the fall..."*

Yeah, you got into trouble just as easy up here in Montana as you did at home. Easier, maybe. Picking fruit. High wages. Everywhere they were yelling for help. You could just keep going and make money all the time. Pick grapefruit around home a while, then wander to the San Joaquin or Imperial valleys in California for seasonal stuff there, then on up into Washington or Oregon for the apples.

Sometimes you hopped a freight for smaller districts, such as this, for less competition and even higher pay. So much a box—if you were fast and strong, you made high as twelve, fifteen bucks a day. The fruit bums, followers of the crops, came on freights, in ramshackle cars, by the whole family in trailers. Tent cities rose, bars were crowded; every fruit town became a boom town in picking season.

BILLY'S eyes left the distant hills and fell on the several pelts stretched on drying frames and hung on the high board fence enclosing the jail yard—proofs of Sheriff Macmillan's marksmanship. Four coyote pelts, a dozen rabbits, four muskrats, a cougar, a row of little weasels—brown weasels, for this was summer. Billy knew weasels, he'd been a farm boy. Texas weasels were a little bigger than these, though from the look of those teeth they were about as vicious.

Billy frowned in thought. The word "weasel" had some connotation with a thought uppermost in his slow mind. What was it?

One corner of the jail yard was devoted to a wire-enclosed runway for a dozen Plymouth Rock hens. Most of the rest of the ground was planted to some radishes, lettuce and a few onions. Beyond, out of sight of the cell window,

First in America

1843 — 1943

## OUR 100th BIRTHDAY

### A century of service to American Families

On February 1, 1843, Mutual Life's Policy No. 1 was issued to a New York business man—the first life insurance policy issued in America by any company operating on the mutual plan.

We enter our second century of service to American families with nearly 1,000,000 policyholders, more than \$3½ billions of insurance in force and—we hope—some of the foresight and courage of our founders.

From the beginning, The Mutual Life was a distinctive American institution—the first to return its earnings solely to its policyholders—first to entrust the conduct of its affairs to trustees representative of its policyholders—first to develop the "agency system." We salute our own agency

force and those of other companies for their public service in educating American families to the benefits of life insurance.

These were untested innovations in 1843. A century of performance through wars, depressions and other catastrophes has proved their soundness. In its lifetime The Mutual Life has paid more than \$4½ billions in benefits to policyholders and beneficiaries. Today it is a national institution, with offices in 47 States and the District of Columbia.

We had planned a nation-wide 100th Birthday Celebration, but to conserve materials and transportation for war, our plans have been deferred. Later, perhaps, we may observe our Centennial in conjunction with America's Victory Celebration.

was the house where the sheriff lived with his daughter and her child. That child, which was about eighteen months old, most of the time was left alone in a play pen set over by the chicken run, in the slight shade afforded by a lone poplar. She was a silent baby, named Wanda, and was usually preoccupied with the dirt in her play pen and did not seem to mind the heat.

Watching her had furnished Billy with most of his diversion the five days they had been waiting in this jail—as watching Wanda's mother had been Frank's diversion.

Billy heard the screen door to the sheriff's frame house slam, now, and Zilma came into view carrying a small bucket. She crossed to the chicken run, opened the gate and began pouring feed into the trough. The chickens scrambled and squawked for the feed. She did not so much as glance toward the window; Billy surmised instantly her father must be home.

Another person born for trouble, indubitably, that girl. Had been in some already, as witness Wanda in the play pen. Married for a time, then deserted by a husband who probably figured life was too short to put up with her. Pretty, deep-bosomed, discontented mouth, maybe eighteen years old. No mother. A handful. Wore high heels all the time. Crazy over movies. Kept house for her father, who made her stay home. Frank Vargas hadn't been in jail a day when they were deeply aware of each other's presence. Frank could attract them. But maybe she couldn't have really understood what a knife could mean to Frank when she got one for him.

BILLY found it strange that a man with the savvy of Dodd Macmillan wouldn't know that Frank's kind attracted them instantly and made them do what he wanted. Maybe Macmillan had faith in his strong little jail. Or maybe that wasn't the kind of trouble Macmillan had savvy about.

Dodd Macmillan, a big, quiet man about fifty who always wore boots, a business suit and a ten-gallon hat. Not mean, just no nerves, no neck, no imagination. He always took first prize at all the shooting matches; he was the kind they kept in as sheriff all their lives. Billy had been paid off at the co-operative sheds for a week's picking; he'd had some drinks, then hopped a freight with other pickers for another town. The train crew tried to throw them off. Billy found himself fighting alongside this Frank. Frank unexpectedly let a knife fly and a brakeman crumpled to the ground.

Billy put his back up against a building, then; there seemed no way out when the crowd began gathering. They don't like knives in Montana. They already had Frank by the arms and Billy was going down when Macmillan shouldered his way in. He had his guns out and kept them steady as a rock against his hips when he told that crowd he was taking charge. "They're stayin' in my jail 'till Judge Haney comes through," he said. "You can all have your say then." And he got them both through that crowd to the jail, too.

Yes, Frank was right in one way; if anybody expected to bust this jail and get any distance at all away from it he would have to dispose of Dodd Macmillan first.

Zilma finished feeding the chickens, closed the gate behind her and returned to the house without more than a glance at Wanda. Her father was home, all right, Billy decided; she was mad clear through about something. He heard the screen slam shut.

He spoke without looking around: "You don't want me along anyway, if Zilma goin' too."

Frank was reading; he hadn't heard. Billy half turned. "That gal, she goin' be in plenty trouble when you scam outen heah, fo' givin' you that knife."

"So what?" asked Frank absently. "Maybe you aimin' to take her?" Frank put a finger on a sentence to keep his place, looked up with a frown. "What're you talkin' about?"

"You kill Zilma's dad and you can't leave her heah."

"All right, so maybe I'll take her. I haven't decided. I'm readin'." He returned to the magazine.

The heat in the little whitewashed cell seemed unbearably oppressive. It was as if the sun overhead were pumping it down, in waves. Frank absent-mindedly unbuttoned his shirt to his belt. Expos-

tightly, as if he had to keep his off this white boy by an immense of will. Only his tightly closed eye the perspiration suddenly gushing his forehead revealed what he felt.

Frank stopped suddenly. He breathing hard. "I guess that'll you," he said, somewhat incon-

BILLY let his arms fall but kept eyes closed. "Not one single bone in yo' whole body," he almost. "Nevuh thought of nobod yo'self in all yo' life."

"Aw, shut up," snapped Frank threw himself back on his bunk, t-

ing his white, thin torso made him seem absurdly young.

"Then you got to take that theah kid, too."

This definitely attracted Frank's attention. He looked up, sharply. "Who says so?"

"Some day she staht cryin' fo' the kid. But she won't evuh be able to come back fo' it."

"So what? Is that your funeral?" Billy stared, hard, at his cellmate. "Not one good bone in yo' body," he said, almost to himself. "Not a single, bitty one."

Frank flushed with anger. His trigger temper was suddenly tripped. The magazine fell to the floor with a slap. "What d'yuh mean?"

"I mean theah ain't one, tiny speck of good in you nowheahs," said Billy, firmly.

FRANK sprang from the bunk, slapped Billy's flat black cheek with his palm, hit him again. Billy lifted his arms to ward off the blows and Frank began punching him in the abdomen with both fists—quick, hard, staccato blows, as if the glistening black abdomen had been a punching bag. "I'll learn you to preach to me," he said, thickly, hitting again and again.

Billy backed against the wall, taking the beating without making an effort to stop it. Indeed, he stretched his arms out against the wall, holding them there

rolling another cigarette. His fit of temper was spent. "If she wants to come with me, that's her business, not you. She'll come, all right—if I say so. I'll be without the kid if she does."

Billy turned resolutely to the window. His great hands gripped hard the iron bars. He felt himself trembling queerly inside. Not from the beating but from the effort of keeping his hands against that wall and off the throat of this lit white-eyed weasel. This sly animal with the vicious temper, who struck silent with knives and who would callously kill the very man who had saved their lives.

"Sure she'll start missin' the kid after a while," came Frank's voice behind him. "And yellin'. But they all start yellin' sooner or later. By that time Frank's strictly never there to hear any more. He's always gone. Life's too short."

Billy did not answer. The connotation between two thoughts his slow mind had looked for a while back came to Weasels came into chicken houses at night and in the morning you found the whole roost wantonly dead, their throats slit with those long teeth, and all of it done silently. You killed weasels without mercy or compunction.

Frank licked his cigarette. His hands were perfectly steady. "Sooner or later she'll bust out of this town with a bar, anyway. She's that kind. Might as well be with me. She wouldn't be a bad disl either."

Billy kept his hands stubbornly on the bars, his eyes on the distant mountains. He had never been so desirous of a man, at least not when sober. For the plain desire to kill was mixed with the idea it would be a good deed. It would save Sheriff Macmillan's life. He could do it, too, with very little pressure from those great hands of his. He had plenty trouble already. He shut his eyes, tried to put the thought from him, but he prayed that that there judge would come to town quick. If he had to stay much longer in this hot cell with Vargas it would surely happen. It would.

He became aware that Frank had been looking steadily. "Hell," he was concluding, "nobody with any sense ever does anything for anybody but himself. If anybody says he is, he's lyin'—he's really lying for himself all along. It's the guy who doesn't mind his own business who gets into trouble."

Billy forced his attention on the scene and sounds before him. From the house, out of sight, came the angry clatter of an iron pot on the stove and a voice suddenly raised in retort to some low-voiced reproof. Yes, her father was home.

Wanda's tirade audibly conveyed the information that she was going to that anyway. Macmillan's reply to his daughter, if any, could not be heard. He wondered which would be the fastest when the time came, Macmillan with his gun or Frank with his knife. Both plenty fast.

Suddenly Billy's eye was caught by a slight movement along the roof of the chicken house at the end of the run, above the high board fence. Because whatever it was was outlined against the brilliant sky, he had to squint to see it out.

Behind him there came a thump. Frank was again practicing throwing his knife.

The object was some small animal. It moved quickly a few feet, stopped to look around. Billy now saw it had a tail maybe four inches long and a tail that made it seem much longer. It stopped and ran along the fence.

Wanda, in her play pen, saw the little animal and sat up with a pleased gurgle. Inside the sheriff's house a stove lid was slammed down. "Just because you see him sittin' in a picture show's nothin'!" sounded Zilma's voice. Wanda huddled herself erect by hanging onto the sides of her play pen. The little animal, she saw, reared its back and showed sharp teeth in a snarling squeak. Macmillan's voice suddenly cut in on Wanda's tirade; he was evidently getting angry. "You're stayin' home and likin' it. With this town filled with fruit bats—"

Billy turned slowly and looked speculatively at Frank Vargas as he lay sprawled on his bunk reading his magazine. After a moment he said, in a low voice, "Hey, come look outdoors." A certain urgency in the Negro's voice made Frank get up at once to look. His wondering gaze followed Billy's finger. "What is it?" he asked, squinting. Billy's black face seemed empty of emotion. "That there," he said, "is a lil' weasel."

"Oh," said Frank, frowning. Wanda was reaching out a small hand to the little animal, which continued to regard the child with exposed, vicious-looking teeth. "Why, what'll it do to the kid?"

"She touch it and she gits a two-inch line in the th'roat, that's all," said Billy. Then he added, "Guess it came after them chickens. It'll kill all them chickens like nothin', then suck their blood."

Frank suddenly grasped the bars and opened his mouth to yell a warning but Billy's big hand closed swiftly over his lips. "Shut up! He liable to do most anythin', you startle him."

"Whyn't they quit arguin' in there and watch that kid?" said Frank, low and angrily. In the house Zilma's complaints had reached their highest note and now she was pouring forth her opinion of her father, this house, this town, this country and everything in it in a steady stream of high-pitched invective.

"Don't make no noise. Don't 'sturb him at all," Billy breathed. "Oh, Lawdy, Lawdy, don't let that chil' touch that animal! I seen 'em in Texas, kill babies at night. Cut they th'roats . . . like a knife!"

"Stand back!" commanded Frank. Billy heard a peculiar grunt behind him, felt a breath brush his cheek. With a little loud squeak the animal was suddenly impaled on the wood of the fence. The knife that held it did not quiver at all.

Billy grabbed the bars as if to tear them from their brick and mortar. "Somebody come git that kid!" he belatedly. "Somebody come quick!"

Frank pulled him roughly back. "All right, quit bellerin'!"

But Billy went on yelling. "Git that kid!"

The screen door opened and closed violently. Sheriff Macmillan, his coat off but his revolvers in their holsters at his hip, came striding into view. "What's all the shoutin' about in there?"

"Get back and keep your mouth shut," snarled Frank.

They backed into the cell and watched. Macmillan stared at the window a moment, then looked around the yard. He saw Wanda standing in her pen and looking intently at something. He strode over and lifted the little animal dying on the knife. Its tiny, slaver jaws opened and closed convulsively in its agony. Macmillan picked up a stick and put an end to its pain with one expert blow. He removed the knife, looked at it curiously. He straightened, then, and looked hard at the window. His hand went instinctively to his hip. "I'm comin' in, boys, to see what else you got like this and you better be against the wall when I do."

ZILMA ran belatedly into the yard, the screen slamming behind her. "What's the matter?"

"This," said her father, handing her the blood-stained knife.

She took it thoughtlessly, stared at it a moment, was about to return it wondering when she remembered, looked at it again then dropped it with a convulsive jerk.

It told Macmillan everything. "Get in the house," he told her grimly. "I'll talk to you later."

"I never saw it before, honest, I didn't—"

"Get in the house," he said, harshly, and turned to run quickly around the jail, pulling a gun from its holster as he did so.

"You half-wit—" Frank stormed. "Shut yo' mouf," said Billy sternly. "Face that wall and be reachin' fo' that ceilin' when he comes in. Make a move and we'll both git shot. Go on—do it."

He saw Frank pale and obey. Billy faced the opposite wall, raised his own arms. An agonized moment of waiting and they heard Macmillan's boots on the cement flooring outside the cell door. The key turned in the lock, the door opened an inch. "Be standin' with faces to the walls and hands up," he ordered. "I'm comin' in with my thumb on the hammer. Don't make it slip."

Billy pressed, hard, against the wall. He heard Frank say. "Come on. We're

ready." Macmillan kicked the door open and entered.

"We got no more knives," said Frank, in an oddly strained voice.

"Thanks," said Macmillan dryly. "I'll look for myself."

Billy felt himself expertly probed along the dungarees. A moment later he heard the thin mattress dragged off each bunk and dumped into the entrance-way. Then, "All right, turn."

Billy turned, slowly, his hands still up. Frank did the same thing. Billy saw that his eyes, curiously, were no longer colorless. Now they seemed almost blue. The sheriff had his thumb on that trigger, all right.

"Guess I'm pretty dumb," Macmillan said to Frank. "Wondered what was eatin' Zilma more'n usual lately. Should've guessed, when she suddenly got interested in cookin' and got up fried chicken." He paused, but only to look Frank up and down. "Looks like I misjudged you, too. Anyway I think the jail at Missoula'll be safer for you. At least I'm phonin' them tonight to come get you." He continued, looking only at Frank. "What I can't figure out is why you'd go huntin' with it in my back yard. Seems like a waste."

"You darned fool!" Frank spat out. "Another minute and it would've cut the baby's throat."

Macmillan stared at Frank. "What would?"

"That weasel on the fence—what do you think?"

THE gun in Macmillan's hand jerked ever so slightly with surprise. "Wouldn't kid me, would you, Vargas?"

"Aw, whyn't somebody keep an eye on that kid?" asked Frank, sullenly.

Macmillan seemed to be trying to make up his mind about something. He glanced for the first time at Billy. "You were worried about the weasel attackin' the baby, too?"

"Yes, suh!" answered Billy, positively.

Macmillan's mouth twitched slightly. His glance went back to Vargas. "Thanks," he said, dryly. "But I still think the jail at Missoula'd be better able to hold you. No women around there to bring you playthings. Judge Haney's there, too, now."

Frank tried to shrug. It's hard to do with your hands up. "Have it your way," he said.

"Just keep your hands up 'till I'm out," Macmillan ordered. "You'll get your bedding back when I've had a chance to frisk it."

He backed out, pulled the door shut and locked it. Presently his boots were heard receding down the cement entrance.

Billy lowered his arms and rubbed his muscles, slowly. Frank threw himself down on the iron frame of his bunk. His shoulders heaved as he broke into nervous, racking sobs.

Billy tried to swallow it down but couldn't. The laugh starting down in his black abdomen was too big to hold and rumbled slowly to his throat. He slapped his knees. "Hot dawg! Nevuh do nothin' fo' nobody and you gits into no trouble!"

Frank took his arms from his face. Tears wet his cheeks. "All right, so maybe I'm goin' to the pen after all. What's so funny about that?" His voice, shrill with rage and disappointment, sounded even younger than eighteen.

Billy, his great body heaving with mirth, turned to the window and grasped the iron bars to control himself. *Wait'll he finds out that wasn't no weasel out there,* he told himself, strangling. *Let somebody else tell him the difference from a lil' ol' brown squirrel!*

THE END

## WHAT RHYMES WITH "JELLY-CAKE?"

She knows . . . she's got INSIDE INFORMATION! She's learned what every grown-up knows—that too much of even the most wholesome food can cause sour, sickish, upset stomach—heartburn—gas discomfort. Be gentle with these little stomach upsets—take soothing PEPTO-BISMOL!

### Never Upset an Upset Stomach!

Don't pile more trouble on an upset stomach with overdoses of antacids or harsh physics!

### Take soothing Pepto-Bismol!

This pleasant-tasting preparation is neither an antacid nor a laxative. Its action is different. It spreads a soothing, protective coating on irritated stomach and intestinal walls, thus helping to calm and quiet common digestive upsets. If you do not get prompt relief, consult your physician.

## The Brumby Car

Continued from page 64

matter of horses, and there he was as Joe was—which was why Joe had made him his partner.

Saltbush received the news without evident emotion, but Joe made up for that. "They don't want horses," he said passionately. "How d' they think they're going to win this bloody war?"

Saltbush adjusted his broad-brimmed hat and spat into the dust.

"You're right!" he said. "We'll forget their damned war. Let 'em get along without us."

But it was difficult to forget the war, even in the great emptiness that is the body of Australia. News comes slowly to it, as if it were not the heart of a continent on earth but a planet itself, swung out in space, measuring its days as moments, its months as hours. Still the news sifts through, carried down the stock trails by their lonely riders, handed to other riders as they pass, as clipper ships once spoke to other ships in midocean. At Boulia in Queensland one day, Joe and Saltbush heard Japan was in the war. A couple of months later, in Marree, South Australia, they heard that this new foe had roared down from the north and stood gathering planes and ships and men to reach across into Australia itself. And on top of this came news that turned them in their tracks.

**T**HE Americans were landing in Australia.

Joe Kenney had his own picture of an American. It was the picture of a man he recognized and loved. It was the picture of a man in a sombrero.

He understood that there were other Americans, but the bulk of America, the backbone, the men who had made it and kept it going, the real Americans, were the men who rode horses and shot six-guns, like as not.

"Listen!" he said, grinning, to Saltbush when this great news came through. "If the Yanks are landing here, you know what that means?"

Saltbush signified his willingness to hear what it meant.

"It means they'll be needing horses. A horse comes natural to them. I've seen things in the pictures—cowboys, they call 'em—you wouldn't hardly believe it. They'll be doing their fighting on horses."

Saltbush meditated. "They'll be bringing their own," he said.

"All that way? When they can get 'em here?"

Clearly ridiculous, Saltbush agreed. Even if he had not, there would have been no standing against the torrent of Joe's enthusiasm. They would hit it back for home and the mob of horses, and turn them over to the Americans for whatever they wanted to pay, and if they didn't want to pay, that was all right too.

When out of the long trail, they came to home they heard that Darwin had been bombed, and Broome and the West Australian coast. The Yanks were somewhere, certainly, but just where, no one could say; it was military information, not being handed out. In Queensland? Only home troops there, according to rumor. Then, Joe said, it must be in the West, where bombs were falling. Rumors seemed to confirm this deduction. And the West was horse country, if any country was.

That was good; but to get the mob of five hundred and some horses to the West was something else.

It meant a trip of half a continent and more, none of it easy country, some of

it savagely difficult, all of it virtually unknown. Joe and Saltbush knew these considerations, but in Joe's mind there was only the driving force of proving his horses, getting them into use, getting them into the war; and if Saltbush had any doubts about the trip, he did not voice them.

So they headed out on the Tanami trail, skirting the desert until they learned from abos that a rainstorm had passed to the southwest. There is nothing more precarious than following desert storm water because it turns so rapidly from the shine of reality to the shine of mirage, but it is a risk that is sometimes taken if it cuts distance from a long trail. Joe and Saltbush took the risk now.

Shorthanded, only the two of them in the dust of five hundred horses, they pushed over the desert, tracking the course of the storm water, the fresh green herbage and the shallow surface holes. Nights, they took turns in the saddle, watching the horses, watching for

to strive against him, matching their force, their authority against his, changing their sweat-soaked saddles three and four times a day to fresh mounts.

They could not keep up that pace. "If we've got to lick the desert and Red Devil too," Joe said grimly, "we might as well chuck it. I'll have to ride him."

Saltbush cautiously dipped out a few words: "He's never been broken. He won't take it. He'll kill you."

"He'll kill us anyway if this keeps up. Anyway, we're delivering the mob to the Yanks, ain't we? I'd feel good, wouldn't I, if I brought 'em in and then had to tell some Yank he'd have to break Red Devil for himself?"

**SO** THEY roped Red Devil and got Joe's saddle and bridle on, while the stallion regarded them with a nasty eye. It was an ordinary stock saddle, single-rigged, without crupper, and far from new. Joe wasn't sure of the girth, so he put a surcingle on as well, but this was so old he wasn't sure of it either. Still, he

red sand ridges. Red Devil shook off weariness and humiliation, and lifted head and neighed. A bay mare tumbled on the ridge and looked back with a tail blown by the wind, a cameo of wild beauty against the pale sky. Joe remounted and gave stallion his head, and they went after mares.

Time flowed over them, covered—a time of unchanging days and nights so changeless that it seemed today would be tomorrow, and yesterday, and all the past and future, and they were little ures riding and sweating and pushing without avail at a static horizon. Time passed, dragging the sand back with it, and they were there when they were out of the sand.

They went on. Five hundred horses and the good spirits were swelling in the chest as he watched them. He saw them not as they were; he saw each one of them with a man astride, khaki-clad horse-fighting man.

It would not be too long now. With Red Devil giving his strength to him, not hold back, they made good speed. They kept the mob in a compact mass and their course was straight. The country was better, though still hard. Not many horizons away were the settlements of the west coast.

They came out of the back country the primitive, toward today's world. Here, the twentieth century could find them.

**JOE** had been shaping a course to bring them around a stretch of broad, rocky hills when he first heard it. It was unreal, but not for long. Its unreality grew lightning fast into hideous fact. It came out of the sun like a javelin.

"Planes!" he said.

Little dots of seed, as if flung down a swinging arc by some heaven-striding sower. These would be fighting planes, Joe thought; it would be good to see them, if only the horses did not take so much fright. Single-winged, flat-bellied down they came. There was a nervous shudder through the mob; they began to run, fast, faster, a full gallop. The pack horses alone dropped back.

Then over the drumming horse he saw there was a new sound, and even as Joe knew it for what it was, he saw the machines on the planes, the red circle that seemed to smolder in the sun and machine-gun smoke.

"Japs!" he said. Then to Saltbush shouting: "We're in the bloody war!"

Three of them. He should have foreseen it. The Japs would be doing a lot of scouting by air, of this coastal country. Hadn't he heard they'd dropped bombs there? His tough luck to run in them. He had no more time to regret. With horror he saw horses—gelding mares, foals—tumbling in the dust and screaming with pain.

He and Saltbush reacted simultaneously and identically to a situation neither had dreamed he would have to face. While the planes bellowed out their dive and swung and climbed for another swoop of gunning, the two of them were stretching it along the flank of the mob of crazy horses. Their long stock whips were out, the plaited leather curling and cracking sharp as gunshot biting into horseflesh—cruel, but not so cruel as bullets, and the only thing to wheel the mob, to swing it off to the right.

Off to the right was that patch of tumbled rocky land. Not good for horse

myall tribesmen, for this was territory where men still rode armed. They took it easily enough. Here in the wilderness they were no longer the shy, awkward youths who entered any town with misgivings; here they were self-reliant and efficient, masters of themselves and their horses and, with luck, of the desert.

**S**TUNTED scrub gave place to gibber plains, and these to sand-ridge country. The desert oak vanished, and the mulgas and the bulwaddy thickets. Between the sand ridges were shy spreads of saltbush (that desert growth that had bestowed upon Saltbush his name) and cottonbush and bluebush and even, here and there, a little thirst-quenching parakilya, the most precious of desert herbage. They saw it with relief, for over this stage of the trek, water holes were few.

Some of the horses were already showing uneasiness, and the stallion Red Devil, though he had never crossed this desert before, seemed to sense that his mares and foals were in for hardship and perhaps death in the country ahead. Not trusting it, he tried therefore to cut the mob off the trail, to swing it back toward water and safety. He ran on the wing of the mob, ears flattened and teeth bare, chopping in to edge them back. This grew into a curse worse than the country. All day, Joe and Saltbush had

had nothing better. He tightened the leather belt about his own waist, threw away his cigarette stub for fear he'd swallow it, and got astride.

The stallion screamed and snapped teeth at the ducking Saltbush and went into the air. The battle that followed was worse for Joe because he knew and loved the stallion. It was a humiliation for Red Devil, for his mares were watching; his pride was outraged. He came down like several demolition bombs and was crafty enough to pack in another buck before he had finished the last, so that he caught Joe coming down and jarred him to the roots of his teeth. But Joe kept on board. He clung to a picture in his mind, of an American cowboy, grinning at the one-horse hurricane he rode and most nonchalantly waving his hat in the air.

The stallion stood still at last, lathered, shaking, licked. Joe fell off, and the ground came up and hit him. He turned his head in the sand and spat out blood and a white object that seemed to be a tooth. Then he looked up and grinned at Saltbush.

Saltbush was forced to speak. "Some ridin'," he said.

"When we get to the coast," Joe said, "I'll take you to the pictures, and you'll see some riding."

The mares were streaming across the

Things that make  
**GREYHOUND**  
 a great public service

*also make it a great force for Victory!*

The very same features that made Greyhound one of the world's greatest passenger-carriers *have also made it ready and able to do a hugely expanded, essential wartime job.* Greyhound is working at that job

full-time, full-strength—carrying the millions who are fighting, working, supporting the war effort. Let's see what some of the best-known Greyhound features mean to America at war:

#### ECONOMY...

Greyhound pioneered travel economy—and today makes an *even more important saving*—using only a fraction as much rubber and fuel per passenger, per mile, as do private autos.

#### NATIONWIDE COVERAGE...

Serving nearly all of the U. S. A. along 65,000 miles of highways, Greyhound reaches directly more military centers and war-vital places than any other transportation system.

#### CONVENIENCE...

Frequency of schedules is now more important than ever—saving precious time, permitting the planning of trips for hours and days when travel will aid the war effort most.

#### SCENERY...

Just as motor buses have always revealed America's *natural* beauty spots, they now reach the factories, smelters, military camps and bases that are today's most satisfying "scenery"!

#### COMFORT...

Wartime passengers cheerfully accept a little less comfort and convenience than Greyhound offers in peacetime—knowing well that greater travel luxury than ever will come with Victory.

#### SUPER-COACH...

The Super-Coach, which revolutionized highway travel, now transports millions of selectees, men in uniform, civilians working for Victory. Expect even finer equipment, when the war's won!

galloping; many would fall. But they could no longer hold together there; they would be forced by the hills to break up into twos and threes. The compact target would be gone.

There was one more terrible swoop of the planes, and horses falling, the bullets reaching down as tongues of wind reach into a wheat field. Then the blessed rocks rose, and the mob parted of necessity, spreading into a wide fan covering two miles or more.

Joe reined in Red Devil, flung himself to the ground and emptied his rifle at the planes. They were mounting now. Five or six minutes the whole thing had taken. Obviously the Japs had no time, no gas, no ammunition to spare to shoot down horses one by one. They were impersonal again, spots against the sky, a distant hum—gone.

Joe lay staring after them. He looked around after a while. Then he put his head down and wept.

His tears were a compound of rage and pain; not physical pain, though he realized now that his forearm wore a scarf of liquid red. Rage that he could not strike back; pain because of what lay behind. Thirty, forty horses, some of them crooked and still, some pitching and screaming in the dust. He had to stop that.

He got up wearily and mounted and looked for Saltbush. Saltbush was on foot, carrying his saddle and bridle and rifle. His face was streaked in sweat and dust and, it might be, tears too. He spoke with even more than ordinary curttness:

"Shot my mount."

Joe nodded.

Saltbush looked at him. "You're bleedin'."

"Come on," Joe said.

They went back grimly to their hateful task. Shots marked their passage as they put the dying and helpless out of misery. It took two hours. They paused then; they did not speak, they avoided each other's eyes; each knew what the other would say, had he heart to speak; each knew what he would see in the other's eyes. Soundless, they set to the long dreary business of gathering the survivors.

When it was over, Saltbush asked the question that he had been wrestling with privately all that time and, unable to answer it, since to a horse lover there was no rational answer, he was forced to put it into words:

"What's the idea, Joe, of their shootin' horses?"

Joe sat up straight. He looked a good deal older than he had a few hours ago. He had bound a strip of cloth over his arm; his face was gray, caked in dust; much older than his years. He stared off at the paling quarter of sky from which the planes had come.

"That must be the kind they are," he said. "The kind to shoot horses, if there's nothing else to shoot. . . . But no," he added, and now there was some pleasure in his face as he thought of it. "Maybe it's not that. They came in from the coast. That means they saw the camps of the Yanks there. They see the Yanks and then they see our horses, so they know they're horses for the Yank army. Saltbush," he said, "that's bad news for them."

TWO days later, they came to the camp of a prospector, the first white man they had seen since setting forth, years ago, it seemed. He was a little wizened man in moleskins and sun-faded blue shirt, and he had, they discovered, a good supply of tea. They did not pause for talk until they had stowed away a quart-pot pannikin each. It was a lovely

change from desert water. It was not the tea of the cities, it was a far more wicked brew. Black as ink, without milk but plenty of sugar, it might have made a camel pause. They drank it in great greedy gulps and ate cornstarch and damper, and they needed the ironbound digestions they had.

"Where you takin' the yarraman?" said the little man, using a word for horses that had drifted from blacks' camps clear across the desert. "You got a fair mob of 'em."

RELAXED and refreshed, enjoying a cigarette, Joe explained.

"Any place there's Yanks. You seen any?"

"Yanks?" The prospector grinned. "Too right I have. I ain't seen this MacArthur, but I hear he's round about somewhere too, come down from the Philippines. Sure I seen the Yanks," he continued with enthusiasm. "There's a whole boilin' mob of 'em three days' ride or so from here. But what are you takin' horses to 'em for?"

"Why, they'll be needing horses," Joe said. "First, Saltbush and me thought we'd turn the mob over to our own people and join up in the Light Horse along with 'em, but they didn't want us. Didn't want horses, they said. So when I heard the Yanks had come, well, I know the way they are—"

The little man thought this over and saw the way it was. He coughed and cleared his throat and scratched around in his whiskers for a while, then made up his mind to it.

"Sonny," he said, "you might as well know, you got a nasty surprise waitin'. You never seen any army like this Yank army. Horses—they don't know what a horse is. They got something better. Peeps and jeeps," he said, and paused and spat. "Peeps and jeeps!"

The cigarette was hanging from Joe's lip. Saltbush had finished another half quart of tea and now, physically incapable of containing another drop, he came over heavily and sat down and stared at the prospector too.

"Peeps and jeeps?" Joe said.

"Peeps and bloody jeeps!"

"What's that?"

"Bloody little motorcars!" the prospector said. "Rootin' through ditches and leapin' over anthills like a swarm of bloody kangaroos! Gave me a ride in one, they seen me starin' at 'em so hard. Damn' near took me whiskers off.

'Climb aboard, Pop,' they says, 'ai yourself a seat. Better than Cooland,' they says, whatever that is. ways game for a lark, so I got in. away, we're roarin' at a bloody bi. Me beard's in me teeth. 'Let me yell at 'em, but the young n laughed at me. 'Hold on, Pop says, and down we go into this head over breakfast, and wallop the other side, and spin around in the air like the bloody little got twenty different wheels goin' different ways all at once, you stand. I got out of there. 'Think live, Pop?' they says, and I shift carcass away, for fear they'd get again. Kangaroos!" he said. "what that Yank army's like, a bloody swarm of kangaroos!"

He was grinning, until the lo Joe's face caused him to remember hell, sonny," he said, "you got t it. There never was an army that r horses less than the Yanks."

Joe got up. "Thanks," he said, t it was difficult, through the lump throat. "Precious fools we wo looked. I guess—well," he said, st to grin, "I guess we're just behir times."

He turned with the melancholy bush and remounted. He knew bush's unuttered question. "We e back the way we came," he said, ar ing it, "or we can push on to the se drive the mob in. Might as well."

This stirred Saltbush to the where he fingered his hat, though from his present emotion he did remove it. He wrestled with sp "Joe," he said.

"Well?"

"If it's all the same with you, I'd to head over to that Yank camp."

"What for?" Joe said.

"I'd sort of like to see them jeeps Maybe," he said apologetically. they're feelin' good, maybe they'll us a ride in one."

ON THE morning of the third da lowing, the camp came up on the horizon, long lines of huts and on a sun-splashed slope, with sound shots beyond, where doubtless men training, and dust, and little crawlin' sectlike things, which even from this tance Joe recognized as the creatur which the prospector had spoken- jeep itself, or the peep, or whatever was called. He gazed at them with

SCOTT BROWN

# "Ladies, here's how you can help cook a tank!..."

...my thing! We women understand why sugar, coffee, gasoline and oil have to be rationed . . . but few of us dream that the Gas that cooks our breakfast is also a vital war material!

...probably never occurs to us that we are actually helping to build a tank or a plane or a ship or a gun when we avoid wasteful use of Gas in cooking and especially in house heating and water heating.

...for Gas is used in making nearly every kind of weapon we need to win the war!

"We women have always known that Gas is the fastest cooking fuel, that it's completely flexible and easy to control. So we can easily understand why Gas is important in helping to give our fighting forces better equipment—that it's speeding production in order that our boys may finish the job over there and get back home.

"So let's all remember . . . it's just as patriotic to use Gas wisely as it is to make the many other sacrifices that are needed for Victory!"

## MEETING WARTIME NEEDS

**1. For Gas fuel.** Today the Gas industry is producing more Gas than at any time in history. Yet because of the difficulty in transporting fuel oil and coal to make manufactured Gas—and because of the shortage of materials with which to enlarge plants or build new natural gas pipe lines—there may be times in some sections when the demands of war production will reduce the amount of Gas normally available for household use. It is for these reasons you are urged to use Gas wisely.

**2. For nutrition information.** If you are one of the 85 million who depend on Gas for cooking, feel free to ask your Gas Company for the latest information on preparing nutritious wartime meals.

taste, over the fine strong backs of his herd of horses.

"You go over," he said. "I'll stay with the mob."

Saltbush looked at him openmouthed. "What's the sense in my going?" Joe asked. "I don't want to see the crazy things. Go ahead."

With several dubious glances, Saltbush at last rode off. Joe sat slumped in his saddle, and when he looked up at the horses, there was a hot stinging behind his eyes, and the mob would not come clear; he saw them through a blur. He wiped the back of his hand over his eyes. It was not that he had brought the mob a thousand miles over country which few men in their senses would have essayed, surviving its natural perils, surviving even the wanton death from the air; it wasn't that time of hardship and suffering, only to find at the end that it was for nothing: it was the shattering of the picture in his mind, the picture of the man with the sombrero. That was gone. He could never replace it. He could not put that man in a jeep, or in a peep, and look at him again with admiration.

"Lies," he said. "All of them, lies!"

He meant the pictures. He meant more than that, but he could not quite bring it out. He was a kid who believed fairy stories, who believed all he saw. The worst tragedy is to find yourself at eighteen or nineteen not the man you had thought; not grown up, believing all you saw.

He bent over the saddle and rested his head on the big stallion's neck and closed his eyes against the stinging liquid.

INTO his misery an unholy sound penetrated. He came up with a jerk. But it was not a Jap plane, as he had thought.

It came squalling over the sunny slope, the dust spinning in sheets from its wheels, and this unholy noise issuing from its belly. It dipped its snout into a gully and dug its back wheels into the dirt and hurtled over the crest. A figure sat clutching its steering wheel and, beside this surprisingly calm figure was another, also calm, and behind these two, was a third. But this one, this third, did not sit and was not calm. Rather, by some miracle, it stood erect, with one hand gripping the shuddering framework of the vehicle, and the other—the other incredibly waving something in the air. And as the dust cloud came below nearer, Joe's eyes beheld that this third rakehell figure was that of the previously impassive Saltbush, the thing he waved madly in the air, his previously immovable hat.

Red Devil moved uneasily, and for the next few minutes Joe was busy calming the stallion. By then the roar had subsided, and the little monster, a jeep, certainly, a jeep of jeeps, was rolling forward very quietly and smoothly, to draw up a few feet away and, with a last cough, hold its silence.

Saltbush leaped out. "Hy-ya-a-ay!" he yelled, insanely tossing his hat from him. "Joe, did you see me? Hey, Joe, get in here! Joe, you never known anything, till you take a ride in a jeep!"

The driver could not have been much older than Joe himself, a bronzed grinning young man. The other was older and considerably bigger, a giant of a man, apparently some sort of officer. He climbed from the car and, smiling, nodded to Joe.

"Your buddy told me you had these horses out here," he said, "so we came out to look 'em over."

"Joe!" the exhilarated Saltbush yelled. "Joe, they want horses! Joe, they're buyin' 'em!"

"That's right," the big man said, but

the smile was gone now. He was looking at the mob. "We n bunch for patrol work. There's around here where it's tough even a jeep, and tougher to haul gas. don't know about this gang." He up apologetically at Joe. "They sort of scrubby-looking. Where's get 'em, anyway?"

Joe wet his lips. For a moment he could not speak, and then his cracked absurdly.

"From the Territory," he said.

"The Territory? Where's that?"

"'Bout a thousand miles," Joe said.

"You mean to say this outfit tra a thousand miles, through countr this?"

"Well," Joe said, "this country here's pretty good. The way we it's a little tougher."

"These horses?"

"You see," Joe said, "they were for it. They're not like the han stock you get around the coast. horses, they've got what you call of brumby in 'em. They can live feed out in the sand and rocks. fig

"This one is eight bucks more. The eyes close and it goes to sleep when you lay it down"

COLLIER'S

ELMER ATKINS

—I—I hoped," he said, "the Ya might have a use for 'em."

The big officer came over closer to him, and his smile was good to see. "You brought them a thousand miles," he said softly. "It looks a lot like you the answer to a prayer."

"You mean—you do want 'em?"

"You come on down to camp and see if we can prove it to you." The officer turned back to the car, but another thought seemed to strike him. "Like a ride with us?" he invited. "I guess your pal will take the bunch down, won't he?"

Joe looked at the squat little thing, a jeep, the essence of this new mechanized war. He, a horseman, ride in it?

"Well," he said. "Well—"

Then he thought of what he had seen that jeep do.

He grinned. It was his first grin in a long time. "Why, sure," he said. His grin got wider as he climbed down from Red Devil and walked over to the jeep. Tentatively he slapped its metal flank. He looked at his horses and back at the jeep and then he jumped in. "I was thinking he said. "I guess it's what you might call a sort of brumby of a car!"

THE END

# FOR THE REST OF THE WINTER

## Industry Looks Beyond the War

**B**EFORE this war is over, it is estimated that we shall have 10,000,000 men in the service, 20,000,000 in war industries—at least. It is estimated that within a year or two after the ends, this total of 30,000,000 men will shrink to 15,000,000, if not less.

The \$100,000,000,000 a year that we are spending on arms is expected to shrink to 100,000,000 or less in that same year or two after the war.

Where are the peacetime jobs for these men to be found? Or will they be content to beg once to molder away on some sort of dole or war WPA? We think the answer to the question is No; and that the answer to the question plainly is that only private enterprise operating freely in big and little units, can find the jobs these men will have to have.

In which connection, it is a great pleasure to record the formation of the Committee for Economic Development, under the chairmanship of President Paul G. Hoffman of the Student Corporation.

The CED embodies a move by numerous American businessmen, social scientists and economists to get set to win the peace after the war is won. The objective is to win the peace in terms of heavy output of the goods which most Americans will be wanting avidly by that time, and in terms of jobs for everybody who is willing to work.

Executive secretary of the CED is Carroll Wilson, on leave from the Commerce Department's Bureau of Foreign and Domestic Commerce. The board of trustees includes Vice President William B. Benton of the University of Chicago, Chester C. Davis of the St. Louis Federal Reserve Bank, Marion B. Folsom of Eastman Kodak, Clarence Francis of General Foods, President Charles R. Hook of the American Ring Mill Co., President Eric A. Johnston of the U. S. Chamber of Commerce, Harrison Jones of Coca-Cola, Charles F. Kettering of General Motors, John Stuart of Quaker Oats.

On the research committee are William Batt, S. B. Colgate, Dean Donald David of Harvard Graduate School of Business, Beards Rumf, some of the social scientists to help in research work are Professor Sumner Slichter of Harvard, Dean Robert Calkins of Columbia business school, Professor Neil H. Jacoby of University of Chicago, and Professor Ralph Young of the University of Pennsylvania.

To us, this looks like a crowd that is willing to experiment and adventure with new ideas, new hopes, new processes. By the same token, it looks like an organization that can find the courage and the brains to blast the pretensions and misconceptions of our die-hard conservatives, die-hard radicals, pink dreamers and totalitarian planners into the middle of next week—to the benefit of the rest of us.

The CED deserves the interested encouragement, we believe, of every American.

## Round Holes—Square Pegs

**K**YLE CRICHTON had a striking article in a recent Collier's, under the title Hollywood Gets Its Teeth Kicked In. Mr. Crichton, as you probably remember, pointed out that the war is stripping Hollywood of its best male movie actors and a lot of its ace technicians.

In consequence, Hollywood within six months may be turning out amateurish films which will sicken United States audiences and, worse, fall down on Hollywood's hitherto superb job of popularizing American ideas and customs all over the world.

Movie people realize this danger, as does everyone else who knows what a force our movies have been in making the American people admired in most other countries. Yet the movie people's hands are tied. They can't agitate for exemption of male stars, for fear of being accused of fostering slackerism. Male stars in droves have gone into active service, most of them because they are brave men, some of them because they feared a misguided public opinion.

We second Mr. Crichton's motion that this trend be stopped, and promptly, by the appropriate public officials in charge of the war effort. It should be stopped not only in the case of the movies but in all other lines as well.

We refer to the indiscriminate drafting of farmers who can produce substantial amounts of food but will make only fair soldiers; to the drafting of technicians in the airplane, automotive, steel, mining, and other industries, to the detriment of our war production and to no improvement of our fighting forces.

That these things are still happening, we all know, though there has been some effort of late to arrange matters more sensibly.

The effort should be stepped up and broadened out, until we come to a point where we are fitting men into the war machine where each man will fit best—and furloughing or honorably discharging men whom earlier drafts have misfitted, or who have volunteered for service branches where their special skills or talents are going to waste.

That is the duty implied in the very term Selective Service. Our Selective Service mechanism should fit round pegs into round holes and remove square pegs from round holes—and without consulting the pegs themselves as to their preferences.

Leave the choice to the man himself, and courage or shame will in most cases impel him to put in his bid for service in Guadalcanal or North Africa or on some other flaming front, though he might contribute 10 or 1,000 times as much to the winning of the war by using his talents on the Detroit front, the Seattle front, or the Hollywood front. Draft men indiscriminately and assign them blindly, and the results will be equally harmful to an efficient, effective and speedy prosecution of the war.

We're not urging any wholesale deferments, furloughs or honorable discharges for flimsy or farfetched reasons. We are urging more and more common sense in assigning men to the war jobs they can do best, whether the job in any case be piloting a tank, chambermaiding a Flying Fortress, or acting heroic roles before a movie camera.

# WANTED AT ONCE!

★ **Mathematically Trained Men** ★  
**Ages 18 to 45 and Over—for America's**  
**Home Front AND Fighting Fronts!**

**THIS** war calls for mechanical ingenuity in America's factories and for scientific efficiency on the battlefield. And mathematics is basic knowledge for all mechanical and scientific work. Thousands of mathematically trained men are now needed for the war effort. To serve your country, to qualify for a bigger job, bigger responsibilities, bigger opportunities—in the factory, in the army, navy or air force—learn mathematics! Now you can master mathematics at home—in your spare time—easily and quickly—and at amazingly low cost!

**THE NATIONAL EDUCATIONAL ALLIANCE, INC.**

brings you this new up-to-date  
**HOME-STUDY LECTURE COURSE in**

## Practical Mathematics

IN PERIODICAL FORM

**in 120 days—at a cost of only 35c a subject!**

**COSTS ONLY 25c TO START—STOP WHENEVER YOU LIKE**

**NO** LONGER need you shrink from the "bugaboos" of mathematics! No longer need you stand aside while better qualified men get all the "breaks" in your shop. No longer need you be lost "in the ranks" while mathematically trained men are given special service ratings. You can now learn how to put mathematics to work for you—how to use it for more rapid promotion, for a chance to stand out from the crowd, for maximum service to your country! No previous training or elaborate schooling is required to master this brand-new simplified course in mathematics.

**Starts With a Review of Simple Arithmetic and Takes You By Easy, Clearly Illustrated Steps and Sample Problems to the Most Advanced Applications**

This series of lectures in PRACTICAL MATHEMATICS comes to you in 14 periodical pamphlets, three each month—just like any magazine—at no more than the cost of a magazine! Each issue contains a group of 20 to 30 lectures, with sample workaday problems, self-examinations and answers.

The series starts right from the beginning with "refresher" lessons in basic arithmetic, so that even if you have done nothing with mathematics since your school days, you will soon be at home in your studies. From here the Course takes you, one by one, into the 14 branches of applied mathematics. Each lecture-group covers 20 to 30 divisions of each subject, under the direction of specialists in the field. Every step is carefully explained, frequently reviewed, and clearly illustrated. Each installment includes a quiz-and-answer supplement especially designed for self-education, so that working by yourself—without a teacher—you master every important branch of mathematics.

**You Get Training in Actual Mathematical War Problems!**

This is not a dry, abstract, school-room course, but a practical training in the vital applications of mathematics. You learn how to use mathematics in the design, production and operation of guns and pro-

jectiles. You learn how to use mathematics in aerial and sea navigation. You learn how to apply mathematics in chemistry, mechanics, electricity, radio. You discover how you can use mathematics for short-cuts in daily shop problems, in the laboratory, in all kinds of figuring. You discover that Algebra, Geometry, Trigonometry, simple Calculus and other mathematical subjects, far from being mysteries, are simply ingenious methods for solving mysteries. By devoting an hour a day to study, you will soon find yourself absorbing the essentials of mathematics with an ease and enjoyment you never thought possible! The Course will make clear to you many problems that have often puzzled you. You will find it a stepping-stone to a job that means a real future!

### How is the Low Cost Possible?

Ordinarily a Course of this scope would cost hundreds of dollars and take years at college. But the demand for mathematical training is today widespread and urgent. All precedents of high cost and lengthy study have had to be drastically revised. The National Educational Alliance, with its resources and experience in bringing education to the millions, is the one organization eminently qualified to make this great undertaking possible. It has gathered a faculty in mathematics from America's leading universities—each a specialist in his field—to prepare the lessons in this reading course. And it has organized this course so that it comes to you in convenient installments—just like any magazine—at no more than the cost of a magazine!

**WHEN** you mail coupon below with only 25 cents, you do not agree to pay for the entire series of PRACTICAL MATHEMATICS Lesson-Groups unless you desire to do so. You can let the Lesson-Groups come to you as long as you please, and STOP WHEN YOU PLEASE. All you agree to do is to pay a quarter for the first group of lessons. We rely entirely on the merits of this course, and are confident that its value will be so obvious to you that you will want to complete it.

NATIONAL EDUCATIONAL ALLIANCE, Inc.,  
 37 W. 47 St., New York, N. Y.

**SEND ONLY 25c WITH THIS COUPON**

Mail to:  
**NATIONAL EDUCATIONAL ALLIANCE, INC.**  
 Dept. 322, 37 West 47th Street, New York, N. Y.

For the enclosed Special Introductory Price of only 25c, please send me prepaid the first issue of PRACTICAL MATHEMATICS containing the first group of lectures on Arithmetic, Algebra, Advanced Algebra, Plane Geometry, Solid Geometry, Trigonometry, Calculus, Mensuration, Logarithms, and the Mathematics of Mechanics, Chemistry, Navigation, Aviation, etc.—and enroll me for four months at a total cost guaranteed not to exceed \$4.35 for the entire balance of the series.

As outlined, you may send me PRACTICAL MATHEMATICS every ten days at the rate of 35c per issue, or 3 issues for only \$1, until I give you notice to cancel my enrollment. For convenience in bookkeeping, you may bill me once a month for such issues as I receive.

It is understood that I may cancel at any time and pay only for copies actually received.

**University of Notre Dame**  
 KARL MENDER, Ph.D. Professor of Mathematics.

### 14 Lecture Groups Comprising These Important Mathematical Subjects

Basic Arithmetic  
 Advanced Arithmetic;  
 Logarithms of numbers  
 Elementary Algebra  
 Advanced Algebra  
 Plane Geometry  
 Solid Geometry  
 Trigonometry (also "triglog" tables)  
 Calculus  
 Mensuration and differential equations

Applied Mathematics:  
 A—Machine Shop  
 B—Construction Engineering  
 Applied Mathematics:  
 A—Heat  
 B—Chemistry  
 Applied Mathematics—Electricity  
 Applied Mathematics—Navigation—Aviation—Military Gunnery, etc.  
 General Applications and Index

THESE mathematics lectures come to you serially—each issue like any magazine. Each issue consists of 20 to 30 sections on as many different divisions of each subject. It is packed with drawings, diagrams, sample problems with answers, quizzes for self-testing—everything you need to teach yourself. A new issue will be mailed on the 10th, 20th and last day of each month. This course in mathematics will be covered in its entirety in little more than a 4 months subscription. You can, of course, take as much time in extra study as you wish, after you have received all the issues. The complete set may be filed in such a way as to help you on mathematical problems for years to come.

**Important**

Apart from your original 25c payment, the total cost of the entire series is guaranteed not to exceed \$4.35. Copyright, 1943, by the National Educational Alliance, Inc.

## ANY WEEK

AMONG this war's several novelties is the absence of the complaint that it's a rich man's war. Nevertheless, the rich are horning in and, in their predatory way, making off with a lot of the glory. For example, you'll remember that some weeks ago we told you what became of the rich young man who appealed to Colonel Walter "Cappy" Wells for a major's commission. Coming straight out of a playboy's role in life, the young man was scarcely fitted for a majority, and the colonel talked him down to a second lieutenantcy. Finding the going easy, the colonel finally told the rich young man that between them they ought to be able to swing enough influence to get the latter into the Army as a private. The young man (whose name we may not use) thanked the colonel and went to work. When he left for Africa, he was a sergeant. He landed at Casablanca with such vigor and kept going eastward with such life-scouring derring-do that he has just been cited and decorated. The colonel told us that he wouldn't be surprised if his gold-coast protégé, now getting away with a most commendable type of murder, would be a major before it's over, or maybe a colonel if he lives. The colonel showed us a letter he has just got from the rich young man. We can publish this much: "I like this. Thanks again for getting me in on the ground floor."

THE Marines have landed again—this time on us. This landing is in the form of a V-mail letter. The sender, signing it "We Marines," is Corporal Warren H. McCallum. "I'm writing," writes he, "in behalf of us Marines on Guadalcanal. While reading one of the magazines, I saw a piece about Major Hart's task force which has been touring the States for the benefit of civilian morale. One of the major's actors, Private Joe Henderson of Tuscaloosa, Alabama, made this statement: 'That guy Sherman was all wrong about war. It's the life of Riley. I never thought, when I joined up, that I'd be an actor as well as a soldier. It's great training and a thrilling experience and we're ready to fight it out on this line if it takes all winter.' Please tell Private Henderson," continues Corporal Mc-

Callum, "that he can have our job here on Guadalcanal any day. He can't make a liar out of Sherman like that. We Marines do not find that war is the life of Riley. We're waiting for Henderson and his troupe to come down and take over. We'll give him the addresses of all the hot spots, too, and welcome."

ON AUGUST 22d, Mr. Ben M. Cohn wrote us a letter from his office in Bree Street, Johannesburg, South Africa. With it he sent his check for ten dollars for a subscription to Collier's. The letter and check have just arrived. He explains that heretofore he has just been a newsstand buyer of magazines, subscribing to none. But on the night before he wrote to us, a member of this staff arrived in Johannesburg—Frank Gervasi. Also, Mr. Gervasi spoke at a meeting of Johannesburg businessmen. "I wish," writes Mr. Cohn, "that I could describe the electric effect of his talk upon us listeners. Give Gervasi the regards of the American colony here. And give us Collier's. And if you have any more orators like that lad, send them too."

HOWEVER, in spite of the camphored New Deal and all the other political and social changes which have come to pass since the First War to Delouse the World, the rumors concerning what one soldier said to another soldier haven't changed. Mr. James Street of Laurel, Mississippi, has just sent us one which was wafting around in 1918, but it's still serviceable. A Negro infantryman had eighty-one sharpshooter medals. Another Negro infantryman looked them over with awe. "Boy," said he, "you must be a good shot." Said the bemedaled one, "Fair to middlin'." A pause. "Tell me, boy, when you shoots at them targets, do you always hit the bull's-eye?" Another pause. "Noooo. But if I does, it causes talk."

AND another writer of short stories for Collier's, Mr. Richard English, reports from Hollywood that he asked one of the movie directors what had become of a certain fellow who used to be one of the highest paid gag men in

(Continued on page 57)

Changes of address should reach us five weeks in advance. Give both old and new addresses.

# Man power plus!

**Q**UIETLY, modestly, over the past years medical science has been producing virtual miracles—miracles which are paying our country increasingly handsome dividends as time goes on...

## *DIVIDENDS IN MAN POWER.*

Today, literally millions of people who are lending their services to Uncle Sam would not be alive but for these discoveries of medical science.

In the 75 years since March 24, 1868, when the Metropolitan Life Insurance Company was founded, the average length of life of Americans has increased from about 40 years to more than 60 years. Figures indicate that about 2½ million men of military age owe their existence today to improvement in mortality since the turn of the century.

Throughout its 75 years of life, Metropolitan has been glad of the opportunity to take an increasingly active part in this drama of conserving human lives.

As far back as 1871, the Company issued "Health Hints," the first of more than a billion booklets on health subjects which are distributed at the rate of one every fifteen seconds.

In 1892 it began its co-operative work with the public health forces of the country by joining government officials in a campaign against cholera. This was the forerunner of numerous campaigns against such diseases as tuberculosis, typhoid fever, diphtheria, pneumonia and others.

In 1909, the Company set up a special department to place its rapidly expanding pub-

lic health work on an organized basis. Among its many activities, for example, is a Nursing Service, started in 1909, which has since expanded to cover the United States and Canada. Last year nearly three million visits were made to eligible Metropolitan policyholders.

Today Metropolitan works closely with health agencies, both private and public, and carries out or assists important health research. Through its health booklets, its far-flung nursing service, its health advertising, and similar activities, Metropolitan consistently pursues its policy of passing life-saving knowledge of medical science on to the people in words they can understand.

On this, our 75th Anniversary, our eyes are on the future, rather than the past. For there is so much more to be done. As new triumphs of medical science are unfolded, Metropolitan will play its part in carrying life-giving knowledge to the people.

## KEEP UP WITH THE WORLD

By Freling Foster

While about 40,000,000 Americans drink alcoholic beverages, the majority only on special occasions, not more than 600,000 or only fifteen in a thousand, are considered to be heavy drinkers.—By George Stacy, Chicago, Illinois.

In England, the owner of a dog that has been condemned to death pays a daily fine of one pound or about \$4 as long as he refuses to have the animal destroyed. In one recent case, a family has so far paid \$2,300 to keep their dog Rowley alive, while in another, a man has paid \$500 to keep Bobbie, most of this money having been raised by a Bobbie Club, consisting of neighborhood children who organized themselves specifically for this purpose.

The SOS, or Service of Supply of the United States Army, is generally looked upon only as a purchaser of military equipment and material. Yet it is also the largest retail organization in the world today, now selling more than \$500,000,000 worth of merchandise a year to our soldiers through its thousands of post exchanges here and abroad.

Many American war plants are now so large that their employees cannot take the time to go to an outside restaurant or even to the company cafeteria. Consequently, they purchase hot lunches from rolling lunchrooms belonging to catering companies, one of the largest of these firms being Boston's Crotty Brothers, who daily serve more than 500,000 workers in sixty-eight plants in twenty states.

Supplementing dehydration, a new process for food compresses, wraps and seals it into blocks and briquettes, thus not only squeezing out space-taking air, but also protecting the contents from germs, grease and dust. The additional space saved by this compression, for example, amounts to as much as thirty per cent for dried milk and fifty per cent for dried eggs.

The recent strike in the tin mines of Bolivia, which caused a national state of siege there and even involved our State Department, resulted chiefly from the company's refusal to double the workers' wages by paying them four cents instead of two cents an hour, although the mines have returned at least \$500,000,000 to their owner.

When an Army transport or cargo vessel is about to leave the United States, no more than six men in the port know the hour it is scheduled to sail, and no more than three on board know the spot where it is to join the convoy.

Since entering the war, Britain's aircraft, surface vessels and submarines have laid about 150,000 mines along the enemy's coast line extending from northern Norway to western France. This is twice the number of mines that were necessary to bottle up the German fleet in the North Sea during World War I.

Of the 17,000,000 school children between the ages of five and thirteen years in the United States, about 1,000,000 receive a pint of milk daily at a cost to them of one penny. In addition, 4,000,000 others who are undernourished receive free lunches, the majority of which are hot and often constitute the child's only real meal of the day.—By Mrs. Lee L. Scott, Vinita, Oklahoma.

The Japanese military authorities usually announce that a soldier or sailor is dead when he is only reported as missing and his fate is unknown, because his family would "lose face" if he had allowed himself to be captured. Often the authorities also send a sealed urn of ashes to the family to "confirm" his death.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. Address Keep Up with the World, Collier's, 250 Park Avenue, New York City. This column is copyrighted by Collier's, The National Weekly. None of the items may be reproduced without express permission of the publisher.

ily Pons came to dinner tonight

## General Electric Television will enable you to see and hear your favorite entertainers in your own home

Just as now by radio you *hear* the world's great artists and entertainers, tomorrow by General Electric television you will *see* them, too!

In some form or other, whether a table model, or cabinet set, or a projected image on a wall-screen, *everyone* will be able to enjoy the excitement of this wonderful new science.

By television, you will see the big baseball and football games, the Mardi Gras, the launching of giant ships. You will invite friends in for the latest television movies, or the new Broadway musical show. By television, you will keep up with new fashions, new recipes, and new dance steps.

If you are a business man, you will introduce new automobiles, radio receivers, refrigerators, electrical appliances, and airplanes by television. Not only will you *tell* the public about your product, as you do now by radio; you will *show* the public the actual product, package and all.

All of General Electric's experience in radio and television is at work today producing electronic weapons that are helping to win the war. When Victory comes, new knowledge gained in war years will be applied to the purposes of peace, and General Electric will build fine radio and television receivers for your pleasure and enjoyment.

**FREE:** A fascinating new booklet, 32 pages, full color, tells the story of television and other electronic equipment. Write for your free copy of "Electronics — a New Science for a New World" to Section 3-A, Radio, Television, and Electronics Dept., General Electric, Schenectady, N. Y. And when you come to Schenectady, visit General Electric Station WRGB, one of the largest television stations in the world.

Tune in on Frazier Hunt and the News every Tuesday, Thursday, Saturday evenings over C. B. S. On Sunday night listen to the "Hour of Charm," over N. B. C. See newspapers for time, station.

# GENERAL ELECTRIC

Leader in radio, television, and electronic research

170-83

### Every General Electric Radio is an electronic instrument

Radio, like television, is a product of *electronic* research. This electronic tube, used in the General Electric FM radio—a new kind of radio with amazingly lifelike reproduction, is essentially the same as the electronic tubes that make television possible.

# CHAMPION SPARK PLUGS

which fire at high altitudes and under extremely high pressures in our "hottest" bombers and pursuit ships have exceptional quality of materials, design and workmanship which accounts for their extreme dependability. These very same qualities are inherent in all Champion Spark Plugs, including those for your car.

The high-output engines which power the "hottest" bomber and combat planes of our air forces are true marvels of precision and compactness. With them our heroic air forces are writing history. These engines must instantly respond to the throttle while maneuvering in the battle ground of the sub-stratosphere. Spark plugs must function perfectly. Champions are equipment on these as well as

many other aircraft engines in the service. The Champions in these engines are not unlike the spark plugs for your car, identical, in fact, in quality and materials, engineering and manufacturing precision and in their characteristic dependability. Your spark plugs are the key to engine economy and performance. Give them the periodic attention our war-time economy requires. Have them tested and cleaned every 4,000 miles—and when you need new ones insist on Champions.

## WING TALK

HARRY PENNINGTON

TIME was when most girls looked upon the airline hostess as having the job of all jobs, with nothing to do but wear a snappy uniform and fly in comfortable airliners all over the country. Of course, those admirers never served a meal to twenty persons at 10,000 feet in the air and don't know what it takes to do that kind of work.

Today it's a different picture. The hostesses are carrying on, but they have plenty of sister workers. Women who have taken jobs since the war started are literally "keeping 'em flying." They are handling wrenches in the shops, working in stockrooms, in radio and weather offices, and to top it all, teaching copilots how to fly on instruments through the use of Link trainers.

Miss Margaret Bell Singleton of New York made such progress as an instructor at La Guardia Field for TWA that she is now teaching other young women how to train copilots. Although Miss Singleton never leaves the ground in her "dodo" craft, which simulates the maneuvers of a plane in flight, she expects to reach the heights in her career.

THE latest project handed to women was the assignment of the Women's National Aeronautical Association to act as recruiting agency for the Army Air Forces Technical Training command; to enroll from 3,000 to 10,000 women to qualify as instructors in airplane mechanics schools. The qualifications for these jobs are tough. The applicants are required to have a year of college or university or teacher-training institution, must be between the ages of 21 and 45 years, and have no children under 12 years of age. There are many other stringent requirements, but the women of WNAA feel sure they'll get the necessary recruits.

MANY leaders in the aviation industry are top-ranking sportsmen, who find their best relaxation in hunting and fishing, far from their plants.

This story shows that just as they overcome the problems of their own industry, so can they hurdle any obstacle which might confront them in their favorite sport. In this case, it was a man

Typical of young women workers who "keep 'em flying" is Eleanor Michael "Mickey" McLernon here shown gassing up a B-2. She is rated as a general mechanic's helper with the Flight Training Personnel at Duncan Field, Tex.

whose pet sport was big-game hunting. He was "somewhere in Alaska" in connection with new air bases. It necessitated a trip by dog sled, and the growl was in an area where there was plenty of big game. The trouble was the guide was the only one who had a gun, and the guide could not be used except to kill game for emergency rations. The sportsman spotted a beautiful mountain goat. He couldn't resist reaching for the rifle.

"We no need food," came the words of the guide.

The aviation man offered a \$5 bill, but got the same reply. Even a ten-spot failed to change the attitude of the guide.

About to give up, the sportsman asked, "What do you want, a twenty-dollar bill?"

"Want five cans condensed milk, two bars chocolate."

The goat's head now adorns an aviation office.

THE Japs evidently have an old belief that anything which works right the first time is the perfect way and should not be changed.

Some big heavy American bombers were making a raid, minus escort fighters, on a Jap-held island. From high above, came an attack by a mess of Zero fighters. The outcome was bad for the Americans. Later, on another attempted bombing of the island, the Japs did the same thing, waiting high up for the approach of the bombers. Again the enemy was most successful. But the next time our bombers were sent on the same mission, far, far above them was a group of Lockheed Lightnings. The Japs started for the bombers in the same old way, and the Lightnings started for the Zeros. Not a Zero escaped, nor was there a Jap who could figure what had happened. . .

## The Doughboy's Dream

by Ben Hecht

When Hitler releases Hedy Lamarr, she strokes his cheek affectionately.

COOKIE (turning around): Say—what's going on back there?

PHOTOGRAPHIC ILLUSTRATIONS BY VALENTINO SARRA

**T**HIS drama was written for soldiers to perform in the training camps for the entertainment of other soldiers. It is part of a military plan to make soldiers happy. At least that's what the colonel in charge told the War Writers' Board. He said that the soldiers were crazy about doing little plays that were specially written for them. He said it made them happy.

I saw through the colonel at once.

The plan isn't for soldiers at all. It's for writers.

Obviously somebody high up has figured out that the nation owes a great deal to its writers and that something should be done about making them happy—during the war, at least.

A secret committee was appointed (I am guessing at most of this) and it was decided that the finest thing that could be done for us writers was to fix it up so we could have our plays performed without any dramatic critics around. Whatever else the Army does, it has ushered in the literary millennium.

As a member of the War Writers' Board I gratefully submit the following drama for the soldiers to play backward or forward, *in toto* or in part, with or without scenery. And if any of our brave combatants think they can improve it by putting in better jokes or finer characterizations they are hereby welcome to do so.

The drama itself takes place in the bedroom where the soldiers sleep.

The locale is any old training camp. And it is night, as you can tell by the fact that three of the soldiers are already in their beds.

IN MAKING the illustrations for *The Doughboy's Dream*, Collier's set up the barracks, complete with cots and other furnishings, and built a plywood plane for the historic flight to find Hitler. The prize ring scene was photographed in a New York gymnasium. Actually, there are only four persons in the ring—Cookie, Hitler, Hedy and the referee. The other Hitlers are photographic trickery. The part of Hedy Lamarr was posed by Miss Mary Brennan, a young actress who has appeared in the movies with Eddie Cantor and other stars. M-G-M once planned to play up her resemblance to Miss Lamarr, but nothing came of the idea. Cookie is John Parker Hughes, a Texan, and Rod Maybee, who has a 20-year-old son in the Armed Forces, posed for both Hitler and the sergeant. Collier's has reprinted *The Doughboy's Dream* in a booklet which the army will distribute to camps.

One of them is reading some important philosopher. The two others are studying something else in order to improve their minds and fit themselves for the new world in which they will have to take a leading part after the peace.

If this is "out of character" in some particular camp, the "business" should be changed to suit.

The names of the three soldiers are Robert E. Lee, David G. Farragut and John Pershing. They are no relations, however. It is just a coincidence.

When the curtain goes up these three sleepyheads drop whatever they are doing and start talking:

LEE: What time is it, do you think?

PERSHING: Eight bells, I'd say.

LEE: Eight bells, eh? What do you think is happening to Cookie? (*He eyes the empty bed*)

FARRAGUT: Maybe they're executing him.

LEE: Go on—they don't execute you for letting the stove go out—only if you drop something.

FARRAGUT (*firmly*): Listen, Sergeant White Fang don't go by any rules. You know what I said to him this morning? I said, "Listen, you big lug, any gorilla is able to lick any seven human beings. But who is it always ends up in the cage? The gorilla! Consider that before you let any more fat grow on your head."

LEE (*judiciously*): Personally, I feel Cookie's got it coming to him. Nobody is entitled to be that dumb unless they already are an officer.

(Cookie Johnson enters the bedroom. He is very tired. During the talk he sits down and gets undressed.)

**SERGEANT:** Here's your phone, you dumb cluck! Now take the mush out of your mouth and speak up.

**COOKIE** (*whispering*): President Roosevelt? . . . Hey, Sarge, you talk to him. I got something in my throat

**COOKIE** (*very tired*): Hello, fellas.

**LEE:** Hello, Cookie.

**FARRAGUT:** How did you make out with Sergeant White Fang?

**COOKIE** (*very tired*): Oh—all right.

**PERSHING:** Come on, let's have it. We're your friends, ain't we?

**COOKIE** (*he is very tired*): I ain't got any friends.

**PERSHING:** That's no way to talk. I was saying to Private Lee only a minute ago we all ought to get up a petition requesting Sergeant White Fang to quit picking on you. Wasn't I, fellas?

**LEE:** I go further than that. I say we ought to take it up with Congress. They could pass a bill forbidding cruelty to Cookie Johnson.

**PERSHING:** I don't see why not. They pass every other kind of a bill.

**COOKIE** (*he is now getting into the four poster*): Cut it out, will you? I'm tired. (*He turns on his side and falls asleep*)

**PERSHING** (*hurt*): That's a fine pal, holding out on us!

(The light in the bedroom starts growing dim. The light over Cookie's bed, however, brightens.)

**LEE:** Don't expect anything out of that guy. He's too dumb to know his elbow from a barrel of flour.

**FARRAGUT:** Yeah, let him sleep. Poor guy, he's probably dreaming he's back home wiping windshields again.

(By this time the three beds are in darkness and a spotlight shines on Private Cookie Johnson's couch. We can see him sound asleep in this light for a moment during which somebody offstage plays a mouth organ for dream effects.)

After a pause a very tough-looking character appears. This is Sergeant White Fang. He is in uniform. He stands in the light beside Cookie's bed.)

**SERGEANT** (*in a hoarse, unpleasant*

*voice*): Private Johnson! (*Cookie tosses in his bed but doesn't wake*) Hey, you! I'm talking to you!

(Now Cookie opens one eye and sees the Sergeant. He groans a little.)

**COOKIE** (*muttering*): Go way. I got a right to sleep. This is a free country.

**SERGEANT** (*you can't pull his leg*): I said, get UP! On your feet, you apple knocker!

(Private Johnson yields his inalienable rights and answers meekly.)

**COOKIE:** Yes, sir. (*He sits up in bed*)

**SERGEANT:** There's somebody wants you on the phone. It's a person-to-person call.

**COOKIE** (*blinking*): Wants me! There must be some mistake. Who would want to talk to me?

**SERGEANT:** It's Franklin Roosevelt.

**COOKIE** (*staring*): The President wants to talk to me!

**SERGEANT** (*grimly*): He's been holding the wire for a half-hour.

**COOKIE** (*scratching his head*): President Roosevelt wants to talk to me! I must be dreaming.

**SERGEANT:** You'll start dreaming in minute—after I clout you one. (*moves toward Cookie menacingly*).

**COOKIE** (*meekly*): I don't see any phone you going to answer the phone or not.

**SERGEANT** (*removing a French phone from his pocket*): Here's your phone you dumb cluck! Now take the mush out of your mouth and speak up.

**COOKIE** (*whispering*): President Roosevelt? (*He looks appealingly at the sergeant*): Hey, Sarge, you talk to him. I can't. I got something in my throat. (But there is no sergeant. He has stepped into the shadows. Cookie is very nervous. He manages finally to speak in the mouthpiece in a very formal and constrained voice.)

Hello. Who is this, please . . .

Oh, you don't say! Well. How are you Mr. Roosevelt? Everything—all right . . . I'm—I'm glad to hear it . . .

Yeah. Yes, sir. This is Private Johnson. I was asleep or I would've answered sooner. . . .

Gee, President, I—I don't think I can get away. You see, I let the stove go out from the mess and I got some extra work to do, accordingly. It wasn't my fault about the stove though. . . .

What? . . . O. K., if you say so . . .

Yes, sir, I'll be right over. Thank you, sir. Wait a minute—who do I ask for? . . .

Oh—just President Roosevelt, huh? . . .

I see. I see. I knock three times, O. K. Goodby, sir. It's a great pleasure.

(The sergeant reappears. Cookie hands him the phone and the sergeant puts it back in his pocket. Cookie talks in a awed voice.)

**COOKIE:** What d'ya know! He wants to see me right away—at the White House . . .

**SERGEANT:** Well, pick up your feet, lame brain!

**COOKIE** (*standing up in his underwear*): He must have heard about the stove going out.

(The light over Cookie grows dark for a moment and the off-stage mouth organ plays dream effects again.)

Then the light goes up and we have a change of locale. The beds can remain on the stage unless some device can be perfected for whisking them off. But it isn't necessary. It will be just as good if a large desk has been whisked onto the stage during the moment of darkness.

The desk is in a half shadow and a man sits at it with his back to the audience. Cookie sits on the other side of the desk in full view and with the spotlight on him. He wears an Army overcoat over his underwear. The man, more or less invisible at the desk, is President Roosevelt. He is talking in his measured, soothing way.)

**PRESIDENT:** I have sent for you, Cookie, because of the great and abiding faith I have in you.

**COOKIE** (*awed, but an American*): The desk is not in regard to the matter of the stove going out that I been called to this place?

**PRESIDENT:** My friend, we have all let our stoves go out once or twice.

**COOKIE:** Ain't we, though . . .

**PRESIDENT:** Obviously you do not realize who you are, my friend.

**COOKIE:** Who, me? I'm Cookie Johnson, from Nyack, New York.

**PRESIDENT** (*softly*): You're a little more than that. You're Cookie Johnson, from Valley Forge, and Belleau Wood. In fact, my friend, I consider you the most wonderful man in the world.

COOKIE (modestly): That's putting it a little bit strong, don't you think, President?

PRESIDENT (firmly): Not a bit. And please call me Franklin, will you? As a favor?

COOKIE: O. K., Frank.

PRESIDENT (sighing happily): Thank you. And now I have another favor to ask of you.

COOKIE: The shirt off my back, Frank.

PRESIDENT: I want you to go on a little mission for me.

COOKIE: Anywheres you say, Frank.

PRESIDENT: To Germany.

COOKIE: Now, that's a coincidence. It happens I am planning to go there at the present time.

PRESIDENT: I know that, Cookie, but I would like you to jump the gun a little and go there tonight.

COOKIE: It's a deal!

PRESIDENT: I knew you wouldn't fail me.

COOKIE: What do I got to do when I get there, if it ain't a secret?

PRESIDENT (archly): Two guesses.

COOKIE (after a pause, exclaims): I capture Adolf Hitler.

PRESIDENT: Right the first time! I want you to bring Adolf back to me, as fast as you can.

COOKIE: You're cookin' with gas, Frank! What a President! I kept wondering all the time why somebody didn't ask me to do that. You got any ideas on how I should capture him?

PRESIDENT: No, I am relying entirely on you, Cookie. I picked you for the task because of your great reasoning powers and also because you have the heart of a lion.

COOKIE: Gee, you know, Frank, you almost make me wish I had voted for you.

PRESIDENT: This is no time to discuss politics. Action is what I want.

COOKIE (rising eagerly): And you're going to get it.

PRESIDENT: Wait a minute. I have a companion for you.

COOKIE: I don't want any lugs along.

PRESIDENT: This companion is no lug, my friend. I am sending Hedy Lamarr

with you. Two heads are better than one, you know.

COOKIE: Holy Ike! Hedy Lamarr is coming with me! All I can say is—that's organizing! That's real organization!

PRESIDENT (modestly): If I do say so myself, I'm sort of good at that. (He becomes crisp) You will bring Adolf back?

COOKIE: With an apple in his mouth.

PRESIDENT: Miss Lamarr will meet you on the plane. Be nice to her. Remember she is doing this for her country. And remember at all times that you are the President's own personal Commando.

(The light goes out again and the mouth organ music plays Over There and other dream effects.

This time there is a major change of locale. An airplane is put on the stage during the blackout. It is, of course, a dream airplane, and can consist of a cardboard cut-out such as Coney Island photographers use.

In any case, when the lights go up again

Four Hitlers come slowly at Cookie.

MISS LAMARR: Look out—they're trying to fool you. Be sure to hit the right Hitler—or it won't count.

COOKIE (sparring): Don't worry. I got my sense of smell

we see Cookie at the controls and beside him sits the beautiful Hedy Lamarr. I don't see any reason why Hedy couldn't be induced to play this part herself because I happen to know she is very keen to do everything she can to help win the war.

The airplane is in flight and we hear the roar of the propellers. Then this noise grows subdued and the mouth organ music fades and it is quiet enough to be able to hear the principals speaking.)

COOKIE (leaning out of the airplane window): Do you know Germany when you see it, Miss Lamarr?

MISS LAMARR: Yes. I have an uncle there.

# Will You Wait For Me?

By Norma Bicknell Mansfield

ILLUSTRATED BY WENDELL KLING

It was through no fault of hers that other men had loved her. But Woodley was a long time in realizing this

AS WOODLEY drew closer to his destination he admitted at last he was on a fool's errand, the kind of thing a man of his age and former attainments should have had the wisdom to reject. But Penster had asked this service of him, and he had liked young Penster from that first day when they had been inducted together.

Troubled and uneasy, Woodley began to question his liking for Penster. He decided it was an irrational affection. Penster honestly believed the world was good, a theory Woodley had cast aside years before as impractical. Penster exalted love. Woodley was safely past that gulf. Penster trusted his emotions. It was Penster's emotion, Woodley saw abruptly, that had brought him out here today into the residential north end of a city he had never seen before. He had ridden forty miles in a crowded bus from camp, taken another bus to the end of the line and was walking now, resentfully, on the strength of Penster's emotion.

Woodley had thought he was immune to fervor, but one day Penster had said, "I won't have a chance to see her again before I go. It's the sort of thing you can't say over a telephone, not to her. She's more your kind than mine, Lance, honestly, but I want you to go to her home and ask her to wait for me. You'll do a better job of it than I would. Just ask her to wait, see?" Woodley had thought, even then, the boy should be told about women, but Penster's eagerness, his confidence, had deterred the older man.

Woodley trudged on, fog soft and dank on his face and hands. It had been quixotic of him not to take a taxi. The houses out here had become estates, set back from the road, half hidden by shrubs. Woodley, recalling his instructions from Penster, turned down a narrow, paved lane, and the smell of the Sound came up to him, salty and pungent.

Penster had said she would be at home today. On Saturdays she entertained soldiers. On other days, Woodley assumed, she entertained herself, having done her bit of war work for the week. Still, you had to hand her something for giving up one day a week. Lallie wouldn't have done it.

Lallie had been his wife, and they had lived in a place something like this, remote and socially unassailable, and it had been almost more than Lallie could bear to have him discuss bills with her once a month. She had begrudged even that much time from her own diversions. In the third year of their marriage, their last, she had begun to hark back to his beginnings when the bills came in. No one but Lallie could have devised so sure a devil's fork to spear him.

"You'll never get over pinching pen-

nies, Lance. Of course I'm expensive, but you can afford me." He could remember even now the sharpness of the pain awakened by his fear that she would leave him. And after she had got her divorce he could remember, too, the slow growth of relief in his heart, unadmitted at first, but welcome at last. Welcome because it brought knowledge, cynical but reliable. No one but Penster could have induced him to talk to a woman again about love.

He found the grilled gates Penster had mentioned and pushed through one and latched it behind him. Inside the grounds the hedge, taller than he, more than six feet high, shut him into a spacious privacy of clipped lawn and tended shrubs. The house was ivy-covered and remote; it reminded him of places he had seen in England. The bricks were old and, doubtless, dated.

AN OLD woman, gaunt and leather-skinned, let him into a wide hall.

"The others," she said, "are in the drawing room." By the others she meant Saturday's soldiers.

"I'm not staying," Woodley said. "I want to see Mrs. Blaine. I have a message for her."

The old servant moved toward a doorway down the hall and Woodley followed her into a small room lined with filled bookshelves. There was an old, carved desk with letters and papers neatly stacked on top of it. There was a gardening glove, soiled and worn, flung down on the gleaming surface. The woman, with a quick glance around the room, picked up the glove and withdrew.

Woodley had no idea how long he would have to wait. A fire laid in the hearth was unlit and the fog outside the windows was gray and depressing, but the room was somehow warm in its aura and comforting. He could hear a piano going somewhere in the house and men's voices, taking courage as the music possessed them, singing heartily.

When the door opened and Blossom Blaine entered, he turned without anticipation. She was tall. Penster had told him she was tall, and he had prepared Woodley, too, for her beauty, the warm olive of her skin, the soft dark hair simply arranged, the dark eyes lustrous and appealing. All of these things Woodley had known she would have, but he had not been prepared for her vitality. Penster had conveyed the impression of languor, of ethereal charm.

"Hello," she said, and offered her hand with a quick, firm clasp. She stood, faintly smiling, waiting for him to speak, but with the moment upon him he realized he had not thought out what he would say. "Tilda said you had a message for me?" Her glance was candid, appraising him.

"Yes," Woodley said. "Bruce Penster asked me to stop by to see you."

"Bruce?" There was surprise and  
(Continued on page 60)

Lance put his arm around her and turned her to face him. "I'm eligible for a goodbye kiss," he said

The long arm of the U. S. Government reaches out to crush the handful of chiselers and profiteers who would victimize their own country

# WAR FRAUDS MUST BE PUNISHED, NOW

BY FRANCIS BIDDLE

ATTORNEY GENERAL OF THE UNITED STATES

home-front traitors who see the nation's peril in terms of profits rather than lives aren't going to get away with this time. Enough of them have already found it out to make our record, so far, the best in any war we've ever fought

one here at home could send them defective equipment for the sake of larger profits to himself.

Yet looking at the isolated instances of fraud, within the broader picture of our vast war program as a whole, we need not be alarmed. We are not losing this war to our enemies within. Against the volume of our war production, the amount of real damage has been trifling. And we are going after those who are responsible, and hitting hard—not after the war is over, but now.

Anyone who thinks that war fraud is a modern innovation need only consult the record. Fraudulent transactions have, unhappily, entered every war we've fought. Charges were flying thick and fast during the Revolution—one, for example, brought by the Committee of Safety against a man who had purchased cloth on commission for the Continental Congress and had charged fifty per cent more than it cost. There were serious abuses connected with shipping. In 1776, Congress agreed to reimburse shippers if the cargoes they sent out should fall into the hands of the enemy. The claims for losses became so heavy that the guarantee had to be dropped. George Washington wrote to the New York legislature that he had "almost incontestable proof . . . that a ship went from hence, sailed with no other view and joined the enemy at the Hook."

In the Civil War, "remarkable combinations" were reported by a Congressional committee investigating government contracts in 1861. "The profits from the sale of arms to the government have been enormous, and realized, too, in many

instances, even by our own citizens, through a system of brokerage as unprincipled and dishonest, as unfriendly to the success and welfare of the nation as the plottings of actual treason."

The report goes on to cite a \$49,000 profit on a sale of carbines "at the very best not exceeding \$60,000 in value;" a 40 per cent profit on blankets for the Army; and "great irregularities in the purchase of horses and wagons." The same kind of transactions appear in records of the Spanish-American War, especially in the furnishing of food of poor quality at exorbitant prices.

## Shipbuilders Come Under Fire

In 1934, scanning the record of the first World War, a Senate committee studying the munitions industry found the wartime performance of certain shipbuilders "close to being disgraceful. . . . They secured cost-plus contracts and added questionable charges to the costs. . . . They secured changes in contract dates to avoid war taxes. . . . They bought from the government, very cheaply, yards which had been built expensively at government costs. In one case, this was prearranged before the yard was built. . . . Profits were concealed as rentals. . . . If there were no conversations about bidding among them, there was telepathy."

Four years after the fighting ended in 1918, the Department of Justice set up a "War Transactions Section" to comb through some 30,000 ordnance contracts, in the hope of recovering overpayments. All those contracts were marked

closed." For the investigators, the going at that late date was not easy. Witnesses and evidence were missing; the cases were "cold," and so was the public, which had had enough of war and everything connected with it. Yet the War Transactions Section managed to recover more than \$11,000,000. Although a few criminal cases were developed, convictions were even more difficult than money recoveries. The section finished with only one verdict of guilty.

Such lag in the administration of our laws is totally unnecessary and has serious consequences on public morale. We have executed spies and saboteurs; traitors have been convicted; fraud must be punished severely, and the time for prosecution is now. With a tremendous purchase program, we should not be surprised to find a certain amount of cheating; but in a war with the Axis, any cheating is too much; and any delay in the discovery, prosecution and punishment of those guilty of it is too long. Treachery is not a matter for library research ten or twenty years hence.

As a result of a suggestion from Congressman Hatton W. Sumners of Texas, chairman of the House Judiciary Committee, who was very much concerned with our experiences in the last war (he became a member of Congress in 1913), I set up a War Frauds Unit in the Department of Justice in February, 1942.

The nucleus of the new unit was formed with personnel from the Anti-trust and Criminal divisions of the Department of Justice, a staff well seasoned in the handling of kindred problems in peacetime industry. To head it, I picked Tom C. Clark, a 42-year-old Texan with a good prosecutive sense.

(Continued on page 78)

WHEN Americans are called upon to show how they can bear up under the strain of a crisis, their best is always a shock to their enemies; their worst, a shock to themselves. Along with our fighting men and the great body of grimly determined citizens ready to do their full part, we have a wretched little handful of chiselers and cheats, who would victimize their own country—the shoddy scattering of profiteers, black marketeers, ration-card phobers, and perpetrators of war frauds. Unmindful that their own skins are being saved from Axis terrorism, they go on twisting and devising and leeching, trying to fatten on the patriotism of their neighbors and the war emergency.

The picture they make in the midst of war is not a pretty one. Part of it has come before the public in the war-fraud disclosures made to date by the Department of Justice. Many of us have been shocked, some alarmed. It is hard for us to believe that while our men are dying death on distant battlefields any-

PEE WEE put a nickel in the juke box. He didn't understand juke boxes like this one. There was a life microphone on the front. From inside the box a girl's voice said, "Hello, darling. What shall we play?"

The girl had a lovely voice. Her voice made Pee Wee feel good inside. For a moment he was tongue-tied. Then he said, "I Had the Craziest Dream."

"Don't you want to sit down, Marine?" said the bartender. "There'll be no cover for a couple of hours and the beer's on me. I was lonesome."

No, sir," replied Pee Wee. "I don't want to sit down." He took a deep drink of beer and it felt good going down his throat. It was the first beer he'd had since he'd left Guadalcanal.

"Go on and sit down, kid," said the bartender, "take the weight off your feet. You look a little peaked."

"I sure thank you," said Pee Wee, "but I'd rather stand here, if you don't mind."

Pee Wee didn't tell the bartender that he hadn't been doing any sitting down lately—not for the last two months—not since the .25-caliber bullets hit him on his hip pockets.

The platoon was creeping through a coconut grove down the coast from Henderson Field. A sniper opened up on them. Gunny Sergeant Spear was hit in the neck. The Gunny yelled, while blood poured from his mouth, "Get behind a tree, Pee Wee."

But every time Pee Wee tried to get behind a tree there was an officer already behind it. So he hit the deck. Pee Wee was a big boy (his nickname was just a joke) and not all of him was hidden when he flopped in the grass. And three slugs raked across the seat of his pants. Pee Wee hardly knew he was hit, at first. He threw his '03 to his shoulder and squeezed two off and a Jap came tumbling out of a tree fifty yards away.

Pee Wee started to get up. His pants were soaked with blood. Gunny Sergeant Spear (he was wrapping his throat with a dungaree strip) laughed, spraying blood specks, and said, "Ain't you house-proud, kid?" Pee Wee laughed, too. But he wasn't laughing ten days later when Colonel Edson had him sent back to the States.

THE Naval Hospital at Bethesda, Md., the big Marine lay on his stomach for weeks and recovered slowly. His back side was still stinging when he was released and given a ten-day furlough. He didn't have any folks. So he decided to spend his furlough in New York.

He stood up all the way on the train. He got a room at the Sloan House. Then he wandered gloomily around town. The gay crowds seemed remote to Pee Wee, somehow.

He stopped and, in the dim-out, made out a sign which said that he was on 51 Street. Pee Wee went into a place called Jimmy Dooley's. And he put the nickel in the juke box and the bartender gave him the big glass of beer.

Pee Wee drank three beers and he made the bartender take money for the next two. Then he left the bar and went down the street. He was standing in front of a place called 21 Club. A big, gray-haired man and two girls got out of a taxi.

"Come on in with us, Marine, and have a drink," said the gray-haired man. He was a little drunk, but he looked all right, and the girls looked better than right. So Pee Wee went into 21 Club with them.

Inside, softened lights reflected on dark walls, and there were some good murals. And Pee Wee saw that one of the girls had red hair and one was a blonde. He liked the place, but he was

sorry there was no place to dance. They headed for a table in the corner. "Couldn't we just stand at the bar, sir?" asked Pee Wee.

The gray-haired man laughed and said, "There's no sense in standing, kid. We've got a reservation. You look as if you could use a steak."

Pee Wee stood behind the red-haired girl's chair while she sat down. Then he moved over to his chair and slowly lowered himself.

PEE WEE'S hips came in contact with the wood and he felt as if someone had rammed him with a bayonet. The red-haired girl was talking to him: "You didn't say what you wanted to drink, honey. So I ordered you a bourbon-and-soda."

"Thank you," said Pee Wee. The big man was talking with the blond girl. The red-haired girl leaned close to Pee Wee and she said in a low voice, "Let's leave after this drink. Sonny Boy here," and she nodded at the gray-haired man, "is getting pretty tight."

Pee Wee's seat was hurting him so, he didn't hear a word she said.

"Excuse me, please," said Pee Wee. He hoisted himself from the chair. He moved toward the checkroom and he felt as if his trousers were on fire and all the people in the room could see the blaze.

He was still stinging, fearfully, when he reached the sidewalk. He stood very straight and looked at the night sky. Then the red-haired girl came out of the club, alone, and she stood there, too, looking at him and laughing.

"I didn't mean for us to leave in such a hurry. But it's all right," she said. "You certainly take a hint. Let's go around the corner to the Stork Club."

"Is there a bar at the Stork Club where we can stand up?" Pee Wee asked.

"We don't need to stand up," she said. "I've some money. Don't worry."

"I wasn't thinking of money," said Pee Wee, "I haven't spent hardly any money in six months."

"Have you been on guard duty?" said the red-haired girl. And she put her arm lightly around his waist.

"There was some guard duty," said Pee Wee. He walked a little faster so that her arm was no longer touching him.

"Really, I'm not trying to grab you," said the girl. She seemed a little angry.

"Well, I would like to go to the Stork Club," said Pee Wee, "if we can just dance and dance. I don't want to sit down a minute."

"We'll have to have a table before we can dance. And I don't feel like dancing. I dance for a living. I'm tired—very tired, really. And I think you are, too." She was silent for a minute. Then she said, "I don't believe you like me."

"Yes, I do," said Pee Wee. And he thought what a beautiful fi-fi she was. And he tried to think of something good to say. But he was aching around the hip pockets so much that he could not say any more.

The red-haired girl had a hurt look on her face when she got into a cab.

So Pee Wee turned around and he walked back up 52d Street until he came to the place called Jimmy Dooley's. He ordered a beer and stood at the bar for a long time. Then he put a nickel in the juke box. And the girl's voice from inside the box said, "Hello, darling. . . ."

"Excuse me, please," said Pee Wee. He hoisted himself from the chair. He moved toward the checkroom; he felt as if his trousers were on fire

A SHORT STORY  
COMPLETE ON THIS PAGE

Mrs. Roosevelt enjoys a visit to the Women's Land Army in a tractor-driven haycart, during her recent tour of Great Britain

## They Talk Our Language Differently

By Mrs. Franklin D. Roosevelt

Only through understanding the likenesses and differences among peoples shall we begin to build foundations for a lasting peace. Until then "United Nations" will be only an empty term

YOU can hardly look at a newspaper today without reading somewhere the phrase, "the United Nations." Sometimes I wonder what that phrase really means. It seems to mean that the government representatives of the four big nations, fighting against the Axis powers today, and the governments in exile of certain conquered countries have agreed that they will co-operate to win the war and try to find a basis of co-operation, at least, for the policing period which must follow the war.

There is something far more comprehensive than this which must happen before we can really use the phrase United Nations and feel that it means what it says.

Anyone who reads the newspapers at home or is familiar with the people of the United States must know that while we have a few people whose traditions tie them closely to Great Britain, we have a considerable number who are critical of the British people. They find their mannerisms and the way they talk and act not only arrogant but sometimes almost unintelligible.

The British are usually looked upon as rather self-satisfied snobs who have a class system which gives great power to small groups and therefore is not deserving of consideration by people who believe in democracy. The British government is looked upon as imperialistic. British statesmen are paid the tribute of being wily and of seeking primarily the good of "The Empire," and the fear is

present that they will fool any American statesman even if he be a good Yankee trader!

The British have conquered many countries, and while it is acknowledged that they colonize fairly well, it is also accepted that their rule has meant exploitation of the conquered areas rather than development for the sake of the conquered people.

This gives us an opportunity to point with pride but not always with justice to the different objectives and achievements of the United States in their colonial possessions.

Nearly all American students get as far in American history as the American Revolution. Some of them never go beyond that point, and the books which they study are usually elementary books which give very little explanation of the reasons why certain things happened. The result is that the average boy and girl has developed a dislike for Great Britain. Most of them have never known

a Britisher, but they have seen him captured in the movies and in the comic and they think of him as a rather la-di-d gentleman with a title. The average boy and girl here admires the red-blooded man without any frills, who has made his own way in the world. He represents their own hope for the future.

This may seem like an exaggerated picture, but nonetheless it represents the feeling of many citizens in the United States of America.

Now we are in the war and suddenly we belong to something called the United Nations, and our soldiers are sent to Great Britain and Australia. The Australians are rather like Americans, so that does not create much difficulty, but our troops approach the shores of Great Britain with prejudices redolent of the "little red schoolhouse," now become the consolidated school, changed in physical aspects but very little in the type of teaching which goes on within its walls.

The soldiers who went to Great Britain

# Bigger than Paul Bunyan's Blue Ox

Three hundred and sixty pounds of meat per year for man for our armed forces! Billions of pounds for our fighting Allies! All in addition to the enormous needs on our home front. America's livestock industry is a giant of fabulous proportions. It accounts for \$3,300,000,000 of farm revenue in 1941. This year's production will be very much greater.

Trucks transport two thirds of all livestock to market. . . make it practical to produce meat animals on farms far from packing centers where no other transportation exists . . . handle meat on the hoof and on the hook with minimum loss and delay.

For it's meat you're worried about, depend on America's millions of motor trucks to do their part.

Joseph B. Eastman, director of the Office of Defense Transportation, recently stated: "Automotive Transportation is absolutely essential to the winning of the War. Goods must reach their destinations and workers must get to their jobs . . . on time." On the U. S. Truck Conservation Corps and keep your trucks in best possible condition. Your GMC dealer is pledged to help you.

made their first contact in Northern Ireland at Londonderry. Some of the boys in our American Army who like a fight are of Irish extraction, and curiously enough we find good fighting men straight out of Ireland in the British army. The greater part of Ireland—that part known as Eire—is, however, neutral in this war. They are exercising a right granted them by the British, who on the whole are pretty considerate of the rights of human beings. Ireland or Eire may be connected today with what is called "The Empire," or what would be described more accurately as a confederation of commonwealths, but Eire is free to stay out of the war.

This means that one of the first things to confront our boys is the fact that they may not cross the border line from Northern Ireland into Eire, and at some points this line is only two miles from our naval establishment. A man in uniform who crosses the line is open to internment for the duration of the war. The girls are just as pretty on either side, and there must be considerable temptation, because the boys in our Army are young, and youngsters love to break rules.

All this probably seems very stupid to them, but little by little, it probably has dawned upon them that here is something that goes very deep in the British character. The British may resent the attitude which the government in Dublin has taken, but they accept enlistments of individual Irishmen. They may let Irish girls come over to work in their factories, but they will not question the right of the Eire government to do whatever its constituted authorities decide they wish to do.

Immediately upon landing in Northern Ireland, or Scotland, or anywhere in Great Britain, the education of our men and the education of the British people begin. They have to work side by side. They have to explain themselves to one another. They discover the differences, even to the varied meaning of certain words.

A story was told me in one of our Red Cross clubs in Scotland about some of our American boys who saw a plateful of what they thought were biscuits on a counter. They asked one of the Scotchwomen who were volunteering to wait on them, for biscuits, and the Scotchwoman kept regretting that she did not have any, until finally an American worker walked in and explained that those plates held scones and not biscuits. A movie is a cinema, a druggist is a chemist, an elevator is a lift, an apartment is a flat, and it hasn't anything to do with a tire, and so on.

### Rationing Versus Hospitality

After about two weeks, however, I think it would be safe to say that there would not be a soldier in our Army who would not answer "Yes," if you asked him whether he had made friends and whether the people were hospitable. The ring of his voice would attest to his sincerity. Our paratroops had been five months in their training camp where I had a chance to talk to a number of them as they showed me their rather complicated equipment. There was not one who did not say he had made a lot of friends around the camp.

Hospitality for the British isn't so easy, because they are under a strict rationing system. Every person gets enough food for himself, and there is very little extra to hand out to anyone else. So if a Britisher asks someone in for a cup of tea or a meal, he and his family go short just that much in the way of food.

Of course, if he lives in a big house in

the country, even though he has very little domestic service, there may be certain things he can offer, like a chance to shoot over his land. One of our generals told me he spent a couple of pleasant afternoons shooting on a place which belongs to a British gentleman, high up in the British government. But few of the privates or younger officers get this opportunity.

The latter, if they are stationed near some big country house, may be asked in for a drink in the late afternoon because the rich man's cellars may still be well stocked, even though the butler has gone. On these occasions, amusing things sometimes happen.

The officers and men in our camps eat their evening meal between five and six o'clock. It is still the habit in Great Britain (even though you have to wait on yourself) to dine at eight-thirty in these big houses. In order to be hospitable, one family we met invited in a small group of officers, from a neighboring camp at six-thirty for a glass of wine, expecting them, of course, to go back to camp for an eight-thirty dinner. Instead of which, the men had already eaten. They were having a good time and conversation flowed on easily and time passed. The British hosts could not ask their American guests to stay for dinner; they simply did not have enough food for six extra persons, so the family ate their dinner at eleven P.M.! The story was told me with a great deal of understanding and amusement, with the remark that the men of the family had done a good deal of "grousing" because they had come down from their war jobs in London and disliked going without their dinner. That, I believe, is a characteristic of menfolk the world over.

### A Clothes-Buying Dilemma

On the whole, our boys are not very conscious of the restrictions imposed by the war on the British people, at least not at first, because the British say very little about it and are not given to much complaining. Gradually, our men make the discovery that the people are restricted in many ways. They get to know the girls and to know what it means to buy clothes on coupons. They find out that the girls in many of the auxiliary military services wear their uniforms all the time, for the very simple reason that their coupons will not reach over a civilian wardrobe as well as a military one.

If a girl has enough clothes left over

from before the war, then when she is off duty, she will scramble into civilian clothes if she is at home in the country or into something soft and feminine if she is at home in a city house or apartment, but by and large, she will have used up her coupons for what she needs for actual work.

When our Army passed the rule in Great Britain that our boys, if they were invited to someone's home, could dine on part of their ration and take it with them, it increased the acceptance of invitations by our men, because they were unwilling once they understood, to accept hospitality under existing conditions without making a contribution in return. Now they can take something from their own Army ration, and it has made for greater neighborliness between the British and the Americans.

### Where the Oranges Came From

I was given some orange juice in Liverpool when I spent the night with WRENS, and I discovered that when our Navy boys came in, they brought their own oranges (who do so much work for their own Navy and for ours as well) so oranges, which are practically impossible to buy anywhere in Great Britain. You may get an apple or a pear if you are on a farm or in a country house where there is an orchard, but there is little question of being able to buy fresh fruit, and what there is is very expensive.

The boys in our Armed Forces have found the R.A.F. boys willing to help them. In talking to some of our American boys whom I knew to have prejudices before they reached Great Britain, I have been greatly entertained to find what a little knowledge and experience with the British people will do. One boy I know has always been very prejudiced and still says that he does not like the British government and its officials, but he sings the praises of British workmen and ground crews in routine maintenance and repair work which they do on American planes. I am not sure that he doesn't think that they show greater skill and a greater sense of responsibility than some of our own workmen.

It is a slow process—this learning to evaluate other people who are like you and yet different in so many ways. Perhaps it is one of the great lessons we will have to learn if we ever hope to build a better foundation for peace—this lesson that human beings the world over have

# The Gun that sprang from nowhere

SOMEWHERE this minute, as you read this, an enemy of America is looking into the barrel of a gun from nowhere.

A miracle gun, if you please, that would still be a useless hunk of unshaped steel waiting to be machined—except for a discovery of scientists in a United States Steel laboratory.

What was the discovery? The secret of making two gun barrels in the same time it takes to make one.

Imagine what this means. Arms are flowing to our soldiers in constantly increasing quantities. One factory, for example, reports that it will make two years' output of gun barrels in *one year!*

And as if that weren't dramatic enough, these same men of steel have accomplished a similar miracle in the art of bomb making. Shaping bombs while still white hot metal. Finishing the bomb casting in minutes instead of hours.

Steel landing fields have been invented to cut the time of making an airport to mere hours! Helmets for America's soldiers that stop a .45 automatic bullet . . . Tanks of tougher steels . . . Ways to make machine gun bullets faster than ever before.

## What you can expect after the war

The world we live in will be years ahead of itself because of new war-born steel inventions. No other material rivals steel's useful qualities.

U·S·S steels have gone to war in tanks, in planes, in ships, in bullets. They'll be back better than ever. You'll find these U·S·S trade-marked steels building a new and greater America in the peace years to come.

to be approached as human beings and not as members of a race or as adherents of a certain religion, but just as people whom you may like or dislike according to their individual characteristics.

I may be a Chinese, an Arab, a Jew, an Indian, a Negro, a German, a Frenchman, or a Britisher, still I must be evaluated, if I am to be fairly judged, on the basis of being just a human being. We have never done this in the world before and we have never had peace in the world thus far.

One of our four freedoms states that we shall have freedom from fear. Freedom from fear, of course, means that, the world over, people will be protected from aggression, people will be protected from persecution because of their race or their religion. People will be safeguarded from hunger and want by an economy which takes into consideration the basic needs of all the people, the world over.

## A Basis for Co-operation

If that is going to become a reality, then the first thing we have to do is to learn to meet our fellow human beings as human beings, recognizing the fact that we will not love all of them or be loved by all of them, but we will love some and we must get on with all, regardless of differences of race or creed. Those who are evil will have to be restrained. We do that in our own countries everywhere.

The Chinese philosopher, Lin Yutang, says, in substance, in a recent article, that our moral attitudes the world over are the important factors, not what we know or what we have, but our ability to choose between right and wrong. This may be the basis on which we shall have to develop some of our future co-operation.

Our boys in Africa and in the Solomon Islands deal with natives who haven't yet had a chance to develop a very high type of civilization. These boys are going a step beyond their first contacts in Great Britain and Australia, and wide differences will develop; but the beginning of the development is in Great Britain. If we can build on the good will which Great Britain has toward us at the moment (largely brought about because, in the trials through which the British have gone, the generosity of the American

people has made them grateful) we are beginning a new era in the world.

Over here, it is hard to understand just what certain things have meant to Great Britain, because, while we have given money which has sent mobile canteens, ambulances, medical supplies, clothing, food, etc., in great quantities to Great Britain, we were only being generous, not sacrificial.

We have sent our old clothes, but they were things we could do without. However, the people who received them could not do without them. A woman in a crowd, for instance, one day, plucked at my sleeve and said, "I little girl would have been cold if it had not been for the warm clothes the children of America sent us."

The British people show their gratitude by wanting to do things for our American soldiers. They realize that coming into the war is a great help to their own boys who have fought in parts of the world for the past three years. But their gratitude goes deeper than that; it touches the lives of even one on that group of islands. It calls for a traditional feeling which I think is ingrained in the people of the United States and in the people of Great Britain: If we have received something, we want to make a return, at least in good will.

This is a basis on which we can rebuild, and I miss my guess if the boys who stay any length of time in Great Britain do not come back to fight down the old-time prejudices over here.

I think of the young Marines serving at the American Embassy, some of whom have been in Great Britain over a year. They responded warmly in the affirmative when I asked if they had made friends among the British people since they came over.

Really to be effective, the United Nations will have to build among the people of all the nations an understanding such as is now growing between the people of Great Britain and the people of the United States. It will be slow, but the building of a peaceful world is not something to be accomplished by the writing of a treaty. It takes time to work out the relationships of men and women, but we hope for peace, it must be done, and I think a good beginning has been made since we entered the war and began our association on the British Isles.

THE END

# So Small a World

By Paul Ernst

ILLUSTRATED BY  
JAY HYDE BARNUM

It was later than they knew, and unhappiness was a luxury in which neither one could afford to indulge

Vin said evenly, "Why, hello, Linda." . . . "Hello," she said, as evenly, as brightly impersonal. She was with a man whose appearance proclaimed him someone pretty eligible

THIS cocktail lounge was new within the year, which was why Naval Lieutenant Vincent Maller headed for it. No memories, no associations with the past. The doorman, all aglitter with braid, gave him a grin like white keys on an ebony piano. "Hi, Admiral," said Vin.

The lounge was crowded and at the bar only a few stools were vacant. Vin saw Tazey Williams at the bar as stolid as a slab of beef, and started toward him; and then Vin saw Linda at a table dead ahead and he stopped again, wheels sliding, brakes grinding, and with a nasty piercing stab making itself felt in the region of the left shoulder blade.

There she was, full red lips impatient, impulsive and imperious: brown hair sleek and with mahogany tints; gray eyes wide and self-possessed—but not right now. The held confusion in them now, for just a second, and Vin was glad to see this. He wanted Linda to be jolted when she looked at him, just as he was jolted when he looked at her. He said evenly, "Why, hello, Linda."

"Hello," she said, as evenly, as brightly impersonal.

She was with a youngish man whose appearance proclaimed him someone pretty eligible.

"Down early this year, aren't you?" Vin asked politely.

"A little," Linda replied. "We opened the house yesterday. Stop in, if you have a minute."

"Oh, sure," said Vin. "Oh, certainly."

He went on to the bar and saw that Tazey Williams had watched the little encounter with Linda and each step he took after it. The Navy world was small, even in Washington with Annapolis regulars scattered like drops in a bucket. Again and again you ran into people. You couldn't miss it seemed.

"Martini?" asked Taze. Vin nodded, Taze knew him pretty well. They were both s.g.'s, same class, same ships until a year ago.

Vin climbed onto the next stool, not needing to bend his legs much for he was tall. He was almost too lean, with a triangular look to his dark face, and with a harshness of line under his officer's uniform which made you feel that if you hit his body anywhere the sole result would be bruised knuckles.

"You might have tipped me a wink," he said to Taze. "You saw me come in, and you knew she was here."

"You two darn' fools!" said Taze.

Vin didn't bother to reply to that. He took the glass the bartender put before him.

"You going to spend the rest of your life running out back doors to get away from her, Vin?"

Vin didn't answer that one either.

"It isn't as if you were getting over it. You're not."

"All right," said Vin. "Set another course, will you?"

Tazey shrugged and did so. A hundred and ninety pounds of pseudo innocence, he rambled along about the Yard, work on his boat, the Byrd, and the destroyer Holmes, of which Vin was second in command; about the no-doubt unintended benevolence that had berthed the Holmes and the Byrd at mild (Continued on page 47)

# YOUR CHILD CAN SHOW YOU A NEW WORLD

MANY a time, when the going got tough, you've probably given your child a helping hand with his homework in geography. But now the picture is reversed. Today your child can help *you* with *your* geography.

Today it takes less time to travel from New York to Moscow by plane than from New York to Miami by train.

His modern geography book is unfolding him a world that didn't exist when you went to school. A world, for example, in which planes are spanning the Atlantic in a matter of 400 minutes—and a man can travel from New York to Moscow by plane in less time than he can go from New York to Miami by train—and the route from New York to Bombay is not a 3-week voyage past Gibraltar and Suez, but a 40-hour flight where the way stations are Iceland, Oslo, and Moscow.

In this new world, the "rowboat" geography you studied as a child has been supplemented by today's "aviation" geography. The earth, and all the people on it, have become a global

community. And rather a small one, at that.

Barriers have been leveled off. Oceans are small bodies of water separating nations which

From New York to Chungking, China, by train and ship, is about 11,300 miles—at least a month-long voyage.

By swift long-range plane — via Fairbanks, Alaska—Chungking lies only 7500 miles, or 38 hours, from New York.

must now become either friendly neighbors or close enemies. No spot on the globe is more than 60 hours distant from your local airport!

This is the world your child is being taught at school. And it is *our* world, as it really is.

We must quickly learn to understand it. For only then can we look beyond the horizons of the present toward the future and its promise.

One thing is already as clear as though written in mile-high letters in the sky. Our growing air power is today becoming a mighty weapon in our hands for Victory. Tomorrow it will be one of the implements with which freedom-loving nations can help build and enforce an enduring peace.

A German bomber squadron based in Norway could, by flying approximately the same distance, bomb Washington, D. C., Chicago, or Seattle.

It is this vision which today inspires the tens of thousands of American men and women whose life and job it is to build the finest aircraft in the world, faster than they have ever been built before.

## Consolidated Aircraft Corporation

San Diego, California • Fort Worth, Texas  
Tucson, Arizona • New Orleans, Louisiana  
Member, Aircraft War Production Council

### QUICK FACTS FOR AIR-MINDED READERS

There are 2 American four-engine bombers flying on today's world battle fronts. One is the Flying Fortress (B-17), designed by Boeing. The other is the Liberator (B-24), designed by Consolidated.

Consolidated has been a big-plane builder for more than 15 years. The company is 20 years old. Today, in addition to the Liberator (B-24), Consolidated also builds the Catalina (PBV) Navy patrol bomber, the Coronado (PB2Y) Navy patrol

bomber, and the Liberator Express (C-87), transport version of the Liberator bomber.

Of the many tens of thousands of aircraft workers at the Consolidated plants in Fort Worth and San Diego, almost 40% are women.

Consolidated was the first to build long-range bombers and huge transport planes by mass-production methods, on a moving assembly line.

Liberator bombers and transport planes have broken all records for both trans-Atlantic and trans-

Pacific flight. One Liberator flew to London in 400 minutes. Another flew from Australia to the U.S. in 35 hours, 53 minutes.

The globe-girdling Consolidated Liberator, dubbed "Gulliver," which carried Wendell Willkie on his 31,000-mile round-the-world flight, was the first plane ever to span Siberia and cut across the Gobi Desert and Mongolia, the first to fly from China to the U.S. via Alaska.

The Consolidated Aircraft plants at Fort Worth and San Diego cover so much space that company messengers are equipped with bicycles and motor scooters.

Through the use of wood plastics, Consolidated is now saving 200 pounds of precious aluminum in the construction of each Liberator bomber.

How fast will the planes of tomorrow fly? A new wind tunnel is now nearing completion on the West Coast which will enable aircraft manufacturers to test planes flying at speeds approaching that of sound itself—741 m.p.h.!

On Consolidated's assembly lines there will soon be gigantic planes which will literally dwarf even the huge Liberator.

# DAIRCRAFT DESIGNERS AND BUILDERS OF THE LIBERATOR, CORONADO, CATALINA, LIBERATOR EXPRESS

*How American it is... to want something better!*

THE HOME YOU'VE DREAMED ABOUT—the colors you're going to have in the kitchen and what is going to grow in place of the weeds in that flower bed—maybe the war has made you *postpone* it, but how *American* it is to plan, to search for, to *want* “something better,” all our lives. It keeps us young, perhaps, and certainly keeps us awake and alert, this constant *habit* of wanting better things!

WHEN IT CAME TO PICKING AN *ALE*, America followed its “something better” habit. And the ale that turned out to have this “something better”—to live up to the “Purity,” “Body,” “Flavor” of its now-famous 3-ring trade mark quite *naturally* became...

*America's largest selling Ale*

*To speed the day when we can have more “better things” buy war bonds and stamps*

# BEHIND THE WALL

By Tosha Bialer

lingering death for those who submit, sudden death for those who do not—that was the choice left for Warsaw's once-flourishing population of six hundred thousand Jews as the New Order moved in and took over

## II

THROUGHOUT 1941, we ran a race against frightful odds. Whatever obstacles we overcame, the Germans erected more. Whenever we managed to adjust ourselves to conditions, they threatened the screw.

They took every conceivable step to halt the black market that kept us alive. Our enemy, the wall, was ever still. It grew higher, and its top was strewn with broken glass. Where a gap showed, it became thicker and stronger. Gangs of men worked on it every day, at some points making it bulge out, at others bringing it farther in. These contortions were called "corrections" and were directed against any possible illegal outlet.

All these corrections in the wall took something away from our living space, swallowed up houses, and forced the Jews who were dwelling there to move on to find another lodging, thereby increasing the congestion still further. Many families found themselves in that plight not once but several times, with no chance to take their possessions with them, and were forced to wander around, sometimes for days, before they could find shelter.

The Germans began to hunt our men in the streets. They were caught like animals and carried away to slave at back-breaking jobs in the outside town. Late at night they were brought back and dumped inside the gates, drained of all strength. The less hardy never returned. We did not let our men go out on the streets unless it was absolutely necessary, and then they were preceded by a woman who would scan the surroundings and give a warning whenever she sighted the Gestapo.

One morning we woke up to find a number of Jews lying dead in Kupiecka Street. They had been caught outside the wall. The Germans had shot them down where they found them and then thrown the bodies into the ghetto. We never knew what business they had been engaged on or whether they had passes or not. The Germans were not troubled by little technicalities like that; they shot first and didn't bother to ask questions after.

There is an old prison, ironically the only place where non-Jews were allowed to live in the ghetto and share the air polluted by the Jews. The German aptitude for thoroughness in everything had made that prison a sinister place not only inside but all around it. In all adjoining houses every window had to be kept closed and locked, every shade permanently drawn. The people living there were condemned to be without light or air. They were forced to burn candles all day, to breathe the same foul air day after day, and were in reality worse off than the prisoners themselves.

One afternoon a woman in one of those houses on Inozielna Street, opened the French windows that led to a balcony and stepped out into the open. She may have momentarily forgotten the order. The craving for a breath of fresh air may have suddenly become overpowering. Or perhaps she was suddenly taken ill and needed help. We never knew, and nobody ever will know, because the moment she appeared she was shot to death.

For our own sake and the sake of our families, we were terrified at any harm that might befall our jailers, because lightning reprisals would always strike at us. Day by day we saw friends and relatives murdered in retaliation for deeds in which they had no share, of which they had no knowledge. On one occasion a Polish policeman had been killed on duty. The Gestapo carried out an extensive search, in the course of which one building, at Nalewki 9, put up a stubborn resistance for several hours. When the defenders were finally overcome, fifty-three male inhabitants of that building were dragged out and summarily shot.

Another time—this happened later, on April 17,

Eternal topic of ghetto street conversation is food, for which there is a never-ending search. Children like these are the worst sufferers under the starvation rationing system enforced by the Germans

A ghetto policeman on duty. The Gestapo set up a Jewish police force, gave it no arms, but did give it responsibility without authority. It does the best it can to maintain order among starving people

Homeless, hungry children, some orphans and others hopelessly lost, have a hard time. These sleep in an abandoned newsstand

A street vender of vegetables. He collects ration points for each tiny allotment. Note bricked-up fronts of bombed buildings

Everything he has suffered is clearly and eloquently written in the face of this man who was once a prosperous citizen of Warsaw

1942—fifty Jewish policemen who spoke German were ordered to report to the Gestapo. Nobody knew what had happened, and everybody was terrified of what would happen. There is one incident during that night's raid of which I have firsthand knowledge and which will serve to illustrate what went on all over the ghetto. Two heavily armed Gestapo men in uniform ordered a young Jewish policeman, hardly more than a boy, to take them to the house of a certain Mr. Blajman who lived on Dzika Street. He was a baker, respected and well liked. The family and guests were just sitting down for the Sabbath meal when the police arrived. Curtly, Mr. Blajman was told to come with them. His wife, in an agony of fear, pleaded with them to let him finish his dinner.

"Don't worry," said one of the Germans, "you'll have him back very soon."

"You'd better give him his overcoat and a muffler; it's cold outside," laughed the other.

The Jewish police boy looked white as a ghost and was trembling all over. The others in the family were all standing like statues, looking desperately from the Gestapo men to Mr. Blajman, who was quietly putting on his overcoat and not saying a word. He went to his wife and embraced her, then disengaged himself and stepped out into the night with the others.

The German had spoken the truth.

Not more than five minutes had gone by when Blajman was brought back. But this time he was dead. The four men had walked through the pitch-dark streets. After several corners had been turned, Blajman was ordered to step out in front. One German flashed his light quickly, and in the same instant the other put a bullet through the baker's back.

Many more were hunted up that night and killed. We never learned the reason.

That winter of 1941-42 was extremely severe. There had not been such low temperatures for many years—and we in eastern Europe are accustomed to cold. Fuel was scarce and terribly expensive. A ton of coal cost 3,000 zloty, more than \$500. Wood was wet and refused to kindle. Nearly all of it went to make coffins, for the death rate was going steadily up day by day. To conserve the precious warmth, we opened our windows less and less as the weather grew colder. The smell and the smoke in our overcrowded quarters made us sick, but letting in air meant freezing to death.

#### Furs for the Germans

In December we had a cruel blow when Commissar Auerswaldt ordered us to give up all furs we possessed by the twenty-sixth of that month. Every scrap of fur was to be seized; all fur-lined and even fur-trimmed garments had to go, because it was not permitted to rip off

the fur and keep the cloth. On the twenty-sixth, a bitterly cold day with a howling wind, we stood in line before the council building and waited our turn to hand over the only protection we had against the murderous season. The members of the council were the most tragic of all, for they had to inflict this new hardship on their own people, as executioners for the enemy.

As 1941 drew to an end, our long suffering began to tell on us. Our resistance was waning, for we never at any time had enough to eat. You cannot permanently feed a community of 600,000 people on the black market. It was impossible for the haphazard business of smuggling entirely to replace the regular channels of supplying a city with food under normal conditions. What came in was always far too little, and even that quantity grew less as the German net became tighter. With the increase in risk, the smugglers got bolder and more unscrupulous. Substitute products began to displace the genuine articles, while prices went sky-high.

There were many kinds of hunger in the ghetto. The few who could still pay bought what they got to eat from "under the counter." They were by far the best off, but still they were hungry.

There were tens of thousands of families who could not afford black-market prices and had to depend on the rationed goods for sustenance. Slow victims of undernourishment, these. Their teeth de-

cayed and fell out, their hair and nails refused to grow, their eyes became great sunken hollows in fleshless faces, and their stomachs were repulsively bloated.

And, finally, there were many who had exhausted their funds entirely. These miserable travesties of human beings picked up what they could find in the streets and in garbage piles, consuming the rest of their strength in the awful fight against real starvation.

Disease and epidemic found an easy harvest. Tuberculosis took an increasingly heavy toll. Worst of all, spotted fever broke out and raged uncontrolled for months. Thousands upon thousands perished from this devastating plague which played havoc with the condition of filth and overcrowding in the ghetto.

#### The Threat of Plagues

It drained away the strength of our already overworked and weakened doctors and nurses. Our feeble medical resources were hopelessly unprepared to cope with its ravages. There were no hospitals in which to isolate the cases, no adequate means of disinfecting buildings. Cleanliness was impossible, and there was absolutely nothing to prevent the plague from spreading. We could only hope and pray that by some miracle it would pass us by.

Toward the end of that year we learned that there were people who had reached a degree of suffering even worse

# *They bet their lives*

**T**HERE is a big, open, well-lighted factory spreading its acres out on the flatlands of a Middle Western state.

There's a long assembly line where Buick-built Pratt & Whitney engines grow, test cells where they get an hours-long going-over under power, another line where they are torn down, inspected, put back together—and back of all, huge factories in Flint where countless parts take shape.

And there's a sobering thought that rides with every part through every process, with every engine down the line, with every packing case that carries a finished engine off for installation in a plane.

That thought is this: Some day somewhere an American flying crew will bank their very lives on the way we build that engine.

They will stake everything on it, and on the perfect functioning of every one of its thousands of parts.

They'll trust it to carry them through overcast and ack-ack fire, to hold

them steady through the bombing run, to help them wheel and dodge in combat with enemy fighters—to carry them home again, safe and sound and able for more.

Maybe your boy will be in that crew. Maybe ours will. Maybe someone who once proudly called himself a Buick man—there are more than 3,000 such now wearing the uniform.

Good people, do you think Buick is insensitive to that?

Do you think anybody with as many good and loyal and trusting friends as we gratefully can claim can do anything but his unstinted best under such circumstances?

You bet your very life we can't!

And because we can't, flying men can bet their lives on our work.

# Better *See-ability* means better work ability

**MOTHERS IN OVERALLS** are one of the many examples of tough American grit the Axis never figured on. These eager family women are drilling, welding, inspecting, performing a thousand-

and-one different tasks that require keen *see-ability*. Keen vision is most important for fast, accurate production. Guard it with good lighting at work and at home.

Wrong light at home, such as above, is injurious to the eyes and actually wastes good light. Shadows caused by the wrong placement of the lamp, make seeing difficult, soon strain and tire the eyes. A very easy way of correcting this faulty lighting is suggested at the right. The lamp should be placed so that light

comes over either shoulder. This prevents shadows on the reading matter. Many other simple ways of getting better *see-ability* from your present lamps are described in a new booklet, "How to Get More Light For Your Money". Write Westinghouse Electric & Mfg. Co., Lamp Division, Dept. R-1, Bloomfield, N. J.

Make sure you get all the light you pay for by buying Westinghouse Mazda Lamps. They stay bright, last long, and give utmost light for your money because they are built to the highest standards of quality and performance.

★ MAZDA LAMPS ★

FOR BETTER SEE-ABILITY

than ours. Small groups of harassed and frightened individuals began to straggle into the ghetto, escorted by the Gestapo. Nearly all of them were old men, women and children, miserable and poor, whose eyes reflected unspeakable terror. They were Jews from small towns and villages in Poland, and their story was a pathetic one. Ten minutes had been given them to collect the few belongings they could carry with them and to leave for parts unknown. Before departing they had been forced to set fire to their huts and barns; with their last look back they had seen the flames devouring the only homes they knew. The younger men were carried away to slave in mines or quarries for the Germans.

Upon reaching the ghetto, they were first sent to quarantine. They they were dumped on the Jewish Council; the Jew could take care of his own. This new influx was embarrassing. There was no room, no food, no facilities for the newcomers, who had nothing but what they carried with them. But there was no other way out; we had to absorb these people. We became desperate as more and more of them were driven in, coming from all parts of Poland. Reception quarters were arranged in former schools and other public buildings. Whoever could helped out with blankets and cooking utensils. At least we still had a little more than they did, and this we could share with these unfortunate peasants, the poorest of the poor, uprooted from their lands and unceremoniously planted in a strange and fearful city. Odd as it may seem, I believe we gained renewed strength from being able to help those people even more miserable than we were.

### The Wall Moves In

In December the wall moved again, this time to exclude the Jewish cemetery from the ghetto. Too much smuggling, said the Germans, had been going on through the cemetery enclosure, which bordered on an ancient part of the city. From then on, in order to bury our dead and visit their graves, we had to obtain a special pass. One lane was left open and a gate set up for the burial carts and pedestrians to pass through the wall to the cemetery. The coffins were not permitted to be nailed down before reaching the gate. Grim scenes occurred there when the carts were stopped by the guards before rattling through. The lids would be ordered taken off the coffins, and the guards would poke about inside with their bayonets, searching for contraband. There were often a number of corpses in one large coffin, and from this they would be tumbled in a grotesque heap of tangled arms and legs, white skin and bones, naked and miserable, like a caricature of a Rubens Last Judgment. This was death without tears, without dignity.

The ghetto had become a haunted town full of weird sights and unreal shapes. Death reigned in every house and on every street, was on every person's lips, had become the only industry. Everywhere undertaking establishments had sprung up, covering the entire ghetto, filthy little shops providing miserable coffins crudely put together. The carts that carried them to the gate were pushed or drawn by relatives of the dead. There were no horses to pull them. Undertaking was the only business left in the ghetto. The undertakers charged very little for the scant services they could perform, but even this was beyond the means of many people, who were therefore unable to bury their dead.

It is a gruesome feeling to be walking along an unlighted street at night and suddenly stumble against something

which had once been a human being but is now a corpse rotting on the pavement covered over with a few newspapers held down by bricks. There were many of those piles in the streets that winter. They would lie there until the garbage truck passed on its round, often at irregular intervals.

Pitiful characters wandered about during the daytime, men and women wearing an old overcoat and, as far as could be seen, nothing underneath. In order to protect themselves, some had wrapped feather pillows around their waists and tied them fast with string, presenting a sadly grotesque appearance.

It became dangerous to walk in the street with a package. From nowhere robbers would jump out and seize it. Hurriedly they would tear off the wrapping and stuff the contents into their mouths without waiting to see what they were, in the hope of getting food. One poor man who tried this was badly fooled: the package contained bleaching soda. I saw another burglar fall down on the pavement and cover with his body the loot he had just snatched. The robbed woman screamed and attracted the attention of passers-by, who stopped to help. They beat and kicked the man, who lay still and took the punishment but refused to give up the package.

Such sordid scenes made us deeply ashamed of the level to which we had sunk. Gone were all decent standards of conduct, all civic virtues, all the dignity of man.

The only places we could gather during the daytime were the numerous small coffeehouses, whose growth had paralleled that of the undertaking shops. These places were a testament to the ineradicable optimism of our people. Most of the shopkeepers had long since sold out their stocks. As new merchandise was unobtainable, the stores would be forced to close down. But the owners believed firmly that the day of deliverance would come and wanted to be there when it did. So they converted their empty shops into coffeehouses. They served worthless substitutes: grain coffee, with candies and pastries purchased on the black market and adulterated by mixing and shortening. The coffeehouses were a haven where we could escape from the narrow confines of our one-room home, keep warm for a while and find company.

Curfew at 9 P. M. left no time for night entertainment. The families gathered at home and told one another the news of the day that had trickled in: whether so-and-so had finally died and what was going to be done with the children; how Zobrisky had actually managed to smuggle in two pounds of potatoes last night; or how a Gestapo official had struck one of the council members with his riding whip that morning. The only other pastime we had on these miserable evenings was a dull game of cards. Any step on the stairs, any knock at the door would send our hearts into our mouths. There was a constant atmosphere of gloom and fear in the room. Our men always kept their overcoats in the kitchen, so they could escape by the back stairs when the Gestapo raided the house.

### Worship Under Duress

Nor could we observe the rites of our church in any strict sense of the word. The Liberal Synagogue was outside the ghetto, and we did not dare to use the Orthodox synagogues left inside. We were afraid to congregate in large numbers in a place of worship, as this would offer an opportunity to the Germans for massacre. Whatever rites we still observed were performed in private,

with no more than the prescribed ten persons that in our creed form a congregation.

No schools were left in the ghetto. The Germans had decreed that Jewish children should receive no education whatsoever. We refused to let our children grow up to be ignorant savages, so we organized small groups into classes, with courageous men and women venturing to do the teaching.

Strange as it may seem, there were few suicides among the ghetto population. The determination to survive held strong to the bitter end. The Germans openly complained about this state of affairs, having hoped for a more rapid extermination. They drew unfavorable comparisons between our resistance and their experience in Vienna, where the Jewish population had killed themselves in an unparalleled wave of panic. They protested to be unable to understand why we continued to hang on, but I think that in the back of their minds they had some inkling of the truth: that we had no faith in the duration of their reign and were convinced beyond all doubt of their ultimate downfall and destruction.

Now that they had curbed us and reduced us to the minimum standards of existence, the Germans sent their soldiers "light-seeing" in the ghetto. Individual soldiers could seldom obtain the necessary permit to enter, even if they had wanted to, either because of the danger they might encounter in the ghetto or because of jealousy between the Gestapo and the army. But their pleasure trips in *masse* were not only tolerated but systematically organized. They came rattling in on army charabancs, forty or fifty at a time, well fed, warmly clothed, broad-shouldered and overbearing, and made the grand tour. With wide grins they took in our humiliation and misery. Pointing at us with disgust and scorn, they would tell one another: "Now you see how filthy those Jews are and how wise it was to shut them up together and let them stew in their own dirt."

### The Lower Depths

The year 1942 brought nothing but more suffering. Life slowed down still further, and the people in the ghetto looked more like ghosts than ever. Dirt and disease kept increasing all the time. Starvation was widespread, and led to bysomal depths of depravity. In the back yards the garbage was piled mountain-high. It had not been collected for months because the Germans claimed that Jews had been smuggled out in the garbage truck. All winter the filthy piles had been frozen and covered with snow. In the spring they thawed and filled the air with a sickening stench. Rats and mice nested in the dumps, and we had to keep the children from playing in the back yards—the only open spaces we had.

Unnatural conditions breed unnatural facts. Life seemed to balk at being renewed in such adverse circumstances; no babies were born any more in the ghetto.

Early one morning in February, 1942, we were awakened by unfamiliar sounds coming from the street. Looking through the windows, we saw nothing but a cold, gray morning shedding its bleak light on an empty street. From the distance came a peculiar shuffling noise punctuated by sharp clicks. As this sound drew nearer, a line of human beings came into view, wearily stumbling and dragging along in the last stages of fatigue. Escorting them was a squad of Storm Troopers armed to the teeth and marching in step with precision.

Thus arrived the first batch of deportees from Germany, headed for what

the Nazis called resettlement in the east. They were from Königsberg in East Prussia, about five or six hundred Jews from all walks of life—decent, respectable people. They had left behind parents, children, and wives.

When they had gone through the usual quarantine nonsense, they were put in the hands of the council, one more burden for the distracted members. Then the Gestapo despoiled them of everything they had carried into exile: stripped of their meager belongings, penniless, and bereft of hope and strength, they were led out again. We were told they were to be settled on a reservation near Lublin.

Many other processions shuffled through the ghetto and out again in the wake of these. I have no firsthand knowledge of their real fate, but grim reports trickled in to us. Between Warsaw and Lublin, the stories went, the Germans would dispose of their charges in several different ways. One was to shut fifty or sixty of them up in a truck and then fill it with gas. Another was to leave them starving by the roadside. Or, when they got tired of such slow methods, they would simply machine-gun them in large batches. The executioners in this organized mass murder were officially termed "Extermination Squads."

### Escape from Hell

As the days became warmer and the sunshine crept into our frozen bones, we began to take stock of the winter's toll. Our ranks had been fearfully depleted by the cold, by spotted fever and other diseases. But what terrified us more than anything else was the growing scarcity of food and the sharp rise in deaths from starvation. The realization came to us with startling clarity that unless we obtained relief in a very short time, we could not hope to survive. This was bitter indeed, but we could not let the thought drive us into resignation or apathy.

There was nothing we could do about our position, yet we had to hold fast to the will for survival, even if we should be left with nothing else. Meanwhile we would place all our faith and hopes in a speedy victory for the Allies.

Then one day, when spring had passed into summer, a miracle happened to me and my family. Through an amazing set of circumstances which cannot be told because it would mean death to all who aided us, it was made possible for us to leave the ghetto. Early one morning we crossed the border for the first time since November, 1940. As we passed through the Leszno gate, I carried my little son, born in captivity, and held him tighter when for the first time he breathed air that was free. A wave of emotion surged up inside me: grief at leaving my country, fear for my people left behind, and anxiety for our own future. But the thought that it was to be a free future steadied me, and I marched confidently forward.

Of those whom we left behind, I can say little. This is the third winter they will have passed through, and how many will survive it I cannot say. There can hardly be many left now.

I, who have lived with them through dark years, who shared their bitter fate, humbly bear witness to their martyrdom and offer this chronicle in memory of those who died in the ghetto, and as a tribute to the courage and determination of those who are still living there in torment. I join with them again in the prayer for a new world in which they will resume their place as free human beings.

# UNDER CONTROL

By William O'Farrell

ILLUSTRATED BY HARRY MORSE MEYERS

It wasn't much of a home—just a trailer, as a matter-of-fact—but she loved it and he didn't. Such a difference usually winds up in a divorce court. Here is one that surprisingly did not

**T**HE alarm clock clanged viciously in the night, jerking Bill Libbey back to consciousness. He pulled himself upright on the narrow bunk and his hand, groping through the darkness, found the alarm clock and turned it off.

Then, "How's the fire?" he called. It sounded like "fiah" the way he said it.

Mildred pushed aside the curtain, which, during Bill's sleeping hours, divided the trailer into two compartments, and the light streamed in around her slender figure. "Evenin', honey," she said. "The fire's out, thank goodness; your breakfast's ready. Are you comin'?" Her speech had the wind of West Texas in it, the vowels were long drawn out, like the sighing of wind over flat plains; they whacked into the foothills of her consonants sharply but not unpleasantly, the way the wind does in West Texas. "Comin'?" she repeated.

Bill didn't answer and, when she turned back to break an egg in the already sizzling pan, her eyes were worried. He swung his feet to the deck and laced on his high shoes. As he washed in the folding basin at the rear of the trailer, she quickly transformed his bunk into a couch and, five minutes later, at 10:35 P. M., he sat down to breakfast.

Bill looked at the trailer, at Cook sitting on the steps, at Mildred busy with bandages. Beyond the fire break men still worked, smoke whirling around them.

"So," he muttered, "after six days they finally got it out."

She smiled. "They had to call on the Army to get it out. The soldiers and firemen passed here about eleven o'clock on their way home. They said there wasn't a house or a blade of grass left for eighteen miles on the other side of Ramona Canyon, all the way from the ocean four miles inland. But it's under control now. They brought—" her smile faded. She set the coffee pot on the table and looked at him with dismay. "Well, Bill! I do believe you're sorry! I do believe—"

His face was taut. Under the fading tan, which even the sunless hours a "graveyard shift" could not completely obliterate, little lines of chagrin showed plain. They made him look suddenly old, older than thirty-three years. He got to his feet without speaking and took the two steps to the trailer door, opened it and jumped to the ground.

Mildred hesitated and then followed him. They stood in their own little fence-enclosed trailer-car "patio," among the flowers and vegetables which she had planted during the warmer months, and looked northward across the mesa to where the near-mountains ran down to the Pacific. The ridge was blackly dentate against a dull red glow on the horizon, but the forest fire was dying. There could be no doubt of that.

He looked at the dying fire, and Mildred looked at him, and presently his shoulders, which had seemed to sag, snapped back again. In a determined voice he said, "Well, that tears it, I reckon. But it don't make any difference. We're pullin' out of here regardless."

Mildred said slowly, "You were willin' for them to burn us out. You wanted us to get burned out so's we'd have to move on again." Then, in a mourning crescendo, "What kind of a husband are you, Bill Libbey?"

**S**HE turned away and had already climbed the trailer steps before he caught her hand. "You ask me a question like that!" he said angrily. "I'll answer it! I'm a husband with a crick in his neck and a sore spot in his head from bangin' it on a five-foot ceiling. I'm a man that wears hisself out six and seven nights a week buildin' big, beautiful bombers, and then he comes home to a two-by-four trailer!" He almost spoke the word.

"It's a home, isn't it? You're makin' good money, aren't you?"

"A lot of good it does me! Comes a free night every once in a blue moon, I'm too tired to do anything but sleep." He looked up at her, standing above him on the steps. Anger, if anything, had made him even lovelier and his voice took on a pleading note. "Look, honey, I'm not the only one. Lots of the fellows feel this-a-way. There's plenty of jobs back home now; they want to get back there before they're gone. Tom Cook's goin'."

"Oh!" Mildred was outraged. She tried to wrench her hand from his grasp. "So Tom Cook's got that itchin' foot again, has he! Well, he can just scratch hisself. I'm just about fed up with his chasin' job, and you chasin' him, and me chasin' you around this country. This trailer may be a poor excuse for a home but it's the only home I got. I'm stayin' here. And think it's time for you to figure out whether you're married to Tom Cook or me!"

She jerked away from him, and slammed the door. A split second later, however, she opened it wide enough to ask, "Or could it be that Estelle Morgan's movin' out, too?" and then slammed it again. Bill swore helplessly. His little coupé was parked by the door, the spare tire within striking distance of his hand. He struck it and, in the dark, his clenched fist hit a metal projection. It hurt. Grumbling, he inspected his hand, and the sight of the stumps where his index and middle fingers should have been made him swear again.

If it weren't for those missing fingers he'd be in the Army, he'd be out of this monotonous night-after-night grind. Mildred would be at home in Texas waiting for him, proud of him, and he'd have something to look forward to when it was all finished. The way it was now, the only thing he had to look forward to was more rivets—row after endless row of them—and, at the end of each back-breaking night, the restless, daylight half-sleep of a (Continued on page 42)

INSIDE VIEW OF A HEALTHY SOLDIER . . . This X-ray picture in minute detail shows Army physicians that his lungs are sound—free from tuberculous infection. It was made on Kodak X-ray Film in “the greatest tuberculosis hunt of all time.”

REJECTED . . . serious tuberculous infection. Not only is a man unfit to fight kept out of the Army—for the first time, perhaps, he learns of his condition, and begins his own campaign against another enemy which can be conquered.

# Kodak X-ray Film helps guard our armed forces against Tuberculosis

**E**VEN war has its bright and hopeful side—even this war of frightfulness. It is bringing the surest, most conclusive test for tuberculosis to millions of young Americans. As a matter of standard practice, those volunteering or called under Selective Service are radiographed—pictures of their lungs are made on X-ray film.

This alertness and determination on the part of Army physicians to keep the Army free from tuberculosis are also performing an

invaluable service for those found to be infected. For tuberculosis, with timely measures, can be cured. But frequently it does not give a warning of its presence, without a radiograph.

**T**HIS is the greatest X-ray job since Kodak introduced flexible X-ray film, to replace

cumbersome plates, in 1914. It prophesies the not-too-distant time when X-ray will make possible the examination of all our people—as hundreds of thousands of industrial employees have been examined, as a matter of routine, for years.

A good deal has been accomplished. X-ray pictures have already been a major factor in beating tuberculosis down from first place to seventh, as a hazard of life . . . Eastman Kodak Company, Rochester, N. Y.

**COOKIE** (*very polite*): I didn't know that.  
**MISS LAMARR**: You are the first man I ever told that to. (*She looks out of the window*) Ah, that is Germany, now.

**COOKIE** (*lost in admiration of her*): I don't know how I would ever been able to pull this thing off without you, Miss Lamarr. (*Miss Lamarr sighs deeply*) You are sighing, Miss Lamarr. You are not sad, are you?

**MISS LAMARR**: Yes. I am very sad.

**COOKIE**: May I inquire the reason?

**MISS LAMARR** (*with some emotion*): Oh, don't you know without my telling you?

**COOKIE**: My mind is at work on other matters, Miss Lamarr. Usually I understand women perfectly—their moods, their fancies. But right now I happen to be riding two horses. So would you mind telling me why you are sad?

**MISS LAMARR** (*wistfully*): I am sad because—after we capture Adolf Hitler and bring him back—then you and I...

**COOKIE**: Go on, I'm listening.

**MISS LAMARR** (*bravely holding back her tears*): Then you and I will never see each other again.

**COOKIE** (*with a teasing smile*): And would that make you very unhappy, Miss Lamarr?

**MISS LAMARR**: Please don't ask me. (*She turns her head away*)

**COOKIE** (*his voice more serious*): I don't mean to hurt you. But could you only tell me this. When did you first realize you loved me, Miss Lamarr?

**MISS LAMARR**: In the second reel of Tortilla Flat. (*She looks at him shining-eyed*) You remember, when I was sitting looking out of the cabin window?

**COOKIE** (*softly*): You wore a little shawl.

**MISS LAMARR**: I saw you then. You were sitting in the fourth row on the end seat.

**COOKIE** (*greatly impressed*): What a memory!

**MISS LAMARR** (*tenderly*): You were chewing on something.

**COOKIE**: Peanut brittle.

**MISS LAMARR** (*her memories overcome her*): I could hardly go on with the rest of the movie. It all seemed so false, so unreal.

**COOKIE**: You didn't act that way when you kissed Spencer Tracy.

**MISS LAMARR**: Darling, I get paid for kissing Spencer Tracy. It was just a business kiss. Oh, you mustn't be angry with me. Please... please forgive me.

**COOKIE** (*patting her shoulder kindly*): There, there—don't think about it. And don't be sad. Whatever happens tomorrow, we have each other now.

**MISS LAMARR**: You're so wonderful. . . . Oh, we're landing.

**COOKIE**: Right in Hitler's front yard. . . . It's called Bertha's Garden.

Again the lights go out and the mouth organ starts playing off stage. It plays German songs. During the blackout the airplane is pulled out of the scene and there is another change of locale. This time the drama moves to Hitler's private office. A desk is whisked onto the stage and a large Swastika is hung up on the back wall.

At the desk sits Adolf Hitler.

There are two high ranking officers present. They are named Wolfgang and Siegfried. Like Hitler, they are dressed in Nazi military overcoats.)

**WOLFGANG AND SIEGFRIED**: Heil, Hitler!

**HITLER**: Vot's going on now?

(All these new characters speak a heavy German dialect which sounds better than it looks in print.)

**WOLFGANG**: We have some good news for you, Fuehrer.

**HITLER**: Spill it. I could use some.

**SIEGFRIED**: We have just captured two Americans!

**HITLER** (*goggle-eyed*): Vot is dis—a communiqué or haff ve really got two Americans?

**WOLFGANG**: This is not a communiqué. This is the genuine apple strudel. (Hitler jumps up.)

**HITLER**: Bring dem in right away! Two Americans! Didn't I tell you dot America was a cinch. Ve vill be eating

**MISS LAMARR**: Have you figured out some plan of action?

**COOKIE**: Yeah. I'm going to get his goat. That's the first step.

**HITLER** (*angrily*): Speak German. I don't understand English. Dot is a language for pigs.

**COOKIE** (*coolly*): Did you say pigs?

**HITLER** (*loudly*): Dot's vot I said—pigs!

**COOKIE** (*with a teasing smile*): It ought to come easy to you then.

**HITLER** (*angrily*): You are calling me a pig!

**COOKIE**: I got too much respect for any animal to compare him to you.

**HITLER** (*fuming*): Listen. Do you know who you are talking to!

**COOKIE**: I would say Boob McNutt.

**HITLER** (*thrusting his nose close to Cookie's*): I am der Fuehrer! The

take a look at his gloves. We don't want them sticking any horseshoes in.

(Miss Lamarr goes to Hitler's side of the ring. A ring, by the way, has been put into place, various anonymous characters standing the ring posts in the corners and hitching up the ropes to them.)

**HITLER** (*putting on his gloves*): Where is der referee?

**WOLFGANG**: I have sent for him.

**HITLER**: Siegfried, you vill be the knock-down timekeeper.

**SIEGFRIED**: Thank you.

**MISS LAMARR**: Shouldn't we have something to say about the referee? (*She has returned to Cookie's corner*)

**COOKIE**: Don't worry. I'm handling this.

(The referee enters. He is another Hitler. He removes his overcoat and is revealed in the same rompers favored by Adolf.)

**COOKIE** (*regarding this second Hitler*): Oh, there's two of you.

**WOLFGANG**: No, this is the referee.

**MISS LAMARR**: It's unfair! My man will get mixed up.

**COOKIE**: Don't worry. I'll rely on my sense of smell.

**REFEREE**: Are you ready? (*Hitler and Cookie and the handlers come to the center of the ring*) You know the rules, gentlemen.

**HITLER**: Vot rules?

**REFEREE**: Good. Ven the bell rings you vill come out fighting und may the vorst man vin.

**WOLFGANG AND SIEGFRIED**: Heil, Hitler!

(The contestants return to their corners. The bell sounds and continues playing Taps. At its conclusion both men come to the center of the ring. They box nimbly for a few moments, landing light blows. Wolfgang leaves the corner and starts prowling around the ring holding a large mallet in his hand. It is his purpose to crown Cookie. He finally gets behind Cookie and lets him have a bang on the skull with the mallet.)

**COOKIE** (*turning to the referee*): That blow don't count. He's a stranger in the ring.

**REFEREE**: Don't worry—I didn't see it. (The contestants resume boxing. Cookie lands a solid right on Hitler's button. Adolf buckles and goes down. The referee starts counting over him. At the count of four Hitler moves as if to rise. The referee helps him up and quickly takes Hitler's place on the canvas. Hitler continues the count up to 9. At 9, the referee rises and starts throwing punches. Hitler is now the referee. Cookie lands another haymaker and the referee goes down. Hitler changes places with the referee who rises and starts counting over Adolf. At 7, Adolf gets up. Cookie stands toe to toe with the Fuehrer until the bell. Both fighters go back to their corners.)

**REFEREE** (*consulting his score card*): I give the round to der Fuehrer.

**WOLFGANG AND SIEGFRIED**: Heil, Hitler!

**COOKIE** (*to Hedy who is massaging him*): How did I do?

**MISS LAMARR**: You were divine.

**COOKIE**: Better than Spencer Tracy?

**MISS LAMARR**: A hundred times.

**COOKIE** (*tenderly*): Rub here. (*He indicates the back of his neck. The bell rings and continues to play Taps*)

"Come along to the recreation hall, men—this gentleman from the radio station is here to entertain you!"

breakfast in the White House in a couple of weeks.

**WOLFGANG**: Ve got a breakfast to eat yet in the Kremlin.

**HITLER**: Don't talk to me like dot! (*He falls to the floor and starts chewing on a rug as he continues yelling*) Wolfgang, give me back the medals. Und vun more crack like dot out of you und I vill trow you oudt of the army altogether!

**SIEGFRIED**: You shouldn't talk like that, Wolfgang. It's bad for the carpets.

**WOLFGANG**: Jiggers, Fuehrer, here are the Americans.

(Cookie and Miss Lamarr enter. Hitler quits nibbling on the rug and stands up. He stares at the prisoners and then starts walking around them, inspecting them like Groucho Marx examining a lady's leg.

Cookie remains unperturbed. But Miss Lamarr is a little nervous. She speaks to her hero while Hitler circles them both.)

**MISS LAMARR**: What do we do now, precious?

**COOKIE**: Don't worry, I'm handling this.

whole world is scared of me! Like anything!

**COOKIE** (*his voice steady*): Yeah? Well, I say you're a bogeyman with a glass jaw.

**HITLER** (*fuming*): I got a glass jaw!

**COOKIE**: Yeah. Two of 'em. And I say you can't take it.

**HITLER** (*leaping*): I can't take it!

**COOKIE**: Not when you're up against somebody your own size.

**HITLER** (*wildly*): Wolfgang, give me the gloves, quick. I am going to give this American pig a boxing lesson.

(All is action now. Wolfgang produces two sets of gloves. Cookie removes his overcoat and is in his underwear. Hitler removes his overcoat and stands forth in a pair of rompers with a swastika embroidered on the seat.

During this activity the various characters speak.)

**COOKIE** (*to Hedy*): What did I tell you? It worked.

**MISS LAMARR**: I was worried for a minute.

**COOKIE**: Nothing to worry about from now on. You're my second. You better

MISS LAMARR: This is the round, Cookie. Let him have it.

COOKIE: It's in the bag.

(He prances into the center of the ring. The lights go out suddenly leaving him in darkness for a moment. Then a strong spotlight shines on him. The ring is empty.)

COOKIE (prancing around): Hey, Pretzel-head . . . where's Pretzel-head?

MISS LAMARR (calling from the dark): Take it easy, Cookie.

COOKIE (swinging a right at nothing): There's nobody here.

MISS LAMARR: Keep your head, Cookie. It's a war of nerves.

(A sign appears in the spotlight. It reads: "Your Ma Is Sick.")

Another sign appears. It reads: "Your Sweetie Loves Another."

MISS LAMARR (calling from the dark): Steady, Cookie, steady. . . . (A girl in a bathing suit appears and starts dancing seductively around Cookie) Keep your guard up, Cookie. Remember, it's a war of nerves.

WOLFGANG (from the dark): All right, Fuehrer. You can go in now. We have softened him up.

(The lights go on. Four Hitlers, all in identical rompers and wearing boxing gloves, come slowly at Cookie.)

MISS LAMARR (calling from Cookie's corner): Look out—they're trying to fool you. Be sure you hit the right Hitler . . . or it won't count. . . .

COOKIE (sparring): Don't worry . . . I got my sense of smell.

(He goes after one of the Hitlers and lands a haymaker. The Hitler referee starts counting over the fallen fighter. For good luck, Cookie clouts him on the button and he, too, goes down. The other two imitation Hitlers flee. Miss Lamarr comes to her hero.)

MISS LAMARR: Quick, we have no time to lose. We will walk out with him and no one will dare to touch us. At the first unfriendly move we will plug the Fuehrer right in the belly.

COOKIE: You think it will work?

MISS LAMARR: It always works with Georgie Raft and Humphrey Bogart.

COOKIE: If they were only here! You got a gun?

MISS LAMARR: Yes.

COOKIE: O. K., precious. I think we can make it.

(They pick Hitler up and start out with him. The stage darkens completely. We hear outcries and screams of baffled rage. It is obvious that Miss Lamarr and Cookie are doing as well as George Raft and Mr. Bogart.

When the lights go on, this indeed proves to be the case. We see the airplane again. Cookie, Miss Lamarr, and Hitler are in it. But Cookie sits alone at the controls. Miss Lamarr and Hitler occupy a seat together—some five feet behind him. Cookie is too busy guiding the plane to pay much attention to them for a few minutes. Above the hum of the propellers we hear the mouth organ music. It plays the Blue Danube Waltz with variations.)

HITLER (softly): Has anybody told you, Miss Lamarr, dot you got beautiful eyes? (Miss Lamarr does not answer him. She remains looking at him meltingly as he continues) Dey do somedings to me. Dey open a Second Front. (Miss Lamarr sighs) May I ask you vun question, please? (The great beauty sighs again) Miss Lamarr, do you believe in love at first sight?

(Impulsively Hitler seizes her hand and covers it with kisses. When he releases

it, she strokes his cheek affectionally. At this moment Cookie turns around.

COOKIE (appalled): Say—what's going on back there?

HITLER (glowing): You tend to business and I'll tend to mine. (He puts an arm around Miss Lamarr) Don't pull away, please.

COOKIE: Take your hands off that woman. You are my prisoner!

HITLER: I am the prisoner of love—of nobody else.

COOKIE (bewildered): Listen! This can't go on like this! Miss Lamarr, throw your fans. They'll hiss you off the screen for this.

HITLER (purring into the great beauty's ear): Think of me. Only me. Nobody else. I made vun mistake. I wanted to conquer the world. To hell mit de world. All I want now iss you . . . and you should go vay to the land of dream. Dot's all I want.

COOKIE: I can't stand this. If I'd had Lana Turner along she would have remained true blue. Or Betty Grable, anybody.

HITLER (quietly): Come here, Cookie. COOKIE (leaves his seat slowly and moves toward him): What's up?

HITLER: Come here. I want you to love me, too.

COOKIE: Nothin' doin'!

HITLER: I say, yes. Come here. Say come on—say, "Heil, Hitler . . . Heil, Hitler . . ."

COOKIE: No! You're trying to hypnotize me! That's what you did to me! You hypnotized her. (He cries out toward the window) Hey, somebody get this guy off me. He's hypnotizing me.

HITLER: Come on, Cookie.

COOKIE (holding back with all his powers): It's that music playing! That Blue Danube. Turn it off, somebody. It ain't fair! Play something else.

(The music obeys. The mouth organ strikes up I'm A Yankee Doodle Dandy and Cookie is saved. Miss Lamarr is also saved. She comes out of her trance. Cookie raises his voice, singing lustily the chorus of I'm A Yankee Doodle Dandy and Miss Lamarr joins in. They are singing triumphantly when the lights go out.

The singing dies away in the dark. The lights come on again and we are back where we started—in the soldiers' barracks room. The three soldiers can be seen sleeping in their beds. A spotlight shines on Cookie's empty cot. Cookie and Miss Lamarr enter. Hitler is between them. They are taking chances. The Fuehrer is in chains and a gag made out of red, white and blue bunting is over his mouth.)

COOKIE: He had me fooled for a minute. I thought sure you'd fallen for him. Then all of a sudden I realized he'd hypnotized you.

MISS LAMARR: How could you think I would love anybody but you?

COOKIE: I couldn't understand it—I don't know how women are sometimes . . . they can love two people at once.

MISS LAMARR (softly): I can't bear if I did anything to make you suffer.

COOKIE: Forgive me, I'm talking like a cad. It wasn't your fault.

MISS LAMARR (looking around): Where are we—in Washington?

COOKIE: Not yet. I got something in my sleeve first. I'm going to hide the Fuehrer under the bed. Then I'll be in a position to go to Washington and dicker.

MISS LAMARR: You are going to dicker?

COOKIE: Yes. With President-Roosevelt.

velt. I'm telling him I don't turn Adolf over unless I get all the exhibition rights—exclusive. Once Frank signs that, I pull Adolf out from under the bed, set him up in a cage, and tour the country. We'll clean up. There's a hundred and thirty million Americans and each will be willing to pay two bits for a look at Hitler where he belongs. That makes roughly thirty million bucks a year coming in—and no overhead whatsoever. (He has been pushing Hitler under the cot) Come on, Pretzels, under you go. And don't try anything funny, if you know what's good for you.

As he talks and disposes of Hitler, sounds begin to be heard. They are faraway and slowly draw nearer.)

**NEWSBOY'S CRY:** Extra paper! Read all about it! Cookie Johnson Captures Hitler.

**SECOND NEWSY CRY:** American Hero Cookie Johnson Brings Hitler Back Alive . . . Extra . . .

**THIRD NEWSY CRY:** Extra Paper! President Calls Special Session of Congress to Honor Cookie Johnson. . . .

**COOKIE (on his feet and listening with amazement):** There's been a leak somewhere.

**MISS LAMARR (beside him):** What are you going to do?

**COOKIE:** I don't know. I got to think this over.

Now the cries of extras have grown nearer and the sound of music is heard. The music is for Private Cookie Johnson. Bands are playing for him, bands from everywhere. Cookie stands listening, and Miss Lamarr darts out. She returns in a few moments, all aglow.)

**MISS LAMARR:** Cookie, listen. It's for you! The whole Army is marching. . . . And everybody's carrying your picture on a flag! And they're all singing about Cookie Johnson. They're all making speeches. The President and all the generals and senators. They're all saying that as long as there are men like Cookie Johnson in our country, the U. S. A. will live forever. . . .

We hear The Battle Hymn of the Republic and Yankee Doodle and The Halls of Montezuma and other tunes in a brave and giddy montage of cheers and melodies.)

**COOKIE:** For me, huh?

**MISS LAMARR:** Yes, isn't it wonderful? **COOKIE:** Then why are you crying if it's so wonderful?

**MISS LAMARR:** Because—now that you're the most famous man in the world you won't love me any more. You'll love her.

**COOKIE:** I don't even know who you're talking about.

**MISS LAMARR:** Lana Turner. And Betty Grable. And Rita Hayworth. They'll all be throwing themselves at your head. And you'll forget me.

(Cookie stands staring at the music and cheering swell. Miss Lamarr cries out above the happy sounds):

Darling, remember that whatever happens, my heart is yours—always and always . . . (Cookie has sat down on the bed) Goodbye . . . I'll go tell them where you are—goodbye. . . .

**COOKIE (very confused):** Don't go way. Here—there's lots of room.

(He lies down on the bed. The lights on the other beds grow brighter. Miss Lamarr has gone. Cookie lies asleep on his cot. The Battle Hymn of the Republic and all the other brave tunes grow fainter. . . . They segue into a single bugle blowing reveille. . . .

Privates Lee, Farragut and Pershing sit up at the sound of the bugle. Private Johnson remains sleeping.

Sergeant White Fang appears.)

**SERGEANT:** What do you think we're running here—an old people's home? Why ain't you dressed? Come on, snap into it, you flatheads. . . . (He approaches Cookie) Wake up, you lug!

**COOKIE (stirring):** Don't go way. There's plenty room in here. . . .

(He opens his eyes and sees White Fang. He rises and starts dressing quickly.)

**SERGEANT:** Come on—get going. (The soldiers are dressed. They walk out of the barracks. Cookie is the last to leave. He gets to the door, pauses and then darts back into the room. He returns to his cot, kneels down and looks under it.)

**SERGEANT (in his hoarse, unpleasant voice):** What's a matter, you lost something?

**COOKIE (straightening up):** Yeah. I guess I'll have to do it all over again. Okay. Lead on, Sergeant.

THE END

# SMOKING LESS—or SMOKING *MORE*?

\*GOV'T. FIGURES SHOW ALL-TIME PEAK IN SMOKING!

*You're SAFER smoking*  
**PHILIP MORRIS!**

Scientifically proved less irritating  
for the nose and throat

**WHAT will happen** when you change to PHILIP MORRIS?

Here's a clue. Reported by eminent doctors . . . in medical journals . . . their findings that:

When smokers changed to PHILIP MORRIS, every case of irritation of the nose or throat—due to smoking—either cleared up completely, or definitely improved!

That proves PHILIP MORRIS are far less irritating to the nose and throat. By tests on actual smokers—not laboratory "analysis"!

And your own taste will tell you—here's a finer cigarette—better-tasting—more enjoyable. Try it!

## The Story Thus Far:

EARLY one morning, a girl enters Jason Amboy's San Francisco apartment, knocks him out, takes some letters (from his brother, Wayne) and goes away. Flack, his eccentric valet, follows the intruder and learns that her name is Luana Topping.

A short time later, Jason is notified that Wayne—employed by the wealthy Grazzard family in Hawaii—has disappeared. Suspecting murder, he takes the first boat he can get and starts for Honolulu. Luana Topping and Flack take the same boat! The former is a member of a Grazzard party—old Mrs. Hiram Grazzard, head of the clan; her son, Lorrin, who is Luana's fiancé; Channing Mace and his wife, Natalie; and one or two others. . . .

A man—a stowaway—disappears. Natalie tells Jason that he was Winfield Grazzard: she says that he and Wayne had been trying to blackmail the Grazzards!

Jason becomes convinced that Mrs. Grazzard is a dangerous woman, a killer. Nevertheless, when he finally reaches "the islands," he accepts her invitation to become her guest, at Kokala. By this time, he has evolved a startling theory. In brief, it is this:

Mrs. Grazzard is guilty of a terrible crime (she has murdered some of her relatives). Her brother, Colton, had been a material witness; so, to prevent his talking, the old woman sent him to Kahuna Island, not far from Ko-

kala. Wayne and Winfield Grazzard had, somehow, found evidence against her. She had murdered both of them. Now, fearing Jason, she is planning to murder him! . . .

Someone enters Jason's bungalow. He attacks the intruder, who manages to get away. In the midst of the struggle, Flack suddenly appears. Accompanied by a man named Sam Shay ("Singapore Sam"), he has come to Kokala to protect Jason. Jason shows him a gold pencil which can be transformed into a siletto—which he had wrested from the intruder. *The pencil is the property of Mrs. Grazzard!*

In the darkness, Mrs. Grazzard and a man enter a large sampan. Flack slips into the sampan with them. The sampan starts. Jason follows, in Flack's small craft. He reaches Colton Grazzard's home just as the old woman is trying to shoot her brother! He snatches the revolver from her—but not until she has wounded Colton once.

## Conclusion

THE wounded man had settled back against the arm of a chair. With his thin brown hands, his baldness, his long narrow face, he resembled a monk—a scholarly monk whose cloister had been rudely invaded. His air was one of shock and complete bewilderment.

"Do something about that shoulder," Jason said to the fat Hawaiian woman. She answered him shrilly in Hawaiian. "Tell her to get a bandage—or something," Jason said.

The white-haired man said thickly, "Yes, yes, yes," then spoke rapidly to the woman. She ran out of the room. She returned at once with a roll of bandage. Her deftness, her composure—especially her composure—were, Jason thought, remarkable. When she had finished binding the wound, she left the room.

The man in white pajamas had sunk back in the chair in which she had placed him. He let his head fall back against the back of the chair. He closed his eyes.

Bertha Grazzard started determinedly out of her chair. Jason turned slightly to face her. "Aunt Bertha," he said softly, "I'd hate to have to shoot you, but I don't trust you. Please stay where you are."

Her amber eyes were dull and half-lidded. She settled back in the chair. Her composure didn't surprise him. He knew now that her composure was a habit that never deserted her.

Jason turned slightly to face her. "Aunt Bertha," he said, "I'd hate to have to shoot you, but I don't trust you. Please stay where you are."

The wounded man was staring at Jason. He was obviously making a determined effort to control himself.

He said in a shaking voice, "Who are you? What are you doing here?"

"He's a blackmailer, Colton," Mrs. Grazzard said in her deep, firm voice. "I want him driven off this island."

"She shot you with this," Jason said. "She tried to have me eliminated tonight, too. That's why I'm here, Mr. Grazzard. When the job of killing me was bungled, it occurred to me she'd try to kill you. I don't know whether you realize it or not—you should, by this time—but she's a very desperate woman. She murdered my brother and she murdered your cousin, Winfield Grazzard."

"I want you to call some of your men, Colton," Bertha Grazzard said in her

(Continued on page 80)

## The first 100 steps are the hardest

**T**HERE'S a long, long walk ahead of those tiny feet...some 100,000 miles in an average lifetime. But, through the years, as those first difficult steps lengthen into the easy, vigorous strides of manhood, dextrose, the important fuel sugar of the body, will power all activity.

An eminent scientist says: "...not a twitch of our muscles, not a throb of our hearts, not a flash of our imaginations, but is produced by dextrose. The gas in the fuel tank of our human automobile is dextrose."

So, whenever you think of energy, think of dextrose; because dextrose is food energy in its purest form. It is the *natural* sugar of the body.

As produced from golden American corn, dextrose is pure white, mildly sweet, cooling to taste.

Modern food producers use dextrose as an important ingredient of their products, because dextrose generally improves flavor and texture, and always enhances food value.

So look for "dextrose" on the labels of foods you buy—canned fruits, fruit juices, candy, ice cream, crackers, cookies, soft drinks, jams and jellies—it is your assurance of quality, flavor and genuine food energy—at no extra cost.

#### \*DEFINITION

"dextrose" is a scientific name. It is *not* a trade mark. It describes a vital sugar—just as the names "lactose, maltose, sucrose," etc. define other types of sugar.

#### FOOD FOR FIGHTERS

The U. S. Army selected dextrose as the basic food-energy sugar of Field Ration "K"—issued to fighting men to sustain them in emergencies.

#### ALL-AMERICAN

The chief source of dextrose is American corn, grown by American farmers. Dextrose is refined in American factories and distributed by American companies.

trailer camp. No wonder Tom Cook was fed up. Even some of the women—the unmarried ones—were restless.

He looked down the lines of parked trailers toward the one which Estelle Morgan shared with two other girls. There was a light burning; she was getting ready to ride to work with him. There was a light in Tom Cook's trailer, too; Cook worked days and seldom went to bed before midnight. Maybe he'd have some hot coffee on the stove. In her present mood, Bill didn't feel up to eating breakfast under Mildred's eyes.

He hopped over the little fence and walked down the line to Cook's trailer.

"I RECKON I can't stop you," Bill Libbey sighed. "But you know there ain't another defense plant in the country will hire you if you quit."

Clad only in a pair of shorts, which were too tight for his robust figure, Tom Cook sat on the edge of the bunk and grinned at him. He was fifty years old but his hair was as black as it had ever been. His eyes were black, too. They were set deep in a creased, plump face, twinkling in their sockets like two bright pieces of jet. "There's other jobs besides defense work," he chuckled. "Comes tomorrow mornin' I'm headin' back for Texas."

"How about the war? You can't just pick up your marbles and quit!"

"Why not? I figure I've done my share in this particular war. We'll have those Japs and Nazi fellows where we want 'em pretty soon. I'm just jumpin' the gun a little."

Bill lowered his head. "Maybe so. But I sure hate to see you go."

"Me, too," Cook stared uncomfortably at the deck. "But you know how it is. Mildred's never goin' to approve of me. She thinks I'm a bad influence."

Bill nodded glumly. "Women are funny, Cook. They start out to fix a little garden and the first thing you know they've taken root themselves. And their husbands along with 'em."

"Yeah. Well, I'll write you a post card as soon as I get located. Maybe... you never can tell..."

His voice trailed off as Bill got to his feet. He stood up, too, and they faced each other shyly.

"Well," Bill said, "I got to be high-tailin' it if I'm goin' to get to work on time. Good luck." He turned to the door.

Cook's bare, calloused feet padded morosely after him. "The same to you, fellow."

They stood in the doorway looking up at the red glow on the far side of the mountains. Bill's fists doubled slowly. His lips moved and suddenly words began to tumble through them.

"Why couldn't it have come down here?" His voice was uncontrolled and bitter. "Three fourths of the men in this camp feel like I do. We're all insured. Why didn't it burn us out?" He slammed his right fist into the palm of his left hand, and his already bruised knuckle protested with a twinge of pain. He said, "Ouch!" inspected his knuckle and then lifted a shamefaced grin to Cook.

"Now, ain't that a fine way for me to be talkin'!" he said.

ESTELLE MORGAN was already waiting in Bill's coupé. She rolled down the window and put her bright yellow head out to call, "Where you been? We're going to be awful late if you don't hurry."

He waved a reassurance and the trailer. His vacuum bottle wrapped sandwiches were on the table but Mildred was not in sight. The car was drawn across the center, stepped to it and partly pulled it.

"I'm leavin' now, honey," he said. Her eyes were open; he could see them on him in the darkness. But was an appreciable lapse of time she quietly answered, "All right."

He'd expected that but, never it hurt. "Is that all you got to say asked."

"What do you want me to say? don't come to me for conversation more. When you want that you Tom Cook."

He told himself that she was mad she was just blowing off steam. He can lay off Cook now, honey. He won. He's leavin' in the mornin'.

"That's just fine." Her voice was liquid with unshed tears. "Will you leavin' with him?"

That did it. He stood there for the anger mount within him, and then he let it come. It started in his stomach and surged upward through his chest and throat until it spilled out of his mouth. "Well," he said, "I hadn't got around to thinkin' of that. But you put it in my head it's not a bad idea I've taken all that kind of talk I at the car's in your name. So's the account and trailer. I'll bring the car back in the mornin' and pack my case. Is that okay with you?"

He waited for an answer but it came. After a moment he repeated that okay with you?"

Mildred's voice flicked at him through the darkness: "It certainly is! And can take Estelle Morgan with you! will you please go away and let me sleep?" And he said, "I certainly honey!" and backed out of the trailer closing the door after him.

BILL piloted the car cautiously through the dim-out zone, leaning forward over the wheel. He watched the road ahead and Estelle watched. "I'm awful sorry, Bill," she murmured, "couldn't help hearing. But you're settling down's okay when you're but a young fellow like you—"

"I'm no chicken," Bill said. "thirty-three."

"Well, I'd never have believed it! I always say a man is as old as he is. Some women, too. I'm only twenty—but when I'm as old as your wife I feel just as young as I do now. That's because I like to keep on the move."

Bill glanced at her suspiciously. "Mildred," he said, "is only twenty-six. all the women talk the way you do before they get married. Afterward they get different ideas."

"Not me." Estelle was positive. "I know the kind of a girl I am? I'm the kind of a girl that your friend Mr. Cook is a man. There's a fellow I could rely on for—if he was young, I mean. I'm leaving tomorrow, isn't he? So'm I. My suitcase is all packed. I don't know where I'm going," she giggled, "but on my way."

Two soldiers with flashlights stepped into the road to guide the coupé to the parking spot. It took all of Bill's attention to handle the wheel. Later, though as they were crossing the street toward the piles of camouflaged sandbags around the main gate, he spoke again. "Cook's got an idea the war will last much longer. He figures he m

well get back to Texas before the rush starts."

Estelle nodded vigorously. "He's right. I've never been in Texas, but I'd love to go there—or anywhere else." She peered at him from under her lashes. "Are you going too, Bill?"

He was silent, fumbling for his identification card as they took their place in line. She kept her eyes focused on his face and presently, "Look, Bill," she said. "I always come outside during the A. M. lunch period to get a hamburger. Why don't you meet me and we'll have one together?"

Bill frowned. He was looking over her shoulder and she turned impatiently to see what had captured his attention. It was the fire. From where they stood the sky seemed very red. Was it imagination which made it appear brighter, yellower than when she had looked before? She shrugged the notion away. "Will you, Bill?"

Reluctantly he pulled his eyes away. After a moment, "All right," he said. "Why not?"

THEY sat at a board table outside the hamburger stand with sandwiches and mugs of black coffee before them. There were thousands of voices talking, calling, laughing all around but, in the complete blackout, they might have been alone.

Estelle said, "Gee! They put onion in my hamburger and I've already bit into it. You'll think I'm awful."

"Eat it," Bill told her. "I'm certainly going to eat mine." He was watching the sky above the mountain. "Isn't that fire brighter?"

"It looks that way. But maybe that's just because it's so cozy and dark here." He sidled closer on the bench and clutched his arm.

"Could be. But it sure looks—" He heard her disappointed sigh and turned to her in surprise. "Why, what's the matter?"

Faintly illumined by the glow of many cigarettes, her face pouted up at him. "That's what I'd like to know," she murmured. "What is the matter? Is it the onion?"

Bill stiffened, the way a man who has been shot stiffens just before he collapses. Her lips were parted, straining up to his, and he toppled toward them.

Then the whistle blew, snapping him

to his feet. She jumped up beside him. "Please," she implored, "wait—!"

"Gotta run," he said. "See you at seven-thirty. Gotta run." He hurried toward the gate, waving his identification card.

She called after him but her voice was lost among a thousand others. No one heard her savage, "Damn that onion!"

THE rumor raced through the shop at 5 A. M. A fellow who had gone to the dispensary met a guy from Production Control there. This guy had it straight from a fellow in one of the Personnel offices, and Personnel, of course, gets the latest dope on everything.

The fire had started again. The firemen, assisted by a battalion of infantry, had smothered it on the far side of Ramona Canyon. They'd put it out, congratulated themselves and gone on home.

And now it was burning worse than before.

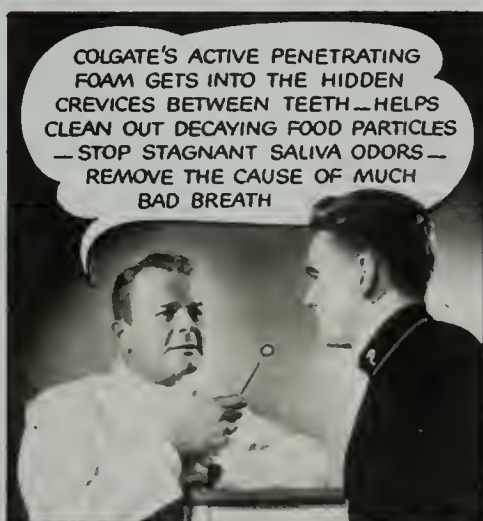

Bill grinned when he heard it; he knew there wasn't any danger. The night before, when he'd wished they could be burned out, he'd forgotten about the Army. If the fire got too close those soldiers would hitch the trailers to their jeeps and haul 'em out quicker'n you could wink. Mildred was safe.

She had gotten her comeuppance, too. Come seven-thirty he'd find the whole bunch of 'em parked along the road, probably at the foot of the canyon. He'd spend the morning looking for a new camp for Mildred and the others who were staying. And then those who were leaving...

He thought of Estelle Morgan and stopped smiling. He flushed and shook his head impatiently, but it didn't do any good. It didn't stop him from thinking but, after all, thinking couldn't do any harm, could it? Or could it?

At seven twenty-five, when the warning buzzer sounded, he put down his tools and moved quickly to the door. At seven-thirty, he was the first man to punch "Out" on the time clock.

Estelle met him at the gate and they raced, in the gray morning light, to the parking lot. They jumped in the coupé and he twisted it free of the thirty-five-mile-an-hour traffic, hurrying toward the ocean. He turned right, there, and let the car out. A thick cloud of black smoke smothered the mountains ahead,

AMERICA MUST  
BE FIRST IN THE AIR

Unless and until America is the most powerful nation in the air, our safety, our freedom, and our standard of living will not again be what they have been in the past.

*Whitehead*

# Will tomorrow's aircraft

**I**T is not venturing too far into the realm of fantasy to suggest that the aircraft carriers of the future may be giant dirigible airships. More than twelve years ago Navy fliers demonstrated the practicability of launching airplanes from dirigibles and taking them aboard in flight.

The airship has several advantages for this duty. It is immune to submarine attack. It requires no cruiser escort. Its top speed of 75 knots or more gives it far

greater range than any surface ship, and permits it to overtake or elude an enemy fleet at will.

How vulnerable is the airship to incendiary fire from hostile airplanes? Less than you might think. Any American dirigible would be inflated with non-inflammable helium gas, eliminating danger from fire or explosion. Its motors would be fed from bullet-puncture-sealing fuel tanks. And like the Flying Fortresses that have

repeatedly routed attacking fighters, could be protected from stem to stern with armored blisters mounting machine guns and aerial cannon.

In considering the possibility of aircraft carriers, it is well to remember that more than two hundred large dirigibles have been built in all world history; but we have learned much about their handling and operation. In recent years, since accurate weather data has become

# carriers FLY?

Small Goodyear-built airships have more than four million miles in all of weather — without the slightest injury to a single one of the 400,000 passengers they have carried. Perhaps a portent of things to come.

Goodyear builds both Airplanes and Airships. America-at-war Goodyear is building the Corsair, carrier-borne fighter airplane in the world, and also of Naval airships for U-boat patrol. Also, cabin and fuselage subassemblies; control wheels, brakes and bullet-puncture-sealing gases for many types of fighter and bombing planes. Goodyear's thirty years' experience in all phases of aeronautical engineering.

*Sectional view shows how planes are carried inside the airship; also the "hook-on" gear by means of which they are launched and taken aboard in flight*

# A LITTLE GOOD CARE WILL PAY YOU DIVIDENDS!

You know the old story about never missing the water till the well runs dry.

We suggest you give it a thought next time you use your Schick Electric Shaver. You wouldn't want to miss those quick, clean, comfortable shaves, would you?

So, the smart thing is to take good care of your Schick. For we're not building any new ones, you know, for the duration. Our factory is going full blast on war work, these days.

But we want you to know that if

you do accidentally damage your Schick, all will not be lost!

At any of the offices listed below, you can get renewal parts and expert repair service at low cost. For only \$3, they can fit your present Schick with a new 2-M Hollow-Ground Shearing Head, if it needs one.

In any case, we suggest you take or mail your Schick in for a check-up job—cleaning, adjusting and lubricating. Why not do it today? The charge will be trifling!

SCHICK INCORPORATED, Stamford, Conn., U.S.A.

\*\*\*\*\*

For the duration you'll want to keep your Schick Shaver in shipshape condition. Expert service and genuine Schick renewal parts—including the new 2-M Hollow-Ground Shearing Head—are available through Schick Service, Inc., at all of their offices listed below. Careful attention given to shavers mailed to these offices.

TO HASTEN VICTORY—BUY MORE WAR BONDS AND STAMPS

and they leaned forward tensely, watching it.

Estelle talked. There was an excited lilt in her voice and, as she spoke, she watched Bill's face. "We're the lucky ones," she said; and, "Just think of the work those dopes have put in! Fences and gardens and all." She moved closer and her left arm brushed against his. "Isn't it funny how you and I think the same things, Bill?"

He listened. He nodded his head and smiled as the little car scurried over the beach road.

Estelle watched him the way a pin-ball player watches his marble hover outside the jack-pot groove; intently, with her heart in her mouth.

"You're not worried about Mildred, are you? That's all over, isn't it?"

"Mildred's okay," he said. "They're all okay. We'll find every last livin' one of 'em sittin' up here at the foot of the canyon."

"And when you do—?" She looked at him archly.

He reddened and turned away. "Well—" he began, and got no further. For at that moment the car rounded the foot of the canyon and there was no one there.

NO ONE, that is, except a corporal and two privates. The privates barred the road while the corporal stepped to Bill's side.

"You can't come up here," he said. "There's a fire."

Bill looked at him. The corporal's face was covered with soot and, under the soot, were lines of fatigue. Bill looked up the canyon. Half a mile farther on, yellow flames flickered through the black smoke blanketing the hillsides. He listened. The crackle of burning underbrush was like an infantry battle.

"Do tell," he said. "Couldn't be that somebody knocked off a little too soon yesterday, could it? How about the people in the trailer camp up there?"

The corporal snorted angrily. "I wouldn't know about them. Early this morning we sent two trucks to evacuate 'em. I rode one truck myself, and you'd 'a' thought I was General MacArthur they was that glad to see me. Then, when they found we couldn't spare jeeps to haul their trailers, you'd 'a' thought I was Hitler. Last I heard they was still callin' me names. Gosh knows what's happened by now."

"They wouldn't leave their trailers?" Bill's face was suddenly gray.

"I never seen anything like it," the corporal said. "All of a sudden they thought more of those few dinky flowers they got planted than they did of their hides. They're crazy. But then they're Texans and I never seen a sane Texan yet. Hey!" he cried. "What do you think you're doin'?"

Bill's horn had blasted the privates from the road. He slipped into low gear and, as his foot eased on the clutch pedal, he turned a gray, set face to the startled corporal. "What would I be doin'?" he asked mildly. "I'm goin' home!"

He stepped on the accelerator and the coupé leaped ahead. It was a hundred yards nearer to the fire before Estelle recovered sufficiently to reach for the emergency. She jerked it back and screamed, "Let me out of here! You—you fool! Let me out!"

He turned to the trembling girl. "Well, then, get goin'." His voice was still gentle.

"Couldn't you take me back to town?"

He reached across her to open the door. "No, ma'am. Get goin'." He put his hand on her shoulder and shoved.

She got her legs out in time to light

on her feet, and she swung back and slammed the door. Tears of mortification streamed down her face. "I she cried. "Darling! Will you let me know what happens? I'll wait at the foot of the canyon. Will you come back?"

He was too busy prying her hand loose from the door to answer.

"And, darling," she begged, "will you bring my suitcase back for me? I'm waiting for you. I'll be—!"

Sharply, he whacked the side of palm across her knuckles. She gasped and let go, and the little coupé chugged sturdily up into the smoke.

COOK'S black eyes twinkled at him. "What delayed you, fellow? Did you know I'd have to borrow your car this mornin'? Mine got a little singed. He lifted his bandage-wrapped arm. "Reckon the supervisor'll let me work with these?"

"You leave those arms be," Mildred said, "until I finish workin' on 'em."

Bill looked at the trailer, at the fenced enclosed patio gay with flowers, Cook sitting on the steps, and at Mildred bent over him busy with bandages and ointment. He turned his eyes away.

Fifty yards off, beyond the improvised firebreak, a thin line of men still worked with water-soaked potato sacks. Smoke swirled around them, sometimes hid them from sight, but the fire was under control again. And this time, Bill knew it would be kept that way.

He turned back to Cook. Mildred hadn't even looked at him and wouldn't speak to her until she did. "I thought the war was over for you," said. "I thought you'd bucked your rivet. How come you changed your mind?"

Cook winked at him. "The war changed it for me. Suppose I got home to Texas and then the war didn't end like I expected? Why, I'd have to turn around and come right back again. Now on my tires, fellow! How about you yourself? Last night you was wishin' we'd burn out. Did you hotfoot it up here just to watch us sizzle?"

Bill leaned over and picked up the wet sack at Cook's side. He spoke to Cook but it was Mildred at whom he looked. "The keys are in the car," said. "But you'll have to ask Mildred about usin' it. It's in her name."

MILDRED'S back stiffened. Her hand closed on the jar of ointment and she whirled to face Bill with angry eyes. Then she saw that he was smiling and the anger was washed away by a swift surge of tears. Her throwing arm relaxed, and the jar of ointment slipped to the ground and rolled into the geranium bed.

"Oh, Bill!" she said. "Oh, Bill!"

She bent quickly to pick up the jar and when she straightened she was back to normal again. "Look what you made me do," she complained. "Now go along with you, and make sure that fire really out before you go to bed. . . . And you, Tom Cook, if you're goin' to work you'd better get started. You'd dle half the mornin' and . . ."

Bill was already walking toward the firebreak. He was smiling. The last thing he heard over the chug of the coupé's starting motor was Mildred's voice calling instructions to Cook:

" . . . and tell the butcher I want steak for five people. That way I'll be sure to get enough for you and Bill. Use your own sugar and coffee coupons. We've been runnin' mighty short lately and it'll be a relief to . . ."

It sounded pretty good to hear her talking like that.

THE END

## So Small a World

Continued from page 24

Charleston in winter; about the Old Man's mustache, half shaved off with a slash of the ship in that November blow. Vin finished his cocktail. No go. He looked at his watch, the last present of Linda's he had. He said, "H'mm. Later than I thought, Taze. I'll have to blow."

"Darn' fools, I said," repeated Tazey Williams.

Vin scarcely heard because now he was confronted with the awful task of walking past Linda again, looking into her grey eyes again. He made it creditably past the table, though he didn't trust himself to speak, just nodded to her with a tight, controlled grin. And then he was at the door, feeling like a bombed miser that hadn't quite missed that last one.

When am I going to get over this? he wondered, disgusted with himself. For fourteen months he'd been insulated by distance from this girl, and still a glimpse of her could stick him like a spear.

HE WALKED down the main drag, feeling savage, feeling like a man alone in a rubber boat on the thirtieth day with no help in sight. . . .

Approaching the bay, Vin began to see the huge and ancient houses that are Charleston feature. Like great long boxes, mainly clapboard, they stretched back from the street; and a few were unimpaired, but most were sleek with the substance of rich Northerners, who bought them as a fad and then poured money into them as into drains.

Like Vurney House. Ballard Vurney, Linda's father, had the moola, all right, skimmed from the steamy twenties. With rare insight he'd

hung onto it through all the intervening storms, in the process apparently instilling in his female offspring the overwhelming importance of wealth. . . .

"Nuts!" said Vin aloud, striving to divert his thoughts. They didn't divert so well.

This was one of four homes visited by the Vurney crowd as the calendar wheeled around: Maine, New York, Charleston, Palm Beach. Then back again. But this wasn't the time they usually hit Charleston. Vin felt that he'd had gratuitous bad luck to bump into Linda now. And it would be three weeks before the Holmes put out again. Three weeks in the same town with her. Even Charleston was too small for that.

Someone said, "Hello, Vin," and he replied absently, "Hello," and then looked more squarely and stopped and said, "Why, hello!"

It was Dorothy Wesley, sweet and nice as ever, though one more lost pound would be downright alarming. Dorothy Wesley. Vin went to her and put a hard, dark hand on each arm and looked deep into her eyes. For here was trouble of a kind to make his own look pale, though he knew that the end result of each was the same: irrecoverable loss.

"You're looking swell, honey," he lied gently. "Staying on here? I thought you'd be home in Vermont."

"No, I won't go home for a while longer." Dorothy's voice had always been nice. It was like cello strings now. "The mild winter is good for little Bill, and I like Charleston anyhow."

No word of big Bill. And no widow's black, either. He was missing after the Casablanca show. Well, some had been

# How to Supplement Your WAR RATIONS

And Be Sure of Getting  
All the Vitamins You Must Have  
to Maintain Vigorous Health!

**ALTHOUGH MANY FOODS** may be rationed to insure a fair share for everyone, we will continue to get more and better foods than any other nation in the world.

**BUT EVEN WHEN** huge food surpluses were a national problem, some nutrition experts estimated that 3 out of 4 Americans did not get enough vitamins for vigorous good health.

**AND TODAY,** for the sake of your country and yourself, it's more important than ever before to get *all* the known essential vitamins every day . . . Protective potencies of *all* the vitamins you *must* have to enjoy vigorous good health—to resist illness—to avoid dread vitamin deficiency diseases.

{ Yet it's so easy and so economical to do! Just take two tiny capsules of "VITAMINS Plus" once every day.

"VITAMINS Plus" is a complete, balanced combination of *all* the known essential vitamins. Not just one or two, but protective potencies of *all*—the vital B-Complex Vitamins B<sub>1</sub>, G and Niacin Amide, combined with the equally valuable vitamins A, C and D.

And that's not all! "VITAMINS Plus" actually gives you *extra* vitamins of the B-Complex and *added* iron. Try it! Remember . . .

Life Begins with  
**VITAMINS** *Plus*

The Only Multi-Vitamin Product Recommended by the Makers of Vicks VapoRub

9 DAYS' SUPPLY . . . 75¢  
36 DAYS' SUPPLY . . \$2.75  
72 DAYS' SUPPLY . . \$5.00

Beginning to feel

**OLDER THAN YOUR YEARS?**

Losing your natural sparkle and drive, feeling nervous and irritable because you are beginning to suffer from daily vitamin shortage? Try taking "VITAMINS Plus" just once a day. And keep it up *every* day. See if you don't soon enjoy renewed energy and interest in life . . . See if you don't *feel* better and so *look* better.

**I am going to kill you—  
I am a Nazi.  
You stand in my way.  
Therefore, you must die!**

**"Y**ou believe you are going to win this war. Ha! You have no idea what it will take to win.

"Because you did not have to suffer much, give much, or sacrifice much to win last time... you think you can get by as easily again.

"Ja...it is good that you think so... good for us!

"Every man and woman in Germany is told how many hours to work, while you decide it yourselves.

"You tell yourself that the German people will crack as they did before. You are an idiot! The German people will not

crack because they know what it means to lose a war.

"This time, you will roam the streets fighting for scraps of garbage to eat. It's your turn to see life savings turn into bushels of worthless paper money.

"Your families will be broken up. Your young girls will sell themselves for bread. Such treatment befits your mongrel race.

"Don't be stupid. We shall not—we dare not lose this war!

"We shall kill and kill and kill until nobody is left...nobody to bar our passage. Then you will see!"

**RIGHT NOW**, unless you are a member of our armed forces or unless you are working at a war job to the limit of your ability... you have a personal enemy who is doing much, much more to win the war for his side than you are doing for ours. Multiply that enemy by the million, multiply yourself by the million, then you are yourself who will win unless things change. The way to make them change is to put yourself a Nazi or Jap... and work hard, sacrifice more, and fight harder than they do. There's a part-time task for you in your local Citizens Service Corps or in the Defense Council. Find out about it today. Should no such activity be available, help to start one. Write this magazine for free booklets giving full instructions. Do it now.

**EVERY CIVILIAN A FIGHTER**

*Contributed by the Magazine Publishers of America*

cked up after weeks. Why couldn't Bill Wesley perhaps be reported in after months? You don't always have to agree with a Navy Department telegram, do you?

"It's swell you're here," said Vin. "Has wee William perchance been fed that awful soupy stuff they give to kids, and are you free to have a celebration dinner with me?"

Wee William had. She was.

THEY went to the Blue Lion. The waiter there said, "Yes, *sir*, Lieutenant," and Vin blocked his ears to whisperings that lingered still from times when he and Linda had come here. He ordered daiquiri for Dorothy. He said gruffly, "Of course you want one. Didn't I say celebration?" And she sat across from him, dark haired, blue eyed, as pretty as a flower which—at least in public—hardly shows its roots have been cut off. The only thing about her was that far-off look. You knew she heard and saw, but also knew that half of her was gone somewhere.

"Linda's in town, Vin," she said.

He nodded. "Yes, I saw her." He said, very lightly over the top of the menu. "We came here a lot. You and Bill did too, didn't you?"

"Yes. Till small Bill arrived. Then there wasn't much to eat out on. The Navy doesn't make you rich."

"So I've heard," Vin said wryly. "Bill loved it, though." Should he lay off Bill? Vin thought not. He thought Dorothy liked to hear the name on a close friend's lips.

"Yes," she said. "I've heard you rather like it yourself, Vincent Maller. Certainly it likes you."

He grinned, teeth extra white in his weathered young face. "I don't know if it likes me, but at least it's kind to me. Under the hat, darling, I'm being upped a grade. One of these new destroyers they're turning out like peanuts will have my napkin ring at the head of the ward-room table."

"Oh, Vin! I'm glad. So would Bill be..."

"Bill was due to get a ship before me. His record tops mine and he had a Navy Cross besides. He—"

Vin stopped and stared across Dorothy's shoulder at the door.

"Well, I'll be darned," he muttered.

Voices sounded there: the waiter's, "Yes, *ma'am*!" and that of a man saying, "Looks all right to me." But over these came Linda's voice as she looked brightly, blankly at Vin: "The place is dead. There's no one here at all."

*Will we fall over each other twice a day all the time I'm here?* Vin wondered savagely.

He said hastily to Dorothy, "She didn't see you—you had your back turned. If she had, she'd have been over here fast to greet you. You know that?"

"Of course," Dorothy smiled. "You don't have to explain Linda to me. She rang my bell yesterday, as soon as she hit town. I think she's swell. You're not too repulsive yourself. Vin—what happened?"

"Stockings," Vin said. "A pair of stockings." He wanted to laugh, but thought it might have a slightly wild sound.

It hadn't been just that, of course. Not just a pair of stockings. But that had touched the whole thing off.

"A run!" Linda had wailed. "In my last decent pair! Oh, darn this being poor!"

Well, before they'd started he'd told her what Dorothy had just said. The Navy doesn't make you rich. He'd told her he would never leave it, and she'd have to live on what he made. No gifts from father; no furtive charge accounts; no allowance.

All her life Linda had simply phoned an order for what she wanted. When it was a tenth worn out, she phoned for another. But this could not go on as Mrs. Vincent Maller. There were shortages. There were denials. With each came a bit of sarcasm quickly detected by Vin, who had married her half expecting such complaints.

"Just stockings?" Dorothy's voice recalled him to Charleston, 1943.

"Well, naturally there were a few other things."

Naturally. Eight months of marriage with a trifle out of reach 'most every day. She'd regretted in humorous terms—but she'd regretted. The stockings had been the final, small fuse, that was all. Some fuse!

"We had quite a row," he said. "She's no doormat, you know."

They finished out the dinner, with Dorothy's dry blue eyes far off again, and with Vin wishing he could trade an arm or something for Bill Wesley's safe return home to her.

He took her to the small apartment she maintained now; very small, but very nice, with warmth in it. The girl who'd watched over little Bill said good night, and Vin tiptoed in to look at the kid, not quite two, sprawled like a puppy in his crib with his button nose askew against a bar.

Against his will, Vin remembered another apartment, larger and more extravagant than this, but without a crib.

"A child, Vin?" Linda had exclaimed. "In a world like this? On a j.g.'s pay?"

"It happens all the time, Linda."

"What? Worlds like this? Or children on credit?"

"All right."

"No, please!" Linda had caught his arm, gray eyes not imperious for once. "It's not a thing to be flip about. I'm sorry, Vin. But couldn't we wait a little, darling?"

Vin looked at Dorothy and found her speculative eyes on him; eyes that still had room for kindness in spite of all the loss that crowded them.

"I enjoyed the dinner, Vin. Have one on me. Tomorrow. Here."

He said he would. He said he'd love it. He'd be around at seven, if that gave her time to tuck small William in. He went to his hotel and cursed the coffee, or whatever it was that kept his mind alert and filled with a lot of little Lindas doing a lot of attractive little things.

HE LUNCED next day with Taze on the Byrd, that boat not being so torn apart as was the Holmes. And then he went to Charleston's bay street and finally sat down on a bench across from the Vurney house and down a little way.

He stared moodily at the place, big, expensive, one of the city's show places. "Well, why would it work? A girl like that—with a Kansas mailman's son who got a lucky appointment to Annapolis. I had a hunch from the start we couldn't make it click."

The garden door opened abruptly, and Vin prepared for flight, but it was Buck who came out, Linda's fourteen-year-old brother. He flipped on his bike, saw Vin, and swooped across the street.

"Vin! Gee, Sis didn't say you were here. Gee, I'm glad to see you." A nice kid, untouched yet by the Vurney money.

"Glad to see you too, Buck." Vin's arm rested lightly around the unfinished shoulders.

"Vin, are you and—and Linda done for keeps?" Buck blurted. "Are you, Vin?"

"What do you think, kid?"

Buck swallowed unhappily. "She don't say much. And there's a guy hanging around."

Vin thought of Linda's escort of last night. He shut his hands hard, and his wrist watch glinted and caught his eye.

He wanted Linda very badly, and he couldn't have her, so he wanted to beat her. He said, "I'm glad I saw you, Buck. You've always admired this. Here, take it."

"Gee, Vin." Buck put the wrist watch on with eyes shining. But even in his incredulous joy, vague doubt stirred. "But Linda gave you this, didn't she? She might not like this."

"Take it. I wasn't around on your last birthday. Keep the chin up, Buck."

He walked away from there, wrist feeling naked without the watch; he walked for miles, till it was time to go to Dorothy's apartment. He walked in parts

## NEW, EASY WAY To Get Greater Breathing Comfort

Easy to carry, easy to use, the new Vicks Inhaler is mighty welcome to folks "on the go." It's packed with effective medication that makes a cold-stuffed nose feel clearer in seconds! And it's one inhaler you can use as often as needed.

## VICKS INHALER

**CHILD'S COLDS**

To relieve misery—rub VapoRub on throat, chest, back and let its time-tested poultice-vapor action go to work! Ideal for children. **VICKS VAPORUB** Just as good for adults, too.

# "FIRSTS"

## A ZENITH HABIT

A GOVERNMENT official was being shown a new idea in the Zenith laboratories. In passing, he commented upon the outstanding manner in which the radio industry was effecting the rapid and continuous changes necessitated by war requirements. A Zenith official replied—he said:

"... the answer is easy. Radio and Radionics represent a trigger-quick, fast moving business. Concerns that couldn't 'change overnight' are out. In this industry, we're used to fighting with new ideas—only—now we're 'fighting' Japs and Germans instead of each other."

In that statement is evidenced the condition that made possible Zenith's attainment of industry leadership. Ever increasing public acceptance of Zenith name and product resulted from a never ceasing stream of Zenith "firsts"—new features—new devices and new sets which enabled us to truthfully say to the public:

# "ONLY ZENITH HAS THIS"

Today you find as commonplaces—essentials—of most radio sets—features first introduced to the public by Zenith—such as—

## "FIRST"

### Push Button Tuning

Years—yes, years ahead of the industry—(1928) a Zenith set embodied push button selection of the station desired. Our slogan in 1928 was "Push the button—there's your station."

For over seven years, Zenith Radio Corporation has advertised on our short wave sets—"Europe, South America or the Orient Every Day or your money back." It has never been called upon for a refund.

## "FIRST"

### House Current Sets

"Way back when" (1926) all home radios were operated from storage batteries until Zenith offered the first set run by house current.

BELOW—A FEW NEW ZENITH "FIRSTS"—"FROZEN" BY ZENITH CHANGEOVER TO WAR PRODUCTION

## "FIRST"

### Long Distance

### Push Button Portable

1942 saw the national introduction of a revolutionary new portable—the Zenith Trans-Oceanic. Without increase in size or weight it gave push button operation for foreign and U. S. short wave stations—tuned in the same way as locals—and standard broadcasts too. It contained a disappearing fish pole antenna plus dual Wavemagnets—operated from battery or house current—was born of Zenith pioneering in LONG DISTANCE RADIO RECEPTION.

## "FIRST"

### Safety Auto Radio

The only auto radio you can operate WITHOUT TAKING YOUR EYES OFF THE ROAD—or—YOUR HANDS OFF THE WHEEL—the Zenith Safety Foot Control Auto Radio. This remarkable new radio was on the FORD, NASH, MERCURY, LINCOLN-ZEPHYR, HUDSON and WILLYS. Owners of these cars will gladly demonstrate their Zeniths—give you a "preview" of "tomorrow's" radio today.

—AND THESE ARE JUST A FEW OF THE MANY ZENITH "FIRSTS"—

## "MILITARY SECRET"

Today all Zenith production centers on war needs. What we are making is a military secret. But three things we can tell you. First... we are dealing with the thing we know—Radio—and Radionics exclusively. Second... we are learning every day—gaining new knowledge which will reflect itself in Zenith civilian products when the time

arrives. Third... we now know—by first hand experience—that our Army and Navy are more than "up-to-date"—they are alert and progressive in thought and action—almost unbelievably so. This fact is a great reassurance to us here as citizens—it commands our complete confidence as it would yours if you knew what we know.

## RADIONICS

### the New Miracle Industry

Four great industries are destined to lead this country back to normalcy after victory is won.

Planes and Radionics are two of the four. Radio—never a necessity on ship or train—is as essential as the engine itself to that great new form of individual and mass transportation—the airplane.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make.

of Charleston where it was highly unlikely he'd bump into Linda. Tazey's phrase was in his ears: "You going to spend the rest of your life running out back doors to get away from her?" No, he told himself, I'm not. A little more and I'll have her cut out of me. And Tazey seemed to say, "Oh, yeah? It isn't as if you were getting over it. You're not."

Irritably he punched the Wesley bell. But he arranged his face for Dorothy as he went up the stairs. He put on a smile and he extended flowers he'd bought at the last corner; but when the door opened, the grin froze on his lips and his hand froze where it was, half out with the flowers in offering—to Linda.

Vin could think of nothing more profound to say than, "Oh!" And Linda didn't even say that much. She went back a step or two. "What are you doing here?" she got out finally.

"Dorothy asked me to dinner."

"She must have got her nights mixed. She asked me too."

"Where is she now?"

"I don't know. She went out as soon as I got here, ten minutes ago. She had her hat and coat on, waiting. She asked me to watch little Bill, then hurried out."

Vin was beginning to get it. A friendly frame-up. Bring Linda and him together unexpectedly, and then duck out and leave them alone. Kindhearted, though pretty clumsy.

"It was a nice try, anyhow," Vin said. "Tell her for me she was sweet to think of it. Good night."

He started for the door. Linda said coolly, "Buck's mad about the watch. He showed it to me. You thought he would, didn't you?"

"It was kind of rich for the Navy," was all Vin said.

HE WENT on toward the door, but stopped a second time as Linda's laugh sounded behind him, light, lazy, amused. And suddenly he resolved that he'd be hanged if he'd keep on running from her. She wasn't that important.

"On second thought," he said, "you can be the one to leave, this time. I'll look after little Bill."

"Oh, I wasn't thinking of leaving, Lieutenant. Only you. Won't you sit down? Can I bring you a drink? I believe Dor has a few bottles still around."

She lost her lightness for an instant as this slammed home the fact of Dorothy's tragedy; but she picked it up again. "Martinis, as I remember?"

Vin nodded, and told himself it was as well, after all, that they had met this. They had to define things sometime; it might as well be now, through Dorothy's well-intentioned if obvious frame-up.

"As expert as ever," he said, taking his drink. "I've been rather expecting a letter from you in Reno, Linda."

"I haven't bothered, Vin, because there's been no reason for it. Until now."

"Now? Oh, I see. The fella I saw with yesterday. Congratulations. You be in your own league, this time. You have dozens of pairs of stockings, she or no."

COLOR spread in Linda's cheeks. She didn't have the mahogany tint in her hair for nothing. But she kept control. She seemed to have much more control than she'd had a year ago. Yes, she changed. She was harder now. A chillier, he told himself.

"That's right," she said calmly. "I have many things I didn't have with you. There will be important differences. I won't have somebody watching my face like a hawk every time I look in a window, to see if I'm regretting my marriage. I won't have someone reading meanings into a couple of cuss words when I prick my finger making over old dress. . . . Oh, why hash it up again? You married me dead sure I'd never be able to live on a Navy income. You put two and a half strikes on us before the honeymoon began."

"I suppose you didn't complain. I suppose—"

"Look, Vin. You love the Navy. I love your life. Yet I've heard you complain—I've heard all you men complain about certain angles of it, times without number. Only you call it grouching. You say it means nothing. You say it's healthy to gripe and get it out of your system. Certainly you don't throw a man out with a dishonorable discharge who he grumbles about the chow."

"That's not the same thing at all," Vin said.

"Isn't it? Oh, for heaven's sake—go home. Get out of here. You think me

"Have you a book on What Every Boy Should Know? I want to cram for a man-to-man talk with Junior!"

COLLIER'S

"Hey, who dusted this bookcase? I had a phone number written on top"

COLLIER'S

DAVE GERARD

mortal soul is less important to me than a run in a pair of stockings. I'll never forgive you for that."

Vin said, "You'd have been a nice girl if you hadn't been smothered in all that dough."

"And that," said Linda, "is what you can never forgive me for. Money. I'm leaving for New York in the morning, so we won't get under each other's feet any more. And you'll get your letter from Reno very soon."

"Good!" said Vin, on his way out. But when the door opened and Dorothy came in. He'd almost forgotten about Dorothy and her good intentions. . . .

"Here! What's up?" he demanded. She stepped swiftly to her and put his arms around her. She sagged there heavily, and Vin looked quickly at Linda, and Linda jerked her head toward the bedroom door.

HEY got her in there, and Vin looked through the medicine cabinet for smelling salts, while Linda put her to bed. Dorothy stared at the two of them as if trying to remember who they were. Then she said:

"He didn't see him."

Linda and Vin looked at her, puzzled. "One of the men from Bill's boat got into town. I heard about it just before you came, Linda. I hurried to see him—to see if he—when the boat went down—"

"Take it easy, darling," soothed Linda, voice rich and tender.

"One of the seamen," Dorothy whispered. "He said, no, he knew nothing of Bill, hadn't seen him at all. He said it was night when—it happened—and so much was going on. He said he was sorry. . . ." She came apart, then, and Vin shivered with the violence of it; and he glared at Linda and at him.

"You two fools!" Dorothy Wesley cried. "You fools! When the time could be so short! When any day—"

There was hysteria and quite a lively period, with Vin and Linda shoulder to shoulder trying to help their friend. Vin had time to feel that this was good, this partnership, even if it only lasted an hour; and he had time to feel ashamed of his assumption that Dorothy had planned this evening just for him and

Linda. Nothing, it appeared, had been further from her distracted mind.

Dorothy came back to normal—if you could call the far-off look in dry blue eyes normal.

"It's okay," she said evenly. "I'm okay now. Run along, you two. Sorry I spilled."

They left in silence; in silence stepped into the night. "I knew it was tough for her," said Vin. "I knew because I know how bad it was with me to lose you. But I didn't know it was that bad."

Abruptly then, he had a second crying woman on his hands, and this one stopped him cold. He'd never seen Linda cry before.

"If you could only know how I hate you!" she said. "Didn't know! Didn't know! Of course, you didn't know. You don't know anything. You went to sea and into danger I could have no knowledge of—and you came back—and you didn't know that every time you left I died all around the place for fear you wouldn't return. You were ashamed because you couldn't give me things, so you took it out on me. You didn't know that, either. All you knew was that I got exasperated sometimes because I missed what I was used to. What of it? Did I ever say I wanted to go back to it?"

Vin tried several times to answer this, but nothing came out because none of the answers seemed appropriate. Not knowing what reply to make, he made none at all, thereby unconsciously achieving a moment of common sense rare in the case history of Maller versus Maller. He cleared his throat. He remarked, mildly, "Say, I'm hungry."

"You would be," Linda sniffed. "Nobody else would be, at a time like this. But you would be."

"Aren't you? That diner we used to hit isn't far from here. Chopped steak sandwiches. Remember?"

"The very idea is nauseating. I'm going home." Linda opened her car door, but stood there, with her back to him.

"With onions," said Vin softly.

"Well. . . ."

"And lots of ketchup."

"We didn't have any dinner, did we?"

Linda said. "I suppose. . . . I wonder if he would have chopped steak, Vin?"

THE END

...and in the Navy too!

✧ It's no military secret that SKINLESS frankfurters are sailing the Seven Seas with our Armed Forces.

✧ Daily, the Navy, Army and Marine Corps demand more and more SKINLESS frankfurters, for they are packed with nourishing FOOD POWER to keep our fighting men fit.

✧ That's why your retailer may be temporarily out of SKINLESS frankfurters. So please bear with him . . . chances are he'll have a new supply tomorrow.

"VISKING" is the registered trade mark of The Visking Corporation

# ONE FOOT ON THE GROUND

By Corey Ford and Alastair MacBain

PHOTOGRAPHS BY ROBERT CAPA

Capable, loving hands, working with ordered haste, have tapped a line here, made a 3,000th-of-an-inch adjustment there, checked every part, and another Flying Fortress sets out for a raid over France.

Give a thought, the next time you read about the big bombers carrying off a spectacular mission, to the anonymous heroes back on the line—the grease monkeys of the ground crews who sent them in there fit to fight

**T**HE storm has passed over at last; the gusty wind drives a final scud of rain across the deserted cement landing strip, and the black puddles bounce with myriad little geysers for a moment. Thunder growls in the distance and occasional blue flashes light the sky, as the storm, fighting a rear-guard action, retreats along the high ridges to the westward. In the darkness, little groups of men huddle in the shelter of the control tower or in the lee of repair trucks at the edge of the field or in the emergency welding tents set up behind the parking area—smoking, grumbling, waiting.

Now the big landing lights go on along the east-west runway, and the head-on silhouette of a four-motored bomber

tilts down into the light and settles like a giant moth on the wet concrete. She taxis smoothly down the field, brakes to a halt, turns and rolls back to the line, warping into place as the landing lights go off again.

Almost before the big plane's props stop spinning, one of the huddled groups is swarming over her. Some anchor her securely to the ground rings, others refill her gas tanks, check and clean her landing gear, examine her minutely from wing tip to wing tip, their right-angle flashlights winking in the darkness like a troupe of benevolent gremlins.

The landing lights come on again, another Fortress slides onto the strip and maneuvers toward her parking area, another group of mechanics run out to

meet her. Still more ships circle overhead, awaiting their landing instructions from the tower. The shouts of the ground crews are barely audible above the constant drone of motors: "Give us a hand with this dolly."

"Toss me up that three-sixteenths socket, Joe."

"Looks like a loose lead here . . ."

You shiver in the raw wind that sweeps the secret concentration field chopped out of an evergreen wilderness. This is where the big bombers assemble like a flock of migrating crows, darkening the field for a few days, then abruptly taking wing as though guided by some mysterious impulse and heading across the water. One night the field is crowded, the next morning it is bare and silent.

Times like these teach us a new gratitude for the simple things in life. A quiet evening of rest, a friendly game with a next door neighbor, good talk, good refreshment, these make a welcome interlude of sanity in a seething world. For millions of Americans that interlude becomes calmer, happier, more content with a glass of friendly Schlitz.

Copy. 1943, Jos. Schlitz Brewing Co., Milwaukee, Wis.

THE BEER THAT  
MADE MILWAUKEE FAMOUS

# "Mommy... who *was* Hitler?"

Today too many children know who Hitler is...

Wherever his ruthless men have marched, childhood has become a nightmare of terror, want, misery and death. For the sake of our own children we must destroy the source of this brutality.

For that, our men are storming the beachheads of the world...our industries are turning their vast peacetime energies into a great stream of war supplies.

For that, we of The Texas Company have turned our peacetime resources into an ever increasing flood of the 100-octane aviation gasoline, Toluene for high explosives, high quality lubricating oils for the Navy, Army and Air Corps and many other war products needed for the fight.

For that, we as individuals must conserve our cars... our gasoline... our tires... buy war bonds and stamps... and help in every way we can.

There must come a day when children will ask... "Mommy, who *was* Hitler?"

**THE TEXAS COMPANY**

TEXACO FIRE-CHIEF AND SKY CHIEF GASOLINES • HAVOLINE AND TEXACO MOTOR OILS

and the whole flock has left for some distant battlefield.

This is the last step in their preparation for combat, the bottom of the funnel. Here the squadrons mass for their final inspection; and here, amid the tension and hurry, their ground crews check and recheck the waiting ships, test their turrets, examine guns and mounts, tune their motors, make sure they are ready for the long hop across.

You've heard them say that a pilot lies with one foot on the ground. This is why, for the dozen grimy mechanics who make up the ground crew of each Fortress or Liberator are as vital to that ship as her pilot or engineer or gunners. When she completes a spectacular mission later over Africa or the Solomons, when she licks her weight in Focke-Wulfs or Zeros, you can take your hat off to these anonymous grease monkeys back on the line, who sent her out there fighting.

The crew chief of the ship that just landed is squinting at the flight report; an assistant holds a trouble light, so he can see. Number Three motor was giving some trouble; loses oil pressure, the report says. The crew chief's ladder, a

twelve-foot scaffold made of inch-and-a-half pipe, is rolled under Number Three, a couple of young sergeants scramble up and remove the two crescent moons of cowling covering the circle of cylinder heads. A gathering pool of oil on the cement under the motor tells the chief that there's a loose connection or a crack in the feed line.

His practiced hands twirl wrenches, reveal the tiny split at a bend of the feed pipe. Without looking up, he removes the faulty tube, replaces it with a new one an assistant hands to him, climbs down from the ladder, goes into the cockpit and starts Number Three. He guns her, nods in satisfaction, cuts the motor. The ladder is shoved in close again, the cowling is fastened into position. Fourteen minutes, all told!

Another ship cuts her motors at the other end of the parking area; her flight report shows that she pulls a little to the left when the brakes are applied. That may mean too little clearance on the left brake or too much on the right, the chief knows. Three thousandths of an inch difference is enough to cause a fatal ground loop when twenty tons land at better than seventy miles an hour. The

wing jacks, huge worm-screw lifters, are set under the jack points, two men turn the spindles, the fat wheels lift slowly off the concrete. The wrenches get busy, the broad brake bands are exposed.

The landing-gear expert makes measurements with his micrometer caliper: "Take up on the right one."

He turns the adjustment bolt carefully, stops to measure with his caliper again, turns the bolt some more. A final measurement; he moves back to let his assistant replace the cover, watching intently until the last lock wire is twisted to seal the nut securely. Just twenty-one minutes!

#### Surgery for Planes

The lights flicking on and off in the darkness, the quick, deft movements and the ordered haste remind you of an emergency operating room in a field hospital. There is no waste motion here, no indecision. These men are specialists in mechanical medicine; they are skilled surgeons with X-ray eyes and stethoscope ears and hypersensitive finger tips. They tap and probe their patients with a family physician's devoted care, diagnose each ailment, prescribe for the slightest symptom of organic disorder in the big bomber's hydraulic or oiling or ignition system.

Their surgical kit consists of socket wrenches and spanners and micrometers and feeler gauges and air compressors and pressure grease guns and electric welding units. They plunge their hands deep into an engine's vitals, feeling expertly, finding the trouble. They are the pick of the best technicians in a country that leads the world in technical skill—the trained doctors of the flying line.

Their training is as exacting as any premedical student's, as practical as a hospital intern's. A mechanic spends his first month in the Air Forces learning to

be a soldier—drill, manual of arms, taking and carrying out orders. In the classroom he brushes up on the rudiments of mathematics, takes machine-shop and aptitude tests. If he makes the grade, he is sent to one of the Air Forces technical schools.

Here he begins the long six-days-a-week grind of higher math, instructive movies, lectures, study of model airplanes, advanced theoretical and practical mechanics. He spends weeks tearing down, repairing and rebuilding motors—radials, liquid-cooled in-lines, the tiny three-cylinder sputterbugs of the single-seater hedge-hoppers, the two-thousand-horse turbo-supercharged power plants of the latest pursuits. He packs in all the theory and practice that engine doctors have stored up for the past forty years; and at last, at the end of six months, he is assigned to work with a crew at an airfield, under the relentless eye of a grizzled master sergeant crew chief.

Master Sergeant "Chief" Pickering, for instance. Gray-headed, spare as a shitepoke, with pallid skin and broken fingernails permanently blackened with carbon, when he contemplates a motor, he stands weighing a wrench in his hand and humming happily, a little off key. He has a nasal twang that could only come from the northernmost part of New Hampshire. Chief's a veteran of the last show, can still tell you the serial number of every Jenny he worked on in France. That's why he closed up the best-paying repair shop in Colebrook, he says. "I guess I had to feel the ground shake under me just once more."

Sergeant Joe Streeter is an ignition expert, lean and weather-tanned. He comes from a town in Texas whose name, he says, you wouldn't recognize if you heard it; claims he started tinkering with motors when he was a kid

Here they come! Anxious ground crews scan the skies, seeking their own plane in a formation returning from a sweep over the continent. Below: One of the planes that took part in the raid is taxied into a hangar, and the ground crew begins repair on a bullet-torn tail

This Flying Fortress landed only four minutes ago. Its crew is being interrogated by Intelligence officers, and the ground crew chief, after squinting at the flight report, is examining the damage to the plane before assigning his men to their specific jobs

With service men, Jockey—the famous brand of support underwear—is a link with home, a reminder of the days of peace. So great is its popularity that they are buying a large proportion of our total output, and the demand is steadily increasing. So, since civilian needs must wait upon the military, you may have to be patient when shopping for Jockey, but it's worth it for the reasons that have made it the service men's favorite.

## Mild Support! Cool!

Only Jockey has the famous patented no-gap, Y-front construction that gives mild masculine support. It's exclusive with Coopers and popular with service men and civilians everywhere.

Because its knit fabric absorbs perspiration and lets their skin breathe, Jockey keeps them cool—even in the tropics. Various leg lengths in cotton and wool mixtures will keep them warm too.

No Bind!

Washes Easily!

Jockey Midway

Jockey is favored by active men everywhere because it doesn't bind, crawl or creep even during the most strenuous exercise. Jockey is famous as the underwear that ended squirming.

Two-piece . . . contoured shirts to match

**Dries Overnight**—Jockey launders easily, needs no ironing and because it's tailored to fit, quickly returns to body contours. Look for the names "Jockey" and "Coopers" on the label.

Short Midway Over-Knee Long

because car cushions make easier sitting than a cayuse. He spent the past five years working in a garage on the main route of the big transcontinental Diesel trucks, but he's always liked the high-speed stuff best.

"Reckon there'll be plenty of private planes to work on by and by when we git home," he drawls. "That's how I come to git in this outfit."

Sergeant Billy Minor from Allamuchy, New Jersey, is round-faced, bespectacled and savvy-looking. He hasn't turned twenty yet, but he's rated one of the cleverest hydraulics men on the field.

He had just started his mechanical engineering course at Stevens when the shooting began. He decided he might as well get the practical end of the course before as after. Anyway, he was turned down for cadet training on account of his eyes. He's not sorry, in a way; says he's never really happy except when he's working on machinery.

"This country's going to keep on having a big air force," he says. "Maybe there'll be a top spot at Wright Field after the war."

They've been gathered from the four corners of the country. They come from the de luxe garages of New York and Chicago. They come from wooden three-stall garages on the Maine coast, where a man works on a logging tractor one day and on a one-lung lobster boat the next. They come from cluttered garages in the Carolinas where pop bottles line the flyspecked windows.

### They Keep 'Em Flying

They come from the heat-soaked garages of the plains where the wind never stops blowing and the junk piles out back seem to sink deeper and deeper into the red dust. North, East, South, West—they thrill alike to the clean staccato of a combustion engine; they know that a motor is a beautiful and holy thing and they know their responsibility to that motor. If an oil-line connection works loose, if a bearing pounds out, if a valve sticks, if ignition points burn and pit, if a gas line clogs, then a quarter million dollars' worth of fancy airplane will be grounded, maybe for keeps. They know it's up to them—at all costs, at all hours, in all weathers—to keep 'em flying.

The lights on the runway have been turned off, all the other planes have landed, their ground crews are finishing up and heading in for late coffee and doughnuts at the PX before they hit the

hay. Only one group is still waiting; they perch glumly along the workbench and on the metal chests in the tool shack, their cigarettes marking their locations in the dark room.

"It would have to be our lead-and-zinc mine that gets lost," a voice complains. "The first date I made in town in a month, too."

"Last anybody saw them was heading south to duck the storm."

"Maybe one of her motors might have—"

"What are you getting at? Them motors was okay." The cigarette behind the voice bobs excitedly.

"Keep your shirt on, Mike."

"Anybody got the time? I said I'd phone by ten if I got held up."

"Better tell her you meant ten in the morning. It's half past now."

"Suit me okay if we got assigned some other crate than that built-in head wind."

"You go ahead along on your date if you can't wait. We'll cover up for you."

"And leave you guys to mess it up when she gets in? Hell, no!"

"Shut up! Listen!"

They pile out the door, stamping their cigarettes hastily. For a moment, they hold their breath, looking up.

They all hear it now, not clearly, but enough so there's no doubt. "It's her."

The sound comes closer, closer and passes directly overhead, a steady drone.

"Motors are okay," Mike gloats.

Now, through a rift in the clouds, they see her. "He's signaling with his lights. Radio must be sour."

She circles lower, her lights flashing a blinker-code message. They look quickly at the tower. A green light appears in the window. She heads in, glides down quietly, barely ticking the cement, and skims to a stop. They race her to the parking place.

One of them holds his hands aloft, motioning her into position; two others are ready with the wheel chocks; another ducks the blast from her props and runs to open the door in the fuselage. The crew chief meantime moves under her big belly, turning his flashlight swiftly on her wheels, her bomb-bay doors, over her wing flaps, up onto the name painted on her nose.

She's not just another plane with a serial number to him; she's a personality, a living thing. He reaches up, pats her sturdy rear end possessively.

"You run around with them young fellers," he murmurs, "but you always come back to me."

THE END

## Any Week

Continued from page 4

Hollywood. "He's in the Navy," said the director. Mr. English said something appropriate—something about the patriotism of a terrific guy like that, getting terrific dough for being terrific, chucking it all and enlisting in his country's Armed Forces. "Oh," said the director, "it's not like that. He hasn't been on the lot for two years. His memory ran out."

MORE admiration arrives—this one from Mr. William W. Acheson of Guadalajara, Jalisco, Mexico. "For many years," writes he, "I have entertained a most pleasant feeling for your magazine. My recollection goes back to the time hookworm first came into the public notice and the most splendid publicity you gave to that most annoying vermin. About your recent article by Mr. Herbert Hoover, however, I desire to say that a cog has slipped someplace. Perhaps Mr. Hoover has not got out of bed very early in the mornings over a long period of time. I have been around a very considerable. . . One never sees two full and two empty garbage cans standing side by side. I am respectfully, sirs, yours."

NEVERTHELESS, we carry on gallantly with a neat bit from the domestic Jap front. From Mr. Francis Hayes of Guilford College, a Quaker school in North Carolina, we learn that when the Japanese were moved out of California, the Quakers rescued many of the young college students from detention camps, placing them in Eastern colleges. Five of them were taken by Guilford, "all American citizens—two Baptists and three Presbyterians." They have, says Mr. Hayes, overcome early local objections and are good students. "One of them has been drafted into the Army," goes on Mr. Hayes. "He is to report soon, and I have just learned that he is to be given time to visit his relatives in a detention camp on his way to the Army."

WHEN we first read Mr. Hayes' letter, we thought of saying something sig-

nificant about it. We still think it would be nice to do so. But we've forgotten what the significance was. Frankly we rattle all too readily these days and we're thinking of seeing That Doctor Fellow. He holds forth in Burbank, California, and we've just heard from him. "Drop in and consult me and I'll tell you who I am," reads his card. "Among my patients are movie stars and other brainworkers too numerous to mention. Is your memory failing? See me. Are you in financial, social, family, industrial or business troubles? So was I. See me. Do you itch? See me. Maybe it isn't a physical itch at all. See me anyway. I'm That Doctor Fellow. Hollywood has beaten a trail to my door and I don't mean mousetraps. Drop in for a check-up. That Doctor Fellow."

OFFHAND, we'd call this one improbable, but a gentleman whose fondness for truth amounts almost to a passion assures us that our doubts would be unfounded. What he told us is that the Treasury of the United States (or wherever the money comes from) has more than a million dollars in uncollected salaries and is pretty sore about it. What happened and still happens is this: During the past year or so, a considerable number of professional and business specialists have gone to Washington to fill well-paid but frequently mysterious jobs. After hanging around for a while trying to find out what they are supposed to do and, if they find out, trying unsuccessfully to get it done, they quietly pack up and steal away home, saying nothing to anybody and fearing to collect salaries due them lest they have to confess their failure. Our friend tells us that at least one such frustrated deserter quit in the middle of the afternoon and was seen no more. His superior spent two weeks trying to locate him and finally telephoned his home in the Middle West. And there he learned that his erstwhile aide had enlisted in the Air Forces where, doubtless, he knows exactly what it is that the government wants done and is in touch with people who can tell him how to do it. . . W. D.

"I don't care if you just can't get along without your former valet. Stop coming here every time you've got a date!"

# FINE FEATHER

BY STANLEY FRANK

Willie Pep mastered scientific mayhem at seven, and went right on to become featherweight champion, with the finest string of wins ever put together by anybody, anywhere. Just ask the boys in Hartford about the astonishing Mr. Pep

WHEN Willie Pep returned to corner after the fifth round of his fight with Chalky Wright for the featherweight title, his large and cheering section from Connecticut was strangely apprehensive. Wright, the old champion, had won the round fetching Willie several forceful fists to the face, and the neighbors from Hartford were dismayed. The Pep kid, not accustomed to losing anything in conjunction with a professional fight. In fifty-three previous bouts he had committed one blunder. He had once lost a round to Pedro Hernandez.

Wright managed to take a few random belts at Willie, but Willie won the fight, of course; he always does. J. J. Fleischer, chief custodian of the archives of boxing, has checked back through more than two centuries and he reports that Willie's streak of fifty-six consecutive bouts without draw or defeat (as of the end of 1942) is absolutely unprecedented in any era or weight division. Willie never has been in the remotest danger of being held even, in a professional passage at arms. Taking a round from him is a stirring moral victory for the other guy.

Old-timers in the fight racket are cynical characters with strident demands for perfection and with nostalgia for the dear, departed titans, but Willie's boxing skill causes them to drool happily. Jimmy Johnston, who has managed four featherweight champions, says he is the smartest young fighter he has seen in years. Al Weill says he is wonderful. Mike Jacobs, whose aesthetic appreciation of a fighter fluctuates with the statement from the box office, says Willie is marvelous.

## No More \$48 Purses

There must be a lot in what they say for the solemn, horse-faced youth, whose largest purse until a year ago was \$48 has come faster and farther than any other gladiator in recent times. Willie (whose family name is Papaleo) was twenty years old in September, making him the youngest world's champion since "Terrible Terry" McGovern.

For an understanding of Willie's extensive popularity in his home state, note must be made of an aberration peculiar only to Hartford and the surrounding countryside. Most localities are interested only in heavyweights, the muscular meatballs who can knock the other guy dead with a punch, but Connecticut is crazy about featherweights.

The Pep kid's recent ascension to the throne will nurture it for two more decades. Most small-town fight promoters are very happy indeed to average gross receipts of \$1,500 for a show. In five fights at Hartford last summer, Willie drew \$70,000 worth of clients.

The promoters, well aware that the people come to see Willie box, have been forced to change their programs. Instead of going on in the fifth bout at 10 P. M., the feature spot for the headliner, Willie's fight always is the third event, at 9:15 P. M., to permit the war workers on the night shift to report for duty at eleven o'clock.

(Continued on page 76)

On the ropes and looking a bit worried, Willie Pep weathers a storm of leather flung by Chalky Wright in their title fight, which Willie won

# NOW *and* AFTER VICTORY

## What Pennsylvania has for you TODAY

Can you buy a tire? What about recapping? What IS this new War Tire? Can you buy one? How? Are all War Tires alike? How can you make your present tires last?

If you want the *right* answers to these questions—(and who doesn't?)—see your Pennsylvania dealer! His information is complete, up-to-the-minute, and *boiled down* to the essentials in which you, as a car or truck owner, are interested.

If you *are* entitled to apply for new tires or retreading, he gladly will help you make the *proper* application to your rationing board. When you get your ration certificate—whether for a new tire, or for retreading—use it *wisely*: insist on Pennsylvania!

Retreading and recapping work is done by factory-trained craftsmen.... The Pennsylvania War Tire, like all Pennsylvania Tires, is made with genuine SUPERTEST CORD and SUPER-PRESSURE CURING.... With certificates calling for #1 grade tires, you have the choice of Pennsylvania RX or Advanced for passenger cars. For truck tire certificate holders, there is the Pennsylvania Turnpike or V. C. Cleat. In each class, the finest tire available today is a Pennsylvania!

## What Pennsylvania has for you after VICTORY

### ★ THE NEW *Silent* PENNSYLVANIA VACUUM CUP TIRE

★  
Among the more than 100,000 new inventions which have been perfected since the beginning of the war, one that is receiving much attention is the new *Silent* Pennsylvania Vacuum Cup Tire.

Wherever and whenever tire history is discussed, the old Pennsylvania Vacuum Cup Tire is always mentioned. And when it is, there is a knowing nodding of heads, and a unanimous agreement that "it was the greatest and safest tire ever built—too bad it was noisy."

TODAY, Pennsylvania's invention of the *Silent* Vacuum Cup makes it again the "greatest and safest" tire—and now it is the *quietest* of all tires!

The new *Silent* Pennsylvania Vacuum Cup Tire accomplishes its feat of combining silence and safety by upsetting the entire current principle of non-skid design. Instead of depending upon noisy ridges (only at their best in one direction), the new Vacuum Cup gets its amazing results by the silent indented cups which are equally effective in all directions. This resistance to skid at all 360 degrees of the circle even reduces the normal friction-producing side-to-side weaving; results in longer wear.

*After Victory, you'll ride on Pennsylvania Vacuum Cups again!*

# Will You Wait for Me?

Continued from page 14

pleasure in her voice. "I've missed him. Where is he?" She went across to the fire then, found a match and lighted it. Woodley watched her. He wondered how old she was. Thirty, possibly. Penster was twenty-two. And he wondered, too, why Penster had had the assurance to think this woman was in love with him, and would wait. It was her charm, Woodley thought, her appearance of sincerity, her friendliness. Lallie had had these things, too.

"He's gone east," Woodley said, "for officers' training." He saw her eyes on him again, noting his sergeant's stripes, careful to draw no visible conclusion.

"Please sit down," she said. "What is the message?"

"It will amuse you," Woodley said coldly. "He wants you to wait for him."

"Wait for him? Where? When?"

"He wants you to wait for him until the war is over," Woodley said, and he made no attempt to warm the words. Penster was well out of this, safely away.

"Oh, no," she said. "This is a joke." She wasn't angry. Laughter waited in her eyes for his explanation.

"Not to Penster," Woodley said, and anger began in him. He had not sat down and she stood up quickly, looking up at him, searching his face for some clue to a clearer understanding of what he meant.

"But Bruce is a child," she said. "What is he—twenty-one, twenty-two?"

"His feeling for you isn't childish."

SHE sensed his hostility at last and her eyes withdrew their laughter.

"I am sorry," she said. "I have just come from the nonsense in there." She paused. "You are fond of Bruce," she said simply.

"He's one of the best."

"So am I," she said, lifting her head and speaking coolly, "but I am also thirty-four and I have no intention of waiting for a boy, no matter how delightful and devoted he may be."

"Is that your answer?" He put his hands on the back of a chair and kept them there.

She turned away from him and looked through the window toward the fog. "You have embarrassed me," she said. She turned back to him. "Besides," she said, frowning, "you've delivered the message very badly. It was stupid of you to come here to say this to me. You must have known it was stupid."

Yes, he had. He had cursed himself most of the way up here from camp; his anger became complicated and vindictive.

"It must have been," she went on, "because you couldn't refuse Bruce. I couldn't either, you see. I let him kiss me. Several times. Is that what you wanted to find out? And why?"

Woodley didn't answer. He was thinking of Penster when this word reached him, of his young face whitening, of the abandonment of his grief; and he was thinking, too, of the others, the many others she had kissed. Several times. Why? Because, at thirty-four, widowed, she wanted a last chance at touching innocence again, or she wanted to re-establish the illusion of her own youth, or she was bored.

It seemed to him now, at last, he understood Lallie. This woman was Lallie, grown older, lonely, selfish, paying with an expensively acquired charm for emotions she lacked the perception to classify. It seemed to him this was Lallie and he despised her impersonally. The

vagrant thought came to him that he could do what Penster hadn't done; he could awaken this woman's love. It would, he thought, somehow avenge Penster, but he put the thought away as melodramatic and answered her question.

"No," he said, "it doesn't matter to me why you kissed him."

"A month from now," she said, her voice softening, "he will scarcely remember me. You know that, don't you? You do if you know Bruce, if you understand him."

"Well," he said, picking up his cap, "I'll write him."

"No," she said. "Please don't. Give me his address and let me write. I promise to put it very plainly." He could not help wishing, abruptly, he had not known Lallie. It would have been so pleasant, while it lasted, to trust Blossom Blaine.

"I'll finish the dirty job," he said bleakly.

At the door she looked up at him.

"Won't you come in and join us?" she said. "There are only thirty today. It's the fog. It makes anyone who hasn't grown up in it lazy and suspicious." They were scarcely two steps apart. He could see now the brief, vague lines at the corners of her eyes, corroborating her age. Turned toward him, her hand on the doorknob, she spoke again: "It is curious, your friendship for Bruce. I don't understand it. Either there was something in him I didn't sense, or you are not being completely honest with me."

She opened the door and the music from the drawing room was robust and inviting. It was young, tempestuous with laughter, and it recalled to Woodley his reasons for joining up, for enlisting as a private when he could have had a commission. It took him back to the man he had been before success had begun for him, before he had turned irritable with worry and pressures, before Lallie.

"Please stay," she said again.

No reason why not. He had nothing else to do.

"Sure," he said. "I'm a soldier now."

It was insolent and she looked at him gravely, but the music boomed an interruption. A young fellow with freckles on his forehead put his arm around her and urged her back on the carpeted floor. There were other girls, younger than Blossom, he saw with cynical surprise, and very pretty, tanned, groomed, at ease with five males responding to every gesture. Near the fireplace, one papery hand tapping out the rhythm, was an old lady, a black ribbon around her throat, lace at her wrists. She was like a dainty statue in a niche, carefully selected to enhance the elegance surrounding her.

"Please," Blossom said, disengaging herself from the freckled youth. She led Woodley through the dancers to the fireplace.

"Granny," she said, "here's another one. Not handsome. Bleak."

The papery hand in his had an unexpected vigor.

"What's his name?" Granny demanded. Her voice was silvery sweet and very clear.

"Woodley. Lance Woodley," he told her. "From Chicago."

"What does Blossom mean by bleak?" she said. "Is your nose pointed?"

HE LAUGHED and in the midst of his laughter realized she was blind. He reached for the papery hand again, and put it on his nose.

"Round as an apple," he said, "and half as big."

She asked him a great many questions and he answered all of them. He had forgotten Blossom. He was surprised, looking up, to find her still there, her eyes on Granny, tender and yearning.

This is someone she loves, Woodley thought.

He began wilfully wooing Granny but Blossom was recalled to the dancing, and the old lady reached down, fumbling for his hand. "Don't waste yourself on me, boy," she said dryly. "Go and dance with her." Instead Woodley put his other hand over hers and tried to bring warmth to the desiccated fingers; he felt young, abruptly, and at peace and he

forgot young Penster for the moment trying to recall when he had ceased to believe in kindness.

From time to time soldiers ambled past him through another door and came back presently, munching. He followed them and found sandwiches and cakes and tea and coffee arranged among candles on a polished table in the dining room. There was no one to serve the food. It was there if you wanted it, and Woodley helped himself, aware of his hunger.

He came back to the music and danced with one of the young things, a leggy morsel scarcely past the robust age and unexpectedly appealing, but he knew he would dance with Blossom before he left. He told himself he needed to know her better for Penster's sake, and yet when she was in his arms at last he could think of neither Penster nor Lallie. He even forgot he was thirty-six and did some of the intricate steps he hadn't tried for years. Blossom's laughter was friendly and contagious, and she was warm and responsive in his arms.

He had meant to leave with the others, collecting their caps as the tall clock near the piano chimed six, but Granny clung to his hand and he was left alone with her in the big room.

"You will come back?" Granny said and pressed his finger tips urgently. Her sightless face was drawn with weariness and her delicately rouged lips moved as though she were still speaking. Woodley had the impulse to insist that she make her continued thoughts audible to him. "Yes," he said instead, "I will come back."

He paused in the doorway to the hall. Blossom was there near the big outer door with the young fellow of the freckled forehead. Outside, Woodley could hear the hilarious withdrawal of the others, but here in the hall it was quiet. Blossom saw him standing in the door.

"I'm shipping out," the young fellow said. "I won't be back here before I go. Would you—kiss me goodbye, Blossom?"

"Good luck," she said, and her voice

"What makes you think you'd do better in some other business? What other business?"

# The Blue Tin ENLISTS!

The NEW Edgeworth SEAL-PAK  
CARRIES ON!

I sat beside a stranger

In the smoking car today  
And as I filled my briar pipe  
I heard the fellow say—  
"Excuse me, Sir, for asking,  
But that package you took out—  
Is that the Edgeworth SEAL-PAK pouch  
I've heard so much about?"

"Yes," I said, "their tin of blue  
Is gone for the 'duration'—  
But frankly, this new SEAL-PAK pouch  
Is really a sensation;  
It keeps the Edgeworth flavor-fresh,  
It's neat—and trim—and handy—"

The stranger took one look and said—  
"You're right! It's sure a dandy!"

THAT famous Edgeworth "tin of blue" is gone for the duration. For Uncle Sam needs the tin for bombers and fighter planes. Today when you step up to the tobacco counter to ask for your favorite Edgeworth Pipe Tobacco, the clerk will hand you a handsome blue pouch—the new Edgeworth Seal-Pak Pouch. It fits your pocket comfortably—and, best of all—it keeps America's Finest Pipe Tobacco in a flavor-fresh condition.

Enjoy a generous sample at our expense. Write  
Larus & Brother Company, 202 22nd Street,  
Richmond, Va.

"AMERICA'S FINEST PIPE TOBACCO"

trembled. She put her hands on his shoulders and kissed him gently on the lips. He fumbled, reaching for the door-knob.

Her eyes as Woodley approached were dangerously bright.

"How many times does a fellow have to come here to get one of those?" he said.

She pulled open the door. "Go away," she said. "Don't come back."

He tried to write to Penster that night. "Dear Bruce," he began, "get out your bib to dry your eyes. You had a ride in a beautiful little red wagon but the stars you saw weren't real. She kisses them all—when they're leaving."

He snarled the paper into a wad and threw it away. He sat a long time with his face in his hands. If he went back again and ate crow, could he get her to write to Penster, promising to wait even if she didn't mean it, to give the kid something to go on? He considered his approach, his follow-up; he plotted a course of action.

He went to bed that night talking to himself.

On Tuesday he called her long-distance from camp. Tilda answered the call. Young Mrs. Blaine and old Mrs. Blaine, she said, always spent Tuesdays at the Red Cross. He hung up.

On Thursday he asked for leave and went out again to see her. The sun was shining and spring was real at last in the air, the willow trees nostalgically fragrant. Through the grilled gates he saw the first tulips blooming at the Blaines'. Someone was running a lawn mower—a girl with brown legs, wearing one of those bulgy peasant skirts the women of Europe had been trying to discard for centuries. It tickled him to see a woman at the business end of a lawn mower. "Do 'em good," he thought, "give 'em perspective."

He would have walked past, but she threw up her head as he approached.

"Did you want something?" she said. It was Blossom. She recognized him slowly and her first reaction was bewilderment. She rubbed the back of her hand across her forehead and it came away wet with perspiration. Her hair, bound back with a white ribbon, rippled to her shoulders, curling up at the ends like a baby's fingers. She wore neither rouge nor lipstick and her olive skin was wonderfully aglow and clear in the pale sunlight. Her white blouse was mended.

"This is refreshing," he said. "I had forgotten civilians labored."

HE HAD meant to be friendly, thrusting in an opening wedge but her dark eyes began to brighten with anger.

"Do you know how long it takes to mow a lawn this size, Mr. Woodley? It takes two days. And do you know who does it? I do. Do you know who clips those shrubs? Do you know who planted those tulips for the moles to undermine? After all, this is a big world and most of it is at war and a few of us here at home think a share of it belongs to us. Why did you come back?"

"You could give it up, all this." He waved a hand.

"I could. Granny couldn't. And it means something to the boys who come out here Saturdays to find a place untouched and still whole to remember. It means something to you," she said unexpectedly. "That's why you came back."

He knew he had begun to love her. He had known it all the long way out today, and the thought of Penster made him sick and ashamed. He began, speaking brusquely, to state the case he had prepared. It would cost her nothing in pride or emotion to write the boy. She

could sidestep the issue of waiting for him and keep the letters affectionate and gay.

"And hopeful," Woodley said firmly. He offered her a cigarette but she shook her head. A breeze mingled salt air and the smell of fresh-cut grass in his nostrils, while near at hand a robin tugged a worm out of the ground. He was aware of these things but while he waited for her answer he was thinking despondently that he would have to go back now and remember all the things he had learned about Lallie, all the decisions he had made about himself; and he wondered how he could have been so stupid as to think he could step from one way of life into another, from one age group to a younger one without in some measure becoming vulnerable again to the beliefs and emotions he had once wilfully discarded.

"I can't do what you ask," Blossom said at last. "I understand you now. You're an idealist. Bruce isn't." It disturbed him profoundly to have her soften toward him. It shook his judgment and his resolution. She came closer to him and her eyes on his pleaded with him. Her voice was urgent: "Cut loose from the memories that hurt, Lance. Bitterness doesn't belong to you. You are good."

Penster, he thought stubbornly. I am doing this for Penster.

"We were talking about Bruce," he said stiffly. Let her think whatever crazy thing she wished about him.

"No, we weren't," she said, and she was laughing, a happy laugh with triumph in it. "Bruce will take care of himself. You wait and see."

Walking stiffly toward the gate again he heard the lawn mower start behind him, and that was good. He had been afraid he might offer to mow the lawn for her. He had been afraid he might ask her to let him come again.

He wrote another letter that night. "You'll have to face it some time, kid," he wrote. "It might as well be now. She doesn't love you and she never will, and your best move is to keep an eye out for someone your size."

He tore the letter up and went to bed. The fellow on Penster's cot next to his, was already snoring, cadenzas rolling.

He tried to remember when Penster had first mentioned Blossom. What had

he said? "She's kind, Lance." That had seemed important to Penster. Woodley saw now it had seemed important to him too. It explained his willingness, his eagerness to run Penster's errand. It explained Woodley himself. Somewhere he had laid aside kindness. Lying there in the dark silence around him save for the restless stirrings of the men, he admitted now he had forsworn kindness even before he had met Lallie. He fought the admission. He excused himself. Toward morning he fell asleep.

He gave himself two weeks. At the end of two weeks he would go back to assure himself that Blossom had been figment of Penster's emotion, which had somehow transmitted itself, briefly, to him. He was too old for that sort of thing, too wise. To prove it he asked for extra duty, and when he was called into the C.O.'s office he supposed he was to be commended for his industry.

"Woodley," said the man behind the desk, given size and dignity by the directness of his manner and the quiet authority in his voice, "we are always surprised when a man of your capacity comes into the Army as a private. Would you like to know why you have not asked for officers' training?"

WOODLEY was disturbed. He had supposed anonymity was a concomitant of enlistment. He had thought here his business would be his own, his private fight, of no consequence in the ultimate battles for which he was being trained. He took time to think of a fitting and ambiguous response, and the officer facing him waited patiently as though he were accustomed to men confused by his directness.

"I think," Woodley said, at last, "I wanted to learn again the lesson of kindness."

The C.O. looked at him sharply.

"The Army seems hardly the place," he began, and paused. "Yes," he said "you could probably find anything you were looking for in the Army, if you set your mind on it. Kindness is not the name we give it but it may amount to the same thing in the end. I think I understand you, Sergeant." Queerly Woodley felt he did, and he had a sense of having confessed, of being cleansed. Now he had spoken aloud the tenuous and exasperating sum of his recent

**This -**

**BUT FOR ONE THING -**

**Could Be Your Wife**

OF COURSE, you've never pictured *your* wife in the hands of an Axis soldier. You're sure it couldn't happen—the war's too far away. *But—*

Our enemies didn't start this war in the expectation of losing. They were sure they could bring war here—and find victory here. And they're fighting today in confidence that they still can!

If American boys dug slit trenches in your front yard and faced the Axis gangsters *there*. . . . If you could see them die at your doorstep defending you—watch them go down under Jap bayonets or Nazi flame-throwers—that nothing could harm you and yours. . . .

You'd gladly say —“Here! Take my dollars! Take anything—everything—to win this fight. What can I do with dollars—if you lose?”

Is it different—because they fight your fight out of sight of your doorstep? Because that boy next door chose to face our enemies *before* they stormed your street and threatened to break down your front door?

Would you rather wait until you hear the whistle of bullets before you *loan* your money to buy guns . . . to keep the skies clear of hostile planes . . . to keep the hands of Axis brutes off your wife or daughter?

Yes—just *loan* the money! Just a fraction of what you'd gladly *give*—if lack of guns and bullets over there could bring the fighting over here. Just a loan—so American boys can *keep* this war “far away.” Just a loan—to be doubly sure that it *won't* be *your* wife—and too late to do anything about it!

From now on—think of War Bonds that way! And dedicate as big a part of your pay as you can. To give that boy next door a fighting chance. To help him keep our home secure. And to let you look our fighting men in the eye some day, and say to yourself, “Yes, when men were dying to save *my* home, I did what little I could to help them keep it free!”

thinking, and it no longer seemed silly and ineffectual. What Blossom had said, what Granny had implied, what the C.O. was repeating began to make a pattern for him.

"I think you are officer material," the C.O. began again abruptly, putting aside abstractions brusquely. "If you have no active feeling against the matter, I am recommending you for officers' training. The outfit is being moved early next week, but this will go right through." He smiled dryly. "Even among officers, Sergeant, I have known kindness to develop." He put out his hand, gave Woodley's a quick clasp and turned back to the papers on his desk.

Woodley went back to his barracks. He drew out a sheet of paper and sitting on his cot, a magazine on his knees for a table, wrote to Penster.

"We may meet soon, there's no telling," he wrote, "or we may not. Anyway I want to report your errand completed. I have seen Blossom Blaine. I have asked her to wait. The answer is no." He sat a long time, unmindful of what went on around him, wondering how much more he should tell Penster, whether he should reveal he was going out there tomorrow to plead in his own behalf. He wondered if officer material made love to a woman marked in another man's dream for himself. He wondered what excuse he had, when you came right down to it, for going out there again.

**H**E ENDED the letter with camp news and signed his name. He mailed it, and within the hour he remembered he had promised Granny he would come again. His last visit had scarcely counted. Besides, he was leaving now. He could claim a kiss.

He got his leave the next day to tie up a few business ends. No one questioned him deeply. He spent the morning in a newsreel theater, but by noon he had his courage in hand and was on his way to the north end of the city. He had bought a cheese, a box of chocolates and three cans of tuna fish, and these things, he thought, would mark him as nothing more than a grateful soldier. It was important to him that Blossom should not know he had thought to betray Penster.

He had forgotten it was Saturday. There was singing again in the drawing room. Tilda answered the door, and he was astonished by the look of relief, even pleasure, on her gaunt old face.

"It's Mrs. Blaine," she said, "the elder Mrs. Blaine. She is very ill. Will you go right up?"

"But," Woodley said, handing Tilda his parcels and indicating the mounting noise in the living room, "shouldn't these fellows be—"

"No," Tilda said firmly. "They wouldn't like that, neither one of them." Woodley followed her up the wide, carpeted stairway and down a vast hall to a corner door.

**G**RANNY'S room held a collection of old-fashioned furnishings, the chairs antimacassared, the walls thick with photographs miscellaneously framed. Beyond, through a draped doorway Woodley saw Granny herself in bed, a lace cap on her wispy hair. The single lights in both rooms were shaded.

"Is that you, Tilda?" Blossom came from the bedroom, and stopped at sight of Woodley. "Lance," she said, her voice hushed as though she were an abashed party to a miracle. "Granny wouldn't let me call you. She said you would come."

"Tell him to come in here," Granny's high, clear voice said from the bedroom. "Lance Woodley, come in here. You others, Tilda, Blossom, go away."

But she seemed only to want to lay her old hand in his when he was beside her. To Woodley there was no change in her; she had looked life-spent when he had seen her first.

"I have been talking to you all day," she said presently. "When you get to be as old as I am, and have been blind for many years you trust your instincts. It's a courage you get with age. I've been lying here trying to put my feeling about you into simple words. I can't do it. I can only tell you I knew you were good when you tried to warm my hand that first day Blossom introduced us, and you sat a while and you talked and you weren't pitying. I knew then you were humble, and I thought you were unhappy, and I listened to your voice. It seemed familiar to me, and it was. It was Blossom's voice, the voice of a person who needed a new chance at believing in simple things again, goodness and unselfishness and kindness and hope."

Her voice was comfortable and unhurried.

"I've been trying to tell you the story of Blossom, too," she went on. "She married my grandson, a very bad man, when she was twenty. Fortunately he died." Her calm and sightless face was turned toward him. "She could have married again, but she hasn't. She has taken care of me, a doddering, sightless old woman who loved her, and all these years she has had only the unhappy

mories of her marriage to live on. It's not enough, and it's wrong. She is young and warm. She wants to give of herself, and I thought it would help these soldiers. It's broken the dike, that's all. She works like a cart horse getting ready for them, and they come, and then they go away, and she can't send anything with them but a kiss and a memory. You'll be going soon, too."

Her fingers in his hand tightened urgently. "I want you to make love to her," he said. "You may not love her now, but you will, and she'll have your letters. She'll be getting something back, d'you see, for the first time in all these years. I was waiting for someone, and you were the one. You were sent here to love and protect her."

Her voice trailed off sleepily, and she turned her face away from him, caressing the pillow with her cheek. Woodley thought she had fallen into the abrupt sleep of exhaustion, but she spoke impatiently. "Go on. I've stayed awake waiting for you, and I'm sleepy."

HE CLOSED the door softly and stood a long time hearing Granny's voice again, and her words. He saw that her condensed both living and dying, made them immediate and gave them a dry. He hated Penster abruptly. Blossom was not in the living room. He found her in the large kitchen, quick hands darting from bowl to bowl of the mixtures set before her. She was making sandwiches. At sight of Woodley the quick hands faltered.

"Granny?" she said. "She's sleeping."

"Praise be," Tilda said beside him. "By day after tomorrow she'll be up and around again." She picked up a tray of sandwiches and disappeared into the butler's pantry.

"Granny hasn't slept," Blossom said, "for forty-eight hours."

He touched her arm. "I'm leaving soon. I want to talk to you."

She slipped out of her apron and into a worn jacket hanging in a closet near the kitchen door. Without demur she opened the door and went out and down the brick path that led them out at last to the Sound. The sky was pearled in the west with the evening rays of the soft, spring sun. A boat with only its riding lights slipped past far out on the water.

He took her hand and she let it lie in his without pressure. "I wrote to Penster today," he said.

"Did you?" She looked at him with a strange astonishment. "That's curious." But she didn't ask him what he had written.

The westing light on her face tranquilized and revealed it, and he saw that she was weary. He put his arm around her and turned her to face him. "I'm eligible for a goodbye kiss," he said.

She was trembling. He could feel the warmth of her body through the thin coat, and he thought for a moment she did not mean to kiss him, but she lifted her arms and put them around his neck and touched his lips with hers. It was a brief kiss, but it left him shaken, and he wondered how he could have thought he would be the chivalrous little man and not betray Penster.

She was looking at him, still in his arms, and he saw the question in her eyes, and at the same time felt her nearness and knew he could kiss away that question. And that he would not. He had begun to get hold again of the simple things, of goodness and unselfishness and kindness and hope; his hold was tenuous but the most precious thing he had, more than he had thought he could retrieve. And somewhere Penster was still hoping.

He kissed her again, lightly, on the cheek, and let her go. He could not read her face. Whether she was disappointed or relieved, he could not tell.

"I wrote to Bruce today, too," she said at last.

He took a deep breath. This was what he needed, a reminder. "You didn't have his address."

"Oh, but I did. He sent it to me when he wrote. He wrote me a long letter, a sweet letter, announcing his engagement to a girl named Amelia. So I congratulated him. I have his letter. I thought you should see it." She handed it to him, and he read it half through, stupidly, before he recognized its significance. He looked up, his face young and bewildered, and she was watching him, and yearning as she had yearned that night toward Granny.

He reached out and took her in his arms. There were tears in her eyes, and the question was answered. She had been afraid, too, he had left integrity too far behind to recall it.

"You will come back," she whispered, words bolstering belief.

"I will come back," Woodley said. "Wait for me."

THE END

## CHINA FLIGHT

BY PEARL S. BUCK

ILLUSTRATED BY MARTHA SAWYERS

### The Story Thus Far:

THE guest of the Hatfords—Arnold Hatford, a wealthy Englishman, and his Eurasian wife, Leone, while they are house-boating in China—Lieutenant Daniel ("Dan") James, of the U. S. Marines, hears that Pearl Harbor has been attacked. Leaving the Hatfords (who plan to make their way to Hong Kong), he hurries to Shanghai, only to learn that his ship has sailed and that he is a prisoner of the Japanese!

Seated in his office, in the Japanese Foreign Office, in Shanghai, an important official, Shigo Kuyoshi, passes sentence on three prisoners: James; Jenny Barchet, an American newspaper correspondent; and a Mrs. Shipman, a kindly soul who runs a home—the "Gate of Hope"—for girls who are in trouble. He says the Marine is to go to prison, and that Jenny is to be interned, in her hotel, while Mrs. Shipman will stay, a prisoner, in her home.

Unfortunately, for Jenny, Shigo, strongly attracted to her, terrifies her by his bold advances. . . . Leone Hatford, half French, half Chinese, does not love her husband. En route to Hong Kong, she slips away from him, and makes her way to Shanghai, where she finds refuge in the home of her grandfather, school-

arly old P'an Lao-yeh. She hopes desperately that, somehow, she can find the man she has recently learned to love—Dan James, of whose fate, needless to say, she knows nothing. . . .

In his prison cell, James is kept in chains. Then, one day—after his brutal captors have given him three American sailors as cell-mates—he is escorted, with the sailors, to Shigo Kuyoshi.

Suspecting that Jenny is interested in James, and hating Americans, Shigo loathes the young Marine. But, when the victims come in, he directs most of his questions—and brutal ones they are, too—at the sailors. Taking a special dislike for a young blond fellow, he directs most of his vitriolic comments at him.

After a time, the boy refuses to speak. Whereupon, a guard attacks him, breaks his arm with a jujitsu trick.

At this point, James (no longer able to control himself) jumps forward. "Come on, fellows!" he shouts, and he and the other Americans leap on the guards. But Shigo knows what to do. He simply touches a bell that sounds an alarm through the building; and a number of armed guards pour in, overcome the Americans and truss them up. Shigo, oily as ever, is calm and collected. "How foolish this is," he says gently, "how unnecessary!"

SHIGO sat there behind the desk, not a hair disturbed.

"Really I blame you, Lieutenant," he said to Daniel, with kindly severity. "These sailors are only simple fellows, but you should have known better."

Daniel bit back the retort on his lips. No use talking!

Shigo surveyed the prisoners a moment, his eyes benign and superior. Then he spoke in a rush of Japanese, and instantly the guards moved. He spoke again and two of them pushed Daniel to one side, while the others led the sailors away. Two stooped and picked up the blond boy.

Daniel asked: "Are you going to get that boy's arm set before he comes to?"

Shigo lifted his handsome eyebrows. "He may never come to," he said quietly.

"Do you mean—" Daniel shouted.

But Shigo put up his pale hand. "Do not shout, Lieutenant—it is not necessary. You Americans have such a habit of shouting."

"Look here," Daniel gasped. "If I get out of this hole, I'll see to it your name is put down at the head of the list for punishment. They'll be making a black list of the ones they're going to punish—for extraordinary cruelty. Your name will be at the top of the list!"

Shigo laughed. "Incurable optimism," he said gaily, "the American national character! There is a large war on, friend, and we have won the first round. We shall win the second round, friend, and the third round, and means we shall soon have the island of the Philippines and the East Indies, Hong Kong and Singapore, Lieutenant."

"You talk like a fool," Daniel said shortly.

Shigo laughed. "How refreshing your frankness is," he said amiably. "You from—let me see—there is a state—"

"Missouri," Daniel said. "Yes, from Missouri."

"Well, Missouri will see," Shigo said. He took an exquisitely carved brass pocket knife from the desk and held it in both hands. "Now to business," he said briskly. He looked up and met Daniel's sullen dark eyes with malicious glee. "I have a special post for you, Lieutenant. I know how hard it must be for a man of your strong frame and active habits to be sitting idly in a prison. Therefore, I propose to take you out into the sunlight and the air and to give you plenty of exercise. I propose, in short, to give you the job of pulling my private ricksha."

HIS mocking oval eyes were smiling as with peculiar pleasure he watched the dark red creep up from the lieutenant's neck and cover his cheeks.

"You haven't a ricksha and you know it," Daniel muttered. "Your kind rides in automobiles."

"Ah, but there you are wrong," Shigo said. "I have a new and shining ricksha with good rubber tires, brass fittings, silk-covered cushions, a handsome ricksha that will be an honor for any coolie to pull. It is quite fitting—did you know that was an American who first invented the ricksha? Yes, it was in Japan, and I hired Japanese to pull him about in the Americans so enjoy the ricksha—pulled by Japanese. Now you will enjoy it also, doubtless, but between the shafts."

Daniel held up his head. He stared high above Shigo and out of the window behind the desk.

"What if I say I won't do it?" he asked clearly.

"It is quite within your right to refuse," Shigo said calmly. "But it is also quite within my right to send you after your companions." He pressed a bell and spoke a few curt words into a telephone. Then he put back the receiver. "Let us listen," he said solemnly.

In silence he sat, his pale hands folded on the desk in front of him, and Daniel continued to gaze out of the window. Small creatures were hunting through the ruins, grubbing in the dust and fallen brick and the ashes.

"Now," Shigo said.

Across the silence rang three clear shots.

"They are saving alive the young man with the broken arm," Shigo Kuyoshi said in his gentle, cultivated voice. "I gave special orders that he was not to be shot—yet."

"Do you think I care what you do to me?" Daniel said. His voice was harsh in his tight throat.

"I thought you wanted to live to tell how bad I am," Shigo reminded him. His eyes were teasing. "How can you tell them about me if you are dead?"

Daniel did not answer. Tears of wrath

*Announces*

# A NEW, NATION-WIDE CONSERVATION SERVICE

TO MAKE this new service available quickly, AC has placed trained men in the field to carry to all service organizations the latest and best methods of diagnosing trouble, testing, adjusting, and repairing AC products with a minimum of parts replacement. This will help to conserve material and shorten the time required for repairs.

## *For Your Car or Truck*

Your car or truck is equipped with from one to nine of these AC devices. All are *important* to the

conservation of your gasoline, oil, and tires. Some of them are so indispensable that, if they fail, you cannot drive at all.

## *For Yourself—and America*

A list of the products covered by this new, war-time service; and a brief statement of what they require, and why; are given below on this page. For your own good, and for the conservation of America's gas, oil, and tires, follow the suggestions given.

This new service will save time on repairs, and conserve vital materials on all nine of these AC products—

**SPARK PLUGS**—Dirty or worn plugs waste as much gas as one coupon in every ten. They also cause hard starting which weakens your battery. Have your plugs cleaned and adjusted every few months because they get dirty faster with slow driving.

**AIR CLEANERS**—A dirty air cleaner restricts the flow of air into the carburetor. This reduces gasoline economy, increases gas consumption. So, to maintain gas economy and to protect your engine against dust, have your air cleaner rinsed every time your car is lubricated.

**FUEL PUMPS**—Fuel pumps are practically trouble free. However, if yours has been in use thirty or forty thousand miles, it may be worn to the point where a check-up is due.

**OIL FILTERS**—Slow driving greatly accelerates the formation of soot and carbon in engine oil. If not constantly filtered from the oil, this dirt will clog piston rings which will cause increased consumption of oil and gas. So, replace your oil filter elements whenever your dealer's AC Oil Test Pad shows that your oil is dirty.

**SPEEDOMETERS**—Speedometers, too, are very reliable and seldom give trouble. But, today, it is absolutely necessary to keep them in good condition.

**AMMETERS**—Your ammeter is very reliable and seldom requires service, but it must be kept in good condition because it is the tell-tale which shows whether the battery is being charged or drained.

**OIL PRESSURE GAUGES**—If your oil pressure gauge stops functioning, SWITCH OFF YOUR ENGINE and call a competent service man at once, or the engine may be seriously damaged. The gauge, often, is not at fault. Usually, the trouble is in the oil supply system.

**GASOLINE GAUGES**—Gas gauges need to be kept in reliable condition, although they seldom need service.

**TEMPERATURE GAUGES**—Your temperature gauge is your only indicator of engine heat. Although very reliable, it should be kept in condition. An overheated engine can suffer expensive damage and waste anti-freeze.

were hot in his eyes. If this criminal had shot so easily the sailors and kept alive the tortured boy, what had he done to Jenny? He brought his eyes back from the ruined city and fastened them upon Shigo's smiling face.

"That girl," he said between his teeth, "Jenny Barchet—did you shoot her, too?"

For a moment the two men glared at each other, and for the first time Shigo's face changed subtly. "You remember her, ha?" he muttered. Then he shook himself and wiped his mouth with his silk handkerchief. His face was right again. "You remember her, of course," he said, and cleared his throat. "No, certainly I did not shoot her," he said. "Why should I shoot a beautiful woman, especially when she is—my friend?"

"You lie," Daniel said distinctly. "She could never be your friend."

"She is a woman," Shigo said. The smile was a smirk. "And I am a man, am I not? And not—too—" He shrugged his shoulders. "Come, I will not praise myself and my success."

He became the man of business again, cold, and full of authority. "Your room is on the compound, Lieutenant," he said with ironic formality. "Our coolies always stay in the servants' quarters ready for call. And you will have these two friends always near you."

HE THREW in a few curt words and the two guards moved forward. There was no time for one more word. They prodded Daniel in the back, pushing him through the door. Then they turned to the left, and he made his way ahead of them through a garden. The grass was dun with winter, but the bamboos were green, and against the house there were clumps of green shrubs gay with red berries. The birds were busy at them and flew away in a scolding flock as he passed. Around the huge house he went, guided by the bayonets at his back, and across a kitchen yard to the long row of single-story rooms at the rear. Three or four Chinese menservants idled there and looked at him with veiled eyes. A Japanese woman squatted on her heels and nursed a walking child who stood on the ground in front of her. No one spoke. He was led to a room near the end of the row and thrust into it. The room had a grilled iron gate and the guards locked the gate.

He stared about him for a moment

and then sank on the bamboo bed, dazed and faint with all that had happened to him. He was a prisoner still.

In the hotel everyone was watching Jenny Barchet. She was the only American. It was a small hotel kept by a German couple, clean and well managed. When she had first come here there were many Americans, and then one by one they had gone away. She had watched them go, had known that she should be going, too. In a few days, she had kept telling herself, she would be on a ship bound for Manila. Then, suddenly, it had been impossible to go anywhere.

The hotel now was full of Germans and Italians and Japanese. They watched her curiously, admiring her beauty and her proud carriage. Every one of them knew that though she seemed to come and go so freely she never went beyond the compound gate. Everyone knew that though she wandered about the hotel gardens, there always seemed to be a Japanese wandering very near. Whether she saw it or not she gave no sign. When her proud blue eyes lifted and fell on that small invariable figure in the dark plain clothes lurking at the end of a flower bed or strolling on a pebbled path, they were blank upon a stranger's face.

She lived a routinized life, sleeping as late as she could, and then going down to the hotel room for breakfast. There she sat at the same table, always a small table set for only one. If anyone spoke to her she answered good morning in a sweet and distant voice. She walked after breakfast for an hour, and her shadow walked, too. Then she went back to her room to write. She wrote steadily for as many hours as she could and what she wrote was a novel. Its scene was imaginary, its people imaginary—dwellers in a land that never was. Because she knew that in the afternoon what she had written would be read by sedulous eyes and reported, she spent the morning making her tale as fantastic and as bewildering as she could.

But all the time she was walking, all the time she was writing, she was taut with listening. Some time during the day, any time, the telephone would ring and there would be Shigo. There was no chance of its being any other voice than his—gallant, mocking, a little eager in spite of himself. There was never a day that he did not call. Sometimes it was only to tell her that he could not come,

"Have you a thicker diary? I lead a pretty interesting life"

COLLIER'S

A. JOHN KAUNUS

"May we have another helping, please?"

DICK SHAW

he had extra work to do. When this happened she always did the same thing. She pulled the shades down and took a bath and went to sleep for hours. Tautness left her until dawn the next morning.

Her door was always locked, but she knew that every lock had another key, and she had it. When she went to sleep she pulled the furniture against the door and put the pistol under her pillow. Sometimes she was waked in the night by the sliding of the furniture pushed against the door. When that happened she pulled out the pistol and called sharply, "Who is there?" Always the noise stopped.

Yet she knew she was safe enough, so long as Shigo came to see her. Nothing could happen to her unless he let it happen. She lay awake every dawn, pondering this horrible net that Shigo had cast about her, a net of silk, seemingly so delicate, actually so strong, so closely woven that there was no escape.

HE had made many attempts to find a thread for escape. Her room boy she had tested delicately, offering him money and would let her through the back gate one night. But he had shrugged his shoulders.

"More better Missy stay here," he had consoled her, and turned down the corner of her bed neatly as he made it.

When she tried it the second time he had said simply, "Suppose my do, what do you go, Missy? No man can talk to you come his side. Suppose he do—" the room boy pointed an imaginary gun, took aim, and fired. Then he grinned at her. "Maskee, Missy," he said to comfort her.

She wandered downstairs sometimes in the evenings. In the lobby there were Germans, German men and a few German women, fewer Italians and many Japanese. They stared at her curiously. Sometimes a man spoke to her, his lips quivering as he smiled. She knew what they thought—that she belonged to Shigo Kuyoshi. None dared to be too friendly to her. There was not one whom she could trust.

Where would it end? Day by day she felt Shigo more pressing. One day that gentle courteous surface that he maintained so steadily gay, so insistently hopeful, would break. Then what would she do to her because she had not yielded to him? The most horrible thing was that he really loved her, in his way of loving. His patience was because he loved her and wanted her to love him.

What would happen to her when she did not yield? This was the terror of her days and nights.

What had happened to Daniel she had no way of knowing. She longed to be able to talk to Mrs. Shipman, but there was no means. At first she had tried to reach her casually by the telephone. She knew now that she could never reach anyone by telephone except Shigo. To any other call the answer was the same, "Too bad—no answer, Missy."

She lived in physical ease and comfort, and yet in prison. She had luxuries of good food and hot water, her comfortable rooms, but she was in prison and Shigo was her jailer.

So she reflected one morning. It was a brilliant day in mid-January, one of Shanghai's rare winter days. The sun poured down as cruelly bright upon the ruins as it had been used to light the once gay city. An hour ago she had been walking in the garden, her usual walk, and she had stopped to look at a bare brown shrub in a sheltered corner, on which the flower buds were already beginning to swell. It came to her with a shock that this garden would be beautiful in spring. But must she still be here in spring?

She had come back to her room with her eyes full of tears. Spring! They would be thinking of her at home and wondering why they did not hear from her. But no one would know where she was. They would not even be able to ask where she was. They might think she was in Manila. The Japanese-controlled newspapers in the hotel were boasting that Manila had fallen. Had it fallen? She did not know.

A great wave of homesickness drenched her heart. She leaned her head upon her arms against the window and sobbed. She must—she must get free! Somehow she must get home. Then in the stillness of the room her solitary sobbing frightened her with its own hopelessness and abruptly she stopped and wiped her eyes.

I mustn't give up, she thought desperately, I must think and think.

She flung herself into a deep chair and closed her eyes. What tool had she to work with to save herself? She answered her own question—nothing but the love of this man whom she loathed—the love of an enemy, a love of which she was ashamed.

But still it is all I have, she thought. She was listening for the telephone again. She opened her eyes and stared at it there on the table. At any moment

## Don't Feed Dogs Table Food!

KEEP 'EM FED RIGHT

Copr., 1943, Gaines Food Co., Inc.

now it would ring. He usually rang before twelve o'clock. Once she had turned it off so that it would not ring, and in less than an hour he had been at the door himself, his pale yellow skin gray with anger. It was anxiety for a moment, but when he saw her it changed to instantaneous anger. He had stepped into the room and slammed the door and locked it.

"Why did you not answer me?" he demanded.

She had opened her eyes of pretending innocence. "I was tired and went to sleep and did not want to be disturbed," she said.

His forehead was wet with sweat and he wiped it off with his silk handkerchief. Then he sat down and took out a cigarette, allowing his anger to drain away.

"I did not know what to think," he said.

"It did not occur to me what you would think," she had replied.

There was no more said about it, and soon he was his usual self. But he had stayed only a few minutes on the excuse that there were duties he had left undone. When she came back from her afternoon walk around the compound, an old-fashioned telephone had been put in that could not be turned off.

She sat up, and twisted her hands together.

How shall I use him? she thought. I must find a way to use him.

She would put herself against him—woman against man, the stake her life. But she would not tell him that. She would let him think it was—perhaps something else. She would fool him, deceive him, promise him for the future, hold him off and deny him now, and bewilder him and confuse him and make him hope.

THEN her heart failed. I'm afraid of him, she thought. How can I fool him if I'm afraid of him?

She looked about the room wildly. "Mother—" she whispered. The picture of that small compact figure came before her eyes, her sensible, practical American mother. "What would you tell me to do, I wonder?" She strained her memory to gaze into those blue eyes which had once been like her own, a young girl's blue eyes. They were wise old eyes now. Jenny was the youngest of eight children, and her mother had reared them on a spiritual diet of hardy ancient proverbs and philosophies. "What can't be cured must be endured," was her mother's favorite. "Put up or shut up," she was fond of telling a complaining child. "No good to me now, Mom," Jenny whispered. "I can't endure it and I don't know how to cure it—and I can't put up with it."

She strained her memory of her mother. But it was no use. This was a situation now which no American woman could comprehend. Her mother, safe in a small comfortable Midwestern town, could not have imagined even remotely her youngest daughter, a prisoner in a hotel compound in Shanghai, prisoner of a Japanese who showed her the mercy of a cat fond of a mouse.

I've got to trust to my own wits, Jenny thought.

As though to challenge those wits the telephone rang. She brushed back her fair hair with both hands, rose resolutely from the chair and took up the receiver. "Yes?" she said. Her voice was clear and hard.

"It is I," Shigo said, laughing, "your tormentor, your persecutor, your—friend."

"Yes?" she said, her voice unchanged.

"I have so long promised to take you

"Do you mind keeping the summons until the tenth of the month? That's when my husband pays all the bills"

COLLIER'S

JAY IRVING

out, have I not?" Shigo said. "I have never done so. Now you have been a long time in the compound and I think you are tired of it. You will relish a drive into the country, I think?"

"I am quite happy, thank you," she said in that unchanging voice.

"You will not go out with me?" Shigo asked. In the telephone his voice took a sharp edge.

She forced herself to laugh. "You must see how it would look, Mr. Kuyoshi," she said. "People would imagine—all sorts of impossible things."

There was a long silence. She heard him draw in his breath. "Very well," he said. "I shall come to see you late this afternoon, please."

She hesitated long enough to control the impulse of terror that suddenly blackened the room for a moment. Then she forced herself to say calmly:

"Of course, I shall be here."

Daniel heard the scrape of the iron-bound door. It opened and he sprang from his bed. He had been asleep, how long he did not know, but hours, at least. He was faint with hunger. Now here was food. An elderly Chinese man was bringing it in. But he scarcely noticed the man for the food. It was real food, a large bowl of rice, a bowl of fish and another of vegetables cooked with bean curd. The two guards lounged against the open door, watching all that was done. The Chinese said not a word to them and paid no apparent heed to them. He put down the bowls on the table, motioned

to Daniel to eat, went out and came back with a large teapot, which he set down beside the food. Then he went out again and the guards locked the door.

But Daniel saw nothing but the food. He was hungry and sick with faintness. He craved the food and was half afraid to eat it. He hesitated for a moment and saw the old man's face looking through the grill.

WHEN he caught Daniel's eyes he made motions of a rice bowl lifted to the lips and chopsticks, and nodded with vigor. "Eat—eat," he was trying to say. Something in the wrinkled brown face and the kind eyes gave Daniel comfort. He took up the rice and awkwardly, for he had never used chopsticks in his life, he began to eat. Even if I'm poisoned it's worth it, he thought, grinning the ghost of his old gay grin.

But apparently he was not to be poisoned and, against his better judgment, he could not resist eating everything. Then, warm and fed for the first time since he left Hatford's houseboat, he threw himself down on the bed and fell asleep again.

It was nearly dusk when he felt his shoulder seized and shaken. He leaped up, incoherent, out of his sleep.

"What—what—" he muttered, and stared into the face of one of his guards.

The guard shouted at him and pointed outside. The door was open and the guard kept pointing. Daniel rose. "All right," he said, "I'm coming—but what

next?" He felt suddenly cheerful in of himself. What for?—he asked him. Then he remembered how well he eaten. One good meal had brought his strength and courage. I guess I'm dead yet, he thought. And I guess won't find it easy to kill me.

He straightened his shoulders and lowered his guards out into the yard. He marched on either side of him, always with those fixed bayonets. Daniel glared right and left at their brightness.

"Bet you sleep with them," he aloud. The guards scowled at him ignorant distrust. He grinned down them. They were a long way down thought, chuckling. Their heads reached his shoulders. If he looked at them he could almost forget they were there. He suddenly began to whistle Star-Spangled Banner.

"Ha!" the guards roared threateningly. "So you know it, do you?" Daniel

torted.

But he fell silent and so they came to the locked gate on the compound. They stopped. A garage stood to the left of the gate. It was open and a handsome American car stood there being washed by a slender Chinese in a chauffeur's uniform. He was barefooted and he had trousers and sleeves rolled up. He was polishing and breathing on the window.

"Ricksha!" a guard shouted. The chauffeur paused, turned his face in surprise at the sound, and saw Daniel.

The two looked at each other. What Daniel saw was a smooth young Chinese face and naïve young eyes. He liked them once. But what the Chinese thought did not show itself. He dropped the cloth held in his hand and leaped gracefully over the car and came out from behind it pulling a new and ornate private ricksha. He pulled it in a slow and leisurely fashion and dropped the shafts in front of the gate.

The guards motioned to Daniel to step between the shafts. He hesitated a moment then he felt a light touch on his arm. The young Chinese was smiling at him and pointing down at the shafts.

"He's trying to tell me to go on and do it," Daniel thought. "Maybe he's right. This isn't a time for a break."

He had the strange inclination to obey this Chinese out of instinctive trust. "Though why should I trust a Chinese chauffeur of a Jap's car?" he asked himself. Nevertheless, he stepped between the shafts, his temper rising. A silly memory came into his mind. He had gone to the World's Fair one summer and had seen American boys pulling play rickshas about. He had not liked it then. The had been something degrading in the idea of a man behind shafts, even in play. But this was no play. He stood, his hands clutched grimly about the polished shafts. The thing was light enough—light as a toy.

JUST then Shigo opened the door of his house and ran down the steps.

In a moment he stood beside the ricksha. "Lower the shafts, please," he said imperiously as he might to any coolie.

Daniel did not move. The blood rushed through his head like a flood. Then there was the sharp prick of bayonet in both his arms. He lowered the shafts and Shigo Kuyoshi stepped in. "The Cosmopolitan Hotel, please," he said.

At the curb of the hotel, Daniel James lowered the shafts roughly. He was panting, but not with fatigue, sweating, but with rage. On either side of him the silent crowds of watching Chinese came a little closer. Shigo did not reprove them. He had let them follow his ricksha all the way. They had padded along men and boys and a few old women

TONY BARLOW

## Is YOUR office in this fix today?

Mounting office work and a shrinking office staff... more paper work, more accounting, more reports to fill out—and a skeleton office force, loyally struggling to carry the load.

There is an answer: call the Remington Rand technical specialist. He is a veteran with long experience and specialized knowledge of accounting, bookkeeping, tabulating, control systems and general office methods. His suggestions can help you get wider use, and more work, out of your priceless office machines and equipment. For instance:

► He can point out short-cuts in accounting work, so that your office machines will give you capacity production.

► He can show you wartime record control methods, and can furnish you visible record equipment and files.

► He can explain simple rules for taking care of your office machines so that they will give uninterrupted service.

► He can still furnish your necessary office supplies—file folders, duplicator stencils, typewriter ribbons, carbon paper and many other supplies—all of dependable Remington Rand quality.

Call the Remington Rand technical specialist. He's as near to you as your telephone. Ten thousand war plants are already using his service to help speed the production of war materials. He may help you win your Battle of Production.

their solemn faces anxious in the twilight. What had happened to the world? they seemed to be asking.

"Faster!" Shigo had shouted to Daniel.

But Daniel had not hastened his steady walking pace. He could not have hastened it if he would. His body felt muscle-bound. Only his dazed will was making his legs move. His brain was numb and he could not think. In this daze he heard rifle shots, and the slush of the mud in the street sprayed his clothes, but he did not care. He still had on his uniform, the uniform of a United States Marine. It was the thought of mud on his uniform that made him suddenly think again.

I wish I had on some other clothes, he thought. This uniform ought not to be between shafts, pulling a Japanese.

He was scarcely aware of the crowds as he strode along, neither slowing nor hastening his pace. It was not until Shigo stepped out of the ricksha that he turned and saw them. There they were, all these faces, watching him. The people stood motionless, staring, anxious, watching him with the terror with which a child watches a parent suddenly grown weak and childish.

An old woman began to sob, and at the sound of this sobbing the guards whirled and charged the crowd with their bayonets. The people fled in an instant, dividing into alleys and doorways. And Daniel sank upon the curbstone and buried his face in his arms.

UPSTAIRS Shigo Kuyoshi was agreeably surprised. Jenny Barchet had opened the door, if not with a smile, at least without the silent hostility which had been like a barricade upon the threshold on every other day he had entered here. She lifted her long eyelashes and her lips quivered.

"Come in," she said.

He almost stumbled in his surprise. "Thank you," he said quickly. "Thank you very much indeed."

He was so used to forcing down her hatred against him that now he scarcely knew how to begin. She dropped gracefully into the chair she always chose, while with inner disturbance he took off his coat and put it down with hat and gloves and cane. Then he sat down opposite her.

"Well?" he said softly.

"Well?" she echoed, lifting her eyebrows. The effect was that of a smile if one did not examine too closely the tenseness of the mouth, the wariness of the blue eyes. But she had rouged her lips with a hint of upturn at the corners so that her whole face was changed with that change. She rose as he gazed at her and put out the overhead light. The shaded lamp on the table glowed softly and revealed less.

"You are different," he whispered.

"Am I?" she asked.

"You—something has changed in you—"

She did not answer nor did she move her eyes from his face. Now to her amazement she saw that he was trembling. When he held out his cigarette case to her, his hand shook. She had never been willing to accept a cigarette from him before, but now she leaned forward.

"Thank you," she said. He sprang to light the cigarette between her lips, and the hand holding the lighter trembled. She looked up and saw his handsome face suffused with emotion and shyness.

"You have never been willing to—to do this before," he said.

"No," she agreed. "I never have—before."

He leaned over her, and she drew back. "But a cigarette is a very small thing,"

she said lightly. "Think how many cigarettes I have accepted from how many men!"

Now he drew back, sensitive as always to the slight rebuff. She could see what he was thinking. He did not want to make a mistake with her. He wanted to follow only as she led, so long as she led in the direction of his goal.

"Sit down, please," she said and he sat down.

What, she thought, would be the end of this? She did not look at him as he sat watching her, but she could feel those hot Japanese eyes upon her. At what point would she escape him? She could not see the end. She was evading, postponing, and that was all. If he should discover the deception, what would happen then?

I must not be afraid of him, she thought. If only I keep myself not

tell him the truth, that in her desperation she was only using this—yielding—as a trick. But she could not speak.

He regarded her tenderly. "You ask me what I have done today. I have done only the general things which come in the line of duty. Certain persons were arrested as spies and tried and punished. That is common and everyday. It is inevitable when a conquered country is being organized under new rule. It is difficult for me sometimes to do my duty for I dislike harshness. And yet—" He paused and coughed into his silk handkerchief and went on, "But there are other pleasant things, also. All day I have been thinking of you. And I looked among my treasures before I came to find something to bring you. I found this." He reached into his breast pocket and brought out a small flat box. He opened it and lifted from it a thin neck-

felt his kiss, like flame, upon the nape of her neck.

"Don't!" she cried. She leaped to her feet. "How dare you touch me!" she cried. "I hate your touch!"

He stood staring at her, his eyes wide, his face reddening. "How dare you—he shouted. "You—you let me expect—"

"Nothing!" she cried. "Nothing!"

Oh, now only the truth was possible and nothing but the truth! "I see I can do it," she said, speaking aloud to herself and to him. "I thought I could use you—"

"Use me?" he screamed. He beat his breast. "Use me?" he repeated.

"To save my life," she said. "But now I know—I would rather die."

They stared at each other and suddenly the heat went out of him. She could see it go, first out of his eyes and then out of his face and then the trembling of his hands was stilled. He took his silk handkerchief from his pocket and wiped his face. Then he gave a strange dry laugh.

"You thought you would use me, to save your life," he repeated. "I was to be fooled, I was to be persuaded that you could love me—to save your life!" He laughed again, his handsome face bitter. "How unnecessary, my dear little Jenny! For, you see, I would not kill you for anything. Your life is as safe with me as though you were in your own home. No one in the world is safer than you here, in your little nest." He looked about the room. "And I shall come here again and again, and what cannot be given to me I will take, dear little Jenny. But you must never, never feel yourself in danger of losing your life. Oh, no!"

HE REACHED into his pocket and brought out a small pistol. "I carry this, but never for you, little Jenny."

"I carry this, too," she said. She put her hand inside her bosom and brought out her little silver pistol.

He laughed. "A toy," he said, "a pretty toy. Look in it, Jenny!"

Instead she lifted it and leveled it at his laughing face and fired.

There was no explosion. She broke open the magazine. It was empty. But how had it been done? She kept the pistol always in her pocket under her hand, under her pillow at night. Yet somehow its load had been rifled!

He was smiling his pleasant debonaire smile. "Someone who knows you very well," he said, "who knows you so enjoy nice long warm baths."

So while she was bathing, he had sent spies into her room! She dropped the pistol on the floor.

"I see you have no mercy," she said in a whisper.

"On the contrary," he said. "I am a man of great mercy. This morning I might have killed a friend of yours. But I did not. I might have kept him locked in prison. I did not even do that. I have—taken him out of his cell and given him a good room and good food."

"I don't know whom you mean," she said dully.

"Come to the window and see," he said. "Look out of the window and see your friend!"

She ran to the window blindly, careless of what he thought of her eagerness. He was at her side in an instant, and he threw open the window and shouted.

She saw a figure sitting on the curb of the sidewalk, motionless, with bent head and folded arms. At the sound he lifted his head and looked up. The lamplight fell full upon his face.

"My ricksha coolie, Lieutenant Daniel James," Shigo said. He jerked her back and locked the window fast.

(To be continued next week)

## MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

afraid of him, I shall escape somehow. It's thinking I can't escape that will make me—lost.

Out of this new, determined daring she smiled at him. "What have you been doing all day?" she asked.

He leaned forward, "Please—speak to me as a friend—I am Shigo."

"Shigo," she said obediently.

HE SMILED and she saw his eyes mist. "If you knew how my name sounds to me when you speak it!"

Yes, the horror of this thing was that he genuinely loved her. She saw that he did and she knew that he did, and she pitied him while she loathed him. Somewhere he was a man, too—somewhere out of this monstrous world which was around them both. Had there been no war, had peace been their atmosphere he would have been different and she—they might have been friends, though never lovers. No, she could never have loved him, but she might have liked him. Now to the terror of her imprisonment and her loneliness was added this horror of his love. She looked away from him and felt her own knees begin to tremble.

She wanted to beg him not to force her, not to hurry her. She had the impulse to throw herself on his mercy and

lace of filigreed silver, decorated with blue enamel flowers. "This, I said to myself, would match the two blue flowers which are your eyes."

He rose half diffidently and came toward her and she took the box from his hands.

"It is very pretty," she said. She could hardly speak for terror. The room was full of terror. When he came near she felt the heat of his hands, the heat of his flesh, and she saw his eyes burning. The pallor of his face, always so smooth, was broken with two patches of red near his temples and his thin lips were red.

"Will you put it on?" he asked.

"Not now," she whispered, "please, not now!"

"Yes, now!" he said. His voice was suddenly loud. "You will put it on now, for I command it!" He snatched the necklace from the box and held it up in his quivering hands. "Bend your head," he said in the same loud voice. "I will fasten it on your neck."

As though she had been told to place her head on the block she bent her head and her hair divided and fell over her cheeks. She felt his hot horrible hands slide about her neck, under her hair, and clasp the necklace swiftly and dexterously. Then before she could move she

FIGHTING JEEP

## TILL HELL FREEZES OVER

AS this is written the Russian flag still floats defiantly over glorious Stalingrad. Day after day, for endless, bomb-shattered, tank-battered weeks, those incredibly brave Russian soldiers, factory workers, women, and even children, have held Hitler's mad hordes at bay.

The crushing toll they have taken of Nazi armed forces and Nazi morale is a contribution to the Allied cause that is beyond computation today. And what an example of *love of country* it is.

Aiding the heroic Russians, in fierce counter-attacks and in many other equally vital operations—as swift, as determined, as deadly to the Nazis as the inspired Russians themselves—are the Jeeps built by Willys-Overland.

Yes, on the volatile Russian front and on every other front in this war, the Jeep is on active duty. With its "GO-Devil" engine heart, and rugged body of steel, it is setting an example of all-out patriotic service; an example that every man,

woman and child in America must emulate if *our* fighting forces are to win this war.

The Jeep puts *everything it has* into every job it has been fitted to do in this war, *for your freedom*.

We are proud of the Willys-Overland engineers who assisted the U. S. Quartermaster Corps in designing the Jeep. And it is to *their* credit that the Willys-designed "Go-Devil" Engine drives *all* Jeeps being built for the U. S. Army and for our Allies. Willys-Overland Motors, Inc.

## What Does She Do with Herself at Home All Day?

HER housework, which her husband will claim isn't enough exercise to keep her weight down, is enough to make her take a daily hike of more than eight miles around her home—and she walks—a distance greater than that from Boston to San Francisco each year—more than 3,000 miles, without leaving her home. Since one out of every three steps she takes is unnecessary, she takes the equivalent of a walk from Quebec to Chicago each year all for nothing.

To add to her misery, odds are ten to one she'll have foot trouble, caused not by her stiff daily workout, but from badly fitting shoes, which likely as not, she'll buy "to make her feet look prettier." And she'll buy them just about twice as often as her husband. Chances are eight to one she'll get corns because she'll tackle her housework in "any old shoes." And when she wails that her feet hurt, it's five to one her husband won't have had that ailment enough to give her the amount of sympathy she thinks she ought to get.

For her average family of four she spends  $9\frac{1}{2}$  whole years of her life in the kitchen. She will cook more than 47,000 meals and scrub 34 tons of family laundry. She will spend almost two whole years of her life just washing the dishes. She washes and dries some 26,280 dishes every year, which, if she "left them to do later" over the entire period of her married life, would make a stack over five miles high.

She totes home most of the lending library books—even if she does get a good many of them because of colorful covers or because her neighbor suggests "Haven't you read it yet?" And if her husband usually snags his pick of the five novels and biography or travel books she brings home each month, she shouldn't complain. After all she can wait—she's better educated than he is, anyway.

Despite the fact that both she and her husband have each been drinking 15 lbs. of coffee along with the 1,415 lbs. of goods they each eat annually, the chances are that she can't brew a cup of coffee that her husband will call "very good." But in spite of this, he seldom complains.

She spends  $\frac{1}{2}$  hour a day in front of the mirror primping and powdering. This pastime will account for almost a whole year of her life. With the polish she uses 2,236 times on her fingernails, she could paint a fair-sized kitchen table.

She cleans her teeth more than 31,000 times, and breaks her glasses about 86 times, mostly because she "just put them down somewhere and forgot where," and then piled things on top of them, or because she stuffs them into her purse.

## Conversation

SHE'S going to talk for over eight years of her life and spend more than  $\frac{2}{3}$  of a year on the telephone. Chief audiences for the remaining years of her discourse will be (1) her female clubs and cronies, (2) her husband, (3) tradespeople.

On her husband's work days she'll spend only about one hour in steady conversation with him, during which time she'll talk about 25% faster than he does and use many more useless adjectives. Three of her most over-worked ones being: "cute," "thrilling" and "darling."

She usually starts the conversation at home, and the chances are that she'll be the one to break the ice at parties and pull her husband into the conversation after her pretty quickly.

Her conversation, which used to be about 10% on education and political lines, and 80% on clothes, social domestic affairs, has changed to 15% on clothes, 2% on men and the rest on current events.

## Rest and Recreation

SHE'LL spend 13 weeks at the hairdresser and watch more than 1,300 movies.

The radio in her home is on for about five hours a day, and in the course of her married life she'll listen to some 44,720 radio serials for escape into "People's Problems."

She's going to sleep for about  $22\frac{1}{2}$  years and will rather sleep in a double bed than her husband—though he's usually the one to wake up with a blanket. She prefers a double bed for (1) cold feet, (2) cure spats.

She writes about three times as many personal letters as her husband does, doing most of her letter-writing in impulsive spurts. When she writes a woman it's usually "darling" or "dearest." She'll keep almost every letter of letter indefinitely, but about the only ones she answers immediately are her love letters—and then she's often sorry she did.

## Money and Shopping

DURING the course of her life, her husband's going to lay out over \$3,000 for her coiffures and cosmetics—enough to come near banishing his worry about the income tax, and then some—and foot the bill for \$1,647 worth of dresses and lingerie and 580 pairs of stockings; most of which she'll buy without first consulting him. If placed end to end, her stockings (which she invariably wears out in the toe) would be well over one-half mile long.

And what's more, she's going to get outside of pounds or almost six times her own weight in candy most of which will be in "chocolates," for about a nickel and a good part of which she'll buy herself.

the statistical low-down on wife and girl friend, the what why, more or less, of her daily life. If you don't agree, blame the numerous agencies, from government bureaus to department stores and life-insurance companies that made the surveys upon which these conclusions are based. It might be helpful to remember the adage: "All generalizations are false, including this one"

script him to help. After all, his brain is 130 grams larger than hers.

The savings account (\$843.07) and her husband's life insurance policy (\$1,940) have a good chance of being in her name, and what's more she'll probably live to cash in on the latter, as she's got a good chance of reaching 67½ years and outliving her husband by 4½ years.

When she surprises her husband with a present, the chances are he won't like it. But it's ten to one he'll keep it just the same. She'll often try to palm off cheap gadgets that look expensive on him, just because she's more apt to be taken in by them than he is. Among her favorite Christmas gifts to him will be: a smoking jacket, necktie, handkerchiefs, socks, billfold, gloves, toilet articles and a pipe—the latter which she'll pick out chiefly for its color. And thereafter heckle him regularly to let her pack off the old ones he cherishes to the rummage sale.

### The Car

THOUGH her husband may rant about women drivers, she averages about the same speed as he, is less apt to fall asleep at the wheel or be hauled in for drunken driving. She has fewer accidents than he. Most common ones: forgetting to signal when she makes a left turn; bumping into the car in front of her. It's been estimated that her total damage to the family car will amount to three crumpled fenders, one torn-off garage door. It's in the books that she'll lose the car keys over 40 times—three times less than she loses her house keys. But to compensate: she'll have a decided way with the Arm of the Law which will probably get her out of more than one scrape, and save her husband a tidy sum of money in fines. Yet despite this, most people would rather drive with her husband.

### Appearance

SHE'S going to grow 11 yards of hair. By the time she's 35 and has grown 17½ feet of hair it will start to get gray. In this she'll have a five year headstart on her husband.

In the course of ten months her toenails will grow about one foot in the aggregate.

The average woman is five feet three inches tall, weighs 133½ pounds. Her bust measures 35½ inches, her waist 29 inches and her hips 39 inches. She is just three and one-half inches shorter and is 11½ pounds heavier than the Ideal Woman, and is definitely dumpy compared to the popular conception of the Glamor Girl.

### The Newspaper

HER husband usually gets first crack at the paper. When she finally sees it, she looks at (1) news, (2) ads, (3) society, (4) comics. And after she's through clipping, ripping, rumpling and crumpling, there's not very much left of it.

### Marriage

SHE marries at 24 and odds are four to one she'll have at least one baby: weight seven lbs. eight ounces.

No matter how good a man her husband may be, the chances are that she'll often wonder about The Man She Almost Married and the job she gave up. But no matter how often she may talk about going back to work, the odds are about six to one against her trying to pick up the threads again.

Most of the 258 marital frictions between her and her husband will take place before breakfast and it's a 50-50 tossup which one starts them. A breakfast quarrel increases his chances of being injured on his way to work.

Although she handles most of the domestic finances

and does most of the family buying, the chances are that her husband will be the boss. And if he isn't, she'll wish he were.

She tells many more white lies than her husband does, but she really kids herself into believing her almost continual series of small exaggerations.

She has one chance in 80 of having twins.

She has one chance in 6,400 of having triplets.

She has one chance in 512,000 of having quadruplets.

She has one chance in 40,960,000 of having quintuplets.

The chances are six to one she won't get a divorce.

### Packing

SHE overstuffs both her purse and a suitcase by about 10%. Because she's a neater packer than her husband, who just throws things in, she does most of his packing. And when he'd rather take along two suitcases, she'll invariably try to make one overstuffed bag do the trick. Her pet ways of closing it are (1) kneeling on it, (2) sitting on it, (3) standing on it. ★★★

No More  
Waste of  
PencilsYou bet  
A MONGOL  
GOES FARTHER!

Everyone has to watch their lead pencils today. They're precious...the government says fewer can be made this year. Pencils now must do double duty...they must last longer. So I insist on MONGOL No. 482. No time now for inferior pencils.

MONGOL quality is ideal for today's fast and furious war-set pace. It's faster, easier and won't break when extra pressure is exerted. MONGOL Pencils take a sharp point...and hold it. More wear from points that are guaranteed not to break in normal use...less frequent sharpening and more precious time saved.

Exclusive Complastic Lead and Woodclinchings add extra strength and steady, sturdy service. In your choice of 5 Degrees: No. 1 Very Soft, No. 2 Medium, F Firm, No. 3 Hard, No. 4 Very Hard.

NEW YORK TORONTO  
Leadership  
IN FINE WRITING MATERIALS SINCE 1849

The clinching demonstration of Willie's crowd-pleasing style came on November 20th of last year, the night he lifted Wright's title. Prior to that fight, Willie had appeared at Madison Square Garden in less than nine rounds, all in preliminaries. But the championship match established an all-time indoor featherweight record for attendance and receipts. A thumping crowd of 19,521 paid \$71,868 to see Willie's coronation.

Pep is the most appropriately named fighter in the business. He commences pounding and persecuting the other guy with the opening bell and he does not cease and desist until the gong bangs again. Unlike most perpetual-motion punchers, he does not flail aimlessly. Willie is a boxer rather than a mauler; he sternly eschews clinches and improvised waltz steps.

## Prefers to Box

He specializes in speed, sharp hitting and slick maneuvering and, despite his inexperience, there isn't a cooler operator in circulation today. He has knocked out more than a third of his opponents—a nice batting average for a featherweight—but he is candid in confessing he prefers to win with his noodle, not his muscle.

"I'd rather outbox a feller than knock him out," he admits. "It's safer and cleaner that way. What's the use of kidding myself? I don't like to get hit or hurt, and anybody who does is punchy before a glove is laid on him."

Pound for pound, Willie probably is the best free-style eater in America. He's not spectacular, but he's steady. He never has been known to refuse an invitation to pull up a chair and he doesn't ask questions about the menu. Anything that is put in front of him is for Willie, and if beer goes with it, so much the better.

The boy's enormous appetite is a standing joke among the members of his entourage and he is encouraged in his labor of love by Bill Gore, his trainer. Since Willie never has had trouble making 126 pounds (he can take off five pounds in a week without weakening himself) Gore even approves of the beer he laps up. The Champ, Gore reasons, still is an adolescent and has to keep up his strength, but in rival camps there is a suspicion that Willie has no greater need for more muscle than a Flying Fortress has for another cannon. At that, the eating gag may be just a sly stratagem to keep Willie in one place for five consecutive minutes.

Folks who have spent an hour with the Pep kid have been known to go away with all the symptoms of the leaping fidgets and the screaming meemies. Willie always is rushing somewhere, and when he arrives, he immediately forgets the necessity for the haste and dashes off again.

Despite his extreme nervousness, Willie is surprisingly calm in the ring. When Willie was training for Wright he was stopped by every other citizen on the streets of Hartford and exhorted to bring back the title and their two-buck bets, but Willie never mentioned the champion's name once.

"Do you know who you're fighting?" Gore finally screamed in exasperation. "Say you're going to knock his brains out. Say something. It ain't natural to clam up like this!"

In plotting the plan of action to be used against Wright, Viscusi (his man-

ager) and Gore tore up the script the heir apparent to the crown knew so well. Willie's natural style features aggressiveness, carrying the fight to the enemy. The brain trust decided that such tactics against Wright, the veteran of more than 300 fights and the possessor of a right hand with the impact of a Missouri mule's hind leg, would lead Willie to frustration and quick unconsciousness.

They told their boy he would have to do everything backward, literally. Instead of rushing Wright, he was ordered to back-pedal all night, pile up points with his left jab and, for heaven's sake, don't let the guy get set to throw that right hand. Gore had a big sign, "Don't Lose Your Head," put over the ring in the old Charter Oak gym on Main Street and gravely assured Willie that it was not a mere figure of speech.

Came the night of the fight, and Willie once more was admonished to do good and follow instructions. That he did. He retreated rapidly and resolutely, like the Italian infantry. In common with most good fighters, Willie lashes back furiously when he is tagged with a hard punch, but not this night.

He jabbed Wright's face full of holes, made him miss with that murderous right hand from here to Easter, and practically fainted the smart old gent out of the building when he had Willie trapped in a corner and ripe to be nailed with Chalky's hand grenade.

Willie hated the strategy mapped out by his handlers. He wanted to make his usual, aggressive fight, but he obeyed orders without question until the end of the twelfth round. He looked up from his stool at Gore and asked wistfully, "Can I punch him now?"

Gore, who knew his boy was so far ahead on points that Wright could win only by a knockout, promised Willie he would be crowned with the water bucket if he deviated from the prearranged plan. It was not, frankly, a thrilling fight, but it was an impressive exhibition of a twenty-year-old boy's adaptability and intelligence.

Willie loathes the drudgery of training; he protested bitterly when Nat Rogers, Mike Jacobs' matchmaker, told him he would have to put in two and a half weeks of gym work preparing for Wright. Yet he trains faithfully and enthusiastically. He does six miles of road work every morning and frequently wants to go farther—to whip up an appetite, no doubt.

Three weeks after he won the title, Willie married Miss Mary Woodcock, of Hartford, in the culmination of what must have been the strangest courtship in New England since Miles Standish's. Nobody could figure out when Willie popped the question because he was a scarce swain who was home every night at nine o'clock and asleep by eleven. On one occasion he was afraid Gore would disown him when he stayed out until ten-thirty. He was caught in a blackout.

After the ceremony, the happy couple headed South to spend the honeymoon at Tampa with Manager Viscusi. At Washington, Willie kissed his bride tenderly and departed long enough to knock out Joe Torres for his fifty-fifth straight triumph, then resumed the journey. A conscientious youth, as you can see.

Another humble kid who has had Willie's spectacular success would get a rush of self-esteem to the head, but not our Willie. He is a restrained, polite youth; he always addressed Bill Lee, sports editor of the Hartford Courant and his most

ardent booster, as "Mister" until I asked him kindly to drop it.

"Now that you're the champ," I suggested, "I think it would be a nice touch if you called me Bill. More democratic, you know."

Willie has not been drafted because he is the sole support of his mother, his father (an invalid), his sister Francis fourteen, and his brother Nick, six.

Willie recalls being taken by Papa to see his *paesano*, Primo Carnera, in an exhibition bout in 1930, and watching Battalino in training, but as far as he knows he didn't give a thought to anything but pleasure fighting until an utter stranger stopped him in an impromptu street brawl one day.

"You ought to be ashamed of yourself," the man said severely. "You're a sucker. Why fight on the street for five dollars when you can get eight dollars for the same thing in the gym?"

Willie pondered the advice and decided to look into the situation, since eight dollars was not a trifling sum to the Papaleo household. Willie entered a bootleg amateur tournament at Danbury when he was fifteen and proceeded to win nineteen fights in a row before losing to one Angelo Radano. Willie then weighed 109 pounds and had to give away eight to fifteen pounds to most of the boys he met. He put together another streak of nineteen straight, dropped a decision to Ray Robinson, then lost his third and last amateur decision to Earl Roys in the final round of the Connecticut Flyweight Championship in 1937, but won it the following year.

## The Golden-Boy Touch

Having quit Hartford High School when he was sixteen, Willie was working for the Hoffman Wallpaper Company and was getting \$13 a week as a stock boy. He was making \$20 a week two years later, but by that time, he had turned pro and he gave up the job to go after the folding money.

There was the golden-boy touch to Willie's work in his first professional start against Joey Marcus at Hartford on July 25, 1940. The wonder child really began to come on early in '42 when Gore, who had owned a gym in Miami came north to take charge of the kid's training. One glance told Gore that Willie knew everything about the fine science of modified murder, but he had to be built up physically to improve his punch and his stamina.

The turning point in Willie's career came on September 1st when he knocked out Bobby "Poison" Ivy at Hartford. Ivy, another local product, had been the people's choice and was in direct line for a shot at Wright's title until he made the mistake of trying contusions with Willie. Nine days later Willie put the chill on Frank Franconeri in one round in the Garden and thereafter the championship was just a matter of time and getting Wright inside the same ring.

Like Henry Armstrong and Tony Canzoneri, the best of the recent featherweights who preceded him, Willie will outgrow the division within a year and go after the lightweight crown. In pursuance of this ambition, he extended his winning streak to 59 straight on the night of January 29th by belting Allie Stolz, a strong contender in the lightweight class, all over the Madison Square Garden ring to win a nontitle ten-round bout.

THE END

# MOVING MANPOWER

*That's My War Job!*

**'It takes manpower to MOVE manpower. And as one of the thousands of intercity bus drivers, I'm doing just that! I go where highways go to get you to your job of making guns, planes, tanks, ships.**

**If you're a farmer, you can count on me for those "must" trips to town. If you are a selectee, I'll carry you to your induction center. If you are in the armed forces, you'll ride with me often. I'm in this war with all the skill I've got—proud that my specialty is moving manpower along the highways to Victory!"**

Intercity bus lines were born in peacetime to carry you, your family and friends along scenic highways—to any spot you had your mind set to go. *Today these highways have gone to war.* And over them the bus lines are moving mass manpower in the same smooth, friendly, dependable way.

Supplying a flexible service that cannot be duplicated, the bus lines are fulfilling the needs of your community and your nation at the incredible rate of 750 million passengers per year—a volume of manpower vital to the winning of the war.

This flow of manpower must not be slackened! *Bus trans-*

*portation must be kept strong and equal to its tasks.* And the bus lines are doing their part by maintenance and operating miracles that save tons of rubber, fuel and steel—by expert dispatching that keeps buses working at top efficiency along 330,000 miles of highways.

With all their experience, skilled personnel, and equipment, the bus lines are concentrating on their wartime job—the job of serving the nation by serving *you*. With passengers and the bus lines working together, this job will continue to be done in a way that *keeps the highways at work for Victory!*

He had been in the Department of Justice five years, with some fine work to his credit in a governmental delousing operation in New Orleans, later as head of the San Francisco regional office of the Antitrust Division, and recently in the handling of the Japanese problem on the West Coast.

I told Clark to go to it. It didn't matter where the trail might lead—to the executive offices of corporations, to headquarters of labor unions, to individuals, little business, government inspectors or procurement agencies—in any case, to follow through, make public the essential facts, in so far as they provide no information of a military value to the enemy, and to see to it that guilty parties get what they deserve.

Clark and his staff went at it. By that time, sufficient information had been furnished by the Federal Bureau of Investigation and the Army and Navy Intelligence offices to suggest a number of prosecutions, and there were leads on others then being developed. The lawyers of the War Frauds Unit were to analyze this material, prepare the prosecution of those cases in which it was decided that the government should act, present them to the grand juries and finally try them.

## Short-Changing the Government

In May of 1942, a series of grand jury hearings in several large cities was begun. Cases presented involved faulty materials, supplies and workmanship which had resulted in defective products for delivery to the government in its prosecution of the war, charges of conspiracy to increase the cost of plants for the manufacture of war materials, and practices increasing the cost of food and supplies for the Army and Navy.

With the needs of a modern armed force about as diversified as the items in a mail-order catalogue, the allegations of fraud have covered a wide range. They run from bullets to blueprints. A firm in New Jersey is accused of shortweighing scrap metal at a federal arsenal and bribing an Army clerk to cover up the transaction.

In an indictment returned in Los Angeles, the head of an engineering firm is charged with padding costs in cost-plus contracts with the Navy to the tune of \$200,000. And a dozen persons engaged in the construction of two air-training schools in Texas are named in an indictment of fraud involving secret rebates or kickbacks among themselves, and false claims against the government.

The falsification of costs and the kick-back (that is, payment exacted by a prime contractor of a subcontractor, or by an employer of his workers, or by a union of its members) are two of the commonest kinds of fraud found in war business. Another is collusive bidding.

In one case of this kind, three firms are accused of a conspiracy in the sale of office supplies to an Illinois ordnance plant, two having submitted bids at very high prices in order to convince the contracting officer that the bidding was really competitive—all by prearrangement among the three. According to the indictment in another case, from December, 1940, through August, 1941, a group of subcontractors in the construction of warships at Philadelphia obtained hundreds of thousands of dollars of business through fictitious bidding.

The complaints—and a complaint, of course, is not an indictment—come from

many sources, including the general public. Upon examination, a large number of them fall down; that is, they are found to contain no valid ground for prosecution as war frauds and are either dropped or referred to other federal agencies. More than a thousand complaints have been received by the War Frauds Unit. To date it has investigated about three fourths of these. Here, in brief, is the score as it stands at this writing:

More than forty cases have reached the stage of formal action. The government contracts involved in these proceedings aggregate about \$180,000,000. How much of this is overpayment and how much is recoverable are questions the courts must decide. Indictments have been returned against more than a hundred individuals and a score of firms. Complaints have been filed with United States Commissioners against 30 other individuals; and indictments have been voted but not yet returned in three cases involving eight persons.

"Leads," or original complaints, come from all parts of the country where war business is negotiated, bunching in the big industrial centers. The cases in which we have decided to take action follow pretty much the same pattern, with twelve in the Middle Atlantic industrial area, four in Texas, four in California, three in New England, two in Michigan.

The most important cases—those involving the largest sums and also those in which some of the most reprehensible acts are charged—have not yet reached the trial stage. In one of these, now indicted, it is alleged that the defendant corporation and certain of its employees used a gadget known as a "button box" hidden beneath a table on which its product was electrically tested. By this device, defective or substandard material could be made to appear to meet the tests required by the Armed Forces.

This company has contracts with the Army and Navy for more than \$6,000,000 worth of material, for use under combat conditions. Upon the performance of its product, the outcome of battles and the lives of American soldiers might have depended. According to the indictment, representatives of the

manufacturers knew their product not good enough to meet certain resistance standards, yet deliberately passed it off on the Army by means of the under-the-table device.

The alertness of the federal inspectors and the promptness with which the case was handled prevented large quantities of defective material from being sent to use by our troops overseas.

Another major case involves a manufacturer of explosives, a company having in excess of \$20,000,000 in contracts. Management irregularities involving more than a million dollars in flagrant bribing of government inspectors are charged. When this scandal broke last October, the situation found by the War Frauds Unit and Navy Department to be so serious that it was concluded that the Navy should take over operation of the plant. Officials of the company and a number of inspectors are now facing prosecution.

## Gambling with Soldiers' Lives

In another city, an inspection supervisor and his assistant at an ordnance plant were indicted last December on a series of charges, the worst of which was causing defective ammunition to be approved and certified as of high quality. The purchases called for in the contracts totaled \$55,000,000, which gives an idea of the enormous amount of imperfect munitions which would have been palmed off on our fighting men had the conspiracy gone undetected.

Other substantial cases are already in the mill. The War Frauds Unit is preparing them, and the findings will become known to the public as soon as indictments are returned.

I wish to give the people of America this assurance: Whenever and wherever these dollar-saboteurs are caught, the United States government will go after them with all the resources at its command. Names will mean nothing, only such a stain appears on them. The names that carry the weight in America today are the names of men who carry glory for America.

## Five Who Vanished

Continued from page 40

calm, imperious way. "I want this man put off this island. He is desperate and dangerous. He will kill both of us."

Colton Grazzard turned his head and stared at his sister.

"I don't believe it," he said in his shaking voice. "You shot me. If he hadn't got that gun away from you, you'd have shot me again. You came here to kill me."

Bertha Grazzard was slowly nodding, confirming it. "I will explain everything, Colton," she said firmly. "But this is a family matter. This man is an outsider. Get him off the island and I will explain everything to you."

Jason, glancing at her brother, saw that he was so accustomed to her domination that he was helpless. His thin brown face had gone slack. He was staring at her with an expression that was plaintive and hopeless and bewildered.

"But you shot me, Bertha," he quavered. "You tried to kill me."

"Yes," she said, "since you force me to admit it—I tried to kill you, Colton. I thought it was necessary—to save the honor of the family. I was afraid you would talk."

HE WAS staring at her with fear and hatred. "But, Bertha," he protested in a quavering voice, "I've promised you so often I'd never talk."

"I was afraid you might," she said calmly.

"But I promised you again and again I wouldn't!" he said shakily. "So why did you come here to kill me?"

"She answered you," Jason said gently. "She has got herself into a hopeless mess. She was afraid you lacked the courage to back her up any longer. And I'm here, Mr. Grazzard, to try to prove to you that you cannot back her up any longer."

Colton Grazzard stared at him with that same helpless, frightened expression. "Who are you?" he whispered.

"Clark Amboy's son—Jason."

"Colton," Mrs. Grazzard said hurriedly, "I want you to listen to me. I want you to pay the closest attention to me. I did not shoot you. Do you understand? I hear people coming. They came in that boat. It was this man who shot you. I will see that Annah does not talk. For the honor of the family—for my sake and your own, Colton—you will say that. It was this man, not I, who tried to kill you. If you stick to that story, I will never try to kill you again. Do you understand, Colton?"

"If you stick to that story, Uncle Colton," Jason said gently, "you will fetch up on the end of a rope. The jig is up for her, believe me."

He heard voices on the lanai.

A screen door hinge squeaked. Three faces were grouped in the doorway. The first was Lorrin's. He was pale and his eyes were narrowed and menacing. Behind him were the white, frightened faces of Luana and Natalie Mace.

Luana cried, "Jason!" in a voice of relief.

Natalie looked quickly about the room. "Jason! Where's Channing?"

"Ask Aunt Bertha," Jason hoped that Lorrin was unarmed. The situation might readily become messy if he had a gun.

Luana, Lorrin and Natalie had evidently come in the power boat, which he had guessed was a Coast Guard or Naval Patrol. Jason wondered where, if that was the case, her crew was. At this moment, the one thing he did not want was official interference.

"What's going on here?" Lorrin said in a heavy voice.

"This man," his mother answered, "just attempted to kill your uncle. I arrived only in time to prevent it."

"Stay where you are, all of you," Jason said. "Lorrin, put your hands on the back of that chair. This revolver is loaded. I don't want to use it, but I won't hesitate to if it's necessary."

"Aunt Bertha has just accused me of trying to kill Uncle Colton. She has just instructed him to say that I tried to kill him. Before I'm through I'm quite sure Uncle Colton will confirm what I say—that it was she, not I, who tried to kill

she said firmly, "you were in Burma in 1916. Have you forgotten?"

"Too late," Jason said promptly. "He never was in Burma. I checked that in Honolulu, Aunt Bertha. At least, he wasn't in Burma from 1914 to 1920. He was either in Honolulu or Kokala. And that punctures the story that my brother and I have tried to blackmail you, Aunt Bertha, for a crime that Uncle Colton committed in Burma. You put that story into circulation for your own purposes—and you kept it in circulation. Did you know about that, Uncle Colton?"

"He has nothing to say," Aunt Bertha

firmly. "I warned all of you. This man is very *akamai*."

"But it is your pencil," Luana said with equal firmness. "I've seen you wear it a thousand times."

"It may resemble it, but it is not mine," Aunt Bertha stated.

"You killed my brother with this gold mounted ice pick," Jason went on steadily. "You killed Winfield Grazzard with it. When you came creeping into my lanai this morning, assuming I was asleep—"

"Amboy!" Lorrin said threateningly.

"Let him finish!" Luana cried.

Aunt Bertha was looking uneasily at the pencil. "He is lying, Lorrin," she said. "The things he is saying are preposterous and outrageous."

"Don't move, Lorrin," Jason said quickly. "Very well, Aunt Bertha, wasn't you. It was a man that you sent. We all know this man. He was seen leaving your lanai, after a conference with you, and going to my bungalow. An excellent witness saw him. This same witness was present on my lanai when this man attempted to kill me." He paused. He said slowly, "Aunt Bertha, where is Channing Mace?"

"Jason!" Natalie cried.

"Yes, Natalie," he said gently, "I'm sorry. But it's true."

Aunt Bertha was staring at the stilet in his hand, not at him. She was, he believed, wholly absorbed in the gold pencil. It was, possibly, a hopeful sign. Possibly she did not know that Flack had been a stowaway on her sampan. I was, Jason realized, a faint hope.

JASON tossed the pencil on a table. "Aunt Bertha, you took Channing into this conspiracy at the last minute—because you were afraid to tackle me alone. You sent him into my bungalow to kill me—but not with this pencil. You didn't know he had your pencil. I'm afraid he double-crossed you, Aunt Bertha. I think he intended to leave it there if he failed."

Aunt Bertha stared at him. "I have no idea what's behind these outrageous lies you're telling," she said calmly, "but I assure you, you will regret this, Jason."

"Where is Channing?" Natalie cried.

"He went to her house. Where is he?"

"He did not come here with me," Aunt Bertha said firmly.

"That means he has vanished, then," said Jason. "Who went aboard the sampan with you?"

"No one. I came alone!"

"But you and he passed within a few feet of where Flack and I were sitting under the trees," Jason said. "I plainly heard him say, 'You'll never have another chance at that fellow'—meaning me. And I plainly heard you say, 'Yes. Come along. There is only one course'—meaning to murder your brother."

"Lorrin," Aunt Bertha said, "I cannot, I will not, stand any more of this."

"Weren't you there, Uncle Colton," Jason said quickly, "when she had that famous quarrel with her husband?"

Uncle Colton stared at him. "That—that has nothing to do with this."

"Two days ago in the Honolulu courthouse," Jason quickly went on, "I examined a photostatic copy of Uncle Hiram's probated will. He drew a quick breath. 'The testator's and the witnesses' signatures are forgeries.'"

"Of course," Lorrin said heavily, "you can prove that?"

"Experts can," said Jason steadily.

"What do you want, Amboy?" Lorrin

## A Great Novel of Nazi Germany

By LION FEUCHTWANGER

The story of Hitler's favorite soothsayer, the women he loved and victimized and his rise to power amid the passion, panic and brutal greed of the Nazi Party.

### Double, Double, Toil and Trouble

An unforgettable picture of the world's master villains, Hitler and his accomplices

### Begins in Next Week's Collier's

him. She has just said she had to kill him to prevent his talking—to save the family honor. And I've just said that he will talk—or else."

Lorrin was glaring at him. "You lying blackmailer!"

"I'll take that up in a moment," said Jason. "Aunt Bertha insists that this whole matter concerns the family honor. I agree with her to a point. And I'm willing to keep it a family matter if it's possible. I am going to make some very grave accusations. I am going to prove something to Uncle Colton that he already knows—that Aunt Bertha is a murderer many times over. Because I want him to talk—before witnesses."

JASON turned quickly to Uncle Colton. "Tell me when you were last in Burma! Just the year! Quick!"

"Colton!" Aunt Bertha said warningly.

Uncle Colton was gazing up at Jason in bewilderment. The question had caught him, Jason hoped, completely off guard.

"But I never was in Burma!" he gasped. Then, realizing that this might be a trap, he glanced anxiously at his sister.

Her lips were compressed. "Colton,"

answered quickly. "I represent the family. I will do the talking for it."

"Uncle Colton?" Jason said.

Colton made a futile gesture with his hands. "I have nothing to say, young man. You heard my sister." Yet the glance he sent to her was, to Jason, a hopeful sign. It was full of hatred.

Natalie said firmly, "I want to know where my husband is."

"Ask Aunt Bertha," Jason told her.

"Aunt Bertha, where is Channing?"

"I do not know, Natalie."

"Lorrin," Jason said, "put your hands back on that chair."

"Amboy," Lorrin said, "you must be utterly insane. We know you're a blackmailer. We know you won't hesitate at murder. But what do you expect to gain by this?"

"Someone tried to kill me tonight," Jason answered. "Someone came into my lanai at two-forty this morning, intending to kill me—with this."

He took the gold pencil out of his pocket. Bertha Grazzard stared at it.

Jason held up the pencil. He depressed the sapphire. The slender, fluted blade shot out and locked.

Natalie gasped, "It's her pencil! It's a dagger!"

"It is not my pencil," Aunt Bertha said

# SOLDIERS ON THE WINTER FRONT

**A** million veterans on the home front are in action in the war against winter.

It's a war being fought by railroad men keep the greatest traffic load in history rolling every minute of the day and night.

Means miles of snowsheds built through the mountains — miles of motor fences to warn of snowslides.

Means mighty locomotives puffing behind great rotaries, or shoving winged plows to fling drifts aside.

Means men braving the blizzard's bite to keep clear the thousands of miles — repair crews standing ready to meet the threat of flood-gate streams.

All this is an old story to railroad men — but it's a story that takes on new drama today.

For America depends on its railroads as never before, to keep its war factories humming, its armies fed and equipped around the world — at the same time that 130 million Americans at home are supplied with the food and fuel they must have.

Railroad men know the size of the job that rests on their shoulders. It's a job twice as big as it was before the world went to war.

And they'll give it the best they've got, so long as they have an engine that will pull, a car that will roll, and a track to follow.

## HELP MAKE TRANSPORTATION GO ROUND

Passenger traffic has doubled in the last year. And the railroads want to carry everyone who must travel. So won't you do this to help?

1. Plan early — make reservations and buy tickets as soon as you can.
2. Avoid week ends — midweek travel is less crowded, more comfortable.
3. Travel light — don't carry more baggage than you really need.
4. Cancel promptly — when your plans shift, release your reservations quickly. Someone else needs them.

Thank You.

asked. "Is this extortion? If it is, you're crazier than I think you are."

"Uncle Colton?" Jason said.

"Be careful, Colton," Aunt Bertha warned him. "This man is cleverly trying to build something up. He will try to lead you into some sort of trap."

"And it's too late to stop me," Jason said. "We can settle this here, now, or I can go back to Honolulu and have Hiram Grazzard's will inspected by experts. Uncle Colton, do you want to talk now?"

"You're doing the talking," Uncle Colton answered, and his voice was almost a jeer. He seemed to have himself rather well under control at last. "Go on, Amboy."

"But I don't want him to go on, Colton," his sister said firmly. "This is too much for you. That wound may give you a fever. You should be in bed."

"HERE," said Jason, "is a chronology of events that took place in the year 1921. On January fifteenth, Ezra Crumpton, the lawyer, drew Hiram Grazzard's will. Ezra Crumpton and his secretary, a young man named Peter Bliss, signed the will as witnesses. On February tenth, Ezra Crumpton died in Honolulu of pneumonia."

"On March third, Hiram Grazzard died following that famous quarrel with Aunt Bertha. You were there, Uncle Colton. You know what the quarrel was about. You know how furious she was when she learned the terms of his will. And you know how he died."

"It was a heart attack," Uncle Colton said firmly.

"Was it? Or was it a native poison she put into his drink?"

"No!" Uncle Colton said shrilly.

"A poison that killed swiftly," Jason went on. "And when Dr. Hastings, the Kokala company doctor, was called—she told him it was a heart attack. Did Dr. Hastings examine the body for poisoning—or was Hiram Grazzard buried without—"

Aunt Bertha started out of her chair. "Make this man stop saying these horrible things!" she cried. "You men have somehow got to stop him! I can't stand it! Lorrin!"

"Be patient, Aunt Bertha," Natalie said. "He can't go on forever."

"For who," Jason broke into the babble, "would question the word of Mrs. Hiram Grazzard—Queen Bertha? And you were there, Uncle Colton—on March eighth—five days after Hiram Grazzard's murder—Luana's father and mother, who were also in the house at the time of the quarrel, set out from Kokala Bay for Hilo in their outrigger sailing canoe. They were drowned that day or the next—somewhere in Kaieiwaho Channel."

"Jason—" Luana began.

"I did some checking on that, too, Luana. According to the Honolulu weather bureau, there was no bad weather on either of those days. Your father was an expert sailor. His disappearance at that time was, to say the least, extremely mysterious."

"Jason!" Luana cried. "Do you realize what you're saying?"

"I'm saying that your father and mother disappeared altogether too conveniently." Jason was watching Uncle Colton. He had seen Uncle Colton's eyes flutter, and Uncle Colton was now staring at the floor and gripping the arms of his chair. "Do you want to talk now, Uncle Colton?"

"No," said Uncle Colton, but his voice no longer resembled a jeer.

Jason looked at him thoughtfully. His throat was growing tired. He had thought he was making very little headway with Uncle Colton, until he had

mentioned Luana's father and mother. But where was Flack?

"On March eleventh," Jason continued, "three days after their disappearance, the forged will of Uncle Hiram was probated. On March twelfth, Bliss—the lawyer's secretary and only surviving signatory witness—Honolulu on the Union Line steamer Ventura for Australia and has not been heard from since."

"Amboy," Lorrin broke in, "aren't even being akamai now. You're babbling. Your scheme is as full of holes as your engine is. Last night, my father settled with you for one hundred thousand dollars. Isn't that enough?"

"On March seventeenth," Jason continued, "you came to this island, Uncle Colton, and you haven't left it since. You had what you wanted—solitude and books. That was your price, wasn't it to be let alone?"

"I will listen to no more," Aunt Bertha said decisively. She gripped the arm of her chair.

"Aunt Bertha—please don't mind me," Jason said. "I've almost finished. I returned his attention to her brother's claim, Uncle Colton, that this was after poisoning her husband, drew this new will and traced the signature to Uncle Hiram and the two witnesses bribed Peter Bliss, who was the man living except you who knew the terms of the original will, to leave the islands. Peter Bliss went to Burma to claim that, in an attempt to protect herself from discovery, she has—if she can't be produced—caused her disappearance at one time or another, five people vanish!"

Uncle Colton had, all this time, staring at the floor. His right shoulder was lower. Now he looked up.

"You can't prove a word you're saying!" he said defiantly.

"All I have to prove," Jason said, "is that the will now on file is a forgery."

"In other words," Lorrin said, "you can't prove anything."

"My brother Wayne," Jason went on, still addressing Uncle Colton, "and my cousin Winfield spent years in Burma trying to track down Peter Bliss. I knew all that I know—possibly not all that I know. Aunt Bertha, you told me my brother was alive—a prisoner on this island. Where is he?"

"Your brother," Lorrin said, "is on this island. We will produce him in due course."

JASON gazed at him. "Lorrin," he said, "you are terrific. You are really terrific. Uncle Colton, wasn't your brother here about two months ago?"

"Was he?" Lorrin said angrily. "You—"

"You said my cousin Winfield was dead," Uncle Colton suddenly interrupted.

"He was lying," Aunt Bertha said firmly.

"He was a stowaway in my cabin on the Tasmania," Jason said.

Uncle Colton was staring at him. "Did Winfield tell you any of the ridiculous things you're saying?"

"Inadvertently—yes. He gave me a phony name and a phony story. Because he didn't trust me; he didn't know who I stood. Mrs. Grazzard got into the stateroom and stabbed him with a thing and pushed him out the porthole just as she got into my brother's burial in Kokala, stabbed him to death, hid him somehow aboard her sampan—dumped him into the sea."

Uncle Colton was bending forward with his right shoulder well down.

"Colton," his sister said warningly, "remember what I said."

"But I want to know what he means. He says Winfield is dead? He says Winfield inadvertently told him things." Jason took out of his pocket the slip of yellow paper which Roth, the room steward, had given him the morning following the stowaway's disappearance. "Here," he said, "are some notes he is making shortly before she murdered him." He gave the yellow slip to Uncle Colton, who held it in trembling hands and stared at it.

"He made a list of the initials of all of who are directly involved in this," Jason explained. "He was speculating about some of us, and he knew a great deal about the rest of us. You'll notice after my brother's and my initials a question mark. He didn't know where we stood. He could not have worked with my brother in Burma, trying to track down Peter Blissing, or he would have arrested me. He worked alone. He didn't even know my brother was dead."

WHAT do the initials VA and IC stand for?" Uncle Colton asked. "That," Jason answered, "is very interesting. Winfield Grazzard was an advance inspector in a certain steel plant. The initials IC and VA are stamped on all inspected equipment. You'll notice IC after the initials of Aunt Bertha, Lorrin and Mr. Mace. And you'll notice VA after Luana's and Natalie's initials. IC means 'inspected and condemned' and VA means 'viewed and approved.' I heartily agree with him."

"But what have these two young ladies to do with this?"

"Nothing," Jason answered. "He was speculating. But his comments on the other initials are very significant."

Aunt Bertha was stirring restlessly. Let me see that," she said imperiously. "In a moment," Jason said. "You'll notice, Uncle Colton, that there's no line drawn through my mother's and father's initials. They died naturally. But there is a line through the initials of Hiram Grazzard, Bruce Topping and Caroline Topping. He had somehow learned that those three were murdered. The dotted line through my initials is pretty obvious. It was next—because I, too, was learning too much. The only missing initials are his and yours."

Lorrin's face was gray and wet, and his eyes were black. "Have you finished?" he said.

"Almost," Jason said. "Will you talk now, Uncle Colton?"

Uncle Colton licked his lips. "No," he said. "You haven't proved a thing."

The screen door hinge squeaked again. Jason glanced at it. A short, bandy-legged man in bedraggled dungarees stood in the doorway. His thin black hair was plastered to his scalp. Water ran in trickles down his face. His shoes made a sucking sound with each step.

"At your service, sir," said Flack. "May I come in?"

There was a tall dark-faced young man behind Flack. He wore the khaki uniform of a Coast Guard officer. He looked about the room, then he turned and walked away. He looked grim and purposeful. Jason suspected that he wanted Singapore Sam Shay.

Natalie sprang up. "Flack!" she cried. "Oh, Flack!"

"Where," Luana cried, "have you been, Flack?"

"On Mrs. Grazzard's sampan," Flack answered. "It got away, Miss Topping. It drifted out to sea. And I regret very much to admit that I cannot swim a stroke. And I could not start the engine. Singapore Sam, who eventually rescued me, discovered that Mrs. Grazzard uses a secret starting switch. He is at present—"

"Where is my husband?" Natalie stopped him.

Flack gazed at her sadly. "I am very, very sorry to have to tell you, Mrs. Mace—he is dead."

Natalie sat down slowly with her hands to her mouth.

Flack glanced at Jason. "Shall I talk, sir?"

"By all means, Flack!"

"Lorrin!" Aunt Bertha cried. "Stop that man!"

"Don't move," Jason said grimly. "Go on, Flack."

"Yes, sir. When I left you, I stowed away in the bows of her sampan just after she and Mr. Mace went aboard aft. They were quarreling. Do you wish a verbatim report of the quarrel or just the gist?"

"For the present, just the gist."

"Yes, sir. He argued that she had gone too far. She accused him of bungling the job of killing you. He said he had had enough. She struck him, I believe, with a belaying pin. It was all very sudden. She pushed his body over the rail. She did not even slow the sampan down."

Aunt Bertha started up. Lorrin started around the chair.

"Both of you!" Jason snapped. "Don't move! Flack, I am trying to convince this gentleman that he should talk. I think he may be inclined to talk now. She tried to kill him tonight, too. This is Mr. Colton Grazzard, Flack. Will you bear me out that she instructed Mr. Mace to kill me tonight and that he attempted it?"

"Yes, Mr. Amboy, I will, of course."

"Will you talk now, Uncle Colton?" Jason said gently.

"Colton!" Aunt Bertha said heavily.

"It's no use, Aunt Bertha," said Jason.

"No, it's no use, Bertha," Uncle Colton echoed him. He licked his lips. There was elation in his thin dark face—a curious gratification.

"Tell it in your way," Jason encouraged him.

"Colton," Queen Bertha said, "I have warned you—"

"No, Bertha. I'm going to talk. I'm sick of it. I'm sick of you. All my life you've bossed me. You're a greedy, ruthless, horrible woman, Bertha! I hate you and I'm going to talk."

HIS sister was staring at him with blazing eyes. "You mean, you're going to destroy your own sister!"

"I'm so sick of all these horrible things you've done," Uncle Colton said. "You tried to kill me tonight. You killed this young woman's husband. You tried to kill this young man. You're a monster, Bertha. You'd kill your own son just as you killed your husband and Luana's father and mother and this boy's brother—if he stood in your way!"

"She didn't kill them!" Lorrin said savagely. "She didn't kill anybody! It's nothing but a scheme to extort money from us! It's a frame-up!"

"So help me, Lorrin," Jason said. "I'll shoot you if you take another step."

"Lorrin," Colton cried, "she killed your father! She told me so. She wasn't even ashamed of it. I saw her kill—"

"You're a liar!" Lorrin shouted.

"And this boy's brother—"

"Did you see that?"

"No, Lorrin. She told me about that, too. He had worked on this plantation for years. He insisted that she give him and this boy their share of the estate. He came here and I talked to him—down on the beach. I wouldn't let him land—but I talked to him. And I told her. She went back to Kokala and she went into the company bungalow where he lived. She stabbed him with that pencil dagger. She dragged his body into her car. She

loaded him into her sampan. She took him out to sea, weighted him down and dumped him overboard."

"I don't believe it!" Lorrin gasped.

Jason was watching Bertha Grazzard's face. The dull amber eyes were almost closed. She turned and walked slowly to the end of the room.

"Let her go," Uncle Colton whispered.

She pushed open the screen door and walked out.

"I can't believe this," Lorrin said thickly.

Natalie glanced up at him. "I can," she said grimly.

"Lorrin," Uncle Colton said tremulously, "every word this young man has said is the truth. It's an awful mess. I don't know what we're going to do about it. Things have gone so far. Sit down, Lorrin—sit down. You look sick."

Lorrin was glaring. "You little rat!" he panted. "You squealing little rat! You got plenty out of it!"

"I'm sorry you feel this way," his uncle said sadly. "What I got out of it is all in this room. Books, Lorrin! Books and solitude. That was how she bribed me. She knew I wanted that more than anything in the world. And I've loved the solitude, and I've loved these simple, kindly people who live here. They're my kind. I wanted to get away from her. I've always hated her."

"I know how you feel, Lorrin. You hate me. But I was in the room the night she had that quarrel with your father. You've never seen her like that. He told her he felt the Grazzards had always been too greedy—he didn't believe a few people had the right to control so much land. Then he told her that, under the terms of his new will, she would get only half, that the other half would be distributed among Luana's parents and this boy's parents. There was a fifty-thousand-dollar bequest to our cousin Winfield. When he finished, she flew into this awful rage. She screamed and ranted at him."

Uncle Colton closed his eyes a moment. He said thinly, "She poisoned your father, Lorrin. She told me so. When Dr. Hastings came to make out the death certificate, she hardly let him see your father's body. Did Dr. Hastings tell you this, Amboy?"

"Yes, sir."

"Did he suspect poison?"

"He did after we'd talked about it most of this afternoon."

LORRIN dropped into a chair and pressed the heels of his hands against his temples. "I don't believe it."

"You might as well begin to believe it," his uncle said. "It's the truth. She killed Luana's father and mother because they'd heard that quarrel, too—and may have suspected the poisoning. According to her lights, she had to kill them before the will she forged was probated."

Lorrin muttered, "You're lying, you're lying."

"I was there when it happened, Lorrin. I did inadvertently just what this man Flack did deliberately tonight. I was a stowaway on her sampan when she rode them down. I'd been feeling horrible. I had got myself very drunk. I felt like drowning myself, and I wish now I had."

"I went aboard the sampan that night and fell asleep in the bows. When I woke up, it was early morning, and the sampan was at sea, almost out of sight of the land. I was too sick to stand up. I was on my knees at the rail when I saw the outrigger dead ahead."

"She ran that canoe down before I could say a word. I was too weak to move. She ran it down at full speed, and she ran back and forth over the spot until nothing was left but kindling."

Jason was watching Luana. When she swayed, he started toward her. Flack helped her into a chair. She put her face into her hands.

"She didn't know I was aboard until she heard me being sick at the rail," Uncle Colton went on. "Well," he said wearily, "I did what she told me to. Until tonight, I always did." He looked pityingly at Lorrin.

"The Grazzard women have always been ruthless and greedy and domineering, but she was the worst of them all. Lorrin," Uncle Colton said gently, "your mother is dead."

Lorrin sprang up. He stood with his feet planted apart, staring at his uncle.

"When she went out that door, I knew what she intended to do," the old man explained. "She threatened to do it if things ever went wrong for her. I am very sorry for you, Lorrin. You'll find her at the foot of the fire pali."

JASON was finishing dressing when the tall, slim, black-mustached young man he had seen at Rodgers airport brandishing a brief case knocked at the lanai door. He still had the brief case in his hand.

He said briskly, "Mr. Amboy, my name in Carrington J. Hambledon." He spoke with a pronounced British accent. "I represent the British Aircraft Ministry."

"So you've heard that rumor, too," Jason said wryly.

"What rumor, Mr. Amboy?"

"That your government has bought my engine."

Mr. Hambledon's very British eyebrows went up. "But didn't you know, Mr. Amboy? The purchase has been authorized."

"Yes?" Jason whispered.

"Yes, Mr. Amboy. We have been testing the three engines we bought from you several months ago. We like them so much that we want to put the Amboy engine into immediate production for a new light pursuit ship—if we can agree on mutually satisfactory terms."

"Sit down, Mr. Hambledon," Jason said hoarsely. . . .

He had lunch with Natalie in her garden. She was pale, but she was composed and she showed no signs of tears.

"I suppose," she said, "it would be more becoming if I were in a slightly less philosophical mood. But, Jason, my emotional system is really bearing up rather well. Even when I learned definitely that Channing was dead—I was shocked only because he had died so unpleasantly. My only feeling is one of release."

"I think I understand," Jason said.

"Yes, I'm sure you do. You suspected all along that, underneath my bitterness, I was really in love with him. The curious thing is, I thought so myself. But I wasn't. It wasn't love. He held me with fear and hatred—and nothing else. He was always cruel and selfish and thoughtless. I can't even say honestly I'm sorry he's dead. All I wonder now is—just how guilty was he?"

"I think," Jason answered, "he wasn't really guilty—until last night—of anything but credulity. He believed what Queen Bertha told him about me—the blackmail story—and I think she worked him up to a pitch last night—so that he really wanted to beat my brains out with that club. And I think her real reason for killing him was that she told him too much. He certainly must have known that she intended to kill her brother."

"Do you think Lorrin knew?"

"He may have had his suspicions, but he was duped, too. What are your plans?"

Her blue eyes studied him. "Channing

EVERY WORD CONTAINS  
A HIDDEN STORY OF ITS ORIGIN

# Alert!

Once meant,

On the  
watch-  
tower!

**ALERT**, now meaning "air raid alarm!" comes from early French *à l'erte*, "on the watch." This, in turn, came from Italian *all'erta*, "on a watchtower or height." When the first field hospital was organized to follow an army, the French called it *hôpital ambulant*, "walking hospital," from the Latin *ambulare*, "to walk." Eventually *hôpital* was dropped and *ambulant* became *ambulance*, a vehicle for conveying casualties. *Sabotage*, now the malicious hindrance of production comes from French *saboter*, "to work carelessly"—originally, "to tread with wooden shoes, or *sabots*."

Both you and your children will enjoy the hundreds of fascinating word origins in WEBSTER'S NEW INTERNATIONAL DICTIONARY, Second Edition—The Merriam-Webster.

These colorful word histories are just one feature of this greatest of all knowledge books. ## Kidneys Must Clean Out Acids

Excess acids, poisons and wastes in your blood are removed chiefly by your kidneys. Getting up Nights, Burning Passages, Backache, Swollen Ankles, Nervousness, Rheumatic Pains, Dizziness, Circles Under Eyes, and feeling worn out often are caused by non-organic and non-systemic Kidney and Bladder troubles. Usually in such cases, the very first dose of Cystex goes right to work helping the Kidneys flush out excess acids and wastes. And this cleansing, purifying Kidney action, in just a day or so, may easily make you feel younger, stronger and better than in years. An iron clad guarantee insures an immediate refund of the full cost unless you are completely satisfied. You have everything to gain and nothing to lose under the money back guarantee so get Cystex from your druggist today for only 35c.

It me very well provided for—inad-  
tently. I'm going back to the main-  
d. I'm going to open a hat shop with  
y young sister on Hollywood Boule-  
rd. It's where I really belong—the  
set of lights, love and laughter."  
"You sound just a little cynical," said  
son.  
Her blue eyes glowed at him. "But  
ernally hopeful, my dear."

LORRIN came to Jason's bungalow late  
in the afternoon. His eyes had a  
lugged expression, and his mouth was  
awn. But he had himself well in hand.  
"Of course, Amboy," he said in his  
avy way, "I am deeply shocked by  
at has happened."  
"I understand," Jason said quickly.  
e appreciated how this proud young  
an must be suffering, and he felt very  
comfortable.

"I assure you," Lorrin went on, "I am  
ost anxious to clear everything up and  
see that a just distribution of the es-  
te is made under the terms of my fa-  
er's original will. As soon as Uncle  
olton can leave the hospital, will it be  
atisfactory if we all meet at my law-  
r's in Honolulu?"

"Quite satisfactory," said Jason.  
Lorrin took a deep breath. His dark  
es seemed to smolder. "I'm sure you'll  
interested to know, Amboy, that Lu-  
a and I have broken our engagement."  
"I am very sorry—for you," said Ja-  
n. At the moment he was sure he had  
ever felt so sorry for anyone.

FLACK left with Singapore Sam Shay  
on the afternoon plane for Honolulu.  
They had been at Coast Guard head-  
quarters since their return from Kahuna  
land, answering questions, trying to  
plain how a cargo of yeast, consigned  
the Quartermaster Corps of the  
nited States Army at Nawiliwili, Kauai,  
a sampan captained by an expert  
hall-boat navigator and escorted by a  
estroyer halfway across the Kaieiewaho  
hannel, had happened to arrive at Ka-  
una Island, approximately fifty miles  
t course.

The Coast Guard officer in command  
of the patrol boat in which Luana, Lor-  
n and Natalie had followed Bertha  
razzard to Kahuna, had placed Flack  
nd Sam Shay under arrest. They were  
pair of extremely suspicious characters,  
e asserted, and should be held for a  
orough investigation.

The situation was saved by the arrival  
at Coast Guard Headquarters of a colo-  
nel of U. S. Engineers. After a short pri-  
vate talk with the suspects, he quickly  
convinced the commanding officer at  
Coast Guard Headquarters how urgently  
cherry-picker and cat-rig operators were  
needed on numerous big-scale defense  
projects—and the two crane operators  
were freed.

Jason and Luana took them to the  
airport in her roadster.

"Flack, before you go out of my life  
forever," said Jason, "will you please  
give me an honest answer to that ques-  
tion?"

"What question, sir?"

"Why did you send Sam Shay up to  
the paddle-tennis court that night to wal-  
lop me?"

Flack looked uneasy. He glanced un-  
happily at Luana. "Mr. Amboy, I may  
never see you or Miss Topping again.  
Can't we part friends?"

Luana was smiling mysteriously.

"We are parting friends," Jason said  
firmly.

"I'm not so sure we will if I answer  
that question. I want you to remember  
me pleasantly."

"I will, Flack. I will always think of  
you pleasantly."

Flack glanced inquiringly at Luana.  
"Miss Topping, shall I tell him?"

"By all means," Luana said. "A man  
always loves to hear about his weak-  
nesses."

"My weaknesses?" said Jason suspi-  
ciously.

A glint came into Flack's eyes. "Very  
well, Mr. Amboy. Here it is: I was ex-  
tremely resentful of the way you con-  
tinually told me I was flying high, going  
off the deep end, and running wild. I  
felt that you richly deserved that wallop.  
I hope you won't hold it against me, sir.  
... And I know your marriage will be  
very happy."

Jason and Luana saw them aboard  
the Honolulu plane, and they saw the  
plane take off, then walk back to her  
roadster.

He kissed her as she slid behind the  
wheel.

"Do you think so?" she said.

"What?" said Jason.

"That our marriage will be very  
happy?"

"It's certified," said Jason. "Flack is  
never wrong."

THE END

# DOUBLE DANGER TO FALSE TEETH IN BRUSHING WITH MAKESHIFT CLEANERS

## 1 BREAKING

The more you handle your dental plate while cleaning it, the greater the danger of dropping and breaking it. Brushing involves too much handling and too rough handling also. Millions of experienced denture wearers have changed from dangerous, old-fashioned brushing methods to the modern short-cut way of soaking the plate in Polident. Try it. You will find this method not only means the least possible handling but also cleans your plate thoroughly—beautifully.

## 2 WEARING DOWN

Toothpastes, toothpowders, soap and household cleaners are only "makeshifts" when it comes to cleaning dental plates—which are much softer than natural teeth. Brushing with "makeshifts" may scratch and wear down dental plates. See above pictures. *Fitting ridges worn down by brushing.* In addition, the scratches brushed into the plate cause stains to collect faster, cling tighter. To avoid this serious damage, soak your plate in Polident daily.

### PLAY SAFE... SOAK THEM CLEAN IN POLIDENT

**DO THIS EVERY DAY!**

Put one level teaspoonful of POLIDENT in 1/2 glass of luke-warm water. Stir briskly. Place plate or bridge in solution for 15 min. or longer—overnight if convenient. Rinse well—and use.

*No Brushing—No Scouring.*

### PREVENTS "DENTURE BREATH"

The film that collects on plates, bridges, soaks up odors and impurities. This often causes offensive "Denture Breath." You won't know you have it—but others will! Yet POLIDENT, used regularly, dissolves film—leaves plates odor-free, sweet. Millions call Polident a blessing.

Soaking plates and bridges in Polident is not only a safer method—it's a much better way—cleans them thoroughly, beautifully. The Polident solution works into hard-to-reach corners and crevices and dissolves daily accumulations of food particles and stains.

Daily use of Polident maintains the original natural appearance of your denture. Polident is recommended by many leading dentists and approved by the leading makers of denture materials.

### LESS THAN A PENNY A DAY

Generous 3 oz. size—30¢, Economy size, 7 oz.—60¢. At all drug, department, variety stores. Less than 1¢ a day for safe cleaning of dentures. Today—get Polident.

## CASH FOR POSTWAR TRADE

**F**IRST we've got to win the war; but it is none too early to begin discussing ways and means for priming the peacetime industry pump as soon as the war is over.

One school of thought feels that nothing but the government can do this; that we must go on after the war for an indefinite number of years of deficit spending, WPA and PWA "work," and so on.

Government pump priming can help, but in nine years it failed to remove the threat of depression. In our opinion, private enterprise is the only agency that can furnish the millions of jobs that will be wanted when the boys come home, and that can turn out the millions of consumer items for which consumers, by that time will be yelling their heads off.

It seems mathematical to us, too, that private enterprise can do this only if it has postwar money to invest in plant expansion or conversion to peacetime production, in building sales organiza-

tions, in organizing outlets, and so on. Therefore, we would like to put in an emphatic good word for a couple of proposals now in circulation looking toward the laying up of postwar cash and business prospects for American private enterprise.

One of these is the proposal that Congress, in levying new taxes, be careful not to make it impossible for industries to lay aside money reserves for quick mobilization while the fighters are demobilizing. A striking case in point (though by no means the only case) is that of the airplane industry.

This industry's expansion has been a major phenomenon of this war. It is turning out planes for military use, which after the war can be converted and dressed up into passenger carriers which will make present-day air travel look archaic by comparison. If the airplane industry is picked clean of its war earnings, however, it cannot make good in peacetime on this wartime

promise; and civilian air travel will be hobbled for years.

The other proposal that looks good to us is "lay-away buying" scheme. Here's the general idea: The longer the war goes on, the scarcer consumer goods will become, yet the more people will be making enough money to buy those things if they could be bought. Why not, then, enable these people to buy a special government bond cashable in payment for autos, radios, refrigerators, prefabricated homes, etc., after the war?

The government would get this money to use during the war; the bond buyers would get a species of lien on the goods when they come into existence; industry would get a rough idea of its postwar domestic markets might be expected to shape up.

So long as the bonds were made elastic, so that you wouldn't be bound to buy any particular article with any particular bond, we think the "lay-away buying" idea has great possibilities.

## SCORE ONE FOR FREEDOM

**W**E'VE deplored a couple of times in this space the recent Supreme Court decisions which permit towns to collect license fees from distributors of religious tracts or to prohibit such distribution altogether. These decisions look to us (as they looked to Chief Justice Stone) like dangerous nicks in the Bill of Rights, which flatly guarantees freedom of speech, press and religion.

It is a great pleasure, therefore, to report that the New York Court of Appeals, one of the nation's most respected tribunals, has refused to follow the Supreme Court in a case of this kind. The town of Irondequoit, Monroe County, New York, recently convicted a member of the Jehovah's

Witnesses sect of distributing and trying to sell Bibles and religious tracts without a license.

Said the New York Court of Appeals, tossing out the conviction:

The Bill of Rights embodied in the constitutions of the state and nation is not an arbitrary restriction upon the powers of government. It is a guarantee of those rights which are essential to the preservation of the freedom of the individual—rights which are part of our democratic traditions and which no government may invade.

At times when a legislative body has sought to invade a field from which, under the Bill of Rights, the government is excluded, and has violated rights

guaranteed by the Constitution, the courts must refuse to sanction the legislative decree. . . .

That is the long and the short of the matter, we believe—and in striking contrast to the tortured reasoning and hairsplitting of the Supreme Court's bare majority of five in these cases. Either a nation has liberty of religion, speech and press or it hasn't. It cannot have the matter both ways. Until public opinion impels the Supreme Court to rectify this mistake, our home-grown enemy of freedom (of whom we have too many) will continue to have a toe hold for an all-out offensive some day against the constitutional provisions which make this country a democracy.

## THOSE 4 A. M. BLUES

**W**E SURMISE that a lot of Americans these days are having the 4 A. M. blues one or more nights per week. You wake up in the small hours and begin to worry about your boy away at the wars or about your family or your income tax or your Victory tax or whatever; and sometimes you keep at it till the alarm clock goes off.

This is not a guaranteed cure for the 4 A. M. horrors, but we think it will help in many cases. Just

reflect that at that time of day your vitality is as low as it ever gets in all the day's twenty-four hours, and that consequently you cannot expect your brain to function well. If you let it do so, your brain at 4 A. M. will feed you all manner of exaggerations, distortions and fears, which have little or no basis in fact. Your 4 A. M. thoughts are most likely not worth a hoot, and you cannot at that time have any reasonable hope of working

out sound plans for fighting your troubles next day. So, instead, why not "unlax" and go back to sleep?

Give this scheme a fair trial—say for five straight minutes—the next time you wake up and begin to flounder through the 4 A. M. blues. If it doesn't work the first time, try it again—again. We think it is based on some very sound psychology.

## ANY WEEK

THE good gray gremlin known as Walter Davenport is in uniform again. In the last war, he started as a private and ended as a major, temporary grade. How he did this has always been a mystery, because anyone less belligerent than Mr. Davenport would be hard to find. He started this war as the finest reporter on national affairs in all America and has graduated (or been demoted) to war correspondent, also temporary grade. War correspondents wear uniforms and cause flutters in womanly hearts and learn to hate censors. In due course, you will again be reading the Davenport whimsy in this place; meantime, you can be reading his swell piece in this issue.

WE ARE worrying because bird dogs aren't appreciated. W. C. Parrish of Reno, Nevada, resented our article on the training of dogs for Army service. "It developed, according to this bemused blather," he writes, "that any and all breeds of dogs are acceptable, other than hunting dogs; bird dogs being politely requested to stay home as being temperamentally unfit, or because of moral turpitude or something. I'll stack my pointer up against any dog in the Army, Hollywood, or any place else. He can go into a park in Reno, look at thirteen assorted individuals and unerringly spot the twenty-four carat socialites out here for divorce and even give them a little wholesome kidding if needful." Mr. Parrish and his dog, Flash Wenatchee, have plans. "The research department of a Middle Western university," he continues, "is advising that crow meat, if approached in the proper frame of mind, constitutes an acceptable human diet even to vitamin B<sub>1</sub> contents. We will bag a few crows, dehydrate same at a near-by garlic-drying plant and forward to the handsome staff of your magazine. From that you will learn the wartime value of bird dogs." We will have Mr. Parrish know that we eat crow in this office only when we have blundered, which is almost never.

FOR some undefinable reason, this reminds us of the article in the New York Daily News about the capture of Roger "Terrible" Touhy and Basil "The Owl" Banghart. "Under questioning," said this report, "Touhy and Bang-

hart proved as reticent and cagey as ever. But their faces fell when they found they would have to go back to prison." When such cruelty can be practiced on escaped convicts, we tremble for the safety of the republic and are not relieved by propositions such as the one that has been presented to us by William W. Elliott of Beaufort, N. C., who urges that the oil now being used in spraying the haunts of the malaria mosquito of the South be turned over instead to freezing families of the Northeast. Although Mr. Elliott seeks to take the curse off his subversive views by saying, "I do not know which would be worse, to die of malaria or to die of influenza," we have turned his communication over to the authorities in New Jersey, and he will soon be visited by a committee.

THE fact that both the London Telegraph and the London Express have reprinted our article, Hollywood Gets Its Teeth Kicked In, proves anew what people in the movie industry have always known, to wit: Foreign audiences are far more insane about Hollywood than Americans are. James Cagney was down seeing Boris Karloff off for England several years ago. "Now don't be amazed, Boris," said Jimmy, "if I pop in on you some morning in London and surprise you." Karloff was telling about it later. "If he had ever popped in, he'd have popped in naked. Even actors in Z pictures get mobbed over there. Ten feet off the boat and Cagney would have been stripped for souvenirs."

**ON PAGE 10 appears a message for every alert young woman in this country. It is published by the Women's Army Auxiliary Corps and shows you one vital way in which you can help win the war. We urge you to read it—every word.**

BUT if Hollywood is the Happy Land for illusioned natives of many climes, it is often a sad place for its inhabitants. In addition to the wage ceiling, the scarcity of help, and gas rationing, there has entered the serious matter of lack of food. In the order named, Hollywood likes the following: (a) money, (b) fan mail, (c) Kansas City steaks. Steaks are hard to come by and there is suffering. Jim Denton of Hollywood has written us about the tragic case of a celebrated man: "Things are so bad out here that Mike Romanoff is thinking of closing his restaurant and going back to loafing for a living." . . . K. C.

## How They Pass the Ammunition in New Guinea

*A typical example of B. F. Goodrich development in truck tires*

IN JUNGLE-MATTED New Guinea most of the fighting is an inch-by-inch, tree-by-tree affair. It's primitive country where mechanized equipment counts heavily—but where it's mighty tough to use it.

Here American-built Army trucks have an unromantic but important job of hauling ammunition and supplies to the front.

As well as tires for this purpose, B. F. Goodrich builds a special combat tire, designed to keep on rolling when hit with rifle and machine gun bullets. Other tires in Army service have super-traction treads that carry heavy trucks through mud and gumbo, across rivers and ravines, over swamps and deserts. Still others are special tires made with B. F. Goodrich synthetic rubber—Ameripol.

B. F. Goodrich has gone "all out" for war production, but that means taking care of

essential civilian requirements, too—with tires designed to give the greatest possible mileage for every pound of rubber used.

And many of the truck tires we are offering owners with ration certificates today are exactly the same as those used by the U. S. Army!

When you must buy, get good tires. B. F. Goodrich Speedliner Silvertowns for trucks and buses have an amazing record for long mileage in all types of service. They are all built with a broad, flattened tread construction which gives many more miles per pound of rubber.

And some day they may be made with Ameripol synthetic rubber. When they are, remember that eighteen months before Pearl Harbor B. F. Goodrich was first to offer American car owners tires made with synthetic rubber.

## WHY GET THE BRUSH-OFF BECAUSE OF DRY SCALP?

WHEN 5 DROPS A DAY CAN CHECK IT . . . . .

KEEP YOUR HAIR NEAT, GOOD-LOOKING . . .

**ALL YOU DO** ➔ Tomorrow when you comb your hair, simply put a few drops of 'Vaseline' Hair Tonic on your comb, or rub it on your scalp with your fingers. Nothing to it—yet it keeps your hair well-groomed all day long. In addition, it checks Dry Scalp and loose dandruff by supplementing the natural scalp oils. Then as an extra aid, massage your scalp vigorously with 'Vaseline' Hair Tonic before every shampoo and rub on a little afterwards. You'll have good-looking, natural-appearing hair and a comfortable scalp to boot! Yes! . . . for double care, both scalp and hair, try 'Vaseline' Hair Tonic. And don't forget: it's different because it contains no drying ingredients.

## KEEP UP WITH THE WORLD

By Freling Foster

Every sixth soldier among the American troops that went to Africa carried a bag of trinkets for distribution to the natives as gifts or payments for small favors. The idea behind these bags, which contained cigarettes, candies, beads, scissors, perfumes, sugar, tea and coffee, was to show that our men were not looters but generous friends.

Ordinary glass is now made so that it will break in any desired manner. For instance, pitchers, jars and other containers for the home are manufactured so that they will break in large pieces, lessening the danger of glass fragments getting into food; while some glass ceilings, like those in the National Gallery of Art in Washington, are constructed to shatter in powder form to eliminate the danger of injury from falling pieces.

Turkey is the only country in the world in which all men and women connected with religious orders are forbidden to wear clerical garb on the street.—By Anna Worona, Paterson, New Jersey.

All American naval aircraft now carry rubber lifeboats with sufficient capacity to take care of everyone in the plane in case of emergency. The boats are built in four sizes, for one, two, four and seven men, and some automatically inflate themselves immediately after striking the water.—By F. Ryan, Brooklyn, New York.

In the proposed World Calendar, each quarter year and half year have an equal number of days, and each date falls on the same weekday each year. The extra day follows December 30th and is known as December W, and the extra day in leap year follows June 30th and is known as June W, both W's standing for World Holiday. In 1945, the World Calendar will coincide with the day and date of the present calendar.

The most complex pair of spectacle lenses ever made were ground recently to remedy six different eye defects, three times the usual number. The prescription corrected astigmatism, farsightedness, presbyopia, eye-muscle imbalance, extreme sensitivity to light and glare, and aniseikonia. They are also shatterproof.—By Ray Gentzler, Southbridge, Massachusetts.

During the twelve months following Pearl Harbor, the United States Navy launched 159 fighting ships, four times as many as the corresponding types sunk by enemy action. Among these new vessels were three battleships, six aircraft carriers, ten cruisers, 107 destroyers and 33 submarines, having a total estimated tonnage of 558,000. In addition, American shipyards produced more than 7,000,000 tons of merchant shipping.

Switzerland's heavily mined Simplon, Lötschberg and Saint Gotthard tunnels are the life lines of Italy. Eighty per cent of all the coal, oil, ore, food and other vital war supplies which Germany sends to Italy are shipped through these three tunnels in the Alps. The Swiss are prepared to blow up the tunnels in the event of a German invasion.

Among the American companies that keep in touch with their employees who have gone to war is a Chicago packing corporation, which encourages its 10,000 men in the Armed Forces to correspond on any subject of interest with "Jane Hathaway." Jane is a department of seven girls, who reply to these notes with friendly, newsy, individual letters, averaging one to a man every six weeks.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. Address Keep Up with the World, Collier's, 250 Park Avenue, New York City. This column is copyrighted by Collier's, The National Weekly. None of the items may be reproduced without express permission of the publisher.

## STRONG MAN of *"The Invisible Crew"*

WHEN SIRENS SCREAM the alert and our invincible pilots of the Fighter Command "scramble" for their planes, the Strong Man of "The Invisible Crew" of Bendix stands ready to start them on their deadly mission.

At the touch of a switch, the "ECLIPSE" Aircraft Engine Starter grips and spins the engine crankshaft. Mighty motors roar into throbbing, pulsing life.

As our fighters—and bombers—take off to drive the Axis from the skies, other vital "BENDIX-ECLIPSE" Accessories take over to

feed electric motors, keep radios and lights operating, lift and lower landing gear and bomb-bay doors and help prevent ice from forming on wings and whirling propellers.

And on tanks and warships, spearheading attacks on land and sea, still other members of "The Invisible Crew" move into combat with our soldiers and sailors. Skilled Bendix men and women—more than 60,000 strong—are manufacturing precision products in ever increasing volume to back up our Armed Forces—from Start to Finish!

### "ECLIPSE" AVIATION DIVISION

#### "ECLIPSE" INERTIA AND DIRECT-CRANKING ELECTRIC STARTER

From the early 250 H.P. aircraft engines to today's giant 2,500 H. P. engines, Eclipse has met and solved complex engineering starting problems. Oldest member of "The Invisible Crew," the

"ECLIPSE" Starter combines the features of inertia and direct-cranking electric starters. An electric motor accelerates a flywheel to 16,000 R.P.M. Through reduction gearing this stored-up energy spins the crankshaft to overcome the original starting load. The electric motor continues cranking until the engine fires.

THE INVISIBLE CREW

# Rings of Iron against Nazi and Jap!

**B**EHIND the man behind the gun is engine power. Engines on land, on sea and in the air must function faithfully behind the man behind the gun. For these engines Sealed Power is making piston rings, pistons, cylinder sleeves—making them 24 hours a day—trying to make them worthy of the hard fighting soldiers, sailors and pilots who will depend on them for power. Wherever the United Nations fight you're almost sure to find Sealed Power engine parts in tanks, army trucks and jeeps, in pursuits, interceptors and bombers, in torpedo boats, destroyers and submarines.

Every gun, tank and ship is half scrap. Send your scrap to war.

## For Civilian Engines, too!

Civilian cars, trucks, buses and tractors are essential to the war effort, too. Consequently while the major part of all we produce is for the Armed forces, it is a part of our war effort to continue the production of piston rings for civilian use.

Sealed Power piston rings are available in packaged sets, individually engineered for each particular make and type of engine. These Sealed Power sets insure the engine conservation and the gas and oil economy the government expects of you today. Ask for them by name! They cost no more than ordinary rings. Sealed Power Corporation, Muskegon, Michigan, and Windsor, Ont.

## WING TALK

Made largely of wood and other nonstrategic materials, Curtiss' newest air transport, C-76, appropriately named the Caravan, can speed troops and supplies to the far-flung bases of the United Nations

**T**HE War and Navy Departments have finally given way before the tide of public opinion and officially adopted the practice of designating our planes by name rather than number.

Wing Talk took occasion, as long ago as April 26, 1941, to urge such a change, pointing out how much more satisfactory were names like Flying Fortress, Spitfire and Airacobra for fighting airplanes than mere alphabetical-numerical listings.

Others took up the campaign, and more and more aircraft manufacturers gave their products informal, characteristic names, but not until last month's press release, did the War and Navy Departments make them official.

The Army-Navy statement also refers to the fact that the War Department has at long last approved of calling fighter aircraft "fighters," instead of "pursuit" planes. For all of two decades, the American Navy and Marine Corps and the rest of the world knew the fast, maneuverable, heavily armed planes whose function was to shoot down bombers, as "fighters." The Army however, persisted in using its own name for them up to a few months ago. It only relented, though, as the result of a British-American standardization program made necessary by the war.

**T**HE boys at the fighting fronts go for candy bars and caramels in a big way—when they can get them. Nobody knows this better than Colonel Leonard H. Rodieck, Army General Staff, who flew into Guadalcanal one day last fall when Marines and soldiers at Henderson Field were eating regularly, but weren't getting anything for that sweet tooth. Crew members of the bomber that carried Colonel Rodieck to the embattled island had been there before and knew how things were, so on this trip they gave a thought to their candy-starved buddies.

At another American base in the South Pacific, these enlisted crew men heard that a shipment of candy—the first to reach the remote island—had just come in. Pooling their available cash (\$154) they were waiting at the door of the Post Exchange when it opened, and a few minutes later the candy shelves were fairly well stripped.

When the troops stationed at the base got wind of this raid on their long-awaited supply, it looked as though the MPs would have to intervene, but when

the local soldiers learned what bomber crew men were going to do the candy, they chipped in, bought the remaining stock at the PX and sent it to Guadalcanal with their regards. Marines almost mobbed the airman when the stuff was handed out. Later they showed their appreciation by kicking in with a load of Jap souvenirs.

**T**HOSE one-sided combat scores up by American airmen in the Pacific unquestionably are due to several causes. One is that United States fighting planes are better than a lot of doughing Thomases believed some months ago. Another possible explanation for the 1 to 1 average of Japs vs. American planes shot down lies in the better training given our pilots.

One main reason for the proven American qualitative superiority lies in the higher morale and fighting spirit of the Yankee pilot. American pilots fight with more confidence and take more chances—calculated, justifiable chances—than do the Nips. They do so because their planes are sturdier and better protected than Japanese craft and because they know that, even if shot down, the chances of surviving are pretty good.

United States airmen who have been shot down in the Pacific say they did not worry a great deal about their chances of being rescued. They declare that along they knew that all available American planes and ships in the area would be searching the seas for their rubber rafts. Our fighting forces, in fact, never give up looking for survivors of a crashed plane. This was emphasized in the Richenbacker rescue and it was not a special case.

The Japs, on the other hand, follow a different practice. They do not believe in wasting time and fuel searching for shot-down pilots. This has been demonstrated many times. In the Battle of Midway, Japanese ships did not pick up pilots floating near them even when the vessels were in no danger from attack by American bombers. Some stories have painted Nipponese fliers as daring—even suicidal—pilots. They aren't.

Army and Navy Air Force officials say that this difference of policy between the United States and Japan as to shot down fliers has a lot to do with the mental attitude and competitive spirit of the airmen of the two nations. . . .

JOHN G. NORRIS

## MOSQUITO...WITH A DEADLY STING!

"Mosquitoes" are bad in Europe this year.

Spawned and bred in Britain, these lightning-fast, plywood bombers are whining over the big Rhine cities in broad daylight, or darting in at dusk to lead the way for the big fellows . . . raising welts and leaving sears awful to Nazi eyes.

It's Britain's pride—this new "Mosquito" that's streaking over Europe—and it's propellers for the "pride of Britain" that we're building here.

They're made by the many thousands, and for other bombers, too: British Lancasters . . . American Flying Fortresses and Liberators.

Bearing these planes aloft, each Nash-Kelvinator-made Hamilton Standard propeller is an engineering masterpiece—so beautifully machined that a puff of a man's breath can set it turning.

Into these "props" the men of Nash-Kelvinator are pouring not only their skill, but their heart's blood and the sweat of their brows! For their swift hands are guided to new records of accuracy and output by the knowledge that on these blades—*there ride the lives of their own brothers, and their sons!*

NASH-KELVINATOR CORPORATION  
Detroit, Michigan

Let's keep the battle rolling—with War Bonds and all the scrap we can collect!

**NASH**   **KELVINATOR**

In War . . . Builders of Pratt & Whitney Engines and Hamilton Standard Propellers. In Peace . . . Nash Automobiles and Kelvinator Refrigerators.

# Life in The WAAC

Some questions and answers of interest to every patriotic American woman

**I've never been away from home. My parents wonder about this strange new life for me.**

There couldn't be a better place for you than in the WAAC where you will receive excellent care in every way, enjoy the companionship of other fine women from all over the United States, and lead a wholesome, healthy life under the leadership of understanding, intelligent officers. Each day is interesting and full of activity there's never time for loneliness.

**Maybe I wouldn't like the work?**

People are happiest doing what they do well. Every effort is made to place you in duties where your service will count most towards final Victory. You may have some latent talents that will fill a particular need for work interesting and new to women, such as repairing the famous secret bombsight, rigging parachutes, operating the fascinating new electronic devices, or driving an Army jeep over foreign terrain.

**Then I have a chance to learn something new?**

Yes, indeed. And the list of WAAC duties grows constantly. The training and experience you get in the WAAC may equip you for many stimulating new careers opening up for women.

**What are my chances of promotion?**

Excellent — if you have the right qualifications and join now. The Corps is expanding rapidly and needs new officers, both commissioned and noncommissioned. All new officers now come up through the ranks.

**What is the age range and other requirements?**

Very simple. You may join if you are a U. S. citizen, aged 21 to 44, inclusive, at least 5 feet tall and not over 6 feet, in good health — regardless of race, color or creed. But the Army needs you now — don't delay.

**Linguists needed.** If you speak and write Spanish, Portuguese, Chinese, Japanese, Russian, French, German or Italian, see your local Army recruiting officer now! You are needed for interpreting, cryptography, communication.

**First of all, is the WAAC really needed?**

Emphatically yes! Already the President has authorized the Corps to expand from 25,000 to 150,000. The Air Forces and Signal Corps have asked for thousands of WAAC members to help with vital duties. Both Ground Forces and the Services of Supply are asking for thousands more. Members of the WAAC may be assigned to duty with the Army anywhere — some are already in Africa and England.

**Can the WAAC really help win the war?**

The whole idea of the WAAC is to replace trained soldiers needed at the front. If American women pitch in now to help our Army (as women in Britain, Russia and China do), we can hasten Victory — and peace.

**But can I live comfortably on WAAC pay?**

There are few civilian jobs in which you could earn clear income, as WAAC enrolled members do, of \$50 to \$138 a month — with all equipment from your toothbrush to clothing, food, quarters, medical and dental care provided. WAAC pay is equal to soldier's pay.

**What about education?**

You do *not* need a high school diploma. A mental alertness test is given to determine intelligence. Your education progresses with service in the WAAC.

**The drilling sounds so strenuous—!**

Nonsense! The most beautiful women in America today are the girls in khaki! Some calisthenics and drilling are vital to general good health, discipline and tuned-up reflexes. After a few weeks at Fort Des Moines, Daytona Beach, or the new Fort Oglethorpe training center you'll feel better than ever in your life.

# Double, Double, Toil and Trouble

By **Lion Feuchtwanger**

Illustrated by **Ronald McLeod**

The Hitler, Oscar Lautensack the clairvoyant believed in his star. There was nothing else either of these men did believe in. This is their story, a story of ambition, greed and lust, a story of the inner councils of the Nazi Party. It was written by a great German exile

ON THAT Wednesday in the first week of May, in the year 1931, Oscar Lautensack the clairvoyant sat in Alois Pranner's apartment in Munich and looked depressed. There he was, stranded again; once more he'd had to seek shelter with his friend.

His coat was thrown untidily over a chair; a package in stiff brown paper lay on the table; the worn leather suitcase with his few belongings stood in the middle of the room. But in Oscar Lautensack's pocket was the thing that had forced him to take refuge here: the bill for one hundred and thirty-four marks which he owed Frau Lechner for his two rooms in Rumfordstrasse and which he could not pay.

Oscar Lautensack the clairvoyant had good reason to be out of sorts. He was forty-two years old and farther from the fulfillment of his dreams than ever. Since the end of the war and since the inflation, the world had lost interest in his accomplishments. For seven long years his luck had been bad. He had been obliged to exhibit himself in side shows, at county fairs, before crowds that made fun of him. And although Tirschenreuth the sculptress had finally taken him away from all that and given him back a certain reputation through the mask of him he had made, still it wasn't a pleasure to come thus to his friend, the magician Alois Pranner.

Perhaps he should have taken refuge with Anna Tirschenreuth. She was not an "artist" like Alois, but the leading sculptress of the country. And unlike Alois she didn't emphasize the bitterness of his situation by cheap gibes. On the other hand she did get on his nerves. Insistently, just by her presence, she reminded him of his mission to live up to the mask.

With a disgruntled little snort he got up and unwrapped the package. It was a bronze relief of his head; it was the mask that Tirschenreuth had made. He got a hammer and nails from grumbling old Kathi, his friend's housekeeper, and hung the mask on the wall. Then gently, even tenderly, he ran his white, well-cared-for, very fleshy hand over the metal surface.

He stepped back a few paces and looked at the relief. The mask made it certain that in some future age, later generations would know his potentialities. If his contemporaries didn't understand, it was their loss.

His fierce, dark blue eyes bored into the bronze

A shade of uncertainty came over Hitler; only Oscar noticed it. Noticed how the man on the platform began to look for someone among the audience

features of the mask. Pleading, begging, threatening, he stared at it; he looked almost grotesque, like a graven image himself. For one long minute he exhibited his unshakable will power to himself and to his portrait.

Then, weary but less disgruntled, he turned back to reality and to the bourgeois comfort of the dining room of Alois Pranner the magician, called Cagliostro.

NEXT morning that same Alois Pranner sat at breakfast awaiting his friend. He had come home late from his performance, and Oscar had gone to bed without waiting up for him.

They belonged together, Pranner the magician, called Cagliostro, and Lautensack the mind reader. They had met sixteen years ago, in the second year of the war, on the Eastern Front. From the very first moment Oscar had bewitched him, and Alois had been quite willing to be bewitched. At that time Alois had been in the Postal Division; he had to censor the letters of the battalion, and from this reading matter he found out certain events which, unknown to the recipients of the letters, had taken place at home. Oscar had made him an interesting proposal: Alois was to keep back letters with news of this kind for a time, and meanwhile he,

Oscar, would announce the events in those letters to the persons in question, thus establishing his reputation for clairvoyance. He would let Alois have a share in the benefits which these activities would doubtless bring him. Alois had accepted; all had gone well; they had worked together excellently. Oscar's gifts had caught the attention of the higher-ups and, backed by the military authorities, they had given evening entertainments behind the front for charity drives. And while their comrades at the front suffered deprivations and starved, they lived a pleasant life at the well-provisioned station. Since that day they had been welded together, as accomplices, in mutual admiration.

They had had any number of rows in the long years of their friendship. In fact lately, since Oscar had said goodbye to vaudeville, they had not been able to spend an hour together without hurling the coarsest epithets at each other's heads. But they enjoyed it.

Finally Oscar appeared. Just as Alois had expected, he put on airs and behaved with gracious condescension, as if he were doing Alois a favor by living with him. It was no wonder that Alois grew annoyed and broached a subject which he knew would rub Oscar the wrong way. Slowly, with well-simulated sym-

pathy, he asked: "And what do you hear from your brother?"

Now Oscar was attached to this brother, Hans; while Herr Pranner could not stand him. Oscar at least had charm; but Hans Lautensack was a most unpleasant scoundrel, and a criminal to boot. Now on top of everything he had got himself arrested.

A certain Franz Wiedtke had been murdered in Berlin, and the crime had easily been proved to be Hans Lautensack's. It was true that Hans had tried to talk himself out of it on the grounds that the whole thing had been a political frame-up, that his opponent had attacked him for political reasons and that he had been forced to shoot him down in self-defense; for Hans had joined a big political party, the National Socialists, the so-called Nazis. And they were helping him in his ugly mess, but it didn't seem to be any use. The prosecution insisted that the murder had taken place on account of a lady of doubtful reputation, a certain Garnet Lizzy. Alois Pranner had good reason to assume that he would wound Oscar by asking after Hans.

Oscar's air of superiority and ease vanished. "I haven't had any news from Hans for a fortnight," he answered unwillingly, "but his last letter sounded confident."

Alois, however, wouldn't let the subject drop so quickly. "I wouldn't be in Hans' shoes," he said, full of sympathy, and thoughtfully drummed the last bit of roll in his coffee.

In a rage Oscar listened to his friend. It was wiser not to answer. At that point, soon, Alois would bring forward his eternal plea that Oscar should come to vaudeville, and then Oscar would have a chance to get even.

And sure enough, after a while Oscar began, bowing his long, bald, comic head in thought: "I know, it annoys you, but I do have to tell you about it once more." And then came the whole, familiar argument which wasn't necessary for Oscar to live with such misery. Why, for instance, would he do an act with him, Alois?

With pleasure Oscar lapped up the honey to his soul. With satisfaction he heard Alois confirm his belief that holding out in miserable circumstances he was making a sacrifice to keep the gift pure. He let his friend finish what he had to say, and only then refused his invitation with icy, scornful politeness.

ANNA TIRSCHENREUTH the actress looked at the clock. It was three minutes to ten. She had asked her car to visit her at ten; she had some things to do for him.

When she had heard that he had scolded from his rooms with debts unpaid and fled to Pranner, she had again taken steps in his behalf. Now she wanted to discuss with him what she had accomplished.

She sat in her armchair, a heavy, massive figure. Her large face with the nose, the gray, rather tired eyes, and faded hair which had once been red, had a sorrowful expression. She felt old; life lay behind her. All she had now was her work and this man, Oscar, whom she loved like a son, this faulty vessel in which one did not know whether all was poured into it was not lost.

And now here he was. The powerful face with the fierce blue eyes beneath the thick, dark brows was trying to look composed, indifferent. The woman was going to make things easy for him again. "Well, there you are," she said as casually as possible.

"I've talked to Professor Hrabliczek," Frau Tirschenreuth said when Oscar was seated. "They're ready to give you continuous employment at a monthly salary of 250 marks." She was breathing heavily. Oscar did not know whether he should attribute the heavy breathing to her asthma or to the content of her announcement. For Professor Hrabliczek was the president of the Psychological Society, and that was the most distinguished association which could be thought of in connection with Oscar. Several times there had been talk of such a position, but Hrabliczek, a difficult, particular gentleman, had not wanted to commit himself.

"You would then be independent," Oscar heard Tirschenreuth's heavy, slightly hoarse voice continuing. "You'd be able to write your book at last. I was looking at that dissertation the other day that you gave me as a birthday present. It could be turned into a sound, valuable book." She talked as if to herself, and barely looked at him.

At that moment he did not like to be reminded of the book, much as the euphonious title, Possibilities and Pitfalls

(Continued on page 46)

Oscar's fierce dark eyes bored into the bronze features of the mask. Pleading, begging, threatening, he stared at it.

## PAY-AS-YOU-GO RUMEL

### BY AMY PORTER

He's a big man, with big ideas, an intense hatred of debt, a bizarre taste in clothes, and overwhelming efficiency. And if your tax affairs are ever put on current basis, he will be largely responsible for it

IF YOUR income is \$1,000, and you spend \$999.95, you get happiness. If your income is \$1,000, and you spend \$1,000.05, you get misery. It's as simple as that about debt. Dickens said

PHOTOGRAPH BY IFOR THOMAS

so some years back, and nobody's ever contradicted him.

In full agreement is Beardsley Rumel, the antidebt hero of 1943, the fellow who thought up the dazzlingly simple skip-a-year-and-pay-as-you-go income-tax plan.

He's a big man, a 200-pound six-footer, with big ideas, a big booming laugh, and a masterful way with millions of dollars that has endeared him to big corporations, big philanthropists, big international thinkers, and now—a big bunch of taxpayers.

"Debt," says Rumel, "is as unhealthy for the whole body of taxpayers as it is for the individual. And a hang-over debt, dragging on from year to year, amounts to a disease in the body politic."

To these sentiments, taxpayers say amen. From the time he announced his

plan last summer, Rumel has had a daily deluge of letters, heartily endorsing the proposal to wipe out the 1942 tax debt and start fresh on a pay-as-you-go basis in 1943.

With apparent reluctance, the Treasury itself gradually came around to thinking that that man Rumel might have something there, after all.

You had to do a sort of mental flip-flop to look his idea in the face at all. Wipe out 1942's taxes? Toss away \$7,600,000,000 deliberately, on purpose?

"Why not?" said the man with the million-dollar mind. "Seven and a half billion is only enough to meet a month's governmental expenditures. It never will be missed."

"All you do is set the tax clock ahead a year," said Rumel, "the same as you set

the time clock ahead an hour for daylight-saving time. Nothing mysterious about daylight saving, is there?"

Rumel even went on to prove, with the aid of accountants, that the government wouldn't really lose anything at all in the end.

Many critics objected, not because Rumel's thinking was unsound, but because it was unconventional. It violated financial tradition to wipe out a debt—zing—like that.

Rumel cares mighty little for tradition in finance, or anything else. Take his clothes. When guests come to dinner, he greets them in a yellow dinner jacket, midnight-blue trousers.

"Why not?" says Rumel, who is known among his friends as "Big Breeze," usually shortened to "B." He laughs his big bass laugh at quips about his bright plumage and casually mentions that in the country he wears pastels—an orchid corduroy jacket, dove-pink corduroy trousers. It is his theory that if more men kicked over the traces on clothes, we'd all be happier. He also has some brilliant Russian peasant blouses in which he drapes his sizable form, but only, he says, among friends.

In his office, for the sake of smooth working relations with everybody, he's a blue-suit-white-shirt man.

Rumel has always loved colorful clothes, but he hasn't always had his nonchalant attitude toward seven billions.

### Six-Figure Checks at First

He worked his way up to that Olympian state of mind gradually, first practicing the unconventional, though highly intelligent, giving away of modest hundreds of thousands of dollars. That was when he was twenty-seven, and the director of the Laura Spelman Rockefeller Memorial. He'd been writing seven-figure checks two years before that at the Carnegie Corporation.

Now, as treasurer of R. H. Macy & Co., the big New York department store, it's no trouble at all for him to figure, as he did last year, that 12 million dollars would be about the right size for a new debenture bond issue. As chairman of the board of the New York Federal Reserve Bank (assets, \$9,000,000,000), he has a voice—advisory but potent—in the monetary policies of the nation.

He's definitely well fixed, of course. He and his family live handsomely in their own three-story house in a good but not a pretentious block in Manhattan's East Sixties. He sends his children to good schools. Alvin, the youngest, is at Harvard; Treadwell, an Army lieutenant in Africa, was graduated there; Ann, a fashion reporter, attended Vassar. Before the war, the family spent summers in Canada, when they didn't go to Europe. And no man could have a greater zest for good living—for food and drink, for art and music, for parties and pleasure—than gregarious, good-humored "B" Rumel.

His early career bears out the notion that he's essentially nonmercenary. He couldn't have had money-making in mind when he decided he'd be a psychology teacher.

He was born in Cedar Rapids, Iowa, forty-eight years ago, the son of a Czechoslovakian father and a New England mother. He was one of four children, all noticeably bright. His sister was dean of Radcliffe College for a time. His father, Wentzle Rumel, was and is, at 75, a doctor, "and a damn' good one," his son says.

"B" polished off the Cedar Rapids High School course in three years, took a B.A. at Dartmouth and a psychology

(Continued on page 63)

The train, bound for Germany, did not dare move against the men, women and children who stood in its path singing the Marseillaise

## Underground to Freedom

By Walter Davenport

BY RADIO FROM LONDON

Monsieur Subway shows a Collier's reporter the blazing spirit of France—a France whose soldiers will never be prisoners and whose submerged hatred can never be contained. It's late, Monsieur Boche; it's later than you think

THAT day two men arrived from France, and Monsieur Subway kept his word. He was waiting for us in the Macclesfield pub. No sooner had Nat and I entered and said hello to Bert Ely, the manager, and ordered a couple of beers, than Monsieur Subway appeared at our side. He said good evening, and marched toward the door. To Bert's dismay, we followed him—leaving our beers in the hands of the barmaid, who probably didn't mind because she's certain that all Americans are crazy, anyway.

Monsieur Subway walked with pre-

cision—a tall, slim, neat, austere man in a tidy, tightly buttoned walk-up suit. If you are one who keeps abreast of important educational matters you would probably know his name. Before France fell he taught in a French university, was an exchange professor at Oxford and lectured at Harvard, Chicago and McGill in Montreal. We called him Monsieur Subway not only because he is the brains and the boss of the London end of the French underground, but because in his new role, everything he says and does suggests the subterranean catacombs, the Paris sewers of Les Misérables, the subways of New York's Grand Central district. We told him, on the night we first met him, that to us he was a professor who during many years in classrooms had yearned to chuck it and play G-man. And, as we remember, that was the only time we saw him smile.

"That is the truth, perhaps," he said. "But I had to wait until the world stopped."

It may all sound very Hollywood to you in America—too melodramatic, un-

real, staged. But it is all very real. We were soon to learn that. In the taxi Monsieur Subway sat between us, stiff and precise, his thin, sensitive hands balled into his coat pockets, his feet planted hard on the floor, his knees tight together. Every now and then he'd draw himself up straighter, clamp his mouth until it became a thin, cruel line, dilate his nostrils and drag in a great chestful of air. When his emotions gripped him like that, Nat and I became self-conscious and exchanged a few awfully corny cracks, thinking to relax him. But all he said, as we sped at the dizzy rate of ten miles an hour through Baker Street, St. John's Wood and Maida Vale, was: "You will meet the two who have arrived today. One was a soldier of France, an engineer who could teach a child in a little time to destroy a power plant like this without dynamite." And Monsieur Subway made a twisting, plunging gesture with his clenched hand. "The other was, like yourself, a journalist. He was a lonely man, a poor man, a scholar. He took no bribes for what he

wrote. His brother was shot for France at Soissons. Not by the Boche but by the Vichy police of Laval."

Monsieur Subway's mouth went tight, his slim body stiffened. He inhaled down to his heels. To a couple of very American guys it suggested an act. But then, we were very ignorant, uncomprehending. Moreover, back home, unforgotten Nazis didn't sit in Washington. Hitler's slugs weren't crashing through front doors of our homes, Himmler's strong-arms weren't hanging Yanks in Times Square, in Grant Park or from the span of the Golden Gate Bridge.

Presently, far out near Hampstead Heath, we left the taxi. We walked ten minutes and arrived at an apartment house. Nat and I grew corny again, relieved. He asked me whether I'd remembered to fill my fountain pen with invisible ink. I said something about the dog which barked at us from across the road being Lon Chaney. We should have been ashamed of ourselves. And presently we were.

A woman let us in. Monsieur Subway kissed her hand. She was French down to her small, blunt pumps, and fussily cordial. She was plump, middle-aged

DRAWING BY HARDIE GRAMATKY

ressed severely in black. On her aggressive bosom she wore a large cross of Lorraine. It was easy to which of the two men was the older-engineer of France. He clicked his heels and bowed rigidly from the waist when he shook hands. He was strong, and swarthy, he had a long oblong chin and stared at us in defiance—somewhat resentfully, we thought. He warmed up later, grew a bit hysterical when he spoke of what happened at Montluçon when five old men, women and children stood on the railroad tracks singing La Marseillaise, during the train filled with each workers to continue on to Germany. And they had to pacify him when he cried: "France will go either to a nonpolitical soldier leader like de Gaulle, perhaps, or France will go to a Communist!"

The other man who had just arrived in France—the journalist—was older; gentle, brooding fellow who peered at us through tiny lenses. He didn't do much talking. He had a curious way of holding the air with his hands, deprecating, when anyone became violent, and murmuring: "Softly, softly!" He watched our notes and understood, like a good editor, when we were having trouble. At such times he'd lean toward explaining, spelling for us the names which after all we couldn't use. They would be good names to remember, though, he would add. Once he said to "One is not a journalist until he has understood the supreme tragedy of the whole people in travail."

### A Little French Spirit

Monsieur Subway would have paved the way to what the two men were to tell us by explaining, without ceremony, the worth and art of the French underground. But the woman, who grew gay and morose swiftly and without warning, stood upon ceremony. "One does not talk well if the stomach is cold," she said. "One cannot talk well if the mind is not calm."

So she went across the room and touched on a phonograph that blared the Marseillaise. And we all stood up straight. Nat and I got a nice kick out of that. We hadn't heard Rouget de l'Isle's great song for a long, long time. When she gave us cake and a glass of wine. And now, she said, Monsieur Subway would talk.

He told us that for months after the fall of France his country lay paralyzed. France was poisoned (thus spoke Monsieur Subway). France had been choked to death by her politicians. There would be elections but always the same old gang sat in her Chamber of Deputies. France was a dying gladiator making futile stabs at Hitler's new armies. Hitler overwhelmed France as one would overwhelm an expiring invalid. But not dead, thank the good God, was the fire at was France's heart and soul. It smoldered. It grew pale. The air that was not of a sufficiency, you understand, of the oxygen of hope. Is not so?

But presently that soul which is France revived. It watched and listened to Marshal Pétain—Pétain of Verdun. But when it saw that he was old. His once

strong hand was palsied, the spirit which would not let them pass at Verdun was senile, rheumatic, weary. In politics he was a henchman of Hitler. At arms he was only the dying vision of a soldier who had fallen on his face from growing weariness. His ears heard only the easy counsel of the rich French who, in dread of Communism, preferred Nazi rule, collaboration with Hitler, and eventually a French Nazi at the head of the French state. You understand, Messieurs? Monsieur Subway was wringing his hands.

Suppressed, gladly sacrificed, were the innumerable old political parties of

COURTESY FREE FRENCH PRESS SERVICE

France except the Communists. Please attend. The Communists among France's working masses were alert. Hitler invaded Russia—Hitler, the great, fat swine drunk with food and stupid arrogance. The Communists of France came slowly out of their lairs and struck their chests. And the places of the old parties—parties which fed on reaction or on what the two hundred families threw from their tables, or on what they could steal—the places of these old parties were taken by Frenchmen who were not Communists but nevertheless, for the first time, called all men who love France, "Brother."

These new parties came into being in cellars, in garrets, in barns and the back rooms of lonely *estaminets*—the Party Combat and the Party Liberation. How shall one say it? They are political parties which are not political. One joins either as it becomes available in one's neighborhood. There is small difference between them.

Liberation is perhaps a little more to the left and is liked by the workers' syndicates. Mildly, it is the Workers' party but it is not Socialist, not Marxist. Does it matter? Combat is then a little to the right, absorbing the clericals, the

## The Distances of the World

By Michael Foster  
ILLUSTRATED BY MARIO COOPER

Madame Hell and the strange affairs at the notorious Sea Inn. A story of Charleston in '64, when that rare city sustained itself with the bitter tea of pride

**Q**UIETLY, she walked from room to room lighting candles as the dusk came on.

Her skirts whispered as she walked—the heavy, rich flounced skirts of a married gentlewoman, whispering about the ankles of an adventuress from the China Coast.

With quiet feet, she went from the drawing room into the library, lighting candles against the dusk of time gathering in an ancient Southern house, in 1864.

And as she walked, with the taper in her hand, she thought of her captain,

who was slipping in to run the blockade tonight, before the moon would rise.

Finally, in front of the library fireplace, she blew out the taper, and stood looking for a minute at the smoking wick. Then with a bitter, invisible laugh she laid the taper in the pewter tray on the mantel and went out through the open doors into the garden.

It was a walled garden, and she walked down an old brick path, where the great ladies of her captain's family had walked before her, between the smoky spires of flowers in the dusk. She didn't know their names, those blue flowers that grew so tall and lovely in the garden; she knew none of the gentle arts, the gentle patter of being a lady. But they were beautiful and she loved them, the flowers.

She was angry, and she wanted to smoke, but she knew she couldn't here, not in the garden: not where the servants might see her from the windows.

It always made her angry to remember her afternoon drive, in her carriage, when the ladies of the old families, from their

carriages, bowed to her coldly, almost imperceptibly, for her captain's family's sake—these high-nosed, lovely ignorant women in silks like hers, but who had never been a week's journey away from their moss-grayed town or from their family plantations. They bowed to her, almost imperceptibly; but she—

She had seen Java Head, indistinct in slants of Oriental rain, dropping away astern of the creaming wake; she had seen the coasts of the edge of this world, the coasts of mystery and loneliness. Standing alone and steady-eyed, she had heard the voices of men and women shaken with passion, and greed, and death, making undertones to the shrill squall and bubbling of strange music that these women would never know. She had stood alone on the edge of the world; but they, they sat cozily in their family carriages, knowing so little of their men or of themselves, and bowed coldly to a newcomer who was married to a son of one of the old families. A renegade son, who, lean and laughing,

The red-haired girl had lit the first lamp and was bending over the second. Anne's hand came out of her pocket with the revolver.

had gone away to sea and then come back again with . . .

At the end of the garden she turned and looked back at that Georgian house of rose brick, very old.

She hadn't expected anything so grand nor so beautiful with time, when she had gone on board a lovely, rakish barque, lying in the river, with a husband whom she didn't know. It had all been so confusing. For the first time in her life, she had been confused.

She had looked up one night, in the gambling rooms of Ah Quong, into creased, laughing face, burned bronze by the suns of Capricorn. White teeth, and eyes like steady pale blue flames, and a vein that twitched and knotted in her

(Continued on page 33)

YOU couldn't wear a four-in-hand tie in the shop on account of the machinery. The end of it was ble to get caught in something and u'd get choked to death before anyone could stop the wheels turning. But it didn't stop Kit. She had bought Joe a bow tie . . . one of the kind that's ay tied.

"Looks neat," Kit said, patting the no place. "It'll set you apart from the rest of those bohunks. She'll cit. It's the kind of thing a woman at wouldn't miss."

"She won't miss this hair tonic," Joe said. "Nobody could miss that. It k."

Now, Joe, you know you look like a man unless your hair is slicked. I've ironed a clean work shirt for and a clean pair of jeans."

"Maybe you ought to trade me off for a photograph instead of the usual ten in stamps," Joe said. Then he done more try: "Look, she's come the plant to sell War Bonds, Kit. ne of eight thousand workers. She know whether I'm dead or alive." s eyes were bright with excitement. "We're going to take her on a tour of ant, aren't they? They're bound to her into your department. They s show everyone the big acid vats. st die, Joe, if you weren't looking best."

But look, Kit! They're not going to work just because Lucille Avery is a look-see. She isn't Eleanor elvelt, baby. She's just a movie star." "Just a movie star!" Kit said. "Just movie star! Oh, Joe, she's Lucille w!"

It was hopeless, Joe knew. So he went to work, wearing the little bow tie with his hair slicked down and wondering who would be the first one to rib about it.

He had never seen Lucille Avery, except on the screen of course, but she had a major headache in his life for a time. Kit had pictures of her all the place. She tried to walk like and talk like her. She bought clothes hats like hers. She'd read in a fan magazine how Lucille Avery, in spite of her money, did her own housework except, of course, the cleaning and mending up. Joe would come home and find he was having a pineapple and a cheese salad for supper, with a dash in red pimentos on top. It wasn't really proper fodder for a guy who had on a twelve-hour shift. But Lucille Avery had recommended it as containing all the necessary calories, and so Kit made it. Joe didn't argue about it. After supper he'd go down to the dog pen and have a couple of hamburgers. He hadn't been crazy about Kit . . . but, there wasn't any use considering it because he was crazy about her.

Nobody kidded him at the plant. Maybe the tie and the hair tonic weren't noticeable as he'd thought. On the other hand he had a sneaking suspicion that the boys in his section were all a little hopped up at the prospect of seeing Lucille Avery. Joe went about his job. They brought Lucille Avery into Joe's section late in the morning. She was with Dr. Grady, the plant's technical director, a press agent, and a retinue of yes men who stood at a respectful distance. Joe had been wrong about one thing. Everything did stop. The men turned away from their machines while Dr. Grady explained about the huge acid vats.

Joe found himself feeling to see if the tie was straight; running his hand back across his hair to make certain it was slicked down. The inside of his mouth felt dry. She was beautiful. You

couldn't get away from that. Her figure was something to dream about. The rich gold color of her hair didn't show up on the screen. She wore a red suit, and a cone-shaped hat with artificial grapes on the crown and a delicate little veil floating down from the brim. She had a gracious smile for everyone. She even looked straight at Joe and smiled. Joe moistened his lips.

Then it happened. Joe shouted at the top of his lungs, "Acid!"

He moved like lightning toward Lucille Avery. He grabbed her, swept her across the floor and shoved her under the safety shower. The instant she stepped on the treadle mechanism, water—cold water that stung—showered down over her. She came out from under presently, choking with rage, drenched.

Dr. Grady, white-faced, explained: "There was a splatter of acid, Miss Avery. If this man hadn't acted so promptly you might have been burned, scarred for life." He turned to Joe: "That was great work, Adams. You can be sure the front office won't forget."

Joe was tongue-tied. He had to open his mouth several times before a sound would come: "I . . . I'm sorry, Miss Avery. But if I hadn't done it . . . well, water's the only thing for acid burns."

The yes men had rushed forward with coats for the dripping star.

"I won't forget either, Mr. Adams," she said, in her husky voice.

So Joe was a hero. At the big bond rally which was held outside the administration building they took pictures of Lucille Avery. Maybe the press agent had thought of it, or maybe she really didn't have any other clothes with her, but Lucille Avery was wearing coveralls, just like the other women who worked in the plant. She sold bonds like crazy, and at the end she made a little speech about Joe's having saved her from a burn that might have ended her career.

Ed, who worked next to Joe, jogged him in the ribs. "I bet she sends you a present; maybe a big check."

"I don't want anything," Joe said. "I only did what anyone would have done."

WHEN they went off that night Ed insisted on buying Joe a beer. He said it wasn't every day you could buy a drink for a hero. They drank a beer, and then they had another. But Joe pushed Ed's arm back when he started to pay.

"I'm buying," Joe said. He looked thoughtfully at the beer. "I can't take anything from you under false pretenses, Ed. You see . . ." He cleared a huskiness out of his voice: "You see, there wasn't any acid."

Ed stared at him.

"You know how Kit is about Lucille Avery," Joe said. "She copies everything Lucille Avery does. Well . . . well, I knew they'd take pictures of her at the bond rally and the pictures would be in all the local newspapers and . . . well, I just had to do it, Ed."

"I don't get it," Ed said, in an awed voice. "You mean there wasn't no acid splashed on her?"

Joe shook his head. "Not that I saw. But I knew if they took pictures of Lucille Avery in that hat, Kit would have to have one like it. You saw it, Ed. Like an ice-cream cone upside down, with fruit on it and a hunk of tulle, or something. I couldn't've stood Kit in a hat like that, Ed. I just couldn't've stood it!"

Joe shoved Lucille under the shower. The instant she stepped on the treadle mechanism, water—cold water that stung—showered down over her

Keeping up with Mr. Tracy was a big order, but those four gentlemen of the Fighter Command had no choice. It was either fly with the guy, or land on a mountain

**A**LL pilots flying P-O's are CAUTIONED not to stunt them, because of LOOSE radio equipment. Any pilot landing with DAMAGED equipment will be held PERSONALLY responsible."

Steb Tracy, civilian pilot with the Ferrying Division of the Army Air Forces, A.T.C., read the notice on the bulletin board of Transition and filed it away in his mind while shifting a wad of gum from one side of his jaw to the other. He shifted about on the hard bench and listened in on the conversation between a fresh-looking stenographer in blue uniform and the perpetually harassed Lieutenant Leslie, just in from a check flight in a B-17.

The girl was saying, "Maybe you know what it's all about, but I don't. It's so utterly childish for combat fliers to resent service pilots. Aren't we supposed to be one big happy family?"

Leslie grinned. "Yeah, we're happy, all right; in my hat. But I guess it's understandable. Combat pilots have to go

through a stiff training routine that keeps them knuckled down every second of their lives. And at the end they get less money than a service pilot, who usually comes out of civilian life and is handed a commission on a silver platter. The combat boys have to break their necks for that commission, so they resent it."

The girl tapped at her teeth with a pencil and frowned. "Well, if that's the way it is, then I don't blame them. It doesn't seem fair."

Leslie's grin deepened and he said, "But, oddly enough, it is fair. The civilians we take in are crack fliers. You take Tracy, here. It would cost the government hundreds of thousands of dollars to give him the experience and knowledge that he has acquired on his own, as a civilian. By signing with us, he is actually the one giving the government a gift on a silver platter. The least the Command can do is to give a man like that a decent salary and a commission. That's the way it works out."

The girl was convinced. "Oh. Then why did those four combat pilots from Portland try to wreck the officers' mess yesterday?"

Leslie shrugged. "They're just full of stuff and vinegar."

The girl broke into a laugh and slanted a look at Steb Tracy. She had been slanting that same look at him for weeks, without results.

An ex-bush flier, ex-mercenary, ex-

barnstormer and ex-test pilot, but always a Texan, Steb had only recently joined the Ferrying Division located at Long Beach, California. His commission as a lieutenant would not be due for a few days, so that he was still able to dress as fancy dictated—more or less. He was forced to wear the customary sun-tan shirt and trousers, but there custom ended. The bow at his collar was a narrow, black string tie, about his waist was a beautifully tooled belt with chased silver inlays and the bottoms of his trousers were tucked into handmade, high-heeled Western boots. No one, including the Army, had yet been able to take Texas out of Steb Tracy.

He got to his feet from one of the two long benches in the ready room of Transition and lazily walked out into the biting California sun. Tall, lean and rangy, he walked with the quiet tread of a cat. His sandy hair was close-cropped.

Steb looked about him and twin lights of pleasure danced in his eyes. He liked the Ferrying Command and everything connected with it.

A loud-speaker blared, "Civilian pilot Steb Tracy report at Operations." The message was repeated and Steb turned on his heel and walked down the alley separating the building of Group Operations from the Pilots' Loft, where a man could buy a soft drink, a sandwich or a full issue of clothes at government prices. He crossed the tar-sticky road to a U-

shaped, tiled-roof building and the received his orders from Operations—delivery of a fighter to a combat squadron in Portland, Oregon.

He picked up his kit, which he had left lying on the lawn under a palm tree and leisurely strolled to the long counter of Control. Lieutenant Silvers glanced up at him and smiled. "Hi there, cowboy. Where've you been lately?"

"Oh, around: New York, Nashville, Dayton, Seattle, Detroit and a couple of other places."

"Uh-hunh. Then you should know the rules." Silvers scratched his head, squinted at Steb, then walked to the window overlooking the field. He pointed to five P-38s standing on the line, high speed, single-place fighters, with twin engines and tail booms and tricycle landing gear. He said, "You know the P-38 pretty well, don't you?"

Steb nodded. "I was test pilot on those crates all last year. Got kind of a liking for 'em."

"Uh-hunh. Major Dunham thinks you've forgotten more about P-38s than any other pilot knows. That's why you're being sent on this hop." He turned about and faced Steb. "Here's the deal. Ferrying pilots are not supposed to fly in bad weather or later than one hour prior to official sunset, unless in an emergency. This is an emergency. Those five crates are part of

(Continued on page 22)

AN Prentiss M. Brown, mild and scholarly, get away with the job that killed off rough-and-tumble Leon Henderson? That is the \$64 question in Washington these days. As Price Administrator his is the rude hand that must pull tight and bite on the belt that goes around the country's soft sensitive midriff. Less food, less gas, less clothes, less comforts, less pleasure, less everything. Not fewer millions, but more. Every day and in every way, vexing irritating interferences with what Henry Wallace likes to call "the American way of life."

Fortunately, Mr. Brown suffers from no illusions. "Avaricious and thankless" is his own description of the job. He knows just what he is up against in convincing the civilian population to serve through sacrifice. Having lost a Senate seat for his part in the fight to control farm prices, he knows also the value of blocs.

It's also the case that the Michigander does not sail an uncharted sea. At hand, for his guidance, is the chart left behind by Leon Henderson, a man that sets down every rock, reef and shoal, and is particularly explicit in warning where not to go and what not to do. If Mr. Brown is as wise as he looks, he will study every detail of that voyage from auspicious start to disastrous finish.

Now that barrel-chested, bull-voiced Leon Henderson has been cast into the outer darkness, it may be remembered that he was hailed as an answer to prayer when he first stepped into the war picture as the administration's "price stabilizer." No rookie from the League, scouted by Felix Frankfurter, but a man with wide experience in many fields. Betwixt his ears, one who had come up the hard way—bone-deep behind both ears, and tough with the toughness often by poverty and struggle.

Back in the roaring days of the NRA, Henderson did not been afraid to stand toe to toe with General Hugh Johnson, matching Old Iron Pants bellow for bellow. Here at last, so it seemed, was a shaggy, two-fisted guy whom neither the crystal gazers nor the politicians could push around.

Reassuringly enough, he gave proof of courage at every outset. Although the President, on May 28, 1942 had declared that America must become the great arsenal of democracy, that year saw automobile production hit an all-time high.

Many leaders were honestly of the opinion that the war and a business boom could go hand in hand, and Donald Nelson went out on the limb with a flat statement: "I believe that industry is fully aware of its responsibility, and that competition between retailers in the field of distribution will act as a necessary brake in preventing price increases, making governmental action unnecessary."

"Ostrich-headed," boomed Leon, and followed by standing the immediate conservation of steel, rubber and copper. Mr. Knudsen, Mr. Stettinius and Mr. Clegg, among others, pooh-poohed the possibility of shortages in any of the strategic materials, but not these authoritative voices could shout Henderson down, and his bellows finally won out.

#### Little David Loses His Sling

More than that, Leon was the first official advocate of price control. Not piecemeal stuff, but an over-all thing for everything—wages, salaries, rents, interest rates, agricultural prices and commodity prices, all controlled as of a set date. And not price control alone, but tied in with a vigorous program of plant conversion, subcontracting, a search for substitutes and alterations, the skeletonization of nonessential industry, and above all, *taxes heavy enough to absorb surplus buying power*. The Baruch plan, of course, but Leon adopted and diapered it.

Unhappily, organized labor went berserk at the suggestion of wage control.

"No compulsion," thundered the A. F. of L.'s William Green, while the C.I.O.'s Phil Murray declared "an upward adjustment of wage levels to assure maximum efficiency of war workers." It is at this point that Prentiss Brown should adjust his spectacles and bend close over the (Continued on page 64)

Speculation is high in Washington as to whether the tax will fall on Prentiss M. Brown, new OPA administrator, for the same reasons it fell on predecessor Leon Henderson. Mr. Brown begins auspiciously by conferring with Secretary of Agriculture Wickard, chief thorn in Leon Henderson's flesh

## What Happened to Leon Henderson

By George Creel

Slapped down and pushed around by pressure blocs and politicians, the former OPA chief staggered from the arena battered and bleeding from every questionnaire. And now knives are being whetted and bludgeons polished up for Prentiss Brown

# SINGING PINCH HITTER

By Howard Taubman

PHOTOGRAPH BY IFOR THOMAS

Because a young unknown could sing the toughest roles in opera on only a day's notice, the Met has a brand-new American soprano star: Astrid Varnay

Something new in opera—Astrid Varnay is a Brünnhilde without avoirdupois

IN THE immemorial custom, the book of Dickinson High School in Jersey City, New Jersey, butters the graduating class of 1935. In the year book there was a girl named Astrid Varnay who was not a singer but who, under pressure, had sung a solo—When Eyes Are Smiling—with the glee club. The year book editors naturally pressed, with a straight face and in black and white, that Astrid Varnay would be engaged by the Metropolitan Opera in 1950.

The prediction was fantastic—fancifully conservative. Astrid Varnay was engaged by the Metropolitan Opera on May 17, 1941, and sang at the Metropolitan for the first time seven months later. It all happened in fairy-book time.

When Astrid Varnay stepped on the stage of the world's most famous opera house on December 6, 1941, for her first performance in opera. For her debut she had a major role, Siegmund, in one of the toughest of all operas, Wagner's *Die Walküre*. She was hitting on twenty-four hours' notice. Lotte Lehmann, world-famous soprano who was ill. And she was singing on Saturday afternoon. Halfway through the first act, she suddenly thought, "Oh Lord, this show is being broadcast! If it flops, there'll be millions to hear it."

She did better than all right. The press public pronounced her the find of the year and shouted for more Varnay. They got more Varnay sooner than they expected—she—anticipated. Six days later she was on the stage again—in *Die Walküre* again. Repeating Siegmund? Oh, nothing so simple! This twenty-year-old operatic neophyte was in the pinch hitting, again on twenty-four hours' notice, for the American soprano Helen Traubel, in the still tougher role of Brünnhilde.

## Breaking the Rules

If you search all the records of opera you will find no duplicate of that first performance. The connoisseurs could probably prove that it's impossible. They would remind you that it takes a soprano at least ten years of training on the stage to tackle Siegmund and maybe another ten to be equal to Brünnhilde. They would remind you that those roles are reserved for the greatest stars in the business, people like Kirsten Flagstad. But Astrid Varnay broke all the rules—for a first performance with an average of 1,000 as the Metropolitan Opera's most brilliant pinch hitter. She was like a rookie hitting home runs with the bases loaded in his first two times at bat in the big leagues.

Astrid Varnay carried it off as if she had been born in the opera house. She practically was. Her father, Alexander Varnay, was a well-known tenor. Her mother was Maria Yavor, a distinguished coloratura soprano. Alex and Maria met when they sang in the same opera house in Budapest, just before the first World War. They married. The Varnays, always traveling, had reached Stockholm when they discovered that a child was en route. She was born on April 2, 1918.

The baby was christened Ibolya Astrid. When the family came to the United States in 1923, immigration officials stared unbelievably at the Ibolyka and promptly translated it to Violet. When the owner of the name reached the age of discretion, she dropped the Violet because it made her think of the original Violet.

The Varnays' next stop was South America, and Astrid's prize memories are of the harbor and opera house of Rio de Janeiro and the opera house of Buenos Aires. She became a fixture at

(Continued on page 26)

***GOOD AREN'T THEY?***

No wonder Milky Way candy bars are such a favorite with the young crowd! What's more, Milky Ways are as wholesome and nourishing as they are delicious.

The pure milk chocolate coating, the layer of smooth, creamy  
nel and the luscious center of chocolate nougat,  
richly flavored with real malted milk, blend  
with each bite, into that delightful taste treat  
found only in a Milky Way.

## Follow the Leader

Continued from page 18

an Army project. They have to be in Portland this afternoon. But there's a bad overcast above Medford and every possibility of dirty weather. We don't ordinarily ask a pilot to take risks, quite the reverse, in fact, and you can refuse if you want—"

Steb shifted his gum and said, "I'll set one down where you want it. How 'bout the other four?"

Silvers smiled, relieved. "Oh, they're okay. They've already been in service over the Aleutians and were just flown down for an overhaul by their own pilots, combat boys."

"The ones who were boilin' for a fight yesterday?"

"The same. They'll be taking off about the same time you do. I'd advise you to lose them. They're wild."

"I'll lose 'em."

He took his route sheet from the lieutenant, checked his radio facilities pamphlet and picked up maps, weather reports and a new Flight Envelope. He made out a Flight Plan for the Interceptor Command, then reported back to Control. There he signed various papers, including his route sheet, received his clearance and walked outside with his kit and a parachute.

ALL ten engines of the fighters were turning over when he reached them. A mechanic scrambled out of the cockpit of his ship, the obviously new one, and helped him stow his kit. Steb strapped on his parachute and looked up to find four young combat pilots standing before him. All of them were smiling, but in the depths of their eyes was something more than a smile, a look not only of resentment, but of contempt.

He returned their flat, steady gaze and said, "Howdy."

One of them, the redheaded one, nudged his neighbor and whispered, "A cowboy ferry—" and then, after a pause, added, "pilot."

Steb's shoulders slowly stiffened and his eyes narrowed. He coldly repeated, "Howdy."

The redheaded one grinned and said, with emphasis, "Howdy, brother. I'm Lieutenant Banning." He indicated the other three with his thumb: "Lieutenants Merritt, O'Toole and Palmer." With a phony accent he drawled, "What might your handle be, podner?"

"Steb Tracy," he answered, with deceptive mildness.

Banning nodded, still grinning. "It would be something like that. Look, brother; you're taking that crate to our fighter group. We'd like to see it delivered intact, so we'll just tag along with you." He delivered a crisp, mock salute. "See you in the air—mister."

The four of them turned away and walked to their planes, laughing over some joke. Steb climbed into the cramped cockpit of the fighter, checked his instruments, radio and engines, then taxied away from the line to the end of a runway. The other four had not yet left the line. Steb got his clearance from the tower, eased the mixture controls and opened the throttles. The ship quickly gained speed and slipped into the air. The field dropped away below him and Steb rapidly made the necessary adjustments, as soon as the gear was up, to climb higher.

He swung over the Long Beach oil fields and glanced at the flat gray sheet of the ocean on his left and the bare, precipitous mountains on his right. At eight thousand feet he leveled off and

held a compass course for Bakersfield. He twisted his head about and searched the skies. There were no other aircraft in sight. . . .

Bakersfield slid by at better than 300 an hour and then, shortly after, Fresno melted below his tail booms. The sweet drone of the two powerful engines was music in Steb's ears and he liked, too, the smell of hot oil in his nostrils. Just being in the air, feet tingling on the rudder pedals, feeling the plane as an extension of his own arms and legs, had always been sufficient for Steb. But not with a war on. Then there was only one place for a pilot to be and that was in the Air Forces. But the AAF had wanted no part of him, in spite of his knowledge and his record in the air. He was two years overage for combat and his formal education had been sadly lacking. He had been turned down, reluctantly but definitely.

Steb sighed and then chuckled. He was going into the AAF after all,

toward him in a snarling, thundering, 45-degree dive, their engines whining wide open and their noses aimed at his tail. They were in a leaderless V formation, but nevertheless diving wing-and-wing. When they passed him they were doing close to four hundred an hour. The four of them split, to almost graze his wings, two pulling off to the left and two to the right in steep chandelles. Steb's plane rocked and bounced with the tremendous wash of their passing. "Darn' fools," he muttered.

He could see Mather Field ahead and throttled back depressing the nose still more. But the four combat pilots pulled out of their chandelles with a few thousand extra feet of altitude and dived at him again. Two shot by under him and two over him, with only inches to spare. Steb involuntarily ducked as they went by. Then they fanned out and came at him from two directions at once and then split formation and dived at him singly and in pairs.

his belt, left his chute in the sea and dropped to the ground.

Lieutenant Banning was waiting him, with the other three grinning close at his side. Banning said, "Hopodner. That was a pretty sloppy landing you made. Where'd you learn to

Steb held himself tensely in check, eyes coldly fixed on Banning's. "V," he said, blowing twin jets of smoke from his nostrils, "I guess it was in a cow-ture. An old Jenny with an OXX-5. You lads wouldn't recollect that before your time."

Banning's face turned as red as hair and he punched at Steb's chest with his finger. "Didn't I say we'd tag you with you? What's the idea of running away? Too good for us? You see pilots are all alike. But this is a different age, brother. We don't fly by the of our pants any more. Airplanes changed. Instruments have changed. Everything has changed—except service pilots. You still go barreling along like you believe in the movies."

Steb dropped the cigarette, crushed it with his heel, then swiftly grabbed Banning's flight jumper with his left hand. His right fist was all cocked to go when a calm voice said, "Your ships gassed, gentlemen."

Steb dropped his hands and turned to face the sergeant-mechanic, who was narrowly watching him. Steb sucked a deep breath of air and then slowly let it out. That one had been close.

THE four combat pilots were sober and coldly staring at him. Banning's lips had gone white and his eyes were blazing. He licked his lips and said, "We'll rendezvous with you directly over the field, Tracy. And you be there. We'll find you and run you out of the sky. Understand?" He turned on his heel and stalked away, the others going with him.

Steb looked at the mechanic and said, "Thanks, sergeant."

The mechanic studied him a moment then smiled and said, "Forget it. I know something was up the way the five of you came in for a landing. But you can't take away with it, mister, not on an Army field. Anyway, those lads have been taught to be killers. You can't expect them to have the dispositions of combat boys."

"I reckon not. Never thought of that-a-way."

"Yeah. By the way, your radio's loose."

"It'll be fixed in Portland."

Steb signed for the fuel and climbed back into the cockpit. The engine barked into life and he taxied away from the pumps. The other four taxied along at his side. Banning was looking over from his cockpit, glaring at him.

The planes swung onto the long runway, and radio clearance came from the control tower. The others waited for Steb to lead on the take-off. They were not going to lose him this time. Steb grinned and opened the throttles, raced down the runway and lifted into the air.

If there was one airplane in the world that Steb knew better than any other was the P-38. He had flight tested the first production model off the line and had flown hundreds of them since then. He knew every inch of that ship and exactly how to get the most out of it.

Steb glanced back at the P-38s on his tail, then looked away and racked his brain for every scrap of knowledge. The P-38 was the world's fastest climbing air-

through the back door. He had to laugh every time he thought of that first day on the Command field. The Lieutenant Colonel, Deputy Commander, had said, "Of course, Tracy, you realize that as a ferrying pilot it will eventually be necessary for you to accept a commission." Then he had added, with a sparkle in his eyes, "But you must conduct yourself, in the meantime, as an officer and a gentleman." The colonel had been thinking of his notorious record as a hotheaded Texan all too willing to swing into action with both fists.

STEB could almost feel those bars on his shoulders already. "Behave myself?" he thought. "Shucks, that's a cinch."

He sat up in the seat, eased the throttles back a fraction and gently depressed the nose of the plane, maintaining constant rpms and speed. He came down to a thousand feet and dead ahead was the dome of the state capitol at Sacramento. Steb glanced at his watch: sixty-eight minutes out of Long Beach. Exactly right. He looked up, his eyes caught a flash in the rear-vision mirror and his head spun about to look back and up.

Four P-38s were plummeting straight

Steb cursed and growled under his breath and fought his bucking plane as if he were in a storm. He slowed down, lowered his gear and flaps and swung around for a wide circuit of Mather Field. The four lieutenants stuck close to him, now under him, now over him and just ahead and just behind. Beads of perspiration broke out on Steb's forehead.

He flicked his radio to the frequency of their interplane communications system and yelled at them to clear away. There was no response from them. They were widely grinning and waving at him. Steb's normally cold eyes turned to chunks of ice. His lips thinned to a white line, and tiny muscles bulged along his jaws. He settled down for the final approach, and the long runway of the field rushed up to meet him. Twenty feet off the ground, the four lieutenants cut in ahead of him and gave him their turbulent wash with a blast of their props. Steb's plane shot up and then down, the wheels hit and it took all of his five thousand hours of experience to avert a crash. The entire runway was used up before he could bring his skidding plane to a halt.

Steb taxied to the fueling pumps, brought his ship to rest by the other four and cut his engines. He slowly unbuckled

MUSIC SOME LIKE IT HOT  
SOME LIKE IT COLD  
BUT ALL LOVE **Hemo**  
MUSIC I'VE BEEN TOLD!

© The Borden Company

**Hemo—the NEW way to drink your Vitamins and like 'em!**

**JUST ONE GLASS OF HEMO GIVES YOU:**

The Vitamin A in 3 boiled eggs!

PLUS

The Vitamin B<sub>1</sub> in 4 slices of whole wheat bread!

PLUS

The Vitamin B<sub>2</sub> (G) in 4 servings of spinach!

PLUS

The Vitamin D in 3 servings of beef liver!

PLUS

The Iron in ½ pound of beef!

PLUS

The Calcium & Phosphorus in 2 servings of cauliflower and 1 serving of cooked green beans combined!

PLUS

Significant quantity of Niacin.

Strange as it may seem to you—3 out of 4 Americans may not get enough vitamins with their meals! . . . and Government nutritional authorities say so!

Here's a swell way to help make up "vitamin-lack" . . . Add a glass of HEMO a day to your regular diet! . . . Tastes like the grandest malted you ever drank—only better!

One glass of Hemo (mixed in milk) supplies half your daily needs of Vitamins A, B<sub>1</sub>, B<sub>2</sub> (G), D and Iron, Calcium, and Phosphorus . . . PLUS a significant quantity of Niacin.

**IMPORTANT!** Vitamin C has been purposely omitted from HEMO . . . you can get it a great deal better in fruit and tomato juices.

Many war workers who need plenty of zip and pep for the most important job in the world drink HEMO!

Some like it hot . . . Some like it cold. Either way it tastes wonderful—and *is wonderful*, especially for children! Give 'em a HEMO treat with their lunch or after-school snack.

If you eat lunch "out"—ask for HEMO at the soda fountain—made up in any flavor you prefer . . . For "at-home" drinking get the full-pound jar—24 delicious drinks—for 59¢ . . . HEMO for one serving costs only 2½¢! At your grocer's or druggist's.

**Borden's Hemo**

IT'S BORDEN'S, IT'S GOT TO BE GOOD!

plane and Steb meant to use every ounce of that climb. He pulled the ship up on its nose, made minute adjustments of the throttles and coolant and oil shutters and carefully babied his inches of manifold pressure.

The rate-of-climb indicator jumped to nearly a mile a minute. Steb looked back and down. The other four were already falling behind and Sacramento was a green and white blur far below, with the American and Sacramento rivers thinning to snakelike ribbons. Steb kept climbing. He went onto blowers and at eighteen thousand feet started taking oxygen. He leveled off in the ice-sharp air of twenty-six thousand feet. Goose-pimples stood out on his hands and arms. He looked back, around and below. There was not another airplane in sight. He had effectively lost them.

He switched on his radio to the Medford range, jockeyed into the middle of the A and N signals and stayed at that altitude. There was a slight haze and occasional cloud masses below and it was difficult to see the ground. But he now and then recognized a check point and marked them on his flight plan. Shortly before reaching the Oregon-California border he throttled back and started down, taking it easy. He spotted Medford from ten thousand feet, shoved the nose down and raced for the airport. His wheels touched, the wing lost lift and he spun about and taxied over to the fuel truck. The other four P-38s were already there.

BANNING, Merritt, O'Toole and Palmer stalked over to him on stiff legs and quietly waited while he rolled a cigarette; they uneasily glanced at one another and seemed to be worried. Steb frowned. That was not like them. He wondered what was up. Palmer started to say something, but the others shook their heads and he closed his mouth.

Banning rubbed his chin, kicked at the dust, then looked up and said, "Look, cowboy; what we'd like to know is how you managed to outclimb us in the same type plane."

Steb smiled. "Oh, that. Don't feel badly, gents. I used to be test pilot on these babies. Just know a little trick or two, that's all."

Banning snapped, "You know everything, don't you?"

Steb puffed at his cigarette and regarded the redhead. "Maybe," he thought, "I should accommodate him right now." But, no; that commission was too close. A fight with an officer would definitely cancel it. Steb forced himself to turn away and Banning's laughter followed him.

The civilian in the Medford weather office told him, "The soup's thick as mud. Starts about thirty miles north of here and extends beyond Seattle. Depth of maybe twenty thousand feet, or more. The ceiling at Portland is five hundred feet and visibility about a mile, or less. If I were you I'd make my let-down between Salem and Oregon City and try to hit the river. Good luck, mister."

Steb thoughtfully walked back to his plane, all gassed and with the motors ticking over. The other four had pulled out. That was a relief. He climbed into the cockpit and hurried to the end of the runway. There was no time to waste. In a few moments he was in the air and climbing.

Ten miles out of Medford, he glanced at the rear-vision mirror and sat up with a start. The other four planes were thundering toward him from a higher altitude. They had evidently been waiting for him above the field. Steb saw Banning's wild grin as they flashed by. They banked about, jockeyed in behind

his tail booms and closed formation, two trailing his left and two to his right. The wings of the inboard planes were almost scraping his wings. He was the leader of the tight V.

Steb swore long, loud and with feeling. This was no time to play. There was serious business ahead. He switched on to their interplane frequency and tried to argue with them, but they made no sign that he was even heard. Then, using him as flight leader, they swung into right echelon, left echelon and every other close formation they knew. It was beautiful precision work, but at three hundred and fifty miles per hour, with wing almost scraping wing, Steb could feel no admiration for their abilities.

He was directly on the Portland range, and ahead, looming high above and blotting out the horizon, was the cold gray mass of the fog bank. There was no time now to outclimb the others. But he had to shake them some way.

Steb eased back on the throttles, then

there was a blur of movement in the corner of his eye. He looked to the right. He could barely see to the end of his own wing, but there, just within its span, nestled another wing tip. He hastily looked to the left. Another wing tip. He couldn't see them, but he knew the other two were nestled against the inboard planes. He was again leading a five-plane V.

He dazedly muttered, "Well, I'll be darned!"

There was no way out of it. The slightest wrong move on his part and one or the other might creep ahead into his wing for a crash. Every movement of the controls had to be so slow and easy that the others could follow him simply by watching his wing. It took a high degree of skill to fly a formation that tight and Steb wondered if they had it.

He reached forward to flick on the radio switch, and cold beads of perspiration broke out on his forehead. There was no response from the radio. He

him so close he could have reversed direction and come out of the fog he had entered it. But he was vir a prisoner, caught in the trap of wings. He could go up or down they would follow him, not kn that his radio was out. If he cr they would all crash.

The minutes ticked by and sti fog-blurred wing tips of the other ers nestled deep within the span of wing. They were definitely stu with him. A worried frown cr Steb's forehead. It was impossibl him to be exactly on the beam. No could cut it that fine. And yet stayed with him, with no indicatio he might be drifting from the b What the devil was the matter wit wild fools? They had their radios to it over with one another and drop altogether if they wanted to. Why c they leave?

Steb glanced at his watch. S should now be to the rear and Port ahead, with Oregon City just ahead to the right. In thirty seconds it w be time to let down. His fingers t ened about the stick and he desper searched his mind for a way to leavi other planes. And then he suddenlaxed. By some wild streak of luc had probably stayed on the beam. fact that the others were still with proved that. They might be wild, they were not altogether out of t minds. He started to smile. The t seconds were gone. He gently, gently, eased the stick forward. The of the roaring plane started down the others with it.

THE combat pilots would now watching him closer than ever and tentative to any change in speed and dition that he might make. Steb ligh rocked his wings, receiving the s signal from them, then eased the thro back and lowered the flaps and land gear. His gliding speed dropped to and he came down through the fog a steep angle. Portland should be dire below. With but a five-hundred-f ceiling to break through, it had to There were too many hills about city higher than that, jagged hills wait to tear him out of the sky.

Steb's eyes were glued on the altimeter. When it read 500 he looked away a out of the cockpit. There was a thinn of the fog and he suddenly saw all fo of the other planes and the tense expressions of the pilots. His plane dropp lower, the fog swirled away from wing as if it were reluctant to loose grip, and then he was below the overca

Steb looked down and smiled with relief. Portland was to the rear and a broad Columbia River was direc under him. Off his starboard wi tip was the airport. Steb looked to left and right at the other pilots and th soberly waved to him. He grimly nodd at them and steeply banked away t the field. The wheels of all five touch the ground as one plane.

Steb turned his ship over to the prop officials, signed a half-dozen forms in t C. O.'s office, and then was driven in jeep across the now dark field to t municipal administration building. I sent a telegram to the Command givin time of arrival at destination and d livery of the fighter plane. The cle looked at his name on the wire at handed him a telegram. He walked o of the lounge with the telegram u opened in his hand.

A sedan came to a grinding stop in small pool of light and Lieutenant Banning blinked out into the fog. "Tracy is that you?"

Steb walked to the car and glance

## ALFRED

by FOSTER HUMFREVILLE

"She wants us to come in for a few minutes, Alfred. Her father is very anxious to meet us"

kicked the right rudder and jammed the stick hard to the left. The sudden snap-roll was so vicious it almost tore him out of his belt. Then he pulled the stick back into his stomach and rolled out on the top of a half-loop with a perfect Immelmann. He glanced back. The others were still with him, not stunting, but doggedly trying to stay on his tail. Steb eased off into a slow-roll, but before completing it, snapped into a Cuban-8, from that into a spin and then a chandelle. The others were now scattered all about him and out of formation. Steb grinned, slow-rolled in a climb, did a tight reversement, put down his nose and dived through the others. No one was on his tail. He did a steep chandelle to the left, suddenly caught it off with a wing-over and dived for the fog bank.

THE P-38 bored into the fog with a dull whine, and the clammy gray stuff feathered off the wing tips. The motors took on a more subdued tone and the shade of gray began to deepen and darken. Steb hastily checked his instruments and his altimeter: it read 6,400 feet. That was enough to clear the peaks ahead. He started to lean back, but

flicked it on and off and even pounded the dials with the flat of his hand. No response. The radio was dead, put out of commission when he had indulged in his orgy of stunting. The path of light, the broad highway of dots and dashes reaching to him from Portland was out of his grasp. He was traveling a cold, gray road through a dark tunnel, with a jagged roadbed below and the walls of the Coastal Range to his left and the towering Cascades to his right.

But through years of flying, Steb Tracy had developed highly co-ordinated reflexes. He closed his eyes a moment and again visualized the instant when he had dived into the fog bank. There had been two mountain peaks directly below him, one taller than the other. He glanced at his map. Dead Man with an elevation of 4,550 and Red Butte with an elevation of 5,275. That was it. The exact time when he had plunged into the fog was also in his mind and he compared that with his present time and speed.

"Well," he said aloud, "barring a little drift, I just left the Willamette River behind and Eugene's on my left." He added, "I hope."

If the other ships had not been riding

# This is the Lawyer

of **BLUE RIBBON TOWN**

*...Whose Salvaging Parties are Winning Renown*

A prominent lawyer  
named Mr. McCarty  
Invited his friends  
to a "Salvaging Party,"  
"But come," he insisted,  
"on this one condition—  
Bring 10 lbs. of scrap  
as your 'card of admission.'"

WELL, that was a party!  
How salvage poured in—  
Old iron and rubber,  
and copper and tin—  
While neighbor met neighbor  
in friendly accord  
Over Blue Ribbon Beer,  
as the evening's reward.

AND since then, his friends  
have been stoutly commending  
This beer that is famous  
for *full-flavor blending*—  
"It's softer and kindlier tasting,"  
they say,  
The reason, of course, is—  
Pabst blends it that way!

Now More Than Ever—  
A Symbol of Friendly  
Companionship

In standard 12 ounce and full quart size bottles.  
Also on draught at better places everywhere.

IN Blue Ribbon Town, U.S.A. (your town—everybody's town) Pabst Blue Ribbon Beer has become, more than ever, a symbol of friendly companionship.

FULL-FLAVOR BLENDING gives Pabst Blue Ribbon Beer all the subtle taste tones of a "complete beer." Not just 3, nor 5, nor 7 brews—but no less than 33 magnificent brews are blended into this great Pabst masterpiece.

Pabst Blue Ribbon is a new experience in taste—a thrilling, exciting experience. There is no finer, friendlier beer in all the world than Pabst Blue Ribbon.

*into One Great Beer*

## It's a mystery to Molly

**MOLLY NEEDS A LAXATIVE.** But her nutrition class meets at 11.

"Can't risk taking a laxative," Molly decides. (She doesn't know about quick-acting Sal Hepatica.)

**FEELING DULL** and fretty due to constipation symptoms, Molly finds it hard to concentrate on nutrition.

It's nobody's fault but her own. (Folks ought to keep fit these days.)

## Agnes knows the answers

**AGNES NEEDS A LAXATIVE.** She's going to nutrition class, too.

"Never put off the laxative you need this morning," says Agnes. She gets out of bed and takes Sal Hepatica—it usually acts within an hour.

**AGNES FEELS SWELL** at nutrition class. She listens attentively to the lecturer, leaves primed with helpful hints on the best ways to feed her family. (She's glad she took that Sal Hepatica.)

## Whenever you need a laxative —take gentle, *speedy* Sal Hepatica

**IT'S UP TO YOU** to keep fit. Never put off till tonight the laxative you need this morning.

Take speedy, gentle Sal Hepatica. It usually acts within an hour.

No discomfort, no griping. Sal Hepatica acts *naturally* by attracting needed liquid bulk to the intestinal tract. In addition, Sal Hepatica helps

counteract excess gastric acidity to help turn a sour stomach sweet again.

3 out of 5 doctors, recently interviewed, recommend this pleasant saline laxative. Try it.

Here are the active ingredients of Sal Hepatica: sodium sulphate, sodium chloride, sodium phosphate, lithium carbonate, sodium bicarbonate, tartaric acid. Your doctor knows best. Ask him about the efficacy of this prescription.

# SAL HEPATICA

Product of Bristol-Myers

inside. The others were there, peering at him through the mist-streaked windows. Steb nodded at them, cold and reserved.

Banning said, "Going into town? Hop in. We'll give you a lift."

Steb's muscles tightened and he stiffly got into the rear seat to sit between Palmer and O'Toole. Within him was burning a warm, dangerous glow of excitement. They would stop somewhere in Portland, walk around to a good dark alley and there they would have it out. Banning, in particular, needed a few good lessons in safe and sane flying.

**THEY** stopped in Portland, but it was on a main street and they were parked against a sidewalk overflowing with people. Banning turned around in the driver's seat and looked at Steb. There was an odd light in his eyes—and it was not contempt. It looked more like admiration, but Steb thought he must be wrong.

Banning said, "I owe you an apology, cowboy. It embarrasses me to admit it, but that stunting exhibition of yours out of Medford was the most beautiful thing I have ever seen. I thought I knew how to fly those cookies, but not any more. I would sure appreciate it if you'd tell me how you did that snap-roll. We were told it couldn't be done in a P-38."

Steb looked from one to the other and they were all smiling. He said, "Oh, that wasn't so much. Anyway, I couldn't shake you boys, which was what I was tryin' to do."

O'Toole grinned and said, "That's what the Army trains us for, podner, to stick. We just scattered and watched you and then we dived back on your tail when you headed for the fog. We

had to stick, whether we liked it or

Palmer said, "Come on, you Let's go in some nice warm rather lap up some beer."

As they got out of the car Steb remembered the telegram and tore it. He read it standing on the sidewalk was from Major Dunham, of Oper and said, "Commission just rec Thought you would like to know

Steb smiled quietly, tenderly at the telegram and stuck it in his pocket. He started across the sidewalk with others and asked, "What do you think you had to stick with me?"

Palmer jerked his head and then explained, "Well, you see, we're too darned proud to tell you—a secret—about it. When we brought ships down south for overhaul, the and radios were left here for service. We overstayed our leave and had to come back to base tonight and there was one way to do that through that fog—well—we just had to follow you."

Merritt chuckled, "You were the one on the beam."

Steb paused and looked from one to the other.

"This here rathole we're agoin' they got hard likker, too?" he asked

Banning said, "Sure. Why?"

"Well," Steb drawled, continuing across the sidewalk, "when I get through tellin' you a little tale about my radios you're gonna need some stiffer than beer."

"Okay," Banning laughed. "Follow the leader, boys."

The four of them strung out behind Steb and banked into the first doorway—on the beam.

THE END

## Singing Pinch Hitter

Continued from page 20

these theaters, where her mother was a prima donna.

When the little girl was just past five, the family paid its first visit to the United States. Alex became ill and, after six months of sickness, died. It was up to Mother to shift for herself and her child. She began to teach young singers. Little Astrid hung around and soaked up opera lore. She knew opera roles as Dolf Camilli's sons know batting averages. Her mother played doll games with her in various languages. At one period this little lady could speak, believe it or not, English, Italian, German, Swedish, Norwegian, Hungarian and Spanish. Today Astrid is still fluent in three or four languages.

In Jersey City, Astrid, at eleven, took up the piano with Ralph Ganci, at the New Jersey College of Music. Her ambition was to become a famous virtuoso. When Mr. Ganci's pupils gave their annual concert in a New York hall, Astrid was one of the shining lights.

At high school, Astrid majored in typing, stenography and commercial law, knowing she'd need a job as soon as she was graduated. The fact that she had a voice at all came out when she joined the glee club in her senior year at the insistence of a chum. Moriz Schwarz, teacher in charge of the glee club, urged her mother to make Astrid a singer, not a pianist.

After graduation, Astrid worked as a typist in an export house in Manhattan, where she also served as the office linguist. Her next job was as a clerk in a bookshop, where the hours were shorter but the pay no better. There must be an easier way to make a living, she figured. Singing, for instance.

She had listened to Mother's plans and instructions. She felt she knew the theory of good singing. Would Mother give her lessons? Mother would. Astrid took a couple of lessons, got impatient, wept and decided to quit.

However, the opera bug had long ago got into her blood. Whenever she could raise \$1.50 she went to the Metropolitan Opera and bought standing room. She made friends with girls of her own age who also stood. After clicking as a singer she was elected an honorary member of the Studees Club of America. The girls are her stanchest admirers. When she made her surprise debut they were in the house. One of them was at the box office when an indignant customer complained: "Some unknown is singing instead of Lehmann, and I want my money back."

### History in the Making

"You can't do that," the Varnay enthusiast interjected passionately. "History is going to be made today."

The man looked surprised, chuckled and decided to keep his tickets. He met the Varnay enthusiast in the lobby at the end of the opera and thanked her for tipping him off.

Watching the operas at the Metropolitan from her place behind the rail kept Astrid in a turmoil, bursting to sing. After a performance of Tosca one night she went home, got out her mother's copy of the score, and playing the piano for herself, sang the part of Tosca from beginning to end. When Mother came in from a late party, Astrid proudly recounted her exploit. Mother bawled her out. The next day

understood. She had sung too long and her voice was gone; it stayed gone for weeks.

That was a lesson to her. If you want to sing, you have to work patiently and patiently. She resumed her lessons. Her voice was getting bigger, though a veil lay over it like a London fog, and it was not clear unless she warmed up the voice for almost an hour. The horrible opera was that by the time the veil lifted, the voice was too tired for singing. It took months to develop singing power so that she could warm up without tiring, but at last she was making progress.

In 1939 Mother wanted confirmation of Astrid's capacities. She took her to Hann Weigert, assistant conductor of the staff of the Metropolitan Opera. Weigert was excited and offered to teach Mother was glad to have an outtake over—it's tough to be critical of someone close to you. Later on Varnay regained her objective approach. Now she sits through every one of her daughter's performances and gives pointers.

Weigert pronounced Astrid ready for the exhibition after one year of study. He arranged an audition for Edward Johnson, general manager of the Metropolitan. Johnson suggested that she send a letter listing the parts she knew, the opera's files. Her letter has become a classic of the theater. It listed even the toughest roles in the repertoire. Some prima donnas don't learn many in a lifetime. The letter passed hand to hand and everybody liked it, especially at the P.S.—"other in preparation."

In the fall of 1940, she auditioned for René Mertens, one of the managers of Columbia Concerts, Inc. He promptly offered her to a contract. Now there are two experts—Weigert and Mertens with faith in her. After Flagstad heard George Szell, distinguished conductor, listened to her and gave his blessing. Hans Leinsdorf, conductor at the Metropolitan, heard her, and suggested to her son that he listen to her again. As she remembers the date of the next performance—May 17, 1941. When she got through singing, Johnson asked, "Do I have to you or your agent?" She was speechless. Weigert jabbed her and said, "You're engaged!" She finally got out a breathless word, "Agent," and ran out of the opera house.

### The Top is Reached

She rushed to the Greenwich Village apartment where she, her mother and a half-brother live. She bought a dozen roses, plowed into the apartment, gave her mother the flowers, and burst into tears, sobbing, "I've made the Met."

Astrid Varnay was a determined, unflinching little lady as she waited for her entrance on the Metropolitan Opera stage that Saturday afternoon of December 6th. Being self-critical, she knew that her voice had not, at twenty-three, reached its full maturity. She comforted herself with the thought: You can only do what you have, and do the best you can with it. She wasn't jittery because, just couldn't afford to be nervous.

Her cue came. She heard herself whispering, "Here I go." She sang a few phrases. The easy, rich, full sound of her voice reassured her. She said to herself, "I'm doing all right." By the third act she was so self-possessed that she kept a nervous veteran from rushing on stage ahead of time.

Six days later Astrid was told 24 hours ahead of time to be ready to do Brünnhilde in place of Traubel. She was scared at first. She had never worked on

Brünnhilde with cast or conductor. There was time only for one hectic session in which the stage director crammed her with the stage business of a long opera. She went home popeyed, got into bed, propped up the score, studied it for a couple of hours until she fell asleep over it.

The entrance of Brünnhilde is one of the most difficult in all opera. The soprano stands alone on a mountain summit and gives out with the famous, "Ho-yo-to-ho," which has to shoot up and down the scale and which has to soar, like a piercing trumpet call, over the sound of 100 orchestra players going hell-bent for leather. As Astrid took her place on the set and the curtain went up, the entire company stood in the wings, watching and smiling to give her courage.

She sang with everything she had. She poured out the magnificent freshness of her young voice, with its lovely, even texture, free high tones and full low tones. She went through the "Ho-yo-to-ho" with the assurance of an old hand.

### A Star on the Beam

That job of work settled it. Astrid Varnay had arrived, and for the rest of the season she sang star parts. She did Elsa in Lohengrin and Elisabeth in Tannhäuser. Then she was chosen to play the lead in a new opera, The Island God, by Gian-Carlo Menotti.

She is not only conscientious, but also has a tremendous capacity for work. She always carries a little black notebook. It contains a diary of important dates. Thus: "Feb. 5th to 20th, memorization of score of Götterdämmerung"—a colossus of an opera. The black notebook also has pages of hieroglyphic diagrams and notations—her shorthand analyses of operas. She spends all her spare time at the Met watching the operas, studying stage business, and making notes.

When she sang in Lohengrin in Boston in the spring of 1942, the heating system in the theater was out of kilter. The temperature in her dressing room was 50 and on the stage it was 95. By the end of the second act, Astrid had a terrific case of laryngitis—couldn't sing a note. The management of the Met had to get another singer, Maxine Stellman, out of bed, rush her into a costume while the curtain was held, and toss her into the third act. Astrid felt miserable; she had let the Metropolitan down.

Astrid has no prima-donna airs. Her companions as standees of several years ago are still her friends. So are the humble members of the chorus.

For her first concert Astrid received \$200, but the price has gone up, and will mount steadily. The Metropolitan has her at bargain rates for the first three years, and knows it; the management gave her a bonus for her pinch-hit homer as Brünnhilde.

Astrid has no plans for marriage. "No time for it just now," she says. Nor are there any prospects in sight. "Aren't they all in the Army or Navy?" she queries, laughing. But she has an open mind on the subject.

Today, Astrid knows twenty roles, and by now there must be "others in preparation." If the Metropolitan Opera wants a star pinch hitter in a hurry, it can always count on Varnay. One of the conductors cautioned her. "Astrid, be prepared," he said. "Carry a long gray beard in your purse; next they'll be rushing you on as Wotan." She might not be able to give off the sounds of a bass-baritone, but you can lay ten to one the gal would know the part.

THE END

Stanley Jones

Prided himself on having a

Strictly logical masculine mind.

Stanley heard, for example, that Postum

Is drunk by many people who

cannot drink coffee.

Therefore, reasoned logical Stanley,

Postum must be a "coffee substitute";

Postum must *taste like coffee*.

Now, Stanley Jones did not care

for substitutes;

He did not like to drink something that

Tastes like something else.

Therefore, he, Stanley Jones, decided he

Would not care for Postum.

Period.

Paragraph.

Stanley's wife, on the other hand,

Operated more on the basis of

Her woman's intuition.

Hearing that millions of people drink Postum,

She simply decided to try it herself.

Which she did,

Without any attempt at being logical.

Well!

Mrs. Jones discovered that Postum

Is a perfectly swell hot meal-time drink,

That doesn't taste like coffee

Or any other drink.

She discovered that Postum

Has a rich, full-bodied, 'satisfying flavor

All its own.

She discovered that Postum, in two words,

Is downright delicious.

Well!

"You and your logic!" she said to Mr. Jones.

"Postum is no coffee substitute.

It doesn't even *taste like coffee*.

In fact, Postum tastes no more like coffee

Than coffee tastes like tea.

"Why don't you be illogical for once

And try it?

Particularly, since

The shortages of tea and coffee

Are getting rather serious."

So

Stanley Jones, after considerable

hemming and hawing,

Put his logic in his pocket

And tried a hot, steaming cup of Postum.

Whereupon, Mr. Jones smiled cheerfully, and said:

"Let us pursue this subject no longer.

Just pour me another cup of Postum."

THE END

P.S. Postum is a fine drink for all the family,

even the children,

Since it contains no caffeine, no stimulant

of any kind.

Costs less than 1/2 cent a cup.

Try Postum Cereal, the kind you boil or "perk."

Or Instant Postum, made instantly in the cup.

Listen to The Aldrich Family, Thursday nights over NBC Network. One of America's great radio programs, sponsored by Postum.

# CHINA FLIGHT

By Pearl S. Buck

ILLUSTRATED BY MARTHA SAWYERS

V

FOR one moment after the w slammed shut Dan stared up Then he leaped for the hotel But quicker than he could leap, the were upon him. They pinioned him and twined themselves about him and the Japanese guards at the ga forward and leveled their guns a He could only wait, cursing and k and twisting, until Shigo came.

As for Shigo, he came down in the elevator, his face black and set. "If not love her," he thought to himself, "would be so easy. Or if I were a man than I am it would also be e

But he was what he was, a strange, vivid creature, half of him man of the world, gentleman, civilized and educated in the ways of civilization, the other brutish, impatient, cruel. There was trouble. He was horribly lonely in the depths of his being. He longed for approval and the satisfaction of being liked and admired as well as feared his power. And Jenny despised him. All white people despised all Japanese he told himself and groaned with pity.

HE STRODE out of the elevator across the lobby to the manager's office and threw open the door. Mr. and Frau Schmitt were sitting there over his account books, and she knitted. Both rose when he came in.

"Good evening—good evening," Schmitt stammered.

"I come to give you your orders," Shigo said brusquely. He did not take off his hat. "The American woman—is to be more closely watched, Schmitt. I hold you responsible. She is to have no communications of any sort—no mail, no notes, no telephone calls."

Schmitt spread out his large padded hands. "But, sir, we have watched her very careful—"

"I will not be told what you have done and what you have not done," Shigo said coldly. "I simply give you my orders."

"Yes, sir," Schmitt said.

Shigo threw him a stern look and went out. He strode to the front door, and a Japanese servant ran to open it for him. Outside, his eyes fell on Daniel, held by the guards.

"What is the matter with you?" Shigo shouted. "Have you been so foolish as to try to escape?"

But Daniel thrust his face near to Shigo's. "What were you doing to the girl?" he demanded.

Shigo laughed loudly. "Is that what you look like the hero in a melodrama? She happened to look out of the window at my friend, and saw you—that is all. And she feels so sorry for you, and being soft-hearted and eager to do all she asks of me, have promised that you shall be treated very kindly and not worked too hard, and that you shall have good food and a warmer coat to wear—that is all."

He stepped into the ricksha and jerked his chin at the guards and they leaped forward, their bayonets pushed at Daniel. He stooped slowly and lifted the vehicle. No use, he told himself.

(Continued on page 36)

Mrs. Shipman and Daniel were there. Leone drew them into the gate

## The Story Thus Far:

WHILE houseboating in China, Lieutenant Daniel ("Dan") James, of the U. S. Marines, and his host and hostess—Arnold Hatford and his fascinating Eurasian wife, Leone—learn of the attack on Pearl Harbor. James hurries to Shanghai, where he learns that his ship has sailed. Then the Japanese arrest him.

Led to the Foreign Office, the young officer is interrogated by an important official: Shigo Kuyoshi. With him at the time are two other prisoners: Jenny Barchet, an American newspaper correspondent, and a Mrs. Shipman, a kindly soul who runs a home—the "Gate of Hope"—for unfortunate girls. Shigo sends Dan to prison; the girl is interned, at her hotel; Mrs. Shipman is interned, in her home.

Arnold Hatford is an Englishman. With Leone, he is making his way toward Hong Kong, when his wife (in love with James) suddenly leaves him and succeeds in reaching Shanghai. There her grandfather, scholarly old P'an Lao-yeh, takes her into his home.

Jenny Barchet is an unusually beautiful girl. Shigo, strongly attracted to her, terrifies her with his advances. Finally, to save her life, she decides to give the man some encouragement—a little, not much. . . . Dan James is taken from his prison cell, escorted—with some American sailors—to Shigo's office. Shigo is there. He begins to ask questions. When one of the sailors refuses to answer him, a guard leaps forward and breaks the sailor's arm. James and his companions attack the guards; but they are overcome, trussed up.

A few minutes later, the sailors are shot. Then Shigo (suspecting that Jenny is interested in the Marine) tells Dan that he owns a ricksha and that Dan is to be his ricksha man! . . . Surrounded by guards, with fixed bayonets, Dan reluctantly pulls Shigo, in the ricksha, to Jenny's hotel: the Cosmopolitan.

Shigo leaves the vehicle, goes to Jenny's room. The girl tries hard to assume a friendly attitude toward him. But when he kisses her, she can pretend no longer—she tells the Japanese what she really thinks of him. Shigo, infuriated, goes to the window, orders Jenny to come to his side. Together, looking down, they see Dan, seated beside the ricksha. "My ricksha coolie, Lieutenant Daniel James," Shigo says. Then he jerks the girl back and locks the window fast.

## LIKE A NICE OCEAN TRIP—FREE?

**NINE TRIP** to Europe. All expenses paid...by the Nazi Government. You get your own cabin...together with about thirty others. But they'll all be Americans, so you'll be among people you know. *This is what can happen if the enemy wins.* For when the war ends, Europe will be stumbling and weak from malnutrition. There will be an enormous job of reconstruction to be done. So what more logical move for a victorious Germany than to ship healthy, well-fed Americans over? Suppose there *isn't* enough food to feed them. Suppose they die in thousands like starved cattle. There will be millions more to draw from, millions more to ship over...to work, and work, and sleep in prison camps, and work, and itch with lice, and become diseased, and work, and work, and die. Millions more...from a subject people. Proud

Americans whom their conquerors will march proudly before all the earth. Prisoners. Beaten, subjugated, slaves.

Businessmen who were proud of their white collars and their profits and didn't want to give them up. Factory workers who were proud of their wages...the highest in the world...and wanted to keep on earning them. Shopkeepers...whose last prosperity was a war prosperity which they enjoyed and coveted.

Are these harsh words? Words can't be too harsh today, because today reality is harsh. It is no longer a dream-world. It is a nightmare-world. And all of us must realize it and think of it day and night, lest we become soft and perish.

For never forget...we have only just begun to win in this war. The enemy is still strong. And

there is nothing he would like better than to have us relax, to have us sit back and consider the war all but over.

We must do all we can *now* to keep the enemy from ever again regaining the initiative. And that demands ceaseless effort on our part.

On the part of you who read this advertisement and us who sign it. *We must not fail now!*

ORDNANCE • STEAM AND DIESEL LOCOMOTIVES

# Underground to Freedom

Continued from page 15

ordinary man of the *bourgeoisie*. But then, neither has candidates to offer. Neither has policies or platforms to beguile the simple citizen. Both have but the one thought. Both want nothing except, you understand, the restoration of a France which will rise from her knees, as already she is no longer prostrate. Both seek but to help France arise from her knees. First there will be one foot on the ground, then the other. Voila! (There were tears in Monsieur Subway's eyes.)

In Paris, in all of Occupied France, there began to appear radio receivers. Where they came from—perhaps England—nobody knew. Nobody cared. But for the first time, Frenchmen of Occupied France began to laugh over the Boche curfew hour of nine. That was the hour when the British Broadcasting Corporation spoke to France. The stupid Germans were gratified, rubbed their fat hands that the French should at last be going off the streets willingly at nine o'clock. They thought that the French were coming to admire and trust Der Fuehrer. The leering swine!

Little by little, newspapers began to appear. Workers in the plants of the great Paris journals stole newsprint and ink, and at least once they stole a whole printing press bit by bit. There appeared the journals of revolt—*La Vie Ouvrière*, *Le Populaire*, *Combat*, *Combat Illustré*, *Libération*, *La Voix Du Nord*. They were printed now here, now there. The Germans would discover a press in one place, destroy it, imprison the writers and printers. But in a few days the paper would issue from a place far away. They were distributed by stealth—folded between Nazi propaganda sheets, left in trees, under rocks, at certain houses which were marked with certain marks. Perhaps fifty people would read a single one of these journals of never more than four small pages and frequently no larger than a small handbill. *N'est-ce pas?* And then the last reader of the now decrepit sheet would copy it word for word and pass it along.

## Under the Nazi Nose

Typewriters began to appear. Thus the sheet *Le Franc-Tireur* grew to a printing of 30,000 copies, which were eventually read by 150,000 Frenchmen and perhaps many more. *Populaire*, when enough paper could be stolen from the pig-swine, printed 40,000. More presses, more mimeographing machines, more typewriters came. And more radio receivers. Hundreds were stolen from the Germans—even from the billets of the German soldiers. Of course there were discoveries by the Germans, arrests, imprisonments, executions. But what would you? France was reviving. (Still speaking is Monsieur Subway.)

In Unoccupied France there was still a lethargy. The hand of the Boche was not so heavy there and the people were still of a belief that it was better to cause no trouble lest their towns and villages, too, should be occupied. Hitler did not understand this, the camel. Had Hitler, that son of perdition, understood this he would not have since aroused all France by defiling it with his occupation. No, Messieurs, the first men and women of the underground were in Occupied France. Agents of the underground died.

There was a boy of eighteen who got to Paris, where he had been apprenticed to a chef of a place in the Bois. He

was of a temerity, you understand. Back to that restaurant he went. The chef was still there. He was preparing a feast for German officers for that night. From his pocket the boy agent took a vial. *N'est-ce pas?* Eight, perhaps twelve Boche officers were poisoned. Fatally? Let us hope. The chef, he is alive. Who can tell? The boy got away to another part of Paris, was hidden by a girl into whose house came a Nazi policeman. The boy killed the policeman and was himself shot to death. This was overzealous. The dead agent of the underground is of no value. But what would you?

Today there are many agents of the underground. How many? But that cannot be told. Hitler and his Gestapo are in despair. They raid the meetings of *Combat*, of *Libération*, of *Franc-Tireur* in Lyons, in Marseille. France is returning to life, Messieurs. Miraculously, machine guns, dynamite, bombs, ammunition are appearing in French hands. From many improbable places within France they come. When the French armies retreated before the Boche, hundreds, perhaps thousands of these useful instruments of liberation were hidden. Today they are dug up. Today one spits in the face of the German soldier and before his hand can fall upon the spitting one he is shot from a window, a tree, a hillside.

Monsieur Subway stopped suddenly. Now his eyes were younger, his lips were

compressed into a mere scratch. Through his flared nostrils he breathed so deeply that Madame gave a loud squeal and made as if to catch him and hold him together before he should burst. As if he were leaping out of the wings onto the stage, the soldier-engineer took the floor, swishing a sheaf of underground newspapers and pamphlets out from under his coat. He threw them at us. These, then, were the journals that the sons of an unconquerable people wrote under the eyes of swine. Madame twittered at him, begging him to lower his voice. The other man from France, the editor, patted the air and murmured, "Softly, softly."

The soldier-engineer told us of what he had seen at Montluçon. That train bound for Germany with perhaps a thousand French workers did not dare move against the men, women and children who stood in its path singing the *Marseillaise*. The German soldiers, swinging their rifles, tried to clear the track. With the Germans were the Vichy police—the police of the assassin Laval. But in the furor, little ones, the truncheons of the otherwise unarmed Vichy police fell often upon the heads of the Boche soldiers and agents of the Gestapo. Pardon, pardon my friend, they would say to the squealing, bleeding pig of a Boche. The multitude destroys my aim. Whoosh! Pardon, pardon! A great animal of a woman moved my arm. Pardon, pardon! An imp of the devil, a small

boy, batted me in the stomach like a ball of hell. I am perhaps mortally injured and no breakfast within me. Pardon, Herr Oberleutnant! The was not intended. So?

The soldier-engineer roared laughter. Madame's eyes were blinded. She was swinging an imaginary clasp of imaginary heads and crying, "One, Two, swine! Three, camel! Four, cow! Five, and sleep forever, thou o!" Monsieur Subway's pacing had brought him to the far wall and he stood facing it, his fingers still interlaced behind his head.

The editor was calm, but his face flushed. Nat had his arm around the soldier-engineer's shoulders, grinning saying: "Hold 'em, Yale!" I passed cigarettes and lent Madame a handkerchief. Order was restored in time.

## Schools for Sabotage

In France (resumed the soldier-engineer) there are schools for saboteurs—the agents of the underground. The underground was no haphazard thing. Today every agent knows his job by step. There is no more wasteful enthusiasm like that of the boy who poisoned the soup in the Bois Boulogne. It is scientific. Would care to sit in a class? Certainly. of what we heard there, not a word to be said or written.

In France, at first, one, two, perhaps three, came to the classes. Now they are dangerously big. They are held at midnight in the dark. It is difficult. minds are keen, eager. A great American studied in the dark and became an emancipator. His name? Abraham Lincoln. The Boche are very flattered. They call the agents of the underground criminals. My friends, there is no soldier with a greater decoration than he denounced by the Boche as a criminal. A criminal for France. From criminals for France, the Norwegians and the Dutch—whom we call Singi Kettles—and Belgians from the front of France are learning to be criminals for liberty. There was that woman who was intercepted in the street in Lyon. The agent of the Gestapo accused her of being from a class. "It is so," she replied. "I am wondering whether I have learned well. You are kind to be laboratory." And she left this Boche dying in the street, his abdomen a gaping hole.

And that seems to be about all we can write. Monsieur Subway told us that we would see him again. At the headquarters of the Fighting French, Dr. Gaulle headquarters? But no. He was never there. He would let us know. Madame was all for singing something, but she was suppressed—with difficulty. It was two in the morning. We turned to the other man from France, the editor. No, no, he had nothing to add except that this, the year nineteen forty-three, would be a great year. There would be many surprises. They would be political, too. Look at the east, to Russia, he bade. Yes. And keep watching. And strike, strike, strike! He wiped his temples, dug me in the ribs, asked me whether I had ever read of the French Revolution. He seemed pleased. Regard, then. What happened then in France was not to be compared with what may happen.

"It is again," he said, "later than you think."

THE END

"Private Wilson reporting for duty"

COLLIER'S

JARO FAHRY

WHENEVER YOU HAVE  
A COLD

Thousands switch to Spuds at the first sign of taste-dulling colds! Spuds' exhilarating menthol seems to cut right through that cold-clogged taste and bring you old-time smoking pleasure!

WHENEVER YOUR  
VOICE IS HOARSE

Voice husky? Smoke a pack of Spuds! They're not a remedy. But many find them more agreeable, more pleasing, at times when they can't enjoy other cigarettes! Treat your throat to Spuds today!

WHENEVER YOU DEVELOP  
SMOKER'S COUGH

Throat irritated? Switch to Spuds! Their modern moisture-retaining agent does not produce irritating acrolein... their greater length provides increased smoke filtration, smoothness, mildness.

# There's a time to SWITCH TO SPUDS!

EVERY SMOKER KNOWS there's nothing like a Spud! And there are times when nothing fills the bill like Spud Imperials! For Spuds are *lightly mentholated* by an exclusive process that means smooth, refreshing coolness every puff. They're made with a moisture-retaining agent that adds no irritating acrolein fumes to your smoke. At last, they give you the full pleasing flavor of fine Virginia tobaccos. Try a pack of Spud Imperials tonight!

WHENEVER YOUR TASTE  
CRAVES A CHANGE

When the old brand seems to "miss the mark"—try Spuds! Those fine tobaccos—with just a touch of cool menthol—will bring your jaded taste back smiling! Try a Spud—just for the thrill of it!

TREAT YOURSELF TO A  
REFRESHING CHANGE

Try Spuds today! Enjoy the feeling of cool refreshment that no ordinary cigarette can give you!

WHENEVER YOUR  
THROAT IS DRY

Throat dry, tired, or over-strained? Switch to Spud Imperials! Enjoy the feeling of cool refreshment that only Spuds' gentle touch of menthol can give. It's a change your throat will appreciate from the first delightful puff!

# It's the "Special Touch" that makes tires last

Your tires are a part of your automobile. Because that is so, tire life is influenced by many things other than the ordinary attentions you normally give them.

Proper tire pressures vary from make to make and often wheel to wheel; your General Motors dealer knows exactly what yours should be.

Wheel alignment, which is a particularly important factor, requires as many as six separate adjustments per wheel. Your General Motors dealer is fully equipped to make all of them properly.

Tire "crossing"—a wise move—usually can follow a regular procedure. Your General Motors dealer knows the instances when departure from this is wiser.

Your brakes, your shock absorbers and other car parts can affect tire life if they are not in proper adjustment or condition. Your General Motors dealer makes it a

business to *know* proper adjustments and maintain them.

Almost any car owner can *lengthen* tire life by regular attention to some of these matters.

But in times when tires must last from now to an indefinite date, it is not enough merely to *increase* tire mileage—the aim must be to get the very maximum through skilled attention to all.

It takes an expert's special touch to assure that. Why not simply put it up to your General Motors dealer to look after your tires and your car — and be sure of a job done right? ★ ★ ★

The Automobile User's Guide answers your questions about taking care of your car and your tires in wartime. For a free copy see any General Motors dealer today or write Customer Research Staff, General Motors Building, Detroit.

# The Distances of the World

Continued from page 16

breath when he was excited—and he had taken off his peaked cap and was holding it in an old-fashioned sort of reverent way over his heart.

"You are Madame Hell. I have heard of you. Your Chinese name," he said, in a dry Southern voice. "You are too beautiful to be here."

A Quong's was the richest, the most respectable gambling place on the China Coast; and she had never let another man touch her finger tips upon her, out here on the coast.

But this one had taken her arm in an unexpected way and they were walking together toward the long table at the end of the cardroom where there was champagne and varnished duck and things like that, with Shanghai boys in white silk jackets to pour and to serve. And Ah Tong, that fat, dry philosopher, standing in the door of his office to incline his head in a sort of cynical blessing as she passed, though she was supposed to be the smiling, cold-voiced hostess who kept the patrons in line. Stumbling a little, because she was watching his face—nothing like that had ever happened to her before—and in something of an unbelieving daze, she heard him say:

"It struck you, too, didn't it, beautiful? When we looked at each other." He said carefully, "I think you must be."

"No, lovely," he said. "What's your name?"

"Anne," she said. "Anne Paget."

"Busted actress?"

"Look," she said. "That's—this is a stupid and, anyway, it's nothing to you."

"Oh, a great deal," he said, with a suddenly sound like a laugh in his chest, as if he were terribly amused, but tensely. "Because we are going to be together. So I did have to know your name. Mine is Rice Linett. Master of the barque Golden Monsoon. At a buoy on your river, just now. But I shall always call you Madame Hell. D'you mind? Have some champagne?"

Dazedly, she took the glass, and looked at his eyes again.

AND he always had kept on calling her "Madame Hell." On their way down the South China Sea, he had stopped abruptly in front of her deck chair one afternoon and said:

"Look, lovely, Madame Hell. There's a civil war on, in the States, you know. This is our last voyage to the East, for a while. D'you mind?"

"Not at all," she said. "But what do you intend to do next?"

"Blockade running," he had said.

And he had done very well at it. Very well indeed, with a lean, narrow-beamed British steamer built in England for him. Their house was crammed with silks and plate; and diamonds were hidden away behind the brick stones of the earth; seeing every day the elegant rags, the desperate poverty, of the South, these lavish riches made him seem, to her, more than ever a renegade—a laughing, cynical renegade.

But no one else seemed to think so. For he was taking out cotton and tobacco in cargoes that loaded down his slim steamer to her main-deck rails. And coming back he brought all the things of life that the Confederacy had thrown away, to fight for The Cause: he brought coffee, and silks, and tea, and French stationery; and he brought beef and wheat for the army; and he brought wool

and leather and steel, and gunpowder in kegs to make up for the poor stuff that the Confederacy made in its own home-made arsenals. And he brought gold.

Gold, in bullion, to pay starving men who fought, as men had never fought before with empty ammunition pouches. Who turned, on the long muddy roads, to snarl and fight again with their buttoned rags flapping in the windy rain; to throw aside their empty ammunition pouches and go back up the long, long roads of mud, toward flaming guns, with only rusty bayonets. . . .

HER captain was bringing in tonight a load of English gold, in bullion. He would be in before the moon would rise. It was a waning moon and it rose

streets, bowing to other ladies in other carriages, where once she had known great distances and the keen edge of danger. Sometimes she thought she would go mad—it was a greater strain than she had ever known, anywhere; and sometimes she thought she simply couldn't stand it any longer.

She couldn't have stood it this long if it hadn't been for Mr. Ferrell.

Of course, though, she never let her captain know anything of all this. For in this old town, where his hard-hunting, drinking, dueling ancestors had lived before him, he was in himself, without thinking, a great gentleman. A great gentleman, and he had left her—once his laughing, passionate companion—to stay alone, and walk quietly, smiling

herself until she could feel her rigid lips become really amused.

There was always Mr. Ferrell. That small, dark, deadly gambler from New Orleans, whom all men feared, and many of these high-born women seemed to love, in a half-scared sort of way.

So, quietly, one foot in front of another, she walked back into the house and heard the velvet sounds of chimes dying away. She went into the paneled dining room and sat down all alone in the great high-backed hostess chair at the end of the long table in the candle-light.

And lifting the first amber-clear silver spoonful of green terrapin soup to her amused lips, she thought:

Yes. Mr Ferrell is coming to call tonight. And I must give him his answer.

MR. FERRELL came to call. He was announced while she was having her coffee in the library, all alone. In the door, he bowed slightly: a slender and lethal man in most beautiful clothes.

Over her hands, he bowed again, and touched them with his small, dark silky mustache, and said, "Well, Anne, have you decided?"

"Wait, please, Mr. Ferrell," she said, and rang the bell. When the colored butler had brought another massive silver tray, with a decanter of brandy and a glass on its crisp napkin, she said, "Please have your brandy. And you may smoke a cigar, if you wish. Then I will tell you."

"Anne. Anne, I— Please, before you answer, remember all I have told you. All the world, and the rivers, and a life with me that you . . . we are the same kind of people, Anne. You know that. You know it in your heart, Anne."

"Please, Mr. Ferrell. I do remember. But have your brandy."

He poured, slopping ever so little. It was the first time she had ever seen those thin, dark little hands shake.

For an instant she thought with a sort of venomous, secret pleasure—shot straight at her captain—that it was emotion that made his hands unsteady. But then, with the practiced eye of the China Coast, she saw he had been drinking heavily all afternoon.

Well, she had bargained for that. When she had practically decided to go with him.

It was his weakness. But she, too, was deadly and she would hold him in line without mercy. And, as he had said, there was all the world, and the rivers of it where men and women could face danger, and distances, and, in a queer way, beauty, together. If they really were the same kind of people.

And this thin steel weapon of a man was her own kind. They both had the same quiet, merciless ferocity for life—for all that life could hold, of beauty and of danger, for the world, and its restless treasures of experience.

"Mr. Ferrell," she said.

"Yes, Anne?" His eyes were a little bloodshot, and his lip twitched once; but the brandy had evidently put him together again.

"I believe it might be possible," she said slowly. "I believe we would make a good team. With some conditions, though."

"Anne. Anne, any conditions," he said, just a little thickly. "You know how much I—"

"Wait," she said.

She poured a little more coffee into her delicate sage-green Wedgwood cup, and

## MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

"I'm seated third from the left"

very late tonight. She alone knew that he was coming in from the sea tonight—only she, that is, and his shipping agent—with the bullion. With a sudden tightness between the eyes, she thought of his shipping agent, Mr. Cartret. One of the most respected names in the state. But on the China Coast, where you looked at people not with automatic belief, that bland, large-chinned face with weak blue eyes might not have rated so . . .

And anyway, she thought, it's probably because Mrs. Cartret had bowed so coldly from her carriage the other afternoon. She realized that she hated these smug, high-born ladies with such quiet venom that it warped her judgment of all their world and all their people.

But she couldn't help it. Her captain had left her in this time-richened house to be a gentlewoman. To move impassively from room to room on quiet feet, where once her feet had had a feeling of wings; to smile, dim, shadowy smiles over cups of tea, where once she had known free laughter; to drive, in the afternoon, through narrow, ancient

dimly, from room to room. And he . . . he still went adventuring into the bright distances of the world.

Standing at the end of the garden, she bit her knuckles, clenched rigidly. What was he doing, that renegade heart, in the dark streets of the Caribbean ports where the cargoes were transhipped from England and from South America into the blockade runners? She thought she knew him; and there were dark girls in the Caribbean ports, and music from behind secret shutters in the dark streets above the water.

TO HER horror, she heard herself making a little whimpering sound under her breath. Jealousy is a sickness, a rotting sickness of the heart: it distorts in the mind a world, once loved, into fevered and obscene shapes. It gives to hands, which a little while ago knew only the ways of love, a shaking rigidity that could be translated into murder.

Carefully she unclenched her hands. And stood for a moment breathing deep, shaken breaths. And smiled a little at

watched him while he tilted the decanter again.

"You know, of course," she said, "that we would be, finally, completely outside the law."

He looked up at her. His eyes steadied, became gray steel points. "I have always been," he said.

He lifted his glass, and his eyes became slightly vague again. "And so, I think, my dear, have you," he said, and smiled at her. His teeth were very sharp looking.

"Perhaps," she said. And stopped to think carefully for a minute before she said in an even and quiet voice, "There is my husband. I shall have to tell him. Before I go. If this is to be done, it will be done above the board."

And that, she thought, is the test.

We will see how these two men will take that, one after the other, she thought. She knew how Rice Linett would take it. She waited to see what this man, also coldly dangerous, would do.

For a long minute, he sat looking into his glass of brandy. Then he drank it, and put the empty glass down and looked at her.

And she suddenly saw that he was very drunk.

Far drunker than she had thought—and beyond the mere drunkenness, a curious and venomous, terribly venomous, exaltation burned suddenly in his eyes.

"Perhaps we need not worry about that, my dear," he said.

Quietly, she set her cup and saucer down. "Just," she said softly, "just what do you mean?"

His eyes became gray steel again, but melted too soon. Much too soon. "Never mind," he said. "It's I that you love, isn't it?"

Deliberately she reached over and took one of his hands, making her fingers soft and clinging as they touched the taut muscles.

"I have been thinking of nothing else," she said softly.

"Well?"

"But there is my husband."

He snarled abruptly. "Don't worry any more about that grinning bravo," he said. "With his fine airs, and the way he swings his shoulders when he pushes better men off the sidewalk."

"But," she said, still softly, more softly, "I don't think I quite understand what you mean when you—"

"He thinks he's coming in tonight, doesn't he?" His thin lips twisted and twitched, quickly, once. "Never mind. Never mind." He reached for the decanter again.

SHE leaned back in her chair and made her eyes deliberately dreamy.

Only one other person in the Confederacy had known that Rice—her captain—was planning to come in tonight, before the waning moon would rise.

Mr. Cartret.

She said carefully, "Mr. Ferrell, how are you doing with your . . . establishment out at the Sea Inn?"

She tried to remember that very old stone inn, half lighthouse in the days of the pirates, on the end of the cape which jutted far out to seaward, south of the channel entrance. Mr. Ferrell had taken rooms out there, where gentlemen of the town could play discreetly.

"Eh?—oh, well enough, dear. Well enough for now, until you can join me, and you and I can really . . . Anne, dear?"

"Yes?"

"Tell you something," he said.

"Yes? . . . Dear?" Her lip curled suddenly. People learned to be more discreet than this on the China Coast.

"One more coup," he said. "Big of all. Solves all our troubles. Lots of money, too. Enough for you and to . . ." He set his glass down again, cleared his throat. "Never mind, said. "Never mind, little woman. know nothing about it."

"No," she said, and it was hard to hear her voice above a whisper. "No, I don't."

AFTER he had gone, she rang the bell again. "I want the carriage, once," she said.

And then she went upstairs to her room and out of the cedar-lined closet she took her threadbare old travel cape. The collar turned up enough to half hide her thin, suddenly very young—no, gaunt—face.

She opened a chest of carved and heavy brass, from the China Coast and from among its folds of silks to heavy piece of . . . adornment, which she slipped into her pocket.

It was a long drive out to the Sea Inn. Somewhere out there in the darkness, a few miles off the cape which the Sea Inn tipped, lay the blockading fleet. So that in that from the inn, on a clear day, heavy frigates, the gunboats and swift sloops with folded wings could be seen on the horizon.

She left the carriage a hundred yards down the road, pulled up against the blacker darkness of a hedge, and walked toward the discreetly lighted doorway of the inn. She asked for Mr. Ferrell's private rooms, and after one startled glance from the fat, dead-eyed landlord himself, he led her up the stairs to the third floor, knocked on a door—and backed a little, not looking at her, as she opened the door and walked in.

They were there, whom she expected to see.

Mr. Ferrell, twisting swiftly to his feet from his place at the table, his right hand slipping like the head of a snake toward the inside of his coat lapels. The other man stopped, and fell away limply, as he stared at her and swallowed once.

Mr. Cartret, flung back in his chair with surprise; one thick, well-kept hand covering his big chin, his small, worn lips which moved once or twice, slowly, in prim fright, before his head too, came limply away and he murmured in deep politeness:

"Mrs. Linett. As I live." He seemed to gain assurance from the sound of her own deep, rich voice, and added, "I'm delighted, madame. A profound pleasure."

She nodded once, and said dryly, "Thank you."

The women—there were two of them—were about what she had expected. Young, rather common, though trying to correct it with the most elaborate criminal lines, the most elaborate charming fawning manners. The pert one had dark hair, masses of it in a great soft knot; the languishing one had pale hair in etic clusters beside her childlike cheekbones. The sort of women she would expect a Union agent and his gold to find to use.

She thought: These pallid creatures—these weak adventuresses—they should be on the China Coast sometime, and find out what women can be like, what they have to be. But she saw how Mr. Cartret had been hooked—beginning probably, with gambling losses to Mr. Ferrell. It didn't take much of a China Coast eye to see this deal.

"We'll play," she said.

"But, Anne—my dear Mrs. Linett," Mr. Ferrell said, "we . . . we were playing tonight."

"Never mind," she said. "We'll play it all I'll deal."

the green top of the big table she  
up a new, fresh deck. The cards  
flowed like fluid between her  
fingers, and she said, "Sit down."  
by one, hesitantly, in a queer way,  
at one another, they did sit  
And she dealt, the cards whisper-  
ing an opening fan around the table.  
"No wild cards," she said. "This is a  
positional game."

they played, pretending to be ab-  
surd in the faces of the cards; and after  
a while, with brandy on the table, pre-  
tending to be gay. Twice, Mr. Ferrell  
dealt the cards, almost imperceptibly  
adapting to a practiced eye, as his deli-  
cately spidery fingers twisted to deal.  
In her, her lip curled again; but her  
face remained blank and pleasant, a  
dreamy.

After a while, she noticed that Mr.  
Ferrell was sweating: clear drops stood  
on his rather fine brow, and  
a queer look at Mr. Ferrell, he loos-  
ened his collar. But the drops gathered,  
trickled suddenly into his eyes. He  
took a fine cambric handkerchief. About  
the time Mr. Ferrell began stealing  
glances, what he thought were casual,  
glances at his watch, slipped secretly out  
of his elegant waistcoat pocket.

The two girls twittered a bit over their  
cards, looking with petulant, childlike  
jealousness toward Mr. Cartret as they  
played their cards, as if pleading charm-  
ingly for his wise advice; and they  
talked publicly, charmingly, as Anne  
did in pot after pot. And the big, oily  
revolver was heavy in Anne's  
pocket.

WAS after midnight, and Mr. Ferrell  
had glanced at his watch quite a nerv-  
ous number of times, when she saw the  
clock. Mr. Ferrell nodded, swiftly, with  
a slight sidewise jerk of his small, smooth  
head, to the red-haired girl. And with  
most charming manners, the girl got  
up and excused herself and went into an-  
other room, and closed the door. Star-  
ting at the door, Anne thought quickly,  
"ring things out. That was the sea-  
ward room, the one whose windows, of  
the inn, faced the sea."

So, she thought, it was possible that  
Mr. Cartret had spilled, finally, just last  
night, or today. It was a hunch worth  
trying.

Quietly she, too, got up, and walked to  
the door to the seaward room, and flung  
it open.

The red-haired girl was at one of the  
windows, carefully busy. For on the

broad sill of the window were three big  
lamps each with a powerful reflector  
affixed to it—two close together, and  
then another a little to the right.

And the girl had lit the first lamp, and  
was bending over the second.

Anne could imagine it, quite clearly.  
A small boat from the blockading fleet,  
standing in under the shore, watching the  
windows of the inn. The lamps, then,  
two and one; and then . . . her hand  
came out of her pocket with the heavy  
revolver. It slammed once, jumping in  
her hand, and the one lighted lamp went  
to pieces in a sheet of flame.

"And now, my dear," Anne said to the  
red-haired girl, "we'll go back in and  
sit down . . . and wait."

BECAUSE she had turned very  
quickly, with the revolver in her hand  
as she motioned the girl out, Anne caught  
the rest of them—not quite flat-footed,  
but just rising, just reaching for their pis-  
tols.

"Please," she said. "I meant it. We  
will sit down."

Again, but this time under the merci-  
less, steady O of her pistol muzzle, the  
hands fell limply away. And they did sit  
down again. There was a smell of burn-  
ing oil, and rug and varnished-wood  
smoke from the seaward room. Behind  
her back, Anne closed that door with one  
hand, and came, too, and sat down at the  
head of the table.

"So," she said, "we will wait."

It was a long time. The longest time  
she had ever known. And the weight of  
the big revolver was making the muscles  
of her wrist jump, when—

Every mortal at that table stiffened  
suddenly, staring, listening.

For, sullen with distance across the  
sea, came suddenly the tolling of great  
guns offshore.

The great guns of the blockading fleet.  
And then . . . and then, a lighter sound,  
too—the nasty, jolting cracks of smaller  
guns, coming over the sea.

Her captain was coming in.

"I think," she said quietly, "that we  
will all fold our hands on the table.  
Where I can see them."

Reluctantly, they did. Their four pairs  
of hands were clasped, before the O of  
her pistol muzzle. Clasped in queer, al-  
most prayerlike attitudes, on the table.

And the smell of burning rugs and  
varnished wood made their eyes wild  
and scared and apprehensive in the blaz-  
ing candlelight.

"That's it," she said. "And we will

## What's This Little Bostitch Staple Doing on Convoy "X"?

THE CARGO bristles with Bostitching (machine-  
applied stapling) drafted for the war . . . for SPEED!

Speed in shaping ammunition belts for our soldiers  
to feed their guns . . . in assembling plastic scabbards  
for their bayonets . . . in steel-stitching parts for planes  
and tanks they will ride . . . in linking portable landing  
fields and emergency roadways . . . in the equipment  
that protects their ships against magnetic mines . . . in  
hundreds of other applications newly created for war  
purposes . . . in thousands of applications regularly used  
on civilian products but now enrolled in war service!

These wartime uses are further evidences that  
"Bostitch fastens it better, and faster, with wire."  
Meeting war production challenges is also creating  
new and improved Bostitch tools and applications for  
future use . . . nearly 800 Bostitch models and types  
make possible the right combination of machine and  
staples for each particular job.

If you have the necessary priorities, find out *now* if Bostitching  
can help speed your production . . . if priorities are not available,  
investigate Bostitching *now* so that you can apply these advantages  
and improvements immediately to quick post-war adjustments and  
production. Bostitch, (Boston Wire Stitcher Company) 56 Division  
Street, East Greenwich, R. I. (Bostitch-Canada, Ltd., Montreal).

"Did you say 'Is it cold?'?"

ED. GRAHAM

keep our hands clasped. And I think you might, you know, really pray, while you're about it." She stopped and listened. The great guns were rolling in peals—and the swift, running whacks of the smaller ones were still replying. "Because," she said, "if he doesn't get through, every soul in this room will die before I leave."

They listened, with their hands clasped, tightening. In blasting waves of sound, the frigates were firing broadsides. One after another, rolling in sullen majesty over the waters of the night. . . .

And from under the edge of the door of the seaward room, a thin page of smoke, growing thicker, began to pour upward into this room, and gather across the ceiling, dropping in swirls down toward the candle flames on the table, hurting the eyes, making the eyes of the four whom she watched widen with terror.

"We'll wait," she said. Then: "Keep your hands clasped, Mr. Ferrell."

"Anne!" he said. "Don't you remember—"

"No," she said. "A better man is coming in from sea."

And she could see him, as she held the revolver steady: a creased, partly laughing but maybe snarling face, now, above the edge of armor plate on his bridge.

Yes. Whatever he was—the swaggering, silly idiot!—he was her captain; and he was coming in from sea.

**T**HE room was thick with smoke. It was a choking smoke of wool and varnish, and tears were streaming down her cheeks. But the O of the pistol muzzle was steady as her captain's eyes.

And then, with a new authoritative blasting that jarred the dusty panes of that inn, the massive guns of the fort across the channel, opened fire. Those grinding roars shook the floor.

And running underneath them, still firing back, came the jolting cracks—the laughter—of the smaller guns.

Her captain had come in. And was running now under friendly guns that were firing over him at blockading men-of-war that had followed him in too close.

She sighed, and looked at Mr. Cartret. The door of the seaward room was in flames now, in charring, varnish-licking flames, and he was in silhouette against the swirling redness. And he looked back at her, that benevolent, big-chinned figure of respectability, through the smoke—and went for his gun.

The English revolver, that heavy oily adornment from the China Coast, whacked and bucked once more in her tired hand.

And then she got up, and went out, and turned the key in the lock of the door, and went down the stairs, and said good night with a slow, grave inclination of her head to the fat, white land-

lord, and walked down the hundred yards of road and got into her carriage under the black shadow of the hedge, under the stars, and said, "I think we will go home now," and folded her hands and closed her eyes.

**S**HE was in the drawing room when he burst open the front door and came walking swiftly in.

With her hair brushed out and newly pinned up in the most dignified fashion, she was in the drawing room, at the piano, playing a transcription of Mozart's *Eine Kleine Nachtmusik*—*A Little Night Music*—the one small and ironic comment she permitted herself.

Like a gale of wind, like a remembrance of violence and loveliness, he came through the drawing-room door . . . and stopped. Holding his peaked, his rakish cap over his heart.

"My darling," he said. "Madam! You are more lovely every time I see you."

Her fingers stopped on the keys. Her heart stopped, too. Slowly, she raised her head and looked around at him. He was laughing, that creased and red face. She wanted to share again.

She got up from the piano bench. Her knees like water. As weak as water with love. She said:

"I . . ."

"Darling!—what's the matter?"

"Nothing," she said. "I mean, I know. Not until I had nearly lost you. Never mind."

"Oh, you mean tonight? All night?" he said. "Don't worry about it. I gave as good as I took. A few patches up the holes, and I . . . D. Madame Hell. What is the matter, my lovely?"

Quietly she went to him and placed her face down on the salt-tasting white of his shirt front.

"Hush. Hush," he said. ". . . D. know, lovely, a funny thing. That night out on the South Cape, that inn, on fire as I came by, in the ch. Blazing like the very mischief."

"How . . . how odd," she said.

"Darling. Darling! Madame! Why are you crying? . . . Oh! I thought you were crying—but what the devil are you laughing about?"

Quietly, taking her face away, she said, "You."

And, picking up her skirts at the top of the dim staircase—the rich, lustrous skirts of a married gentlewoman—she bowed to him, as a great lady bows on a staircase, spreading her skirts.

She inclined her head so that he should not see her eyes. And picking up her skirts, she walked on up the stairs.

Tomorrow she would drive in her carriage again.

In time, perhaps, she hoped, she would learn the dignity and the courage of a gentlewoman.

THE END

## China Flight

Continued from page 28

grimly. Even if the Jap was lying, and ten to one he was, it would be a sheer waste to do anything here—this Jap would like to make a mess of him under her window! He looked up, but she was not there. He must hold his temper and plan something real. He walked slowly back to the Japanese compound, refusing to hasten one step, although the bayonets were at his shoulder blades all the way.

And upstairs in her room Jenny had flung herself upon the bed and was sobbing as she had not sobbed since she was a child.

**F**OR three days Shigo did not go near the hotel. Each day Daniel was called but it was only to parade him up and down the streets where the most people could gather to watch the strange sight of a white man between the shafts of a ricksha. It seemed they could never get used to it. The Japanese hooted and laughed, but the Chinese crowds followed him silently. They were the poor and the children. Well-to-do Chinese averted their heads and seemed not to see him. Sometimes an old woman put her sleeve to her eyes or an old man hid his mouth with his hand. Daniel, stalking along with his head held high, felt the infinite difference between Japanese and Chinese, between enemy and friend.

Back in the compound again, his mind

still restless with the idea of escape, he examined every face he passed as he went to his room. Was there one here who might help him? . . .

On the morning of the fourth day he was called as usual and he went out. The sky was a cold stone gray. The wind came from the sea and it crept through his cotton coolie coat. He felt bitterly depressed and helpless and he strode along, his mouth hard and his eyes on the wintry earth beneath his feet. One of these days—today, maybe—he would simply make a break for it and see what happened. He was tired of being cautious and waiting for luck. Then as he walked to the gate he felt someone trip and fall against him. Someone had darted out of the garage door with such sudden speed that it was like a catapult against him. He fell, clutching the other man, and they struck the ground together. In that instant he felt a hand thrust deep into the bosom of his coolie coat. It was only a second and they were on their feet again and he stared down into the face of the Chinese chauffeur.

"You son of a gun," Daniel said hotly, "can't you see where you are going?"

The Chinese dusted himself furiously and flung curses in stinging staccato syllables. "You turtle's egg!" he shouted. "Can you not look where you are going?"

The little fellow, whose words he could not understand, looked like an angry ban-

nam rooster. He lifted his foot, kicked Daniel's shins, and spat on the ground in front of him.

"Here, you" Daniel said slowly, "you can't act like that—you're as bad as a Jap."

"P'ei!" the little man said and strode away with large steps. But as he went, with that left eye of his which was turned away from the guards, he gave Daniel a slow American wink. No one could have guessed it who saw the angry set of his back and the strut of his walk as he went away. But to Daniel it was like a word from home. The fellow was fooling the guards! Dan put his hand into his coat quickly and touched a scrap of paper there and took his hand quickly away again. Whatever it was, it must wait until he came back and was safe in his room again. But could it be true that he had a friend?

At that moment Shigo came running lightly down the steps. He gave his customary curt nod and stepped into the ricksha and the parade began again. But it was not as it had been on other days for Daniel. Yes, he had a friend.

When he was back again and the door locked behind him, when the guards were lounging again beside the door, he got into bed and pulled the quilt over his head as though to sleep. There under the safety of his cover he reached into his breast and took out the slip of paper.

Upon it was scrawled in hit-and-run capital letters, misspelling nearly every word, this message, "Kepe up the friend Ling samsing hapen soonly."

"Keep your upper lip stiff, I am your friend Ling. Something will happen soon." It was easy enough to translate. He leaped out of bed and stood for a moment so full of joyful energy that he shouted aloud before he knew it. The guards rushed to the grille of the door and peered in. He saw their startled faces, and the impulse seized him, half of mischief, half to baffle them, to cover his involuntary shout. He pressed against the grille and distorting his face he howled like a wolf. Again and again he howled. The guards stared at him, their eyes widened and their faces blanched. Then without a word they turned and fled.

**S**HIGO in his office heard their hesitant double knock upon his door.

"Come in," he called sharply. He was impatient of interruption at this moment when as quickly as possible he must get these sheets of paper back to Jenny Bouchet's room. They were brought to him every day while she walked in the garden, and he read them swiftly and turned them. The messenger was waiting now outside in the hall.

The door opened and Daniel's two guards came in. At once he saw that

## A TRIBUTE

## to the Pontiac Dealers of America

FROM TIME TO TIME during recent months, we have had occasion to report to the American people on our progress in arms production.

Yet, while we in the City of Pontiac have been engaged in the thrilling task of building guns, torpedoes and other materiel that our soldiers, sailors and marines *use in actual combat*, thousands of other members of the Pontiac family have been contributing to the war effort in a degree that, as yet, is neither fully understood nor properly realized. We refer to the Pontiac dealers of America . . . some 3000 strong and scattered from Coast to Coast and from Canada to the Gulf.

Spurred by the knowledge that American industry cannot function to fullest effectiveness in war

production if the nation's automotive transportation is seriously impaired, they have "carried on" for over a year now in the face of steadily increasing difficulties.

Theirs is the important national duty of *PRESERVING AMERICA'S AUTOMOBILES* . . . of seeing that they are maintained in good, safe operating condition . . . and of keeping them running with maximum efficiency and economy until victory. And it is a matter of record that they are fulfilling that duty in a truly magnificent fashion, *despite decreasing revenues, despite the difficulties of maintaining adequate staffs of skilled mechanics, supervisors, parts managers, etc.—and in face of the countless other impediments to normal operation*

*that the war economy imposes on all business today!*

This, we hold, is a contribution to the war effort no less vital than that of direct arms production—because "*a man can't build a gun unless he can get from his home to the job*".

True, they have been able to carry on as they have largely by virtue of their management ability and their good standing in their respective communities.

But beyond that, it reflects a determination that nothing shall prevent them from keeping their facilities and specialized experience at the disposal of the civilian production army . . . *by whom they are needed now as never before!*

They call it "Doing their bit".

To which we add, "Well done!"

PONTIAC MOTOR DIVISION OF GENERAL MOTORS CORPORATION

"And can you count  
up to 60?"

**APPLICANT:** Of course! But what in the world . . .

**EMPLOYER:** A little joke of mine. I merely wanted to impress on you the fact that—in this office—we often use one sheet of carbon paper *sixty* times before throwing it away.

**APPLICANT:** My goodness! Don't the copies

get awfully blurred . . . and hard to read?

**EMPLOYER:** No, indeed. You see, we use Roytype's Park Avenue, one of the carbon papers made by the Royal Typewriter Company. And each sheet of Park Avenue can be used—not just 20—but up to 60 times, cleanly and clearly. This test copy proves it . . .

This is the sixtieth copy made with the same sheet of Park Avenue Carbon Paper, a product of the Royal Typewriter Company. This sheet of carbon paper had been used 59 times before! The test was made at the United States Testing Company, Inc., one of America's largest independent testing laboratories. See what a clear, legible copy this sixtieth one is!

Laboratory test No. 36092-NY, issued October 6, 1942

**APPLICANT:** I'd almost swear that was a first copy! How ever do they do it?

**EMPLOYER:** Their man tells me they have a special process called "deep-inking." It soaks the ink right down into the paper. Then, too, Park Avenue's extension edge lets you reverse the sheet, top to bottom, so all areas of the paper can be used.

**APPLICANT:** Gee. I bet if I'd known that much about carbon paper, you'd have hired me right off, wouldn't you?

#### Complete line of carbon papers

THERE ARE MANY different carbon papers in the Roytype\* line, made by the Royal Typewriter Company. One of these . . . it may be Park Avenue, or it may be another . . . will exactly fit your needs, depending on the particular type of work

**ROYTYPE**  
Carbon Papers and Ribbons

something was wrong. They were very pale and disturbed.

"What now?" he exclaimed. "Has the American escaped?"

They shook their heads in unison. "He has gone mad," the elder guard said. "He is howling like a wolf."

"Stupid!" Shigo cried. "It is a trick." The two guards looked at each other helplessly. Then the younger one spoke: "I ask to be put elsewhere."

"I also," the elder said, emboldened by the younger.

For answer Shigo darted from behind the desk and slapped first one man and then the other on the face. Neither moved nor put up his hand to his cheek. "Get back to your posts," he bellowed.

THEY went out without a word. And Shigo, left alone, sat down again with a great gust of a sigh. This story that she was writing so assiduously every day, what did it mean? He had ordered that Jenny be watched night and day, and so two holes had been bored into the decorations of the wainscoting. Through them, guards watched her constantly. She did nothing but write, they told him, and here was what she wrote, a novel, a strange, meaningless novel. No, there must be a meaning in it.

But what could it mean, this fantastic tale of a man and a woman alone on an island. Why a man and a woman? They were both Icelandic—why Icelandic? He had never been to Iceland—what sort of people lived in Iceland? But these Icelanders, the woman beautiful, the man handsome, had both been driven out of Iceland because of their crimes. They had met upon the wild seas, and had gone to the North Pole. Why the North Pole?

At the extreme pole they had found a strange uninhabited country, green and full of unchanging summer. But this was absurd. At the pole there was neither summer nor green. Nevertheless—so she had written—the two had left Iceland as strangers to each other, driven out separately for different reasons. The man was a murderer, a homicidal maniac, the woman a kleptomaniac. They were not in love with each other. Then the woman having stolen all the man had except the clothes he wore, discovered that she loved the man, and there was the immense struggle of whether or not she would return his possessions. And the man who plotted only how to kill the woman, now had to struggle between his love for the woman and his wish to keep her alive, and his desire to kill her.

Shigo read of these two, each mad, and wondered why Jenny wrote thus and why he tortured himself to read meanings into what she wrote. Was there some resemblance to himself in this man, Dort? And was Keyna like Jenny herself? He was sure that Jenny had some meaning in the story. Did she suspect even that he saw these pages every day? Accustomed to plotting, he could not believe that there was not some plot in her mind, too.

He made a few careful notes of the points which might help him to decide these difficult questions and then he put the sheets together and struck the bell on his desk. The shuffling humble stenographer came in and bowed and took them, and when she was gone he sat with his head sunk in his hands. There had been a pretty scene at the end of the story—a very pretty scene, where the two mad people discovered they loved each other. He thought of it and suddenly burned with longing for Jenny. There was all this passion in her? Oh, why not for him? He sat, thinking of her intensely, and suddenly he sobbed. He rose abruptly, and banged his bell again. When the

bent figure of the secretary appeared the door, he shouted:

"My car, in five minutes!"

"So—" the figure breathed and was away.

He strode back and forth twice across the room, then stood and stared out the window. A dark flush was creeping out of his collar and suffusing his cheeks. It was time for all nonsense to stop. He would go to Jenny and tell her so—make an end of everything.

But when he came downstairs, the American car would not move. Ling, chauffeur, put his head out from underneath it and reported, "Car no go."

Shigo waited in the chill twilight, tugging up the fur collar of his coat. He was burning hot and shivering at the same time. He felt ruthless and yet timid; he was anxious to do quickly what he wanted to do. He could not endure delay. From under the car came the sound of tinkering, and he stooped and peered under it.

"So," he said in English, since he could not speak a word of Chinese, "are you mending it or not?"

Ling crawled out, a smear of oil across his face. "No can do," he said calmly. "My no savvy what for he no go. Suppose tomorrow my talkee galage."

"Tomorrow!" Shigo said impatiently. He longed to slap the Chinese across the mouth. If Ling had been Japanese, he would have done so. But the other side of him was sensitive even before a Chinese—he would not behave in ordinary ways except before Japanese.

"Call the ricksha," he said shortly to the gateman.

He waited a few moments and he saw Daniel come out of his room between his guards and he stared at him, remembering what the guards had said. "The man looks no different," he told the contemptuously in Japanese. "He looks no more of a fool than ever."

They did not answer and he said to Daniel, "What's this about your going mad?"

Daniel grinned. "Never heard of it he said."

"The guards told me you were howling like a wolf," Shigo said.

"They must have been hearing things," Daniel retorted.

He saw that little devil of a chauffeur standing there and he watched him closely out of the corner of his eye. Did the fellow want him to know something?

"Car no go," Ling said cheerfully to Daniel.

"Come, why are you stopping?" Shigo yelled at Daniel suddenly.

Daniel picked up the shafts and started at his usual steady walk.

"Faster," Shigo shouted. "I am in a hurry."

"I'm not," Daniel said shortly.

SHIGO threw a command to the guards and the bullets sprayed the slush of the road. Daniel did not look to the right or the left.

Car no go? What was up? Anyway, no use getting shot until he knew. He felt suddenly so cheerful that he broke into a lope that nearly overturned the ricksha and left the guards far behind. Shots sprayed the slush at his feet and he felt Shigo's stick in his shoulder belaboring his shoulder blades. He stopped so abruptly that Shigo fell out of the ricksha and upon him.

"You—you—idiot!" Shigo bellowed.

The guards came running up, panting and angry, and Shigo's face was twisted with rage. "I could have you shot—at this moment—" he panted.

"You told me to run," Daniel said simply.

Shigo threw him a look of bitter hate

and stepped into the ricksha again. "You know what you do," he said. "Do not do again or I warn you that I shall shoot you."

"Where are you going, anyway?" Daniel asked.

"To the Cosmopolitan," Shigo said shortly.

The word sobered Daniel in a second. That was where this rat was going—again!

SHIGO did not pause at her door. He did not knock. Instead he inserted his key, turned it and walked in. She was at the small desk, writing, writing. The sheets of paper were flung on the floor. He looked up when he came in and he saw her eyes absorbed and luminous, her lips red. But he did not hesitate. He went to her and bent over her and seized her in his arms.

She seized his head in her hands and twisted her face away from his. "Shigo—don't make me hate you—I don't want to hate you."

In her clear voice the word "hate" struck him like a sword. He dropped his arms and she leaped up and put the chair between them.

"What has happened to you?" she demanded. She was sick with disgust.

"I will not wait any longer," he said.

She did not move her eyes from his reddened face. "But you will wait," she said still in that silvery clear voice. "You will wait because you know that you can't do this sort of thing. It isn't you—Shigo."

God forgive me for a lie, she was thinking. But I'll save myself anyhow.

"When people have said the Japanese were—like this," she went on, "I have always denied it. I have thought of you, Shigo."

He stared at her blackly, the pulse in his throat beating, his eyelids thickening. Then without a word he turned and left her as she stood. She heard his footsteps harshly ringing down the flagged corridor.

She stood without moving until she could hear them no more. Then she went to the door and locked it, and sobbing and crying softly, she pulled the chairs and table against it in a fury of anger and fear.

DOWNSTAIRS Shigo leaped into his ricksha and shouted something to the guards.

"Ha," they grunted.

"You," Shigo muttered to Daniel, "go as you are told."

Daniel did not answer. He threw a sharp look at Shigo's pale face and went as the pricks of bayonets guided him, now to the right and now to the left. What had the scoundrel done to Jenny? He had only been up there a few minutes—not long enough to have harmed her. He had been just about ready to make a break for it into the hotel to find Jenny when the Jap came out. What was it all about? Why had Ling fixed it so the car wouldn't go? How could Daniel find out anything?

He went, it seemed to him, a very long way until at last the streets grew cobbled and narrow. He had never seen this part of the city before. He smelled the reek of cold canal water, and the stones were wet under his feet. Then suddenly the guards halted him before a gate. He lowered the shafts and Shigo stepped out.

"You will wait," he said brusquely.

It was a curious gate, he saw, with a Cape Cod fisherman for a knocker. Two Japanese guards stood on either side and they opened the gate obsequiously for Shigo. Daniel, following the disappearing figure, saw above the gate the letters carved in stone, Gate of Hope. They were English letters, he saw to his astonishment. Wasn't that—yes, that was where the old American woman had come from—Mrs. Shipman!

INSIDE the Gate of Hope, Leone sat with Mrs. Shipman. She had come here day after day, bringing Mrs. Shipman one day some rice, another day a bit of meat. This was a strange house now, full of prisoners. Forbidden to go outside the walls, the conglomeration of women inside grew sullen and quarrelsome.

"Tiger cats, dearie," Mrs. Shipman said sadly now to Leone. "I get them together twice a day, morning and night, for prayers, but it don't calm them. They're restless. And here I am, just tied, and I can't do a thing. I tell 'em we ought to be thankful for food. But I don't hardly put it beyond one or two of them to make up to these Jap guards, even. That sort of thing gets into the blood like opium. I watch 'em, but—" Mrs. Shipman sighed. "I kind of wish sometimes I had been put into jail with the lieutenant that day," she said.

Leone lifted her head quickly. "Do you think he is still there?"

"Why not?" Mrs. Shipman asked.

They were sitting in her small ill-furnished bedroom, whose walls were crowded with cheaply framed photo-

## For Distinguished Service

graphs of all the "girls" who had ever passed through her house.

"And what of the American woman?" Leone asked.

"You mean Jenny Barchet?" Mrs. Shipman asked in turn.

"If that is her name," Leone said, "the one you say is so pretty and blond, that you are afraid lest she be—"

"Dearie, I am worried to death about her," Mrs. Shipman said. "I haven't heard one word about her. I can't find out. Wang went to the hotel and he says they won't let him even inside the gate. There's Jap guards there, too. My, my, and to think I once liked the Japs because I thought they were a clean, neat kind of people! I guess only the Lord knew their black hearts. Well, I do, too, now. I'll never trust one of them again. Would you?"

Leone did not answer. Every time she came here she asked herself the same question: Should she or should she not tell Mrs. Shipman that she was in love with Daniel? But Mrs. Shipman was only so charmed to be able to talk that she sat back in the old wicker rocker, her gray worsted skirt sagging between her widespread knees, and talked on.

"Though why I should worry about any other girls than my own, dearie, and now you come home without your husband, is more than I can see sense to."

"Don't worry about me," Leone said, smiling her delicate melancholy smile. "I came home—because I could not go to Hong Kong, Mother Shipman. No, it is not easy for me to be the wife of a foreigner. And I do not love him. I think I shall never love him."

MRS. SHIPMAN'S face grew sorrowful. "Leone, don't begin on that again. You hold fast to what I told you. It isn't love that counts after a while—having your own house for shelter and a man in it that'll be kind to you. When you've seen so many poor girls as I have, going from man to man, and every man kickin' them down deeper, and hell at the end, then you know like I do, dearie, that if you can just get a man to marry you and keep you as his wife, you're wonderful lucky. It's what I always try to get for my girls, however poor the man. And Arnold isn't a poor man, dearie—he's very successful, and let me tell you it's very few white men you'll get to marry a girl that ain't all white. I know, for I've tried. 'Tisn't that they mind so much—men don't really care what color a girl is if they have a fancy for her—but it's the white women that make the men's lives miserable—their mothers and sisters and their friends, wives and all."

"I know that," Leone said in the same low voice.

"Leone, you do," Mrs. Shipman said vigorously, "for I told you before ever I let you marry Arnold Hatford. I said you weren't to get upset because those white women wouldn't come to see you. I told you just to thank your lucky stars you had a roof over your head and food to eat and clothes to wear and a good man's love. Let the other women come or not, you had all you needed."

Leone's head drooped. "I think I could—remember such things if I were a little older," she faltered. "But I am very young, Mother Shipman—I am not yet twenty-two. It is hard to think in such ways when one has never been in love—before."

She lifted her head.

"I am in love—with the American," she said simply. "You will ask—how did I meet him? He came once or twice to our house—with friends. And Arnold invited him to go on the houseboat with us, for a week end. It was the week end of Pearl Harbor."

Had she told Mrs. Shipman that she had an incurable disease she could not have caused the kind old woman more dismay. She leaned forward and seized Leone's narrow hand in her fat, wrinkled one. "Oh, dearie," she said, "it's bad, bad news. We've got these Japs and the war and it's about all I can stand. Because, dearie, when a girl thinks about love, it's unaccountable what she will do. I've seen it. There's that Meri I have now—the trouble I have with that girl! French, dear—and there's two kinds of French girls. One is the kind hard as nails that thinks only of themselves and couldn't fall in love no matter what comes their way. The other kind it seems like they feed on love like a baby on milk. When they don't have it, they die."

LEONE drooped her head. "I, also, am half French," she murmured.

Mrs. Shipman's jaw dropped. "I guess I never remember it," she said frankly. "And as for that, I guess it's the first time you ever said it yourself to me. Al-

ways insistin' that you was Chinese—"

The door opened suddenly and the girl Meri thrust in her dark saucy face.

"What is it, Meri child?" Mrs. Shipman asked. But the girl did not answer. Instead she came sidling in, a wisp of a creature with huge, tragic eyes and a mischievous mouth. Obviously there was something unbalanced in her, something mad. She came close to Leone and looked at her as a child does at a stranger, with frank and unashamed curiosity. Then suddenly she dropped at Leone's knees.

"You are so pretty," she breathed.

Leone smiled and drew back a little. This strange child!

"And who is your lover, Mademoiselle?" Meri said innocently. "For surely you are very well loved? You have on such a pretty dress—all silk."

"You see what I mean," Mrs. Shipman said sadly to Leone.

But Meri seemed not to hear. She put up her hand and touched Leone's soft pale cheek. The skin was fair, but there was the tone of ivory underneath it. "Are you not French?" Meri whispered. She spoke in French, the delicate syllables dropping from the end of her tongue. "I think you are French."

"My father was French," Leone said. In spite of herself she was speaking French, a language she had sworn she would never speak again, because her father had taught it to her, holding her on his knees and roaring with laughter at her baby talk.

"Ah, I know, I feel it," Meri said. She leaned her elbows on Leone's knees. "Shall we be sisters, you and I? See, I have no one—no mother, no father. I am very much alone. And now, no man comes here. We are not allowed lovers. She does not allow it." She threw a look of dark scorn at Mrs. Shipman. Then she laughed. "That one!" she cried and thrust out a little narrow red tongue, as quick as a snake's tongue, at Mrs. Shipman. "What does she know about love?"

Mrs. Shipman regarded Meri with eyes full of shrewd and patient common sense. "Now, Meri," she said, "you go back to your work, child. I don't believe you have got the living room all dusted. Everybody has to work around here, you know—we can't afford help now in war-time."

Meri leaped up with a whirl of skirts. "Oh, you old woman!" she shrieked and ran from the room and slammed the door.

In the silence, Leone and Mrs. Shipman looked at each other. "French,"

to his feet, he heard a girl's piteous scream. It came from inside the house. No—but was that Jenny? Had she been brought here? Quicker than he could draw his breath he had leaped up. He was inside the gate. Before the sluttish guards could wake to see what he had drawn the bar and the gate was locked and the guards were shouting outside. A startled old Chinaman looked from a room across the court. Daniel gave him no heed.

He darted across the court and into the main door opposite. Where was she? He found himself in a large empty room and for a moment he looked this way and that. Doors opened and he saw the heads of half a dozen women looking out. None of them was Jenny. Then somewhere in the back he heard the sound of a woman sobbing and he followed it. He stumbled across a high Chinese threshold in the darkness and pulled aside a curtain. There, in a room lit by a small oil lamp, he saw Shigo. He had a young girl by the arm, pulling at her and the girl was twisting and turning. But she was not Jenny. Oh, thank God, it was only a young thin creature who he had never seen before. It was she who was sobbing in childish weeping.

Then he saw Mrs. Shipman. She was pushing between Shigo and the girl as she looked up and saw Daniel. "The fellow wants a girl," she said simply. "I don't know what he comes here for—I know I don't run that kind of a place. She was so angry that she did not even wonder where Daniel had come from."

SHIGO'S handsome face was flushed. He stepped back abruptly. "I do not believe the girl is unwilling," he said coldly. "She is afraid only of you."

"This Meri," Mrs. Shipman said to Daniel, "she's crazy, poor child. Such terrible things have happened to her, she couldn't let her go—she doesn't know anything."

"The girl will come with me," Shigo said sullenly.

Daniel strode forward, fists clenched.

But with complete calmness Shigo put his hand into his hip pocket and brought out his pistol. For one second the two stood, staring into each other's eyes. Then Shigo began to back out of the room and the girl followed him.

Daniel leaped forward but Mrs. Shipman sprang at him from behind.

"Now then," she said firmly. He felt her two arms about his waist and suddenly she had jerked him across the room into another and slammed the door between and locked it.

"Save yourself," she said resolutely. "I'm going to need you a lot more than this. We'll have to let Meri go."

"I could have killed him," he said.

"So could he have killed you," Mrs. Shipman retorted. "Now quick—how many guards were at the gate?"

Before he could speak, someone came out of the shadows of the room, a slim figure in a Chinese robe, whom he did not at first recognize. "Daniel James," the girl said. He stared through the half twilight and saw Leone.

"You," he whispered, "but how did you—"

"We haven't a minute, you two," Mrs. Shipman said sharply. "That fellow will send the guards for soldiers, and the place'll be taken over. I have my other girls to think about. Leone, you go right on home this minute. I wish you hadn't been caught here by this."

"But you will come, to my grandfather's house," she pleaded, "if I go and prepare the way for you?"

"He don't want us," Mrs. Shipman said.

"I'll make him," Leone whispered and

Mrs. Shipman said sadly, "all the way through." She leaned over and patted Leone's knee. "Be glad, my dear, you're half Chinese. It gives you ballast."

"Yes, Mrs. Shipman," Leone murmured.

She rose a little wearily and buttoned her outer coat about her. "I must get home before it is too late," she said.

"That's best, my dear," Mrs. Shipman said.

OUTSIDE the gate Daniel had not moved. He was listening to every sound. He must not miss a trick. No, he would not go into the house. He would escape down the street—first escape and then? In the anxiety of his waiting, he felt himself grow tense and more tense. All the sounds of the night-muffled, captive city were magnified in his ears. He heard the low conversation of the guards and their yawns. A gate shut somewhere and there was the small screech of the iron bar being drawn. A child cried in a house across the street and was hushed.

He looked up cautiously and saw that only one guard was left at the gate. The others were tramping off down the street. Of his own two guards one was asleep and the other nodding as he leaned against the wall. Was this the moment? He remembered his afternoon's trick and how it had terrified his guards. He would pretend again and in the moment's dismay of his guards he would get away somewhere and find his luck.

And then, even as he was about to leap

# Lockheeds GET INTO THE AIR Quicker! BECAUSE OF TRUCK- TRAILERS

★ Lockheed fighters and bombers, the death-dealing Lightnings and Hudsons, got into the air quicker on all of the far distant fronts where they've lashed and blasted the enemy . . because of Truck-Trailers.

## LOCKHEED'S TRUCK- TRAILERS CONSERVE RUBBER, STEEL, FUEL, MOTOR POWER

**Motor Power!** Since a truck, pulling a Trailer, can haul far more than it is designed to carry, fewer power units are needed. Moreover, same loads pulled on Lockheed's Trailers are so heavy that only far bigger trucks could carry them. Thus large motor units are released for military work for which they are essential.

**Rubber and Steel!** A Truck-and-Trailer combination uses about 16% less weight of tires and 25% less steel than do the 2 trucks required to carry the same load.

**Gasoline!** A truck, with a Trailer, uses far less fuel than the one large truck or several small trucks it replaces.

## Convert

your trucks into tractors and make them haul two or three times as much. Conversion is simple and inexpensive. Ask your Fruehauf Branch.

That's because production is speeded at the big Lockheed plants on the West Coast by the faster inter-plant handling of material by Trailers. Minutes and hours gained here and there in production mean precious days and weeks gained in the delivery of these war planes.

Lockheed's fleet of Fruehauf Trailers, which started with the purchase of three units in 1939, performs many tasks, most of which could not be handled in any other way.

Material must move swiftly and regularly, day and night, between the No. 1 and No. 2 plants, 19 miles apart over a traffic-congested route. Trailers, hauling about 8,000 pounds each and working on a "shuttle system", make nine round-trips per day and help keep the assembly lines fed. "Shuttle system" means that one truck-tractor handles three Trailers . . truck and driver are always busy pulling one Trailer while the others are being loaded and unloaded at the two plants.

Still more time is saved by Fruehauf automatic coupling . . the driver couples the Trailer, or uncouples it, without leaving his cab.

Maneuverable? Truck-Trailers worm through lanes inside the plant where trucks big enough to carry comparable loads couldn't move.

Versatile? They carry a multitude of items . . wings, propellers, engines, patterns, jigs, etc.

Economical? There has been no repair cost . . only nominal maintenance.

## YOU MAY ALWAYS BE CONSTIPATED UNLESS—

You correct faulty living habits—unless liver bile flows freely *every day* into your intestines to help digest fatty foods and guard against constipation. SO USE COMMON SENSE! Drink more water, eat more fruit and vegetables. And if assistance is needed, take Dr. Edwards' Olive Tablets. They not only assure gentle yet thorough bowel movements but ALSO pep up liver bile secretion to help digest fatty foods.

Olive Tablets, being *purely vegetable*, are wonderful! Used successfully for over 20 years by Dr. F. M. Edwards in treating patients for constipation and sluggish liver bile, today Olive Tablets are justly the choice of thousands upon thousands of grateful users. Test their goodness TONIGHT! Follow label directions. 15¢, 30¢, 60¢.

disappeared instantly, her eyes clinging to Daniel.

Mrs. Shipman peered through a crack in the door. "He's gone," she said in a loud whisper. "But he'll be back."

She opened the door. Everywhere there was perfect silence. She stood for a second staring about her. "I guess he's taken that Meri," she said sadly. "Well, some man would have anyway, sooner or later. She was not even afraid of a Jap, poor child. It was true it was me she screamed at. I was just comin' out with Leone to see her started when I saw Meri makin' up to him. She makes up to any man, and don't know what she's doin'. I'll have to get her back as soon as I can. Come on."

And then standing beside her, he saw her, like an old general, marshal all her forces. She shouted and the girls whom he had seen came running out to her. They were all ages, all colors, but they looked at her with the same anxious eyes. She spoke in her broken Chinese, mixed with pidgin English, and he could not understand her. But they did. They listened, their eyes fixed on her face, nodding and murmuring, little bundles in their hands. In a moment they were flying toward the back gate and she was behind them. The old Chinese whom he had seen put out his head was there at the gate and one by one he thrust into each girl's hand a little money as she passed through.

"Goodby, dearies," Mrs. Shipman cried, "goodby and be good girls, every one of you, and do like I told you! Every girl go to where I told her. Mamie, you look after Dorothy like I told you because she is so little. You do what I tell you, girls!"

They cried back at her in a dozen languages and suddenly they were gone, like birds flying out of their nest. Daniel standing by Mrs. Shipman did not move in his astonishment. When they were gone he looked down at her and saw that she was weeping.

"There they go," she muttered, "and I have kind of a feeling I'll never see them under my roof again. God save the poor dears—I knew it was coming and I had old Wang ready to give them each a little something as they went. It was the last of my burial money, that Paul told me to keep."

But before she could wipe her tears they heard the sound of marching feet at the front gate. A second, and feet were marching across the court. Without another word Mrs. Shipman seized his hand and they, too, ran out of the narrow back gate.

OLD Mr. P'an sitting late in his study as he always did was astonished to see Leone push aside the curtains of his door. She who was always so neat, so beautifully dressed, looked as though she had been caught in a storm. Her hair was blown about her face and her feet were muddy.

"Grandfather!" she panted.

He looked over his spectacles at her. "Grandfather, the enemy is after Mrs. Shipman and—the American!"

Mr. P'an put down his book. The very sort of thing in which he dreaded being involved was about to happen!

"What has that to do with me?" he asked.

"Grandfather, they must come here," Leone said.

"I cannot allow it," Mr. P'an said clearly. "If I could save them, I would do so. But it would mean my death and yours and those of our innocent servants, who have devoted their years to us."

"Grandfather, it would be only for a few hours," Leone pleaded. "Until we could get them out of the city. Besides,

why should they not come here? No one would think of this house. Besides, Grandfather, think of what Mrs. Shipman did for me—and for my mother. Grandfather, you are a good Buddhist. Will you not be responsible for their deaths if you refuse to help them?"

He looked at her uneasily. It was quite true that he was a good Buddhist and that, therefore, he hated the taking of life.

"What would I do with them if I saved them?" he asked her. "It may be they are ordained to die."

"I will take care of them," she cried passionately. "If you will let them stay only a few hours, Grandfather, I will soon take them away."

"Where?" he asked.

"I have a place," she replied.

She was very beautiful, he thought sadly. She had been a beautiful little girl and he had never denied her anything. Now, poor child, why should he deny her this, although he did not believe her? After all, what did it matter if any of them got killed? He was old and what had she to hope for, with her confused blood? "Well, let them come then," he said. "But I do not wish to see them."

"You will not," she promised him.

She was gone on the words, and he sighed and took up his book again. Underneath the quiet of this room at any moment the world might come to an end! And what could he do if this were his fate?

But already Leone was holding the gate wide open in the darkness. The gatekeeper was asleep and she had not waked him. If the two whom she expected could come in without his knowing it so much the better. She would take them to her own rooms and for the night at least no one need know they were there. Before dawn she would lead them out herself, disguised in any way she could devise. It must be before dawn, before the blue of their eyes could be seen in the sunlight. But for this moment she was only straining to hear the sound of their footsteps. She clung to the gatepost, listening.

And then after a long time, so long to her that she had no idea of how long it

really was, she heard the sound of feet and the sound of Mrs. Shipman panting. A moment more and they were there. She drew them into the room soundlessly, hushing them as she so, and soundlessly she locked the door and led them toward her own room. Then only when the doors were locked and the curtains drawn did she turn the light.

Mrs. Shipman had sunk on the floor. "Oh, my," she was panting. "Oh, my, haven't run like that—since I was five."

They raised her, and she and Daniel led her to the bed and let her lie down and there she lay, her eyes closed, purple face gradually paling.

ONLY when she seemed able to breathe again did Leone turn to Daniel. She was very pale and overbeating of her heart her eyes were gray. He looked better than she had hoped could, she thought. He was not too thin. But his unshaven beard made him seem older and very haggard.

And he looked down into her pale face and knew nothing of the beating heart. "How did you come here?" he asked her wonderingly.

"There is not time for me to tell you," she said unsmiling. "I must think of one thing—how you—and she—can escape from the city."

"Escape from the city!" he echoed. She saw a strange look come over his face.

"You are in danger of your life," she said. "There is no time to lose in getting you out of the city."

He met her eyes with sudden resolution. "Thanks a lot," he said abruptly. "But I can't go out of the city yet. There's a girl I've got to get out first."

As though he had spoken her name, Jenny Barchet was there in the room before Leone's eyes. She had never seen the American girl, but she seemed to see her now, beautiful, fair-haired, blue-eyed, the girl she could never be.

Mrs. Shipman sat up suddenly. "O dearie!" she cried, in pity.

But Leone turned to her proudly. "Of course, he is right," she said. "We must find her and save her, too."

*That dream home on*

*will come true*

**Y**OU'LL like living on Bond Street.

Cool, green lawns, and children's laughter in the twilight. Tall, friendly trees, sheltering a houseful of happiness.

You can start plans *today*.

Stamp by stamp, bond by bond, you can build a home with comforts and conveniences far beyond your fondest dreams. For all those wondrous aids to Better Living that seem just fantasies now, will be *realities* tomorrow.

Marvelous new electrical servants that come right with your Victory Home on Bond Street . . . that's "Better Living Built In!"

The War Bonds you are buying today are your Bond Street Building Fund. Invest all you can, all the time. It's the one sure way to happiness and security for yourself . . . and to peace and prosperity for your country.

**TO SERVE YOU IN WARTIME**

*The General Electric Consumers Institute is dedicated to the service of America's homes and carries on constant research on such home problems as:*

Nutrition • Food Preparation • Food Preservation • Appliance Care • Appliance Repair • Laundering • Home Heating and Air Conditioning

WAR BONDS WILL BUILD NEW VICTORY HOMES TOMORROW

Red Skelton says dunking is probably the oldest form of rationing. It combines eating and drinking in one simple operation and eliminates using sugar in your coffee, provided the doughnut is sugar-coated. The only real problem, however, is: Where are you going to get the coffee?

Barbara Stanwyck's favorite salad is a combination of lettuce, tomatoes, celery, and chicken or leftover bits of meat. She says you may fill in with fish instead of the chicken or meat, if you like. Mix ingredients together with your favorite salad dressing just before serving.

Deanna Durbin recommends this sauce for spaghetti. You begin with one small onion, chopped; two garlic cloves, chopped; one half cup of salad oil. Cook together until onion is browned. Then add the following one at a time: one small can tomato paste; three and a half cups of chopped fresh tomatoes or one large can of tomatoes; three cups of hot water; three teaspoons of salt; one fourth teaspoon pepper; one fourth teaspoon cloves; one half teaspoon sage; two bay leaves; and one fourth teaspoon rosemary. Cook this mixture about one and a quarter hours over a slow fire. Don't cover, stir often. Pour over thin spaghetti which has been cooked ten minutes. This makes enough sauce for one and a half pounds uncooked spaghetti or twelve servings.

## WHAT'S COOKING IN HOLLYWOOD

PHOTOGRAPHS BY GEORGE DE ZAYAS

WITH shortages of meat, eggs, gasoline, rubber and whatnot worrying the nation, Hollywood came up with a number of bright ideas. Fortunately, indeed, each idea when properly executed is quite edible and, for a change (from the Hollywood point of view), quite economical.

Whether you are a movie star or John Citizen bucking a rivet gun in an aircraft plant, eating is pretty important, and eating well is doubly essential. With conservation a prime consideration, it isn't how much money you can spend, but what you are able to buy and what you can "stretch" that count.

Hollywood has done a complete about-face and banned the lavish, costly dish. But, of course, Hollywood wouldn't be Hollywood unless it put a few frills even on hamburger. In many of these dishes on the new "ration" menu, influences from South America and other cor-

ners of the world find their way into the kitchen.

These days when the inhabitants of Glamor Town take off their frills and sit down to dine, the taste must be varied, but every meal is economical with the full knowledge that a quarter of a pound of butter or a pound of ground round steak is just as valuable in Hollywood as in Wheeling, West Virginia. Rarer.

Lucille Ball stretches her butter by adding one fourth cup of milk, one fourth cup of sour cream, sweet cream or evaporated milk to one pound of butter. She creams the butter first, then adds milk and cream gradually and whips in an electric mixer until blended. This method makes one half to three fourths again as much butter. This "whipped butter" can't be used for baking, but is fine for vegetables, tables, and on breads, toast or rice.

men Miranda came forth with two recipes à la Brazil. They're called paxada and peadinho. Feifoada is made by soaking enough Brazilian black beans for four people overnight. Pour off the water, and add one cup of garlic, a piece of pork, two small sausages (cut in cubes). Add water, cover and cook over a slow fire for two and a half hours. Then add a chopped onion which has been browned in oil. To make peadinho, cook one pound of chopped spinach, add one half pound of chopped meat which has been fried. Then add one onion and a pound of sliced tomatoes which have been cooked slowly in drippings. Mix this sauce usually with the spinach and meat. Try these two dishes and you'll know why Brazilians dance the Samba. Both recipes will serve four people

Charlie McCarthy shows Edgar Bergen how to remove the T-bone from a sardine. Charlie explains that you throw away the meat and eat the bone. "The bone is rich in roughage, you know, old boy," he says. Disliking waste, the solicitous Charlie will eat the meat himself

Veronica Lake makes Bell Peppers by boiling one cup of rice in salted water. Drain, wash rice in cold water. Add two cans tomato sauce and half-pound of fresh mushrooms which have been sautéed in ham drippings. Stuff six peppers, top with sliced pimienta cheese. Bake for half an hour

## Double, Double, Toil and Trouble

Continued from page 12

of Telepathy, appealed to him. He did not like to be pinned down. Yet in that dissertation—after she had been at him continually about it—he had wrung from himself some explicit conclusions. The true telepathist, he had maintained, could read the thoughts of others much more exactly and comprehensively than had been hitherto supposed. Also, this faculty was usually combined with a great power of suggestion—a good mind reader was almost always a good hypnotist. On the other hand, it was a silly superstition to assume that a gift of this kind was bound up with the power of summoning the dead, prophesying the future, or anything of that sort. Anybody who claimed to have such powers was a swindler.

"Thank you, Frau Tirschenreuth," he heard himself saying. He took her hand and pressed it. Her eyes, the practiced eyes of a sculptress, gazed at that hand and could not tear themselves away from it. She had modeled that hand, the way she had modeled his face. It was a white, well-cared-for, skillful, fleshy, brutal, violent hand.

He meanwhile was moved by the thought that she had done something for him, and not for the first time; something difficult and wearisome.

"I'm sure it wasn't easy," he asked, "to persuade Professor Hravliczek?"

"It wasn't easy," Tirschenreuth admitted without looking at him.

"What did you have to give him for it?" he asked point-blank; he wanted to know how much he was worth.

"The Philosopher," she said, with the same frankness.

THE Philosopher was a small bronze statue; Tirschenreuth had had many offers for it, but she had loved the piece and had not wanted to part with it.

"What did Hravliczek pay for the statue?" he asked; his deep tenor, usually silken and caressing, sounded constrained.

"I've had higher offers," said Frau Tirschenreuth evasively. "But he paid quite decently," she added quickly.

Anna Tirschenreuth was not miserly—Oscar knew that from repeated experience—and it would have been a little thing for her to put at his disposal a sum on which he could have lived for three or four years, comfortably and without commitments. But for that she was too strict and pedagogical. That would not be good for him, she thought. She preferred to give him a secure foothold through the job, and to reach that end she had taken the painful roundabout way of sacrificing the statue.

It warmed his heart that Anna Tirschenreuth valued him so highly. He would prove to her and to himself that she had not overestimated him. That he was at last being given a chance to devote his whole strength to his talent, he would live up to it. He would write the book. He would scribe something unique, what could experience: Possibilities falls of Telepathy.

Having formed this solemn resolution he did not hesitate to ask Anna Tirschenreuth for a loan of the strength of the contract he was to conclude with Hravliczek. If she would lend him 250 marks—which would respond to his first month's salary—he could escape the tedious conditions of living with Alois Pranner and his quiet retreat in Rumfordstrasse.

Frau Tirschenreuth gave him the money.

A FEW days later Oscar received a telegram from Berlin in which his brother Hans, or Hannsjörg as he called himself, informed him that he had been released from custody and would arrive in Munich the day after tomorrow.

Before everybody, especially Alois, Oscar had emphatically subscribed to Hans' version of the affair: he had killed his opponent during a fight, in self-defense. But in his heart Oscar had known that the position had been right: Hans had shared in Garnet Lizzy's earnings and had shot Wiedtke the painter because the latter had stood in his way.

So it was with all the more relief that he read the telegram which brought news of the happy turn of affairs. There was any being in the world he loved, then it was Hans, his brother.

On the evening of the appointed day Oscar stood on the station platform, craning his neck, while his eyes searched the cars of the Berlin train.

There he was! He was climbing the steps of a first-class compartment. He seemed slimmer than Oscar had expected, all his features sharper, his mouth narrower, his eyes more gleaming, his manner more over, cheerful, mischievous, crafty, confident, impudent.

"It's wonderful to have you again," Oscar declared vehemently several times over.

When Hans said he was going to stay at the Hotel Kaiserhof, Oscar's relief for his brother's ability to make his money increased. They covered the short

"I tried to tell the sergeant, sir. It got stuck this morning, just after breakfast"

COLLIER'S

COLLIER'S

BARBARA SHERMUND

re to the hotel on foot, through the  
rful noise of the city's evening  
le.

ans engaged a good room, regis-  
erl. His baggage was brought up; he  
nacked and washed. Oscar kept him  
pany; with genuine emotion he  
ed at his brother's slight frame. The  
shrimp, he thought. They chatted  
e Hans washed. Now he was talk-  
opening up more. He told how his  
ction had fluctuated as the position  
e Party, of the Nazis, had been more  
arable or less. "But even when things  
ened in a bad way," he said, "at bot-  
I never doubted that they'd turn out  
light. I knew the Party would manage  
And they did manage it."

hey ate their dinner in the room, and  
Hans went on with his report. He had  
come a hero of the Party, a great man.  
I was in Munich at the Party's expense  
for the Party's purposes. Hence the  
ed hotel and the first-class carriage.

later, Hans told him that the next day  
was going to be introduced to the  
Fehr at the big Party meeting in the  
Krone Hippodrome and receive the con-  
tulations of the Munich party mem-  
s. Manfred Proell himself was flying  
m Berlin to introduce him to the  
Fehr. Of course, Oscar must come  
k. Oscar was deeply impressed.

HE car in which the Lautensack  
brothers drove to the Krone Hippo-  
ome, to Adolf Hitler's mass meeting,  
moved forward very slowly. From all  
es people were streaming in; there  
re police everywhere. Expectation,  
ecitement, was in the air. In the last  
ections the Party had risen to the posi-  
tion of second strongest in the Reich.

Oscar had applied for membership a  
few weeks before. But he was too late,  
now everybody was begging for it, and

the Party leaders had ordered a tempo-  
rary halt.

Hans scolded his brother affectionately  
for paying so little attention to such mat-  
ters; it was important nowadays to be a  
Party member. Now, he, Hannsjörg,  
would have to spring into the breach  
again. But he'd manage it all right. He  
would get Oscar admitted to the Party.  
True, a membership number as high as  
the one Oscar would get through the  
regular channels wouldn't do him much  
good. But he would fix that and get  
Oscar a low number. And when Oscar  
just smiled, he assured him: "You can  
believe me. Your brother happens to be  
somebody in the Party."

Oscar did not contradict him; but his  
expression remained incredulous. Hans'  
smartness might get him just as far as  
it had in his best days, make him a suc-  
cessful pusher, a blackmailing journalist.  
So he might now be a well-paid political  
agent. But "a somebody in the Party"?  
No—the kid was certainly talking too  
big.

Yet when they came into the room  
where the notables of the Party were  
gathered together, Oscar realized that  
Hans had by no means exaggerated.  
With his own eyes he saw that his Hans,  
little Hansl, the son of the late city clerk,  
Ignaz Lautensack, of Deggenburg, was  
the center of this brilliant gathering. The  
leaders of the most influential political  
party in Germany thronged around him,  
they congratulated him, took pains to be  
introduced to him, asked him respect-  
fully for his opinion on political prob-  
lems. Oscar was stunned.

The person who seemed most friendly  
to Hannsjörg was a man whose face was  
known to Oscar from the newspapers:  
the chief of staff of the Party army, Man-  
fred Proell. Hannsjörg was treating him,  
for all his subservience of manner, with

# SYMBOLS OF SUPERIORITY

\*The Corvette—symbol of Canada's fast-expanding Navy, is speedy and maneuverable—does a magnificent job of convoy duty and helps free the seas of enemy raiders. The G & W Label has been a symbol of superiority in whiskey distilling and blending for more than 111 years.

## More Pleasure Per Bottle!

ASK G & W enthusiasts why they prefer these fine whiskeys and, frankly, you'll get pretty much the same answer—*more pleasure per bottle!* That's been true of these whiskeys from the time of the stately Clipper Ships to the modern streamlined Corvette\* of today. Take G & W Five Star, for example. Rare base whiskeys are responsible for the distinctive body of this matchless blend. Specially "rounded" spirits lend it a rich smoothness, an extra mellowness altogether its own. Best of all, this premium blend is now moderately priced. Try G & W Five Star in your favorite drink. One taste is *convincing!* Gooderham & Worts, Ltd., Peoria, Ill.

G & W 5-Star Blended Whiskey, 86 proof, 75% grain neutral spirits

## G&W Five Star Blended Whiskey

intimacy which the other tolerated with a smile. Proell was not very tall, but nooth, well-groomed, rosy-skinned, with a tendency to stoutness. A pair of light gray eyes were set in a round, first bald head. His uniform was not coming. He gave Oscar a white but nonetheless powerful hand.

"h, so you're our Hannsjörg's roer," he said. "Hannsjörg has told me a lot about you. You're just the way I imagined you," and he eyed Oscar with embarrassed scrutiny.

OSCAR was not sure how he should interpret Manfred Proell's words. The powerful person obviously had a more than friendly relation with Hannsjörg and was therefore showing him, in his favor. Yet in spite of his comfortable manner he had something arrogantly scornful about him. He was the center in the gathering, he felt himself as such, was treated as such, and Oscar could really smell that he was destined for greatness. Yet he also gave out a sense of foreboding, of disaster, and much as Oscar was tempted to win his friendship, his inner voice warned him not to get involved with the man.

The main reason I came to Munich," Manfred Proell told him, "was because I wanted to introduce your brother to the Führer personally. Since Hannsjörg gets it, I'll help you make the Führer's acquaintance, too, if you like." He smiled, and his light gray eyes looked almost with amusement into Oscar's dark eyes.

When they made their way into the circular hall of the circus. Oscar admired the magnificent technique with which the party got up its public exhibitions. Everything contributed to a common effect: the threateningly sinister black swastikas against the white circles on the blood-red provocative banners, the brown uniforms, the thunderous music, the yells, the fumes, the dull avidity of the crowd, the singing in front of their beer-filled mugs and waiting to roar their *Heil* and their enthusiasm at the Führer, the German Messiah.

Now the Führer was coming. He walked forward and stepped onto his platform to receive, with masculine composure, the acclaim of his faithful.

Then he spoke, in his practiced voice, filling the hall and their hearts. Oscar was an expert; it was his profession also to work on the masses. With the knowledge born of his training he watched the speaker's performance. Like the Führer, he too sprang from the Bavarian-Bohemian border. Like the Führer, he too had difficulty in speaking pre German instead of his native dialect and in avoiding errors in the basic rules of German grammar; for like the Führer, he too had run away from school, trusting his intuition more than academic, scholarly training.

Oscar loved the man up there more profoundly than the others; he knew him more profoundly. He had his intuition in common with him, his "perception," his inborn knowledge of the souls of others. It made them one, the man on the platform and the man in the hall. Hitler spoke and Oscar listened, or was the other way around: was Hitler listening and Oscar speaking? Bared to Oscar lay Hitler's most secret wishes and inspirations, his obscure, passionate, ferocious will.

Hitler was better than ever today. He surpassed himself. He derided, extolled, loved, hated. He set off a magnificent display of fireworks.

And to Oscar it seemed that this was happening for him alone. For him alone that man was working himself up until the long lock of hair and the short mus-

"Do you suppose you could give them the hang of it? Gosh knows I've tried!"

tache were bathed in streaming perspiration.

Oscar was impelled to give a sign to that man up there, and receive a sign from him. The skin of his face grew taut, his pupils contracted, his fierce eyes grew more staring and at the same time more alive. He retreated into himself; he was pure will. "You, up there," his burning will commanded, "know that I am present! I understand better than all the others what inexpressibly great labor your achievement has cost, but also how exalting is its attainment. Give me a sign. Turn your glance upon me, as I turn mine upon you."

A shade of uncertainty came over Hitler; only Oscar noticed it—noticed how the man on the platform began to look for someone among the audience. With breathless suspense he followed the man's glances. Now it had happened! With almost sensual pleasure Oscar felt the Führer's gaze sink into his.

From that moment on, the eyes of the two men did not leave each other. Hitler, in a powerful crescendo, outdid himself. He foamed, slavered, trumpeted, screamed, cajoled, jeered. And Oscar's face reflected the scorn, the cajolery, the love. Hitler and Oscar gave each other a magnificent spectacle.

AFTER the performance, the leading men of the Party met with the Leader in an Italian restaurant in the Barerstrasse. Proell took the Lautensack brothers along, and there he introduced the new Party hero to the Leader.

Hitler said a few cordial, hearty words to Hannsjörg, but even while he spoke his gaze wandered over to Oscar, who stood waiting at the side.

Then Proell introduced him also. "I know your face," said Hitler, "it is a significant one." The two men shook hands. They looked deeply at each other. They made an alliance. "If you betray me," said the Führer's eyes, "you are lost. But if you cleave to me, you shall be my comrade and share in my booty."

Oscar, filled with his meeting with the Leader, accompanied his brother to his hotel. He asked if he should come upstairs with him. "Why not?" Hans replied.

He was tired and went to bed at once. He lay there in elegant, apple-green pajamas. Oscar sat beside him, as he had often done as a boy. Hannsjörg had left only one lamp on; Oscar in his chair sat

in the light, Hannsjörg's bed was in the shadow. Oscar noticed how brightly his brother's little eyes shone in the dark. Like an animal's eyes, he thought.

"This evening meant much to me," he said.

The little fellow's bright eyes seemed like a wolf's to Oscar now. "I'll provide you with evenings, my dear boy, that will mean much more to you," he said. He lighted a cigarette, got himself settled ceremoniously, and invited his brother to give him a thorough account of his circumstances.

Oscar told about the suggestions made by Alois Pranner, called Cagliostro, and how he was continually rejecting them. He told about the contract which Professor Hravliczek wanted to conclude with him, not forgetting to make a point of the fact that Tirschenreuth, in order to get him the contract, had given away The Philosopher, for less than its proper price.

"My proposal is really along the same lines," Hannsjörg said. "I also wanted to suggest to you that you should appear publicly again. But not in vaudeville. I thought you should use your gifts in the service of the Party."

So that was it. That was all. That was Hannsjörg's great project. Oscar was disappointed.

Meanwhile, Hannsjörg was explaining. He told him about a certain Hildegard, Baroness von Trettnow. This Trettnow was one of the most influential women in Berlin, very well-to-do, of an aristocracy older than the Hohenzollerns; her house was frequented by everybody who belonged to Berlin society, and she was one of the few great ladies who were on the side of the Nazis, of the Party. Moreover, it had been this Trettnow who had saved him, Hannsjörg; without her he would never have got out of that mess.

"And the very first time," he said, "when she visited me in prison, it dawned on me: 'Here's something for Oscar!'" He became animated. "Now just imagine the situation," he urged Oscar. "You're sitting in jail; your life is at stake. Then somebody comes in of whom you've been told that she's your last chance; if it doesn't work you're done for. You're standing behind the bars and waiting for your visitor; she's a woman and everything depends on how you speak to her, what kind of an impression you make on her. And what does your Hannsjörg do

in this situation? When I saw the woman—she's a smart dresser, good-looking, features a little sharp, reddish blond, with a bold nose—when I saw that woman's restless, rather crazy eyes, there, in the midst of the most extreme danger, in deadly peril, the idea came to me: 'She'll go for Oscar.' That means something, my dear brother," he said, preening himself, "that's a proof of devotion. 'The good Lord grew her just for Oscar,' I thought to myself!"

WITH cutting politeness Oscar answered: "It was very kind of you to think of me in prison. And I'm sure your suggestion's well meant. But I'm just not the kind of person—forgive me for being frank—who looks at a woman from the viewpoint of how far she can be exploited."

Hannsjörg listened amicably to his brother's outburst, a little smile around his narrow mouth. "That's just the high-sounding way Father used to talk," he answered. "But just the same, he only married our mother for her shekels. Well, well, one just doesn't get rid of the good old Deggenburg respectability so easily. All right," he broke off, suddenly very sharp, "let's not talk about it any more."

For a moment it looked as if Oscar wanted to make a forceful retort. Then he reflected and said, almost begging: "Well, go on."

Hannsjörg suppressed a smile and explained the project more clearly. He described Hildegard von Trettnow as always wanting to carry out some project. He described her house, where all the Party notables went in and out, as well as every other person whose word carried weight in Berlin. If Trettnow would arrange an evening for Oscar at her house he would be able to display his arts before all the people who mattered, he would have a real start in Berlin, an entrée.

In his imagination Oscar saw the unknown woman before him, very elegant, of very old aristocracy; he saw her house and the Berlin bigwigs who stared at him, conquered by his art. He felt the strength of the temptation. But aloud he only said: "And how do you know that your Trettnow won't just talk a lot but really do something?"

"She'll go for you, you can stake your life on that," Hannsjörg replied. "I can feel those things about a woman. She

"HE WAS SIGNING ON THE  
DOTTED LINE AND MY PEN  
QUIT COLD. SUPPOSE IT  
CAN BE FIXED?"

"I DON'T KNOW. REPAIR  
PARTS ARE FRIGHTFULLY  
SCARCE. YOU SHOULD  
HAVE USED NEW PARKER  
QUINK. THE SOLV-X IN  
IT PROTECTS METAL  
AND RUBBER."

# New protective ink guards pens against wartime failure!

IF YOUR PEN breaks down now, it may be out of commission for good. For repair parts of metal and rubber may soon be impossible to obtain!

To give your pen real wartime protection, fill it with new Parker Quink. This is the only ink containing *solv-x*. It stops most pen troubles before they start.

*Solv-x* is an exclusive ingredient discovered by Parker scientists. It absolutely prevents the corrosion of metal parts and the deterioration of rubber caused by strongly acid inks. It flushes away sediment and gum left by inferior inks. *Actually cleans your pen as it writes!*

Remember: the pen which fails now may never write again! So treat your fountain pen to *protective* Parker Quink. It's smooth-flowing, fast-drying. Gives perfect protection to steel pens, too. The Parker Pen Company, Janesville, Wis.

## NEW PARKER QUINK is the only ink containing *solv-x*

Eliminates the cause of most pen failures:

1. The *solv-x* in new Parker Quink dissolves sediment and gummy deposits left by inferior inks. Cleans your pen as it writes!
2. Quink with *solv-x* prevents the rubber rot and corrosion caused by strongly acid writing fluids.

### FOR V... - MAIL "Micro-film Black"

THE ONLY INK CONTAINING *SOLV-X*

knows your mask; she's curious about the original. I raved to her about you as an unworldly prophet. You don't have to do anything. You just have to stand there and keep your mouth shut."

"It would be kind of you," Oscar reproved him with acrid politeness, "if you'd drop your silly joking. Instead tell me in plain language what I'd have to do in your Trettnow's house. Do you really think that the Berlin notables would be interested in my manifestations?"

Hannsjörg dreamily lifted a shirt from the table, ran his hand over the silk, and laid it back. "Of course you'd have to add a little sensation," he said, "a little spiritualism, a little prophesying."

OSCAR put on his Roman look. "I'm not giving any more fraudulent performances," he declared. "I've already told you that." Hannsjörg was silent. Oscar dropped his pose and explained further: "It endangers my powers; I mustn't do it." And as Hannsjörg still said nothing he added, now quite honestly, desperately: "I can't allow myself to do it; I'd go to pieces."

Hannsjörg knew when his brother's scruples were more than affected talk, and he was careful not to react ironically. "I don't want to urge you," he said, "to do something that goes against your grain. But be clear about this, my dear Oscar, a chance like Trettnow doesn't come twice. Conquer yourself, too, Oscar. Make concessions. You simply owe it to your gift."

The words sounded sweet to Oscar. His brother believed what he was saying.

"You haven't been in Berlin for a long time," he heard his brother running on. "The city has changed a lot. The people in Berlin today don't want logic any more, or reason, or high-brow lectures. They want the irrational, they want miracles. And that's your strong point, Oscar; nobody can beat you at that. I tell you, there's never been a more receptive public for you in the whole world. You fit the Berlin of today like a glove. Be smart, Oscar. This only happens once; it won't come again."

Hannsjörg lay there in his elegant, apple-green pajamas, and his wolf's eyes were gleaming in the dusk. High society, wealth, all the riches of the world he spread before Oscar. He was the tempter, his little brother was.

"See," he said, "that's how we Nazis do business, too—by promising people miracles. You and the Party—it's a natural combination. I can see tremendous possibilities in it. The Leader is susceptible to the mystical, like all great men.

You appealed to him. If we play our game cleverly, you can become his adviser. *The adviser.*"

An enormously tempting dream of power and influence was stirring in Oscar's mind. There was music in his soul, wild, Wagnerian music. He saw himself guiding human destinies in a huge circle of influence with one soft word.

The dream was too beautiful. Suspicion seized him. "Why should the Party help me anyway?" he asked. "What do they get out of it?"

"I could imagine," Hannsjörg replied, "that Proell, for example, might strengthen his influence over the Fuehrer indirectly through you."

"Then it would be to your Proell's advantage," reflected Oscar.

"Manfred Proell is the Party," said Hannsjörg with unexpected sharpness.

Perhaps it was because he was irritated by that sharpness that Oscar's fierce, dark blue eyes became almost threatening. "And what do you get out of it, little brother," he asked, "if I and the Party join forces?"

Hannsjörg met his gaze. "Quite right. I'm not making you this proposal from pure brotherly love. I expect to get something out of the deal, too. I am convinced," he said, and his voice gained in warmth, "that the Lautensack brothers can accomplish more than Hannsjörg or Oscar Lautensack alone. The brilliance of one will reflect on the other. But the main advantage, if we combine, will be yours. Your gift is rare. That's just why it's not easy to find the right person for it. Up to now nobody's appeared who could have given it the right presentation. I'm telling you a fact. I'm the only one who can help you."

There's something to that, Oscar thought to himself. The Lautensack brothers. Joined together. In mystic union, from sources of being primordial, from the waters of the deep. "You're right," he said, deep in thought. "I shouldn't hide my light under a bushel. I should reveal it, in your interests and mine."

"Good," said Hannsjörg. "I'm glad that you don't want to be in such a daze any more."

"Wait a minute," said Oscar, "we aren't there yet."

"Now what is it?" asked Hannsjörg.

"After all it will take some time before your Berlin plans bring in something," Oscar said. "And unfortunately I can't wait. I have no money," he confessed.

"You're an idiot," Hannsjörg said amicably. "I've got money, and as long as I have it you have it too."

These simple, generous words warmed Oscar's heart. "All right," he said, "I'll do it" and he held out his hand to Hannsjörg.

Postures of that kind were not customary between the brothers; Hannsjörg smiled as he laid his small, slim hand in Oscar's large, white, brutal one. "You've been a long time," he said. "You're very slow on the uptake. Well, finally! I think," he went on to elaborate his plan, "I'll be busy here for about three years more. Then we'll go to Berlin together, and then I'll introduce you to the new."

"No, my dear brother," Oscar said emphatically. "That wasn't our agreement. I'm to go to Berlin. I'm to run it, your Trettnow woman. That's not my style; I've told you that already. I'm going to offer myself to your fine friend." He stood there looking warlike and imposing. "If she wants anything," he said, "she can be so kind as to come to me."

Hannsjörg looked his brother up and down expressively. "You're crazy," he said comfortably. "You've gone out of your mind."

But Oscar stuck to his point. "If she says as much as you say," he said firmly and stubbornly, "then she'll go. And if not, it's no loss." He turned away, and took a few steps through the room.

When something strange happened to him. Midway in his progress through the room he stood still. His eyes fastened on a spot on the wall, or perhaps only in the air, and clung to it, but not for long. On his face became empty, slack; his lips parted; his strong white teeth became visible. He walked backward with uncertain step, fell into a chair, remained there, relaxed, removed from his surroundings, looking inward, listening, with a lost, even somewhat foolish smile. Hannsjörg knew that now Oscar was having another one of his attacks.

It was a fact. Oscar had felt, in his chest—or was it his breast?—a very faint tingling, a faint noise as when one tears a piece of silk. The objects around him faded away, he felt lifted out of himself, as if he "saw." For a little while he sat there, slack and at the same time with a storklike rigidity, his face almost idiotic with inner strain. Then, as if awakening, he ran his hand over his forehead and smiled, very confidently, but in an everyday tone: "Don't worry. She'll come. I've 'seen' it."

Skeptical as Hannsjörg was, his brother's vision had impressed him. It was always like that. Something in Hannsjörg laughed at Oscar's visions, but a longer something believed in them.

While Hannsjörg was thinking this

over, his quick mind was already calculating how to persuade Trettnow to make the trip to Munich. He would write to her that same day. Would describe to her how seeing his brother again had put new life into him. Would describe how impressed the Fuehrer had been by his meeting with Oscar. "You're right," he admitted. "She must come here. I'll write her."

"I knew you'd understand me," Oscar said.

But Hannsjörg smiled: "Yes, we belong together, we Lautensack brothers."

"Then I'll be going," said Oscar. "One more thing," he added with a rush, "you were kind enough to offer me money."

"Oh, yes, of course," replied Hannsjörg, "how much do you need?" Oscar reflected. His brother seemed to be well off. So Oscar could easily ask for a large round sum, say for a hundred marks. Judging by the style in which Hans was living he could even ask him for more, two hundred. "I'd need about three hundred marks," he said; and his heart stood still at his own boldness.

Hannsjörg got up and fished three blue notes out of his wallet. "Here, take it," he said. Oscar thanked him and withdrew. I could really have asked for five hundred, he thought, as he rode down in the elevator.

THE next morning a letter from Professor Hravliczek arrived. He sent the contract and requested the return of a countersigned copy.

Oscar was sitting at breakfast when he received the letter. With a small, malicious smile, he studied the professor's clear, neat, slightly pedantic handwriting. Then he tore up the contract. And later, when Frau Lechner announced that Frau Tirschenreuth was on the telephone, he said: "Tell her I'm not in."

His understanding with Hannsjörg grew better and better. Everything was going well. The very same week that Hannsjörg had made him the proposal about Trettnow he had handed him, with a proud smile, a membership card in the National Socialist Party. It bore a low number, one of the much-coveted numbers in the first thousand, the number 667.

Perhaps Oscar would have been less happy if he had known that the former owner of Party Card 667 had met a miserable end. Condemned by one of the Party's secret courts, and foully murdered, he was now moldering away in a wood in the vicinity of Munich. But no inner voice told Oscar Lautensack about this, and so he was heartily grateful to his brother for the distinction which he had procured him.

(To be continued next week)

"Well, how do you like it?"

GEORGE PRICE

A philosopher once observed that it is easier for a man to adjust himself to sudden poverty than to sudden riches. Young Phil Akers was a case in point

# Paycheck

By Ernest Haycox

ILLUSTRATED BY JOHN HOLMGREN

WHEN he had worked at the Save-Rite Market, they had agreed to meet at the corner drugstore, which was halfway between his house and her house; in this way they always managed to get into the neighborhood movie at the beginning of the main feature. In those days he had no car, but now he did and his new job at the shipyard gave him plenty of time. Still, the habit remained. She hadn't asked him to pick her up at her house and it never occurred to him to do it. Fifty-fifty was good enough for Phil Akers.

He came into the drugstore ten minutes late, a chunky boy with a round, solid face and gray eyes underneath eyebrows which were extraordinarily black for an eighteen-year-old. He had a little bit of a swagger to him and his hat was back on his head, signifying that he felt

good. He grinned at her and crooked his finger, not mentioning anything about being late.

They walked half a block to his car and got in. He started the motor, roared down the street in low gear, made a sudden shift into high and began to use his horn at the traffic.

She said, "You've got a new tie."

"Got it today. Genuine twill, the clerk said." Then he casually added, "Two and a half bucks."

"Oh, Phil."

It pleased him to have her be shocked. He said, "These clerks give me a pain. I walk into the store in my work clothes and they think I'm a cheap skate and let me stand around. So I got hold of a girl and I said, 'Sister, maybe you can show me some ties if you ain't going out with Gable tonight.' She picks some

funny ones at a dollar a throw, giving me the eye like she was doing me a favor. So I laid five bucks on the counter and I said, 'What you got for that money?' She pulled out this one. I guess she thought she was putting me in my place but I took it—and then I gave her somethin' to think about. When she handed me the change I said, 'Keep it for Social Security.' You should've seen the look she gave me."

SHE sat grave and still while Phil jockeyed the car in and out of traffic. She wore a brown skirt and a pink blouse that had small ruffles on its collar. She was pretty and she had used her lipstick lightly and her perfume was only a suggestion. Working at the Paris Gown Shop, she watched the customers and saw which ones had taste—and from

Phil came into the store ten minutes late. He had a little bit of a swagger to him and his hat was back on his head, signifying he felt good. He grinned at her, and crooked his f-

those she took her lessons. She was a sweet and ambitious girl and she had things to be right.

"How much did you make this week, Phil?"

"Seventy-four fifty. Remember eighteen bucks I used to get at the Save-Rite?"

"Four times as much," she murmured. "Four weeks for one week. Where you cash your check today?"

"At the beer parlor. Sure, I had a couple beers. You got to drink a couple or two for the favor of gettin' the check cashed."

"Don't they charge twenty-five cents for cashing checks?"

"What's two-bits?" he said. "Listen, Edie. You got to lift your sights. I'm making dough now. We don't have to haggle with the pennies like we used to."

"You're driving a little fast."

"Some of these dummies," he said. "I don't seem to know a war's on. They move fast."

When he crossed the bridge he turned up Broadway toward the center of town instead of going down Third Street to find a vacant place to park. She said, "I don't mind walking five blocks, Phil. We can save thirty-five cents."

"If other guys can roll up to the front door," he said, "so can I. Don't keep thinking hard times."

"All right, Phil."

THAT was one of the things he liked about her, the way she gracefully surrendered. Because she was a cashier, she thought she knew about money. In those old days when he was getting eighty dollars a week she had held him down, making him save, making him take her to places that were free. She had even figured out how long it would take them to build up four hundred dollars in the bank; and that was when they were to be married. But sometimes this was pretty slow, pretty dull; and then he had to set her right, whereupon she would smile at him and say, "All right, Phil."

He parked in a lot and went across the street with her. There was a line in front of the box office and he knew they'd have to stand up inside and wait for a seat; when his turn came he got a couple of loge seats, a dollar ten cents extra. She had drifted on to wait for him and when he came up he saw her looking at a soldier. The soldier was giving her one of those looks, just waiting for a break from her. Phil took her arm and said gruffly, "All right," and peeled his eye at the soldier as he went in. He pushed his way through the crowd with his loge ticket and flagged an usher. Edie murmured, "I wouldn't have minded waiting, Phil."

"We're entitled to the breaks."

It was another war picture and the hero was an American flier in China—one of those tall fellows with a tough face and a soft voice. He thought, irritably, "This war stuff is getting pretty thick." He got Edie's hand and held it and he bent his head to touch Edie's head. She sat still, all wrapped up in the picture.

Afterward they went to the Silver Grill and he tried to persuade Edie to have a steak. He said, "I'm always hungry these days. It's the work." But she stuck with her root beer while he had a clubhouse. She took his olive and his pickle and once she smiled at him, little lights dancing in her eyes and her

# Butch is on a BALANCED DIET!

THIS situation isn't covered by Army regulations. But we're betting that Butch will find a way to handle it without spilling a spoonful!

In fact, we electric companies know just how he feels. We have the same problem. Right now, we're being called on to balance good service and low, regulated rates against fast-climbing costs and tremendously increased demands for electric power.

We're doing it, too. Filling all our war orders. Giving America far more power than all the Axis countries combined. Pushing

production up and up. . . . And besides that, we're balancing a big plate of taxes.

*Don't get us wrong.* We know the need of wartime taxes. We're proud that business-managed electric companies paid \$620,000,000 in taxes last year. That was 23c out of every dollar you paid us—8c to local and state governments—15c to the federal government—enough to outfit 1,687,762 buck privates.

How is it possible to make so much power and meet so many taxes *at the same time*? Because of sound business methods and long

experience—because men, women and management worked together as a *team*.

But while we're doing all this, *government and municipal power systems are not paying a penny in federal taxes to help win the war.*

*Shouldn't every one do his full share?*

lips curving. It was the kind of smile that always stirred him up. They went back to the car and bucked the home-ward traffic.

In front of her house he turned off the engine and switched out the lights "Edie," he said, "everything's swell," and waited for her head to turn. But her kiss was quick and light and left him on the wrong foot. Then she slipped out of the car.

"Gladys wants us to drop in for a moment. Ben's home on leave. He's a corporal now. Come on."

"All we'll do is sit around," he said. He remained behind his wheel, expecting her to come back, but she stood on the sidewalk and waited for him until he said, "Okay," and got out.

IT WAS the house next to her house and Ben was a big blond guy who had enlisted as soon as he got out of high school. He was a sergeant instead of a corporal; women never got that stuff straight. He said, "Hiya, Ben, how's things?" He was introduced to some other Army guy, a friend of Ben's who was also a sergeant.

Except for the new guy, they were all old-time friends. Edie seemed pleased to see Ben and put both hands on his chest. She said, "Ben, you look wonderful."

"Why," he said, "they work us like dogs. I'm twenty pounds heavier."

"What's that badge on your shoulder?"

"Mountain regiment. Pack mules, skis, all that sort of stuff."

Gladys said, "Last week he marched forty miles through eight feet of snow. His captain says maybe he can take officer's training in another six months. If he were just a year older—"

Everything was Ben and this other sergeant. Phil sat in a chair with nothing much to say. This other sergeant gave Edie a look which sent its growling wake through Phil, and Edie had a smile for the sergeant. Pretty soon Phil got up and said, "I got a day's work tomorrow. Be seein' you, Ben."

"Sure," said Ben. "Sometime. But not soon. We'll be leavin'."

"You never told me that," said Gladys. "Where?"

Ben and the other sergeant swapped grins. "We wouldn't know," said Ben. "But what you suppose we've been training in snow for?"

Edie said, "When you get to Kiska, you take care of a Jap for me, Ben," and she gave him a nice light kiss. Phil was in the doorway, waiting for her, and he saw it. They walked back to her house, never saying a thing; they stopped at the steps.

"Edie," he said, "what are we waiting for? Let's get married now."

She said, "You know what we're waiting for."

"I'm making money. What's the difference whether it's in the bank or in a paycheck?"

"How much did you put away this week, Phil?"

"Well," he said, "I had a payment on the car and the old man needed something extra. But we got plenty. The foreman said I'd be a leadman in a couple of months."

"What did you put in the week before?"

"I had to get some new clothes for the job. This leather stuff comes high. Edie, I wish you'd quit thinkin' hard times. People don't pay cash for things. You can get a house full of stuff on time."

"No," she said, "that's not safe. Maybe your draft board will put you in the Army. What would I do with furniture payments then?"

"I'm in 3-A for the duration. The old man can't work. I got to support my family. You're hipped on this stuff. That was all right when I had eighteen dollars. But we don't need to be afraid any more and we don't need to do things cheap any more. I've got to take chances and step on Edie."

He waited for her to smile and say "right," but she didn't say it. He thought of the way the sergeant had looked at him and the way she had kissed Ben.

under his skin. He said, "Well, if that's the way you feel about it—"

He walked back to his car and kicked it up to fifty miles an hour. He parked in front of his house and found her sitting in the front porch shade.

His father had been night watchman until he got hurt a year ago; and his father was fat and easy and smoked his cigars all day long. The old man murmured, "Trouble? Well, we can make a man trouble. I had it when you was your age."

"She keeps putting me off," Phil said. "I'm making plenty. She's scared of everything."

"Women," said the old man, "they do things their way. They don't know. They always want to put a harness on him and a clock in front of his nose. You got to be firm about that. We are a fine thing for an old fellow like a crippled and good for nothing, to have a son to lean on. Phil, I'd like at least twenty dollars."

"I gave you twenty yesterday."

"It is for the groceries."

"Yeah, that's what I gave the twenty for."

"I had to use it on another bill, so said the old man blandly. "During my sickness I got a long way behind."

"Sure," murmured Phil. "I guess I did." He pulled his roll of bills out of his pocket and peeled off two tens and gave them to the old man. "You better go to a doctor lately to see how your back is getting along?"

"Ah, what does a doctor know? The man's the best one to judge if he's good or poor. My spine's always going to be disconnected. I can feel it grit when it's broke."

EDIE said to herself, "He's mad and was hinting that maybe I'd better do it the way he wants." She went into the house and up the stairs to her room.

It was a nice room, made over according to a picture she had seen in a magazine. She had paid for the furniture out of her own money, she had made the bedspread, she had shopped for the picture. All of this would go into the new home when she and Phil were married; she would be like a girl in France, bringing something to her husband.

The show, with the extra loges, was \$2.20, the parking lot thirty-five cents, the meal ninety cents. That was \$3.45 for the evening. "When he was working at the Save-Rite," she thought, "I never spent that much all month." She got ready for bed; she sat in the middle of the bed with her chin resting on her doubled fist. Every Saturday he had brought his check to her and she had banked it for him at the same time she banked her own money; but somebody had heard about that and had kidded him. He didn't bring her his check any more, and he didn't talk about the house and furniture any more. He was tired of it because it was too slow. That was what his new job had done.

"It made him big too soon," she thought. "He's not the same Phil and he's tired of all our plans. I thought I knew him. Maybe I don't. Something's gone away."

She turned out the light and lay we, thinking of the way he had told the story of the five-dollar tie. She hated the clerk who had sold it to her for she knew what the clerk had thought about Phil. She had thought he was a fool. She said to herself, "It started from that paycheck."

THURSDAY was a half day at the Paris Gown Shop. Directly after she took the bus to the drugstore and turned to Phil's house. Mr. Akers was on the porch, half asleep in his chair. Edie said, "Hello," and went into the house. Mrs. Akers was in the kitchen, ironing.

Edie said, "I was wondering if you could tell me how much Phil's saved?"

"His passbook is in his bureau drawer. Hundred and sixty-five dollars."

Edie said, shocked, "It was that much in April?"

"Isn't you seen it since then?"

"He doesn't bring me his check any more."

"Ah," said Mrs. Akers, "that was his father's advice. His father said to him a man shouldn't start letting a woman run things. Sit down a minute."

Mrs. Akers leaned her arms on the iron-board. She was a small woman, wiry gray; she was a soft, quiet woman. She had gray eyes and her mouth was

She looked at Edie so neat and pretty; she saw Edie with an appreciative

"Edie," she said, "you've been looking, haven't you?"

"Yes."

"He's got good in him and he's got a lot," said Mrs. Akers. "He can be a man or he can be shiftless. You know that. You been goin' with him two years. You're a smart girl. Why don't you find another boy you don't have to cry about?"

"You know why."

"You're in love. But a woman never gets so far in love she can't see ahead. What do you see ahead, Edie?"

"He doesn't care about the nice things I had planned. That was what put us together and made everything wonderful. The light just went out in

"You've made up your mind to do something?"

"Yes," said Edie, "I've got to bring him back."

"What if it doesn't work?" asked Mrs. Akers. "Will you give in and take him as he is and let him have his own way?"

"I don't know."

"Listen to me," said Mrs. Akers. "Before you start, make up your mind to lose him. Make up your mind you'll never go back. Make up your mind he's got to come to you. Not halfway, Edie. All the way. A man must come to a woman. A man must hold up a woman. It is the only way she ever knows whether he loves her or not. If he comes all the way to you, then you're sure. But if you give in and go to him, you'll never know and you'll spend the rest of your life full of doubt and regret."

"That's hard to do," said Edie and gravely watched the tips of her gloved hands.

Mrs. Akers sent her iron back and forth. Her lips were pressed together, her face was dark-set and stern. "You're thinking I'm old and have forgotten about being in love. No, I haven't. No, I haven't! Love isn't a girl giving up everything she wants to let a man grow careless and set in his ways. You have got to make a man run fast and strain his bones and rack his mind. That's the way a man becomes a man, and that is why a woman loves him. You don't want less than that, Edie."

Edie got up. Mrs. Akers, she saw, could cry; and she could cry. She said, "Goodby, Mrs. Akers."

"That's the way," said Mrs. Akers. "Goodby, daughter."

HE WAS twenty minutes late when he got to the corner drugstore. He looked around and didn't see her and he sat on the edge of a stool, kidding the counter girl for five minutes. Then he thought: If I'd gotten here on time I'd been waiting half an hour, and he felt irritated at the delay. He ordered a malted and drank it, a little at a time; at a quarter of eight the counter girl said, "You're stood up, Phil," and he grinned to cover his resentment and walked out. When he

"The same old story: He showered her with gifts—canned fruits, soups and vegetables, steaks, chops, coffee . . ."

# Low cost, broader Protection *for* *homes...families...everywhere*

**It's brand new!** It gives you broader protection against damage suits than ever before obtainable—it costs far less than such protection ever cost before!

It's the new HARTFORD COMPREHENSIVE PERSONAL LIABILITY POLICY—planned to meet the needs of everyone who maintains a home.

## *Why you need this protection*

You may not realize it, but you are constantly exposed to serious loss through damage suits. Someone may be injured on your premises—your dog may bite someone—you may hurt someone while playing golf, hunting or riding your bicycle. Insuring yourself against these and other risks formerly meant taking out perhaps half a dozen separate liability policies—a complicated, bothersome procedure.

## *All this in one policy—\$10*

The New Comprehensive Policy gives you protection against many risks—even covers your wife and minor children—costs only \$10 a year—\$25 for three years.\* In combination with the Automobile Liability and Property Damage policy, it provides protection against personal injury claims arising from practically any cause. In most states, if you insure your car with the Hartford, this comprehensive coverage can be added right on your automobile policy.

## *Get full details*

Your local Hartford agent (*we'll gladly send you his name*) can fit this new, broader form of protection to your requirements—or expertly advise you on any other insurance you need. Talk to him—or to your own insurance broker.

*\*\$5,000/\$10,000 limits*

## *9 reasons why you should have this Comprehensive Policy*

1. It protects against damage suits due to injury to members of the public at your home.\*
2. If you acquire an additional residence for personal use during the policy period, the insurance covers it automatically.
3. It protects you against damage suits if you injure someone while engaging in any sport.
4. It protects you against damage suits if your dog, horse or other animals should injure someone.
5. Besides yourself, this policy covers your wife, your minor children and any other relatives under the age of 21 who reside with you.
6. It covers all your activities not directly a part of your business—including activities in civilian defense.

*The following features  
involve small additional premiums:*

7. It can be extended to pay automatically the medical expenses of visitors who may be injured on your premises.

THE TWO HARTFORDS WRITE PRACTICALLY EVERY FORM OF INSURANCE EXCEPT LIFE

HARTFORD, CONNECTICUT

he sat down by the phone, but  
 "Let her call me," and went  
 porch. His father came through  
 and stopped and bent down to  
 a throwaway paper. It didn't  
 cause his broken back any trou-  
 when the old man got to the  
 he seemed to remember his injury  
 himself into the easy chair with a  
 gan.  
 "Then thinkin'," said the old man.  
 "You due for a raise pretty soon?"  
 "I got a promise as leadman."  
 "Big corporation will diddle you  
 promises. You got to watch out for  
 rights. They'll work the life out of  
 if you let 'em."  
 "I'm doing all right,"  
 "I was here this afternoon to see  
 mother."  
 "What for?" and went in-  
 his mother was in the kitchen, late  
 He said, "What did Edie want?"  
 "Nothing," said his mother. "Just to  
 as nine o'clock and he had noth-  
 do. He thought, "Funny she  
 't let me know." He went up to  
 and lay back on the bed; he  
 about his job and he thought  
 Edie and he thought about the  
 t who had looked at her. Then  
 remembered the other soldier in the  
 lobby who had looked at her.  
 clock came. He got up and went  
 phone and called.  
 "as at the drugstore," he said.  
 "asn't," she said.  
 "All," he said, "if I'd known, I'd  
 on to your house."  
 "asn't home."  
 waited a minute for an explana-  
 The silence hung on. He said,  
 "orrow night, then."  
 "be at the USO evenings."  
 Pertaining soldiers? For the love  
 e, Edie. That's for old women."  
 "Maybe they'd like to see a young  
 she said.  
 "nded like a road coming up to a  
 There wasn't anything more. He  
 "You should see the suit I bought  
 "and waited for her to say,  
 "shocked, "You shouldn't spend  
 "ch, Phil." But she didn't say it,  
 a sudden whirl of irritation he  
 "Well, good night," and hung up.  
 I WENT back to his room and  
 "ammed the door. He sat on the  
 of his bed. He thought, "Where do I  
 min? She's gone nuts about the uni-  
 or something. Well, if she wants  
 he knows where I live."  
 stayed away from the drugstore on  
 day. On Tuesday he stopped by at  
 usual hour for a malted, and made it  
 or fifteen minutes. Then he went  
 "Mom," he said, "are all women  
 ?"  
 "ook in the mirror and see who's  
 ."  
 "ust asked a civil question," he said.  
 "ent up to his room and looked in  
 mirror. "What's wrong?" he wanted  
 "ow. He lay back on his bed again  
 "die got to thinking of her down at the  
 S, dancing with some guy in a uni-  
 . It hit him across the stomach like  
 k handle and a sharp stinging broke  
 his face. He felt a great anger, a  
 ple injustice; and then he felt afraid.  
 "ently he rose and got ready for bed.  
 "left the lights on and when he heard  
 "nother go down the hall he called  
 "rn. She stood at the edge of the bed,  
 "tly watching him; it occurred to him  
 "she didn't smile much.  
 "Mom," he said, "you see anything  
 "ged in me?"  
 "No."  
 "e said, "It's tough to have things  
 "d right out from under a fellow."

"You've got everything you want.  
 You've got a job. You're making a lot  
 of money. You've got a car and plenty  
 of new clothes. You used to complain  
 about our treating you like a kid. You're  
 grown up now and you do as you  
 please."

After his mother left he thought,  
 "Edie's sore about the money. She don't  
 understand there's a difference between  
 a kid sellin' groceries at eighteen a week  
 and a fellow doin' man's work for man's  
 wages. A woman can't change her mind.  
 A woman always holds back." He  
 thought of his passbook and that made  
 him think of his old man. "Why can't  
 he work?" he thought.

HE HAD never intended this at all;  
 and he stood outside for a quarter  
 hour, looking through the USO doorway.  
 Then he went in and saw her dancing  
 with a guy in uniform, the music coming  
 from a jukebox. He watched the guy  
 hold her and talk to her, his mouth near  
 her ear. She was a keen dancer; she  
 could always follow and her body was  
 smooth under the lights, like water flow-  
 ing. By and by she saw him and came  
 over. She had been smiling but she  
 wasn't now; she looked at him as though  
 he were a stranger, and he felt foolish  
 in this place. He said, "Thought maybe  
 you'd want to go home."

"I'm on here until ten."

"I'll stick around."

She said, "This is just for soldiers,  
 Phil."

He gave her a black, astonished  
 glance. "Make it tough," he said. "Rub  
 it in."

She opened her mouth to speak; she  
 saw how badly it hurt him and the ex-  
 pression on her face softened. But a  
 soldier put a nickel in the juke box and  
 came up and asked for a dance and she  
 went away with him.

He left the USO. He walked around the  
 block and then he walked around two  
 blocks, and then around four; he stopped  
 to look into a jewelry store window but  
 he didn't see a thing. He was flat inside.  
 He went back and waited in front of the  
 USO. She came out at ten o'clock, with  
 a soldier, but she gave the soldier a little  
 smile and came on to Phil. He opened  
 the car door for her and waited until she  
 had settled herself. He swung around  
 the block, heading home. He said, "I  
 don't get it, Edie. What's in it for me?  
 Am I supposed to stick around outside  
 from now on until the war's over?"

"No, Phil. You've got other things  
 to do."

"Edie," he said, "what's happened to  
 us?"

She sat still in her corner of the seat,  
 her hands on her lap. She was a sweet  
 and warm presence in the car and it  
 made him want to stop and kiss her, but  
 something had happened and she didn't  
 want to be kissed. Edie had a way of  
 telling a man, without saying a word.  
 She said, "These boys gave up their girls.  
 They're a long way from home. Maybe  
 they won't get back."

"What about us? What about every-  
 thing we've got in mind? We ain't talked  
 about our house for a couple of weeks."

"We haven't talked about it since  
 April."

"I've had a lot of things on my mind.  
 Taking care of the old man. Buying  
 stuff. Times change."

"Times change," she said, very quietly.

"Listen, I don't mean it like that. I'm  
 just as sold on everything as I ever was.  
 But a man—"

"When you were making eighteen dol-  
 lars it was kind of important to put away  
 ten dollars a week and dream of when  
 we could buy a kitchen set. It isn't im-  
 portant any more. It's too easy to get

LT. THOMAS C. OILLARO, ARMY AIR FORCES

How they used to fill practice bombs with sand at the Midland Army Flying School, until Bruce Goode and Paul McHargue devised the faster method below

PFC. DOUGLAS MAC DONALD, FOR ARMY AIR FORCES

This machine now does the job fifty times as fast. Inventor Goode (left) and Operator H. W. Humphrey are both civilian employees at the flying school

## Anti-Japanese Sandman

ONE morning some months ago Paul McHargue and Bruce Goode of Midland, in west Texas, watched several dozen future bombardiers at the world's largest bombardier school laboriously shovel 73 pounds of sand into each of the hundreds of practice bombs used daily by the Hell From Heaven Men.

"That," observed McHargue, "is a pretty dismal waste of man-hours."

"Let's do something about it," suggested Goode.

They did, and today their Anti-Japanese Sandman—an automatic loader standing 20 feet high—is proving such a success that other bombardier colleges are interested in the blueprints.

The McHargue-Goode machine takes

processed sand from a jet-flame drier and pours it into a large bin, whence it is dropped into smaller bins holding exactly 73 pounds each. Slots are opened and in less than a minute the sand fills five bomb shells at a time. Twenty cases, mounted on a disc, rotate automatically under the bins. Later the blue eggs are charged with five pounds of powder, sufficient to provide a flash which can be photographed from the air and used as a basis for scoring target-range hits.

The Anti-Japanese Sandman can load more than 2,400 blue bombs in eight hours, giving the men who used to grunt over them with shovels an opportunity to learn more important anti-Axis tactics.

—BILL COLLYNS

# Loaded for War

Take a good look at the picture below. It shows a Santa Fe train loaded for war.

That war train is ready to roll. It is *going through*.

In railroad language, it has the right-of-way over everything else on the line.

So it must be with *all* American transportation until this war job is done.

## Victory Rides on Wheels

For this is essentially a war of rolling wheels...

Millions of men and millions of tons of vital foods, raw materials, and finished products must be moved swiftly and surely, where and when they are needed.

*Stop the wheels that move them,*

*and we stop all that floats and flies as well.*

That is why, on the Santa Fe, movements essential to the war effort are topping the greatest transportation job in all our history. They *must* come first, beyond argument or selfish interest.

★ During 1942, with 26% fewer locomotives, Santa Fe moved 122% more freight ton-miles, and 79% more military and civilian passenger-miles than in 1918, during the First World War. The Army and Navy, the ODT, and civilian shippers and travelers everywhere are cooperating 100% with the railroads of America in making records like this possible.

SERVING THE SOUTHWEST FOR 70 YEARS

now. I'm not blaming you. It's just that things change."

He didn't say anything more until he stopped the car before her house. He cut the ignition and he turned to her. This was always a nice time, this time when they sat together in the darkness. When he held her it was swell. It made him feel different, it made him grab at big things all around him. It was a nice time. But tonight she opened the door and said, "Good night, Phil."

"Wait a minute," he said. "Don't you want any of this any more? All of what we used to do. I mean, all those things."

"We don't want the same things any more. Good night, Phil."

HE WATCHED her move up the steps in her quick, light stride and go into the house. He heard the door slam. He put the car in gear and he nursed it along a little and put it in second, and jockeyed it into high. He stopped for the red light by the drugstore and the sight of the drugstore reminded him of when things had been different; it hurt him inside. He parked before his house. His father sat in the porch easy chair, smoking a cigar. Phil thought, "Ten of those things a day at a nickel a crack. He's doin' all right for a cripple."

He went on upstairs to his room and he sat down and got the passbook out of a drawer and looked at it. Then he found a pencil and a paper and got to figuring how much he had made in the ten weeks he had been at the shipyard and what he had done with the money. The list got long but it wasn't long enough to account for all he had spent and then he dropped the pencil. "What's the use of figuring it? I spent it. I haven't got any of it."

He sat back, one arm hooked over the chair and his dark hair dropped down on his forehead; and he grappled with a problem that was new and hard. "I did better than that when I was at the Save-Rite. How can a man get by on eighteen dollars and then go broke on seventy-five?" He put the passbook away and went back to the porch and sat on the steps, crouched over, and he tried to figure out just where the change had started. He said to himself, "I liked all that figuring about the house. I still do, only that ain't the point. We could have it any time without waiting." He remembered a lot of things he had said to Edie and things she had said to him; he remembered meeting her in the drugstore, he remembered kissing her good night in the car. At that point the cold, dead feeling went through him, knowing it was over.

The old man got up and moved by him to the gate; the old man stooped and picked up a throwaway and grumbled,

"I wish they wouldn't drop these things on the lawn." He had bent and lifted himself like any other man. Suddenly something went through Phil like a bullet.

"Pop," he said, "you go out this week and get yourself a job."

"Ah, son, if I didn't have a broken back—"

"Your back's all right. You just got out of the habit of workin'," said Phil as he went into the house. It made him stop to think of what had happened just the Pop had been the law for nineteen years now Pop wasn't the law. It broke something in him and it couldn't be mended. "Well," he said, "I guess that's another thing when you grow up."

He had a day off on Friday. He got his two new suits out of his closet and he took his new five-dollar ticket, and his radio and a revolver he had won on punchboard, and a pigskin traveling bag, and made the rounds of the neighborhood, peddling his possessions to fellow he knew. He sold his equity in the car to Skid Toomey and he thought, "Skid doesn't need it any more than I did, but I guess he's got to be a fool like me." He put the money in the passbook and the evening walked ten blocks to Edie's house and sat on the porch until she came home shortly after ten o'clock.

She was tired and she didn't smile at him. She stood at the foot of the steps and he looked hard at her, searching her eyes for the familiar look that was no longer in them. He stood up and handed her the passbook and the money. "Maybe," he said, "you'd like to take care of it again."

THEN he knew it wasn't the same; he knew it just couldn't be picked up and carried on. She looked at the passbook and then lifted her face and he saw a funny expression on her mouth and in her eyes, as though she were afraid. It was a bad moment; it made him cold and sick all over. He reached out and took the passbook and put it in his pocket. "Sure," he said, "I know the score."

"Phil," she murmured, "do you? Tell me what it is."

"I sort of slipped up on the deal, I guess. A couple of people have to stick together and see the same thing all the time. When one of 'em looks somewhere else it breaks up everything."

"Oh, Phil," she murmured and he knew her well enough to understand that she wanted to cry. It hurt him to stand off and see it; but it wasn't like old times. He couldn't touch her. He was a stranger, just as though he never had kissed her. He said, "Well, see you sometime, Edie," and walked down a street turned black.

She watched him until he was all the

"Remember all the fun we had back home smashing through walls, and knocking down houses and trees?"

COLLIER'S

ADOLPH SCHUS

"I have to fill the tub twice. He soaks up the first tubful" BEN ROTH

the drugstore corner; and then went up to her room and sat on the edge of the bed and looked sadly at the wall. When you made up your mind to harden your heart to possible something happened to you. She was then terribly afraid of losing Phil. She had ever wanted was to bring Phil back; but when he came home he had done something to himself.

GOT up early the next morning and dressed in a good suit. His father said: "Have you changed shifts?" "No," he said, "I'm going over town." He looked at his father and he said: "I'm foolin', Pop. You better oil up your flashlight." He was gone all day and came home for dinner; but after he left again. He looked at the clock as he went by it, but he didn't see her. She wouldn't be there any more. One week she was the kind of girl to wait for him at seven o'clock on the corner; the next week she was a girl who stayed home and waited for a man to ring the door-

bell. He had only figured to walk by her house, thinking she would be at the USO; but he saw a light in her bedroom window and he went up to the porch and rang the bell one long and one short which was his signal. He stood back in the shadows, listening to the slow way she came down the stairs, not with the skipping run she once had used. He felt embarrassed when she came out on the porch; he didn't want her to think of him as a fellow hanging around after she had run out. He didn't want her to be kind to him. So he said, "I'm in particular, Edie, except for you."

His face had been quiet, a little watchful; she had been wondering what he would say and how she would answer. But he saw a queer expression tighten his lips.

"Where are you going, Phil?" "I've enlisted today."

He stood with her back to the wall, his arms behind her, tall against it. She had her legs and he remembered how well she could dance and how easily he could hear her laugh when he teased her. A sudden backfired down on the arterial system, sending a harsh sound through the quietness of this back section. Somewhere inside, Edie's mother walked back and forth and somewhere a radio made a racket. He heard these things over the silence.

She said, "Do you remember graduation day at high school, Phil?"

"Yeah."

"It was a long time ago," she murmured. "Nothing's the same. I hate the war. I hate the shipyards. I hate everything that's changed us."

"Well," he said, "it would have come. Or something else. Edie, I guess this is the last time, and maybe you won't mind—can I have a kiss?"

"Yes," she said.

He never had been so awkward, so unsure. He trembled a little when he felt her lips. It was different, it was sharper and it was something new and it hurt him with everything it did to him. He stepped away, reaching for his cigarettes. He had never remembered Edie being so beautiful, so tall and so quiet; she was a woman with lights in her eyes. She was somebody he didn't know.

"Edie," he said, "if you should get married while I'm gone, write and tell me. Because if it doesn't happen, I'd like to walk down here when I come back. I'd like to say, 'Hello, Edie,' and maybe see you smile at me."

SHE put her hand on his coat. She saw some of the old Phil there, in the way he held his head, in the way he looked so sharp and straight at her, in the way he admired her. The rest of him was new and there wasn't anything now to take them back to their little dreams, their little plans, their little world. All that was gone. He was a man looking at her and loving her; and it made her sad and excited to think of where he might go and what might happen to him. They were two new people and it was nice to have him there with all that it might some day mean, if he didn't change and if she didn't change; it was nice to think about, and suddenly it was very hard to have him go.

In the old days she would have put her arms around his neck and cried and held him back; and he would have said, casually, "Pull yourself together."

Now she said, so softly: "I'll think of you. I'll be here."

He smiled at her, made hopeful by the promise. "All right, Edie," he said. "So long till then," and moved down the steps. She heard him whistle a little bit; and suddenly cease to whistle. She stood still and watched him reach the street and go across. She watched him until his shadow moved into the shadows far down the street and she saw him no more.

THE END

# Taking the Jeeps Over the Jumps!

PRODIGIOUS jumpers that they are, our fighting Jeeps still can't jump broad rivers. So the Army's resourceful Engineers find still another job for their Evinrudes! Huge rubber rafts are bridged in tandem . . . Jeeps and troops are loaded aboard . . . husky Evinrudes sing their deep-throated song of power . . . and quickly the Jeeps are over another jump!

Giving a lift to the leaping Jeeps is but one of many wartime jobs which Evinrudes are performing today. For Evinrudes are *enlisted for the duration* . . . in the Army, the Navy, the Marine Corps. Great Evinrude "Fours" power swift assault craft, landing boats and lighters. Evinrudes help build bridges, ferry supplies, troops, equipment. Mountbatten's famed Commandos know their power, rugged reliability and trigger-quick starting ease.

All the experience gained in 33 years of building fine outboards is centered on our assignment to build Evinrudes for the armed services. Knowledge of some of the tasks these motors must perform is an ever-pressing incentive to build them finer . . . and still finer! *After Victory*, there will again be Evinrudes for all who love the water . . . sparkling new Evinrudes whose performance will ably reflect many advancements achieved in their fighting forebears!

**EVINRUDE MOTORS, Milwaukee, Wisconsin**

*Evinrude Motors of Canada, Peterboro, Canada*

★ Invest in America! Every War Bond you buy helps speed the day of Victory. Then, goad fishing to you.

**EVINRUDE OUTBOARD MOTORS**

HENRY and George won a map in a poker game. A treasure map. From two Mexicans they had never seen before, and hoped earnestly they'd never see again. In fact they were trying their best at the present moment to keep from seeing them again.

They had to win the map twice. The first time was when Henry topped the full house of one of the Mexicans with four deuces that he had been saving up. The second time was when he and George, with the map and a young Mexican who had been watching the game, got out the back door of the saloon just ahead of two thrown knives. They had the map on purpose; that they carried José along was an accident. He just happened to be in the way and they didn't have time to go around him. And he was glad enough to go along with them too. A knife sticks just as far in you if it hits you whether it was meant for you or not.

The door they came out was on the side of the saloon toward José's home, so he just kept on going the way he was headed. And Henry and George, with no particular direction in mind but only distance between themselves and the knife-throwing Mexicans desired, followed José through the breaking day.

Their pace soon slowed to a walk and they came at last to a halt before the one-room adobe house that was José's home. The sun was fifteen minutes past directly overhead.

It was ten miles to José's home from the saloon. They had plodded steadily through a small dust cloud of their own making all the morning. Henry and George were sweat-soaked and the dust had caked on their boots and clothes.

José, standing almost wholly in the shadow of his wide sombrero, was coated with dry dust. He was barefoot.

"This is it," José said, gesturing toward the closed door. "This is the hotel of my father. See?" He pointed to a sign that hung above the door. On it was RITZ HOTEL in straggly faded letters on a weathered board. Through RITZ was a wavy line in new black paint, and above it, also in new paint, was SIETE PISTOLAS.

Henry and George looked at the sign and Henry said, "Well, let's get inside out of this sun."

"We cannot enter the hotel of my father now," José said. "My father, he is taking the siesta."

"I don't see any lock on the door," George said. "How come we don't just push the door open and walk in?"

"The door, she is barred from the inside, so the siesta will not be disturbed."

"This is a lousy hotel," George said.

"Sure, she is one lousy hotel," José agreed. "Just like in the movies, with a long bar in one end and sawdust on the floor. My father, he is a smart man. He saw the movie one time in El Paso. That was the time he found the paint to paint the sign. It was in a store."

"How come him to change the name from Ritz to Seven Pistol?" George said.

"My father, he is a brave man. He got drunk on the tequila one night, and the next morning, what do you think? He has killed seven men with their own pistols . . . he thinks."

"He thinks? Didn't the men know whether they were dead or not?"

"My father does not know. He left

# PERFECT FOOL, JR.

By Arthur Mann

Ed Wynn was the proudest man on Broadway as he watched his madcap son disprove, to loud applause, the ancient adage that there is no fool like an old fool

ED WYNN interrupted a comedy routine in the Passing Show of 1916, went to the wings at stage and returned with a bundle of humor only a few months old. He held a bumpy head in full view of a puzzled Winter Garden audience. "You might as well start now," he said with a beam of paternal pride, "because you'll see a lot of him from here

as he launched the stage career of his Xavier Aloysius James Jeremiah Wynn, which reached a sudden related apex on Broadway in a mad-mixture of Army decorum and ex-décolletage called Strip for Action. In "Ed Wynn's boy" held forth such skill and personal triumph that the Perfect Fool will probably be better known as "Keenan Wynn's old man." Which label would be okay with the man, for, until recently, the inane and kaleidoscopic interests of his wheeling son forced him to profess utility of fatherhood. When his undisciplined heir wasn't cracking up in air-solo flights (three crashes to date), he was inviting the undertaker in big-speedboat races with souped-up motor. At odd intervals he invited paternal bankruptcy with purchases of high-powered foreign automobiles and clashes with highway cops, as he checked the efficacy of his investments against natural and man-made laws.

## Only a Spoiled Brat

Growing up, he seemed to have less energy and purpose than many of his father's more fantastic stage contraptions, but at least Pop's contraptions cost money. Far from becoming a poor edition of his humorous father or dramatic counterpart of his celebrated paternal grandfather, Frank Keenan, the predictable youth developed into little more than a spoiled brat. Eventually the situation became tragic. "You're nothing," the despairing father announced at the dinner table. "And you'll never be anything but a comedian's son!" To an erring soothsayer was less disappointed over a cockeyed prediction than Wynn when he watched his 26-year-old headache recite 112 sides of sparkling dialogue as star of the Lindsay-Crouse hit. He recorded the incongruous tale of a lady Smith, a drafted burlesque comedian who invites his former showmates to honor the camp with an unauthorized presentation of Flugel Street comedy and

unmitigated strip tease. Keystone of the plot and two hours of uproar, the kid did it without mirrors or any of the historic Wynn hats, inane giggles or impossible inventions. The boy gave out so well with his own interpretation of haphazard thinking that the producers couldn't find a suitable understudy or top comedian to replace him when he left for Hollywood, which, of course, had "discovered" him.

"This is not surprising," said Ed Wynn, hiding his delight under a bushel of modesty, "and certainly no dependable gauge of his acting ability. My son, left-handed from birth, is merely playing a screwball character, for which he has had a lifetime of preparation."

Like all fathers, Ed felt that somewhere he had been responsible, and in this case he had something. Young Keenan was allowed all kinds of freedom backstage during the Ed Wynn musical extravaganzas at home and on tour. He enjoyed enough interest and opportunity to become a child star, but he had distorted dramatic ideas that defied regimentation. Dignity was something people mentioned when speaking of Grandpa Keenan, a fine old-school actor. It had no place in any of Pop's shows, where anything crazy or unrehearsed was preferred.

During the run of The Perfect Fool at the Globe, young Keenan decided to give Pop a chance to ad lib by letting his

stage scenery and his favorite woodland haunts in Central Park.

Another prank was quickly substituted, such as cutting the support rope of a cyclorama during a slapstick scene, or rushing across the stage as a short cut to somewhere else. But the promising career in extemporaneous abandon reached a climax during the run of The Grab Bag, which featured a stable of Ed Wynn "horses." Each was composed of a couple of humans and a comedy horse head.

One night Keenan prevailed upon Joe Schrodre, front half of the most important horse, to let him occupy the after portion. When Pop brought out the prize of his stable, the audience screamed and broke up the scene. The horse resembled a giraffe, as it should have, with a seven-year-old kid occupying the hind end.

Forthwith, the elder Wynn packed the kid off to become the youngest student in the Harvey School, a decorous little institution in Westchester which had done nothing to deserve such a hellion.

"How was I to figure it?" Keenan demands, reviewing the horror of his early incarceration. "I went from the wildest backstage freedom to a peaceful asylum I never thought existed. Because I was the only actor's child in the place, they thought I could act, and so I was rushed right into the annual production. My job was to hold an ermine-trimmed cloak, trailing from the neck of a king as he marched somewhere. The sight of an audience paralyzed me. I stopped dead in my tracks. The king toppled backward, a victim of near-strangulation."

### An Unusual Student

Denied the care and comfort of his mother, who was an invalid the greater part of his life, Keenan did just as he pleased. The Harvey School condoned his pranks for seven years, and then he was foisted upon the unsuspecting faculty of Horace Mann School, to whom he was a constant source of amazement as the only student who could average 42% for the year and turn in the highest marks for examinations.

He failed to show up for the finals in mathematics, and they didn't know what to do. He appeared two days later with an apology. There was a motorboat race, he explained, from Albany to New York.

"But examinations are more important than watching a motorboat race," the teacher gasped.

"I wasn't watching it," Keenan said. "I was in it." He paused for dramatic effect. "Not only in it, but I almost won it. I left the trophy down in the gym for the kids to see."

He had cut Saturday classes to pilot his boat to Albany for the big Sunday race down the Hudson River. It was a death-defying contraption (entered in the unlimited class), which he had put together with his mechanic, Hector Alexander. They "souped" a 400-horsepower Liberty motor to a mere 550 by inverting the cams of the intake manifolds and feeding twelve V-type cylinders not only from the outside, but from four carburetors instead of two. Exhaust manifolds were centered between the cylinders to resemble smokestacks. Competitors gasped when they heard the monster roar. Powered by a batch of six-volt batteries, there was scarcely standing room for mechanic and pilot.

They zoomed into the lead of the unlimiteds (which start last) and almost swamped the little outboard motorboats in overtaking them down the river. It was a breeze until about thirty miles from the finish when—kablooy!

Vibration from the supermotor jarred loose the assortment of heavy batteries which, placed off center because of limited space, had shifted and ripped out their connections. Becalmed, Wynn and Alexander frantically set to work replacing the batteries and rewiring connections. Minutes flew by, and so did competitors. Just how many of each, Wynn doesn't remember, but he and his partner finished the job, zoomed downriver again, past Ossining and Yonkers, and finished a close second.

With a heavy sigh, the school gave him a special exam in mathematics, which he passed quite easily, and so he graduated.

Interest in motors had long been his obsession. Less than a year before, he had fixed up another craft to compete in the Around-Manhattan race for the Hearst Trophy. He drove a Baby Gar type with the skill of Gar Wood himself. Keeping to the center of the rivers all the way, he completed the thirty-seven miles in thirty-nine minutes flat, clipping twelve minutes from the best record.

Always provided with a chauffeur and a swanky foreign car in his early youth, Keenan's idea of a swell time was to dismiss the hired man for the day and spend it in the fascinating garage of Charlie Stich, a mechanical genius who serviced foreign cars. In no time, the brat had learned every angle of internal combustion and he astounded chemistry and physics teachers with an enviable knowledge of octane gas, compression, valve-grinding, greasing, and tuning up Dusenbergs, Hispano-Suizas, Mercedes, Bentleys, Rolls-Royces, Bugattis, Invictas, or Maseratis.

"A garage mechanic," the older Wynn sighed. "A fortune spent on education, so he can be a grease monkey!"

But the auto-fixing provided a great alibi the day Keenan came home with his face and hands swathed in bandages.

"A carburetor," he explained and struggled to smile. "I... I flooded it too much, and it went kablooy!"

Pictures in the next morning's papers branded his explanation a lie. A wild kid in his 'teens was flying a plane with a 220-horsepower Hispano-Suiza motor at about 2,000 feet. A T-connection in the oil line was severed just enough to permit a drip to the hot exhaust pipe. The oil ignited and then came the trouble. The whole mess blew up in his fresh puss. The flames melted the rubber of his goggles, seared and scarred his face and hands. But he brought the plane to earth with a slight thud in the midst of the tennis courts at Jackson Heights, Long Island.

### More Knowledge Needed

As his preoccupation with motors increased, so did arguments between father and son about college, but Keenan said, "Find one where I can major in motorboating, and I'll go."

Only when Pop hinted that unlimited cash was no longer available did the kid placate the old man by attending Ned Wayburn's school.

"But even that was a mistake," Keenan admits. "At Wayburn's, all the pupils danced, tapped their brains out, and I couldn't dance on a hot stove. After four months, they had one of those show-off recitals. Everybody danced, except me. I gave out with some lines from They Shall Not Die—the defense attorney's speech in the Scottsboro case. After that, nobody could possibly claim I was Ed Wynn's son, and Pop, sitting there with Mr. Wayburn and Melville Burke, wanted to least of all."

But Burke, who ran the Lakewood

Players at Skowhegan, Maine, saw thing. "You had a lot of nerve chewing scenery like that," he said the recital. "I'll give you a job at hegan. Ten bucks a week and meals."

Playing a Princeton boy in the act of Accent On Youth was the 78 parts Keenan memorized for su theater productions. Add to this, in twenty-two Broadway shows fourteen that never reached Broa and you have a fair idea of what endured trying to convince people he is more than just Ed Wynn's son.

"I've lived a whole stage care seven years," he moans. "Money doing voices on the radio kept me reer from ending in death by starv. I've had shows close after a week after a day, and one show closed b the end of the first performance, a dernourished turkey called The Widow—full of murders and Lucille verne. About thirty people showe on opening night. Half of them le the end of the first act. During the ond act, the spectators kept sho 'No, no, don't shoot him, too!' A end of the act, they went out for a sr and failed to return. We never pl the third act."

### Boy Meets Girl Backstage

Late in this dismal apprentice came a part in Hitch Your Wagon Star and a backstage meeting with Abbott, a cute little trick who had st and serious jobs with Evans, Cor Gielgud, Meredith, Gish and the F ric Marches in such offerings as Ro and Juliet, St. Joan, The Star Wa The American Way, Key Largo, and he said, "She's for me." Miss bott didn't mind, but she insisted tha consult Pop.

She was at dinner the night the traught father staged the great denun tion scene from indignation. With t she was determined to help straight out the bewildered maverick who suddenly found himself corralled. talked Keenan Wynn to producers til both she and the producers were l in the face. But the result was be parts and a chance to do his own t of comedy, which is a smooth and bre interpretation of his hapless attitude ward life and living it.

Marriage and a son, whom he named Edmund Keenan Wynn, h made him slightly serious; just enot to work out a plan for the future. H return to Hollywood, where they th ened to bury him alive with mea parts. His best, though small, was spitting machine gunner in the Gab Turner picture, Somewhere I'll Fi You. He worked with Judy Garland For Me and My Gal, and finally in hair shirt called Gambler's Choice. I situation drove him to seek a leave absence to appear on Broadway and discovered. It worked.

Promised a raft of heavy work a heavier money by Hollywood, he w remain in pictures only long enough build a bank balance for the protecti of his wife and son. That will requi only a few months.

"Then it's the war for me," he declar without a trace of brag. "And I'll he straight for those PT boats that whisk MacArthur from Bataan to Australi I'm dying to get my paws on one of the All I'll want then is my old mechan Hector Alexander. He's flying plan now, but I'll bet he'd get transferred I asked him. Can you imagine what of those scows could do after Hecto and I got through soupin' it up?"

THE END

## Pay-as-You-Go Ruml

Continued from page 13

### GLANDULAR DISTURBANCE

**W**HILE in 21-day quarantine for mumps at Camp Hood's Tank Destroyer School in Texas, New York's Private Robert Fuller had time to figure out a dismal prospect.

If, he calculated, one man in his company broke out with mumps on the twenty-first day, the rest of his pals would go into a second three weeks' quarantine. Then, if another man came down with the disease on the last day of the second quarantine period, the gentlemen remaining would start another twenty-one-day stretch.

Well, Private Fuller estimates dolefully that if this went on to its worst possible conclusion, the last guy in the company would be cooling his heels in quarantine for no less than eighteen years.

He frankly and loudly abhors all forms of exercise, considers it worse than useless for city dwellers.

His classic remark on the subject is: "If you ever hear of me dropping dead on a tennis court, you'll know it was because I was crossing it on my way to a Scotch and soda."

Ruml, during this period, had had several offers of jobs from business firms, including a handsome proposal from Percy Straus of Macy's. But he still was wedded to the social sciences, and in 1931, when his good friend Bob Hutchins asked him to head up a bigger and better social science department at the modern-minded University of Chicago, he gladly accepted.

But all was not rosy, for once in Ruml's smooth-flowing career. He and Hutchins hoped he'd be able to integrate the various courses in his department, or, as Ruml somewhat cryptically puts it: "We wanted to achieve unity in the several disciplines included in the social science field. But I had trouble with a handful of distinguished professors, and after three years of effort, my progress was microscopic. Those professors wouldn't work together. They wouldn't even play together."

When Straus again approached him, he allowed Macy's to ensconce him and his comfortable thinking chair in a plushy office on their exclusive 13th floor.

"I guess they hired me for a counter-irritant," says Ruml.

"We hired him for his breadth of vision," says a Macy executive. "We didn't care whether he knew anything about being a treasurer or not. We knew he could learn. What we wanted was stimulation. We got it."

Ruml likes the job, but neither he nor Macy's can imagine his giving up his other interests, for they contribute to, rather than detract from, his vitality.

From the time he first journeyed down to Washington during the last war, he has had a continuing interest in governmental affairs.

He served on Hoover's Employment Commission in 1930.

"They were cagey then," he chuckles, "they didn't call it unemployment."

He had another "plan," almost as far-reaching as his current production, in 1928. It later became the agricultural domestic allotment plan, which is generally regarded as the father of the New Deal's farm program.

At present, he's adviser to the National Resources Planning Board, director of the National Board of Economic Research, a trustee of the Farm Foundation, and a problem-sharing friend to many of the men who make governmental plans. All this takes him to Washington about once a week. He gets a sitting room as well as a bedroom in his Washington hotel when he can.

"I have to pace around," he explains; "and a bed gets in my way."

#### An Unconventional Young Man

In politics, as elsewhere, he's an independent. He says he registers Republican, then votes Democrat "to even things up." He voted for Roosevelt three times.

He is able to accomplish so much because, apparently, he is engaged in purposeful thinking so long as he is awake. He requires only a stingy six hours of sleep. He never bothers with details. He'll go to an important conference, deposit a startling idea, and depart, leaving others to lengthy discussion. He works on a project only until the ball starts rolling, then moves on.

He works from the particular to the general. He may start out by worrying about the little tax problem of a friend who's going into the Army, but his expansive mind soon has encompassed the tax problems of millions, with a side glance at the economic health of the entire postwar world.

Ruml can't understand why people say you shouldn't talk shop at parties. "Why not?" he asks. "Shop's the best entertainment in a man's life. If it isn't, he's in the wrong job."

His idea of fun is to gather together a group of dinner guests who are interested in discussing the very problems he's been dealing with all day.

A Macy official said, "He forces us all to think. There you are just sitting around talking, and the first thing you know his mental gymnastics have stung you into real thought on your own account."

People who know him well describe him as "the warmest-hearted economist," "the most earthy sophisticate," "the best friend" they ever knew.

The Ruml Plan has affected the lives of many people—including Ruml. A private person heretofore, in spite of wide-ranging interests, he's a public figure now. He'd never made a public speech until the Plan forced him to. He had rarely seen his name in the newspapers. Now he's an experienced speaker and his name is known to millions.

What will he do with his sudden renown?

He could use his advantageous position to put some more of his many plans before the public, he could . . .

"Plans," says Ruml facetiously, "will be announced later."

THE END

## Blind Men Drive Cars! True or False?

You're right! It's true! Remember . . . last time a passing car splashed a puddle of dirty road muck against your windshield?

Your old dull wiper blades can't clear that smear. They even make it worse. You're caught . . . splash blind . . . in tons of moving traffic. Can't see to steer.

You'll never be blinder . . . or more scared!

Why take such needless chances?

Smashed cars and broken bones today help only Hitler and the Japs. Your nation needs you and your car—both at your best—for Victory.

So . . . next time you buy gas . . . ask your serviceman to put on for you a pair of keen new RAIN-MASTER Wiper Blades.

One-piece molded virgin rubber . . . Ten keen wiping edges . . . Original equipment for years on many high grade makes of cars and trucks. Used round-the-world today on our fighting ships and tanks and trucks and bombers too.

RAIN-MASTERS cost mighty little. A joy to use in any storm. Most good gas stations have them. Tear this out and put it with your pocket money . . . to help you remember.

## WAKE UP YOUR LIVER BILE —

Without Calomel—And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pints of liquid bile onto the food you swallow every day. If this bile is not flowing freely, your food may not digest. You get constipated. You feel sour, sunk and the world looks punk.

It takes those good, old Carter's Little Liver Pills to get these 2 pints of bile flowing freely to make you feel "up and up." Get a package today. Take as directed. Effective in making bile flow freely. Ask for Carter's Little Liver Pills. 10¢ and 25¢.

Look —  
my Lady Buxton  
has a secret  
hideaway!"

My Buxton "inner fold" keeps large bills out of sight.

A patented construction allows a Buxton to expand as I stuff it. Yet when I ease the load, it slips back into its original "just-bought" shape.

Best of all, Lady Buxtons come in a variety of gay, costume-flattering colors. They're chic—they're flattering—and wonderfully useful!

**A MAGIC PURSE**  
It's removable! A honey for small change—in your bill-

fold or for solo use. Easy to unsnap and take out—just as easy to snap back.

"Three-Way" with Magic Purse in Goatskin—\$5.

"Three-Way" with Magic Purse in Sheepskin—\$3.50.

Open-window model with Magic Purse—\$2.

Other Lady Buxtons from \$1.

Just the thing with your uniform

Lady Buxton is the orderly "carry-all" for a service girl. Ration cards, identification papers, license, bills, coins, keys—all have their place in my roomy Lady Buxton "Three-Way."

HERE'S THE LADY BUXTON "THREE-WAY"

**A pocket file**—I'm so busy today I need a regular "office file" to keep me straight. Lady Buxton's three full-length compartments and half-a-dozen smaller ones are just that!

**For a glamorous evening**—I need a gay, wafer-thin billfold. So, by just lifting the inner fold out entirely, I have a complete, streamlined fold for my evening bag.

**A secret pocket**!—I simply tuck the large bills or important papers I want to keep hidden in the inner fold, reverse it, put it back! They are "locked in"—and hidden from sight!

A Lady Buxton "Three-Way" has nine different compartments to keep track of everything so a woman can find what she's looking for in a jiffy! Of course, all "Three-Ways" have the Magic Purse.

Ask to see Lady Buxtons at department, leather goods or accessory stores.

Buxton Inc., 4374 Orleans St., Springfield, Mass., or Dept. D, 47 West 34th St., N. Y. C.

## What Happened to Leon Henderson

Continued from page 19

Henderson log, so as to miss no word.

Even as Leon rushed forward to the fight, offering Bill and Phil the first two bites, word wafted down from the All High that wages must be excluded from any price-fixing bill. In the wake of the word, came the politicians and choice members of the palace guard, massaging Leon's shoulder blades with practiced touch, and pressing murmurous lips against his quivering eardrums.

Politics, they argued persuasively, was a game that had its roots in compromise. Give and take, while entailing some sacrifice of principle, was a fixed rule of the game, approved by experience and honored by all officeholders. They knew how he felt about wage control, and their hearts bled for him, but the Party must come first. Don't rock the boat, Leon. Be a good soldier!

Old stuff, but Master Henderson, loyal soul, fell for it with a bang that changed his voice from bass to soprano. To be sure, he did mumble something about the impossibility of curbing a price inflation "if wages or any other cost is allowed constantly to rise," but after this one rebellious squeak, he accepted wage exclusion. Straightway, the farm bloc swung into action, encouraged by the consideration shown labor, and while Leon gaped helplessly, the bill incorporated a provision that farm prices should not be set below 110 per cent of parity.

With piecemeal price fixing the order of the day, chaos followed inevitably. The Dutch boy who stopped a leak in the dike with his thumb had only one hole to plug. Starting off with a score of leaks, poor sweating Leon soon had hundreds. Wage boosts, backed by strikes and threats to strike, led to instant demand for higher farm prices, and these increases were followed no less quickly by clamor for new wage hikes.

Poisoned by fatigue, Leon now suffered an attack of Washingtonitis, a disease that manifests itself in a passion for size. The bigger the organization, the more efficient. Contemplating a force of 98,000 men, women and Phi Beta Kappas, his first request was for something like \$200,000,000, and loud were his protests when Congress cut it down to \$120,000,000. Existing divisions of the OPA doubled and trebled, and new divisions came into being overnight.

### Descent of the Parasites

Busy with his leaks, Leon had no time to pick and choose. From every nook and cranny, rushed briefless lawyers, social planners, theorists, crystal-gazers and congenital unemployables, pushing and jamming until shoehorns had to be used to get them in. Headless and footless, the jitterbug crew cried, "Good hunting!" and plunged into an orgy of directives and questionnaires that left the country a shambles.

If Mr. Brown has not already done so, it will pay him to visit the OPA Chamber of Horrors maintained by Senator Byrd in the basement of the Senate Office Building. Report 1-1071 PL OF NOBUCOS-WP. One book of regulations with 300,000 words. One questionnaire on vitamins 11 inches wide and 18 inches long, and after being filled out, four feet wide and twenty feet long. And a new report of equal size to be returned whenever the manufacturer, in response to an order from WPB, changes from cartons to bottles or from tin caps to corks. How

many times do you expect to wear your rubber boots in the next year? A statement from one firm giving \$100,000 the amount spent on questionnaires twelve months.

In the late summer of 1942, when was finally realized that an amenable price-fixing bill must be asked of Congress, Leon was given a second chance show independence and courage, and again he let himself be persuaded to play the role of "good soldier." Farm par was reduced from 110 to 100, but wages no less the cause of price leaps, were excluded as before, and no Henderson blow was raised in protest.

With Leon punch-drunk by now, who had been forcefulness degenerated in bluster and acrimony. His wrangles with Ickes reached a point where he would not sit on the same board with Harold. At his first meeting with Rubber Czar Jeffers, he pounded the table and told the big, jovial railroad president where to get off.

### Coup de Grâce for Leon

Crowning achievement of all, Leon even irritated amiable Claude Wickard by persistent attempts to evade the provision of the law that all price controls over farm products must be approved by the Secretary of Agriculture. Senators and representatives, complaining pitifully about appointments in their states, were bawled out as "patronage hounds," and public protests against questionnaires were answered by accusations of slackerism.

When, therefore, the election return convinced the alarmed politicians that a goat must be offered up, what more obvious selection than Leon Henderson the Ready Rationer and Big Questionnaire Man? Of course, it was in his power to have pointed out that actually he was not to blame. He could have shown that the real fault lay in the cowardice that exempted wages and farm prices from control in the first instance and impelled the politicians to continue purring against the legs of labor in the second instance.

And, too, he might have stressed the lack of an honest, courageous tax program for the absorption of surplus buying power, and the manner in which both agriculture and industry were drained of essential workers by draft boards under strict orders to meet their quotas. Also, the great triple transfer—Ickes to Manpower, McNutt to Labor and Madam Perkins to Federal Security—that held up organization of the Manpower Commission for weeks. Instead of that, Leon Henderson continued to be the "good soldier"; he even stuck his chin out for more punishment.

So much for the stout fellow who went down with the boat rather than rock it back to an even keel. What Washington now waits to find out is the exact goat content of Prentiss Brown. Will he have the courage to clean house, changing the Office of Price Administration from an overstuffed WPA project into a sensible, efficient working organization? Profiting by a study of the Henderson voyage, will he rear up on his hind legs and demand that a skewer be run right through the whole price structure, ending piecemeal stuff? Or will he, like poor Leon, fall for the "good soldier" line and meekly ready his back side for the boot that is bound to come?

THE END

## Treasure Trail

Continued from page 60

he found out. He is on his burro home when he wakes, and hah! do you think? He has the seven in his pants. And he has never those men since. From that day he called himself Siete Pistolas, like in movies he saw that day he found the. He is one brave man. All the people under the knuckle to him. Every-scared of Siete Pistolas Pedro. The she is named for him."

"Seven Pistol Pete," George mused. "My father, he is brave-looking with the seven pistols in his pants." "But he is," George said. "How does he keep his pants up with all that weight?"

"He has the pistols tied to his shirt with pieces of string."

"That must be some job untying all in every time he changes shirts."

"Why should he change the shirt? The one he has on is not worn out yet."

Henry had been looking about at the waste with two or three other houses scattered beside the trail. "Can't we go in one of the other houses until your father wakes from his siesta?" he asked José.

"Everyone takes the siesta," José said. "At the foot of the east wall of the hotel my father we can find the shade so as the rump of the burro." He measured a foot of space with his hands. "It should be enough."

He walked around to the east wall, and Henry and George followed him. He lay down in the narrow strip of shade with his back against the wall and wiped his serape around his shoulders and covered his face with his sombrero. Henry and George sat down against the wall and tried to pull their legs up into the shadow. They sat there waiting at sand fleas and twisting and turning until three o'clock when they yawned and grunts of awakening came inside the house. They rose and went to the front door and knocked and waited and at last heard the sounds of a door being lifted from the sockets. The door swung slowly open and Siete

Pistolas stood before them yawning. His mustache, long and greasy, curled fiercely upward above his gaping mouth like the horns of a Texas steer above the open end of a nail keg. His pants sagged with the seven pistols. His sombrero was still tilted over his eyes but on seeing the two strangers in the door he closed his mouth with a snap, pushed his sombrero back, and glared at them.

"Gosh!" George said, staring at the pistols, thinking until now that José had made up the story about his father. Henry spoke quickly, eyeing the pistols too, "Siete Pistolas Pedro?"

"Who seeks Siete Pistolas Pedro?" Seven Pistol demanded.

José came around the corner of the house just then, stretching. Seeing his father glaring at Henry and George he called, without quickening his pace, "Father, these are two friends of mine that I have offered the hospitality of the Hotel Siete Pistolas."

SEVEN PISTOL relaxed his fierce stance, the thunder cleared from his brow. He bowed.

"Ah, señores. Welcome to the humble abode of Siete Pistolas Pedro. The friends of the son of Siete Pistolas are welcome at the Hotel Siete Pistolas. My house is yours."

Seven Pistol swept his sombrero to the floor. He moved aside, bowed again, and swept Henry and George inside and up to the bar. José came in the door behind them and moved, still stretching and yawning, around the end of the bar and set a stone jug before them. Seven Pistol swept his sombrero back on his head and removed the corncob stopper from the jug with a flourish. He extended the jug to Henry. Henry took it, sniffed the open neck, shuddered, then turned and braced his shoulders against the bar and closed his eyes tightly and drank. He passed the jug, sputtering and gasping, to George.

George drank and handed the jug to Seven Pistol. Seven Pistol wet his lips, sniffed the mouth of the jug and rolled

his eyes upward, then raised the jug and drank slowly, and smacked his lips. Henry held to the edge of the bar and coughed, and George said, "Whush. Ain't that stuff hot?" José drank after his father.

They spent the rest of the afternoon drinking and by nightfall they were all pretty drunk. Seven Pistol roared toward a door in the back of the room for food and soon his wife came in with a platter of tortillas and beans and set it on the bar. She withdrew and the men closed in on the platter and scooped beans into their mouths with broken-off pieces of tortilla and washed it down with tequila. After a while they set the platter on the floor and sat down in a ring around it. This was more comfortable than standing, and too, their legs were beginning to get tired. Seven Pistol made José bring the jug so they wouldn't have to get up to get a drink.

About nine o'clock Henry said, "Siete Pistolas, we would like to stay at your hotel for a while."

"Certainly," Seven Pistol said. "You will remain as my guests until our grandchildren and our grandchildren's children are as numerous as the fleas in the sand."

"We only want to stay a few days," Henry said.

"What! Only a few days? You think then the hotel of Siete Pistolas is not good enough for you, what?" Seven Pistol roared out, pushing his sombrero off on the floor and trying to get to his feet. He got to his knees, then fell forward on his hands with one of them in the now empty platter. Several of his pistols had worked out of his belt and hung suspended from his shirt by the strings. They swung together with flat metallic clanks and Seven Pistol reached for one of them. With all his weight on the hand in the greasy platter it slipped, and Seven Pistol plunged forward on his face.

HENRY and George and José picked up Seven Pistol out of the platter and seated him in his former place and José wiped the grease off his face with a handful of sawdust. He got some of this in Seven Pistol's mouth and when Seven Pistol began spluttering and blowing the sawdust out, José handed him the jug. A good drink washed the sawdust down and restored Seven Pistol's humor. He passed the jug and they all drank.

A pencil had fallen out of Henry's pocket. Seven Pistol saw it and focused his eyes on it, and thought for a while and said to José, "Get the book. It is time for our guests to sign their names in the book. Bring the pen and ink."

José got to his feet and, staggering slightly, went around behind the bar. They heard him moving bottles and boxes about under the counter and he returned at last with the book and a pen and ink. The book was a leather-bound ledger with gold writing on the back. The pen had a rusty nib in it, and the ink bottle was dust-coated and half full. He placed these on the floor, with the ledger in the platter, and Seven Pistol said to Henry, "You will please to sign the name in the book of the hotel. Everyone signs the names in the book. Observe."

He opened the ledger, wet his thumb and tried to turn the first page. His thumb slipped, leaving a smear across the page and ripping it part way loose from the binding. He ripped it all the way loose and threw it aside. The page now showing had several wavery marks across it, and some blots. Seven Pistol slapped it lightly with the flat of his hand. "Observe," he said again. "Everyone signs the names in the book. We keep the record."

Henry had the pen in his hand and now he dipped it in the bottle of ink that José held open. Then he bent over the ledger.

"What is that on the page?" he said, looking at the marks and blots.

"That is where the other guests have signed the names in the book. Cannot you read the English?"

"That's not English. That's not anything but some crooked lines and a couple of big blots. Whoever did that must have been drunk."

"What? You think that the guests of the Hotel Siete Pistolas cannot write the English? You think that drunkenness is allowed in the hotel of Siete Pistolas Pedro?"

Seven Pistol tried to get to his feet again but this time he only managed to raise himself a few inches from the floor, then his hands gave out and he dropped back with a soft thud. His loose pistols clanked, and he fumbled at them with his hands, pulling one of them loose when the string ripped out of his shirt. The pistol fell to the floor and when he felt for it with his hand, he covered it with sawdust. He turned to look for it and fell over on his face.

This time Henry brushed his face off when José righted him. George staggered over with the jug and kicked the ink over where José had set it on the floor, and stepped in it. Then he stepped on the open page of the ledger and after Seven Pistol's mouth was washed free of the sawdust this time and they all had a drink around, José happened to look down at the outline of the foot on the page. There were flecks of ink-soaked sawdust stuck to it, and the cracks in the soles of George's boot made trails across the outline.

"Look," José said, pointing. "We have another treasure map."

They all looked, and George said, "It's a plainer one than the one we already have."

Seven Pistol leaned forward. "What is this about the map of the treasure?" he asked.

"Gimme that map, George," Henry said.

George felt around in his pockets, found the map, and handed it to Henry. He opened it and they seated themselves around the platter again and compared the map with the footprint in the ledger.

"The marks are about gone from that one," José said, pointing a finger to the map in Henry's hand. "The one in the

# NOTHING CUTE ABOUT A COUGH

(DUE TO A COLD)

**SMITH BROS. COUGH DROPS**

When a cough due to a cold plagues you—it's just common sense-ible to trust America's most famous cough drops for quick relief. Smith Brothers contain a soothing blend of medicinal ingredients—blended with prescription care. And they still cost only 5¢. Why pay more?

**BLACK OR MENTHOL 5¢**

## Now She Shops Cash And Carry

Without Painful Backache

Many sufferers relieve nagging backache quickly, once they discover that the real cause of their trouble may be tired kidneys.

The kidneys are Nature's chief way of taking the excess acids and waste out of the blood. They help most people pass about 3 pints a day.

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

## ENDERS shaving saves all 3

**1 TIME** Enders streamlined design makes your shave amazingly easy, quick.

**2 FACE** Enders feather-light pressureless action is more friendly to your skin.

**3 STEEL** Enders twice-thicker blades can be stropped many times—to keep 'em shaving—and smoothly.

Enders users—Save steel. Send \$1 for Enders Stroppler.

**ENDERS SPEED SHAVER**

holes in his shirt and tied the pistol to him again.

They were ready to leave for the treasure hunt now and José went out and brought a burro around to the front. He had already packed it when Seven Pistol made him take the pack off so he could put in two jugs of tequila. That made the pack too heavy so they left out a sack of flour and one canteen of water.

"It is bad to be lost in the mountains and be thirsty," Seven Pistol said, "but it must be horrible to be lost in the desert and be thirsty and not have the drink to quench the thirst."

"We won't get lost with this map to follow," Henry said.

"Where is this map?" Seven Pistol asked.

"George has got it. It's his map."

"George," Seven Pistol said, "where is this map?"

"You had it last night," George said.

"You said you would protect it for us."

"What! You tell Siete Pistolas he has the map? Phwaw. What do you think Siete Pistolas is? A thief in his own hotel?"

"Here," Henry said, reaching last night's jug from the counter and thrusting it at Seven Pistol. "Drink this and see if you can remember what you did with it last night."

Seven Pistol took the jug and tilted it to his lips. He drank, lowered the jug and wiped his mouth with the back of his hand and absent-mindedly passed it to George. George drank and handed the jug to Henry. Just as Henry was about to tilt the jug to his lips, Seven Pistol grabbed it from him.

"Quick," he said. "I almost have the idea. One drink and I think I have it." He drank and let the jug down at arm's length by his side as he stared at the floor with a frown of concentration on his face. "One more," he said after a moment. "I get it this time." He tilted the jug but it was dry. "Quick," he said to José, dropping the empty jug to the floor. "Get one of the jugs from the burro before I lose the thought." He stood with his eyes shut and one hand over them, the other hand outstretched. José had to take the pack off to get the jug of tequila, and as soon as the burro felt itself relieved of the weight of the pack, it wandered off.

When he came back in with the jug, Seven Pistol took several drinks, then George took the jug from his hand and drank and passed it around. When noon came they had both jugs with them, one

on the floor by Seven Pistol, who could think easier when he didn't have to stand, and the other on the counter in front of George and Henry and José.

At last Seven Pistol looked up at José. "Go out and see how close the shadow is to the wall," he said.

José went out the front door and soon returned. "She is about like the burro across the rump," he said.

"Close the door and drop the bar in the sockets," Seven Pistol said as he got up from the floor and, taking the jug with him, staggered over to the corner where the sawdust was thickest.

"What the devil?" Henry said.

"It is the siesta," José said. "We rest, then we think about finding the map some more. My father, he thinks better when he is rested."

José went through the door at the back of the room, and Henry and George looked at Seven Pistol in the corner, his serape wrapped around his shoulders, his sombrero over his face, and the pistols tied to his shirt lying about him in the sawdust. They sat down on the floor with their backs against the counter and their jug between them.

**PROMPTLY** at three o'clock Seven Pistol awoke. He yawned, sat up, and took a drink from his jug. He rose, and with the jug hooked onto one finger, crossed to the door.

"I have the fresh mind now," he said as he lifted the bar down. "With a few of the drinks, I will have the idea surely."

He set the bar to one side and swung the door open. Standing in the door were the two men George had won the map from. Seven Pistol looked at them in surprise, then bristled as he swept his hand across his mustache and then patted the guns dangling about his waist.

"Who is this that confronts Siete Pistolas?" he said.

"We wish to come into the hotel, Señor Siete Pistolas," one of the men said. "We follow the gringo whom we have tracked here. We did not disturb the siesta. Now the siesta is over. We have come for the gringo."

"Say—it's the ones we won the map from," said George, rising.

"So it is," said Henry, coming to his feet beside him. "Let 'em in, Seven Pistol. Let's see if they can take us."

"I wish they would find the map," George said. "It's more than we can do."

"What?" said one of the newcomers. "You have lost the map?"

Siete Pistolas swelled his cheeks out

## A million tons of rubber

You'd demand action—if you knew that a million tons of rubber were going to waste, when it's vital to our war effort.

And yet the fact is, a million men are "going to waste" in low-paid, unskilled jobs—when, with a few months of practical, spare-time training, they might be doing more important, better paid work in some victory-vital shop or factory!

And America needs trained manpower as much as she needs rubber and steel!

You can demand action on this matter, too—by mailing this coupon today, and learning how quickly a low-cost I. C. S. Course can fit you to be a better fighter on the business and industrial front!

Act right now—the world won't wait for slow-pokes!

until the ends of his mustache jumped up and down. "What do you mean, lost?" he bellowed. "You insult the house of Siete Pistolas when you think one of his guests have lost something." Seven Pistol's face flushed darkly as he raised both hands, one with the jug still hooked to the finger, and waved them in the faces of the newcomers. The newcomers' eyes followed the waving jug and they swallowed thirstily.

"The journey here has been long and hot, Siete Pistolas," one of them said. "The mouth gets dry like the desert sand, and the spit is like the cotton."

"Give 'em a drink, Seven Pistol," Henry said. "You don't aim to turn a thirsty stranger away from the house of Seven Pistol with his thirst unquenched, do you? Anyhow, they can't take the map if we haven't got it, can they?"

"That is so," Seven Pistol said, his cheeks deflating and his face returning to normal color. "Come in," he said to the two men, bowing and motioning to the inside of the house. "Welcome to the house of Siete Pistolas. What is his yours."

The two men came in with a wary eye on George and Henry and sidled up to the bar. Seven Pistol set his jug on the counter before them and they drank thirstily. Seven Pistol roared toward the back door and soon José came bringing the platter with more tortillas and beans.

BY THE time the food was eaten the jug was about half empty and everyone was on friendly terms. One of the newcomers turned to Henry and said, "Where do you think this map disappeared to?"

"Durned if I know," Henry said. "Seven Pistol had it last."

"So!" said the newcomer, whirling on Seven Pistol. "You have made the map to disappear, hah?"

"Who dares to say Siete Pistolas has made anything to disappear? You insult the house of Siete Pistolas."

"This for the house of Siete Pistolas," the newcomer said, crossing his fingers and drawing them across his throat as he made a spewing noise with the side of his mouth.

Seven Pistol swelled. Foam appeared on his lips. Sputtering words tumbled through the foam in an incoherent jumble. He clawed at the pistols dangling from his shirt, and the newcomer whipped a knife from his sleeve and let fly with it. The blade nicked Siete Pistolas' throat on the side, and in surprise he stumbled backward and went down, hitting his head on the corner of the bar as he fell and knocking himself out. They all stared openmouthed as he failed to rise from the floor, then crowded around and looked down at the blood oozing from the side of his neck.

"My father, he is dead," José pronounced finally.

"That is very sad," the stranger who had thrown the knife said. Then, "Let us then offer felicitations to the new head of the House of Siete Pistolas." He took his sombrero off and bowed to José, and the other stranger followed suit, and Henry and George took their hats off too.

They picked the unconscious Pedro up and laid him on the bar and placed candles at his head and feet, then drank to his departure and to a long and prosperous future for José. Seven Pistol's wife came in and sat in the corner where the sawdust was thickest and threw her apron over her head and wailed. George placed the platter on the floor, since the bar was now crowded, and the men all sat around it with the two jugs in easy reach. In deference to José, as the new head of the house, the others waited until he had scooped beans into his mouth on a piece of tortilla and washed it down

with tequila before they began to eat. Seven Pistol's wife watched the platter from under the edge of her apron so that she could refill it each time it became empty.

The men did not have much to say at first, but when the platter was empty, José said, "My father was a brave man."

The stranger who had cut Seven Pistol's throat said, "He was a good man. He was a friend to everyone."

"I'll miss old Seven Pistol," Henry said.

"The place won't seem the same without him," George said.

"I wish now we had not killed him," the second stranger said. "Now, we will never find the treasure."

Seven Pistol's wife saw the platter was empty and dropped her apron from her face and came across the room and got it. She took it into the lean-to and refilled it and brought it back, then she went back to her corner and put her apron over her head and began wailing again.

After they had eaten some from the platter and drunk some from the jug, George said, "I reckon it's about time to sign the book again, ain't it?"

"What book is this?"

"The hotel register where Seven Pistol keeps the record of who comes here. Where is it, José?"

"The book, it must be on the floor somewhere where we put it away last night."

They looked about for the ledger and Henry found the map.

"What do you know about that?" he said as he held it out for them to see. "Here's the map."

One of the strangers took the map from his hand and his companion peered over his shoulder at it.

"This is no map," the first stranger said. "It is all of a color. There is nothing on it but some—some—" He raised it to his nose and sniffed. "Something very damp and strange. The paper has swelled. It comes to pieces in my hand."

"Seven Pistol must have dropped it when he went to sleep last night and it's been lying in tequila and ink ever since. No wonder they ain't no marks left on it."

"That Siete Pistolas. I wish his throat was not cut, so that I could cut it again," the first stranger said.

"No one could cut the throat of my father two times," José said, glaring at the stranger and trying to get to his feet. "He was a brave man. He was Siete

Pistolas Pedro. He killed seven men last night . . . he thought."

"Here. Drink up," Henry said, bringing José back to the floor and putting the jugs around.

They all drank, ate some more and drank again. The one who had cut Pistol's throat said, "Siete Pistolas was a brave man. It is too bad he is dead. This is the way of things."

At this last mention of his name Siete Pistolas came to. He sat up on the floor and swung his legs off the edge and said, "Who is this that calls the name of Pistolas?"

THE men on the floor whirled to the voice and the one who had cut Seven Pistol said, "Madre de Dios has risen from the dead." He scrambled to his feet and, followed by his companion, fled out into the night.

Siete Pistolas slid from the bar, winced as the jar of his movement ried to the lump on his head. Raising his head with one hand he clanked to the jug of tequila and raised it to his lips and drank. George and Henry and stared up at him as he lowered the jug and smacked his lips and said, "I am even to see Siete Pistolas is to make them run. You know those under Siete Pistolas' protection are safe from those who would harm them?"

"My father," José said as Seven Pistol took his seat on the floor and scooped a mouthful of beans from the platter. "He is a brave man. You see?"

Siete Pistolas' wife stopped wailing and dropped her apron from her head and went to the kitchen to prepare beans.

"Your father didn't do much of a job of protecting that map," Henry minded José.

"What is that of the map?" Seven Pistol said.

"Here's the map you were going to look after for us," Henry said, scooping the sodden pieces from the floor and handing them to Seven Pistol.

Seven Pistol took them, stared at them a moment then let them fall from his hands to the sawdust, and brushed his hands.

"Ah well," he said as he reached for the jug. "This treasure. What if we not find it? We did not lose it in this place."

He drank and passed the jug around. THE END

"After five years, I've finally landed the Aphorhp Stores account! They just ordered 100,000 cans of corned beef, 65,000 cans of sardines, and 745,653 cans of assorted soups"

NO THIRD  
WORLD WAR!

## THE COST OF MODERN WAR

*Fitzpatrick*

THE President rang in 1943 by asking Congress for 100 billion dollars to spend on war during the fiscal year beginning July 1, 1943. As the request is argued in the press, and as Congressional committees behind closed doors give the gimlet eye to the proposed expenditures, we take it that Americans are gradually realizing just what modern war costs.

Not that anybody can visualize a billion units of anything, let alone 100 billions. Various illustrations, though, can be cited.

For one, this amount which the President proposes to spend in one year for war is one third of the United States' estimated total gross value, as real estate plus its numerous improvements, of 300 billions.

For another illustration, the entire national income of the United States for the year in question is expected to come to 145 billions. Of this amount, it is suggested that we toss 100 billions, or 68.96 per cent of 145 billions, into the war—into the destruction of human life, the smashing of cities, the extermination of real wealth.

This program would be colossal enough if only the United States were involved in it. But in addition to our 100 billions for war, other warring nations are expected, during that same year beginning next July 1st, to spend for war as follows: Germany, 35 billions; Great Britain, 21; Russia, 15; Italy, 8; Japan, 7; Canada, 3. Total: 189 billions.

We shan't pay all of our 100 billions in cash. Much of it will be borrowed. If the President gets from Congress all the additional taxes he wants (which is doubtful), this budget nevertheless anticipates a national debt of 210 billions by July 1, 1944. Should the national debt eventually reach 300 billions, as it may, then the United States will be comparable to a house mortgaged for 100 per cent of its value, if you can imagine such a thing. A banker can't.

That all this will mean staggering taxes, we are all aware. And if we don't tax ourselves heavily,

we shall run into an inflation that will prove more ruinous than the prospective taxation.

When it is all over, and we have won the war—as now seems assured, though it will probably take quite a while—what shall we have to show for our money that will have vanished?

We'll have casualty totals probably exceeding those on both sides in the Civil War, our bloodiest war prior to this one. We'll have a ruined, wrecked, starving and bankrupt Europe calling on us for help of all kinds. Large parts of the rest of the world will be in like straits. Americans themselves can expect to be eating more sparingly than now, to be wearing clothes of lower quality, to be colder in winter.

We shall still, however, have our independence as a nation; and that is worth any price. Our enemies will take that away from us if they win, and will turn us all into slaves. It is worth any effort, any price, to prevent that.

### How Much is the Future Worth?

Congress should scrutinize every item of the Administration's proposed war expenditures, and should mercilessly cut out every threat of waste. But Congress also should vote every dime that will be needed to carry us successfully through the budget year.

This question, though, keeps clanging in our minds: How many more of these holocausts can the world stand? This one is vastly worse than the first World War. What will the third one be, if there is a third one? What will it cost in blood, heartbreak and money?

It looks to us as if the civilized world's main job, for the rest of this war and the years just after it, is to strive to work out some way of insuring mankind against future world wars.

We are not trying to talk like idealists or dreamers. It makes more sense, we believe, and it certainly appeals to American common sense, to put the discussion on a cold-fact basis. The es-

sential cold fact in this case is that modern costs too much; too ruinously much.

If another world war can be averted, we see that it matters how the result is accomplished. If an improved and implemented League of Nations will do it, let's have the improved and implemented league. If a United States armed to the teeth will do it, let's stay armed to the teeth for an indefinite period after this war. Let's have anything that holds out a fair hope of sidetracking another of these horrors 20 or 30 years hence.

We don't agree with those who see no hope. We do not think, with some super-pessimists, that the race of man is fated to wreck itself and ruin the running of the world to the rats, the foxes, the tigers or the insects.

There is at least this ground for hope: The present world debacle, by its very magnitude and immensity of the ruin it will leave behind it, will make the postwar world climate more favorable to some workable plan for insuring peace.

That adjustment of the world's mental and spiritual climate was not accomplished by World War I. The first World War's devastation was not great enough to bring about such a result in Europe. To many people, especially in the allied countries, that war was more a grand, intoxicating adventure than it was a tragedy.

The present war may blow such delusions out of most minds on blasts of sulphur smoke blended with minute drops of blood. If most of us are ripe after this war for any proposal that seems to carry a fair promise of lasting peace, then the human race would seem to deserve to be killed by its own folly.

Let us, then, keep our minds and ears open to all the plans for organizing the peace that are now in circulation and that will be offered in future. One of these, or a combination of several of them, may contain the answer.

If we don't find the answer—well, paint your own picture of the ultimate consequences. You can hardly paint the picture too dark.

**DO YOUR BEST...AND**

# *Be at your Best*

**T**HESE are simple obligations, to our country, to our men at the front, and to ourselves.

No matter what your job—housewife, office employee, war worker—give it all you've got . . . do your best all of the time.

That means keeping strong, keeping healthy. This job's going to take every bit of stamina we can muster. And health is your greatest asset.

But as you work, don't forget to play. Play is the great equalizer. Make it part of your life also. Step forth. Go places. Meet people. Cultivate old friends and make new ones—lots of them. And try to be at your best always. Look your neatest. Be your sweetest. Swap a smile for a tear. Trade a laugh for a frown. Don't let down. Keep smiling. Keep going. That's the way the boys at the front would like it.

As a safe, efficient household antiseptic for use in a thousand little emergencies, Listerine Antiseptic has stood pre-eminent for

more than half a century. In the later years it has established a truly impressive test record against America's No. 1 health problem, the ordinary cold, and its frequent attribute, sore throat.

It is hardly necessary to add that, because of its germicidal action which halts bacterial fermentation in the mouth, Listerine Antiseptic is the social standby of millions who do not wish to offend needlessly in the matter of halitosis (unpleasant breath).

## ANY WEEK

IT SEEMS that William T. Knight of Lincoln, Nebraska, is so bored with talk about taxes that he has a solution for this vexatious problem: "Let the government take over all our wages or salary and then feed and clothe us and pay our rent and give us Army pay of \$12 a week for the duration. That would free about half the government employees for war work and cure a million headaches. Most workers never have as much as \$12 a week left anyhow, after paying those above-mentioned bills."

IF MR. KNIGHT thinks he's going to get by with anything as subversive as that, he's crazy and may be inviting a visit from the F.B.I. If he considers he has troubles, he is only pampering himself. From Alva Adams of Madison, Wisconsin, we learn of real tragedy: "Because of the war, we have a fuel-oil shortage; because of fuel-oil shortage, we're cold; because we're cold, I purchased outing flannel pajamas for the family. Outing flannel consists of one tenth outing and nine tenths fuzz. Said fuzz does not remain with garment but sneaks out of it, creeps downstairs, lurks in corners, garnishes family roast (when we can find a roast). I tried washing the offending garments in the family washer. Result: Clogged up that little sieve where water runs out; removed sieve, let water run on floor. Result: Basement drain clogged; shortage of men, can't get a plumber anywhere. I hope they boil Shicklgruber in oil—preferably fuel oil!"

AND according to one of our most faithful correspondents on the Coast Mr. Sam Goldwyn has just finished a picture starring Bob Hope, and he thought it would be a good idea to get some information on what Hope's last previous effort had done for Paramount. The film was Road to Morocco, and the reports ran something like this—Boston: "They tore the roof off for this one." Chicago: "They ripped the seats up in their enthusiasm." Memphis: "Hope really burned the place down this time." Sam Goldwyn read these raves with something approaching terror. "It beats me," he said worriedly, "how they're able to stand up under that boy."

BUT if Paramount is having trouble with Bob Hope, we're being harassed by A. M. Jackson, editor-publisher-handy man of the Slaton (Texas) Slatonite, who writes, "If your column needs some original ideas from a real man instead of these imaginary characters you claim you hear from in all parts of the world, I can turn out some high-grade baloney (for a price) from a place in Texas where cowpunchers raise cotton and where we build sand fences instead of snow fences." If Jackson thought he was going to break our heart by spoiling our last illusion, he is mistaken; nobody is ever going to make us believe that Texas cowpunchers are anything but BIG, BRAVE, BULLDOGGERS.

AND while we're all (in the East, at least) sitting around in freezing rooms like characters in a play entitled The Last Days of St. Petersburg, Headlee Lee Howard, now in training at Nashville, Tennessee, has the effrontery to be sore because we printed an article on the making of the picture Air Force, in which we said that the motion-picture crews almost died of the heat around Tampa, Florida. Insisting that Tampa never in its life had a temperature over 100, Mr. Howard seems to suggest that the whole thing may have been a plot by the movie people from California. We investigated and found that the crew returned from Tampa looking like baked apples, but that may merely have been make-up. We must insist, however, that Mr. Howard keep a civil tongue in his cheek on the subject of heat. We burn a chair in the middle of our living room every night and are not too amiable with people complaining about sunburn.

OUR anger is relieved somewhat by finding a touch of pathos in a communication from R. D. Wullschleger of Frankfort, Kansas, who asks indulgence for those who brew a crock of the flowing grape for their own pleasure. It wouldn't happen, he says, if the government would be content with lower taxes on liquor, but since they won't be content, and loose fruit will persist in lying around, a man can hardly help making a little wine. "He gives his friends some," says Mr. Wullschleger, (Continued on page 68)

## Tough? These new **SYNTHETIC RUBBER** soles wear twice as long as leather!

EVERY general knows that a soldier is no tougher than his feet. That is why, back before the war, both the Army and Marine Corps made rubber soles and heels "regulation" on field shoes—because tests proved good rubber long outwore any other material on the march. And it is easier on the feet than old-style hobnails.

But when Uncle Sam began calling millions of men to the colors, Goodyear foresaw that our troops might eventually be deprived of these longer-wearing, foot-cushioning soles as the nation's rubber reserve dwindled. So many months ago we set our Research Department the task of developing comparable soles and heels from Chemi-

gum, Goodyear's own synthetic rubber.

Now after many trials Goodyear is ready with Chemigum soles and heels that not only wear as long as natural rubber—*more than twice as long as the best*

*leather*—but possess a plus advantage not found in either rubber or leather. This is Chemigum's impermeability to acids, oils and greases that cause both leather and rubber to soften and swell.

As a result, Chemigum soles and heels are definitely superior for wear in engine rooms, auto repair shops, gasoline stations, oil fields, barnyards and in many industries.

Thus once again Goodyear has anticipated an emergency and is ready with the answer. Should the rubber shortage force the Army to give up its present shoe construction, Chemigum soles and heels can be produced as rapidly as adequate quantities of this synthetic rubber can be made available. And with the expanding output of new synthetic plants, built as part of the government's rubber program, these better shoe products will ultimately be available to all.

## KEEP UP WITH THE WORLD

By Freling Foster

The world's largest carrier of aerial freight is the TACA line (Transportes Aereos Centro-Americanos), which serves the seven countries of Central America with 56 planes, 30 radio stations, 126 offices and 200 airports. Each day over its 7,000 miles of scheduled routes, are carried such articles as dynamite, chicle, mahogany, foods, heavy machinery, household goods and work and meat animals. Incidentally, it is the only airline in existence that owns a flying oil tanker.

In its study of the possibility of the transmission of breast cancer of mice through milk, the National Cancer Institute in Bethesda, Maryland, uses a machine to milk its laboratory mice. No one has hands small enough to relieve these little rodents of their milk which amounts to about one quarter of a thimbleful taken at each milking.—By S. G. Collier, Edmonton, Alberta, Canada.

Amatol, an explosive used in shells and bombs, requires a heavy charge of another high explosive to set it off. This "booster" is usually the more sensitive TNT which, in turn, is detonated by the still more sensitive mercury fulminate.

A package addressed to a soldier overseas can no longer be accepted by a post office unless the sender produces a request for the specific articles in it, written by the soldier and approved by his commanding officer. Moreover, the package cannot be mailed if it is more than five pounds in weight, fifteen inches in length or if it is thirty-six inches in combined length and circumference.

During the entire seventeen months' siege of Leningrad, broken on January 18, 1943, most factories, schools and churches continued to function and four theaters and twenty-three motion-picture houses did not close their doors even for one day.

A new treatment for burns is the spraying of the injured skin with a melted mixture of paraffin wax, sulfanilamide, cod-liver oil, vaseline camphor, menthol, and oil of eucalyptus. The advantages claimed for this new spray treatment include instant relief from pain, elimination of bandages and time saved, as twelve men can be cared for while one man is being treated by any other method.

Many psychologists believe that everything we have heard, said or experienced in our lives is retained in the subconscious mind, but that most of these details rarely return except under exceptional circumstances. Classic case cited is that of an illiterate servant girl who, while delirious, repeated numerous passages in Hebrew, Greek and Latin which she had overheard a former employer recite in his study.

On December 8, 1941, the Jockey Club of New York received a great many letters from racing stables requesting the official registration of the name "Pearl Harbor" for one of their horses. On the following day the name was given to a bay gelding formerly known as "Two," which was owned by the Bedford Stock Farm near Fort Worth, Texas.—By E. A. Maker, Swansea, Massachusetts.

When an American soldier is captured, his pay is continued and the accumulated amount given to him upon his return, minus such deductions as insurance premiums and allotments made to dependents. When a man is reported missing in action and his fate is unknown, he remains on a pay status for at least a year.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. # Training the CLIPPER PILOTS

with  
**JACOBS**  
AIRCRAFT  
*Engines*

Long before the day when he took the controls of this huge skyliner, the Clipper Pilot served an apprenticeship exacting in the extreme—an apprenticeship of countless hours aloft, under every conceivable condition, flying mostly “on instruments”.

This comprehensive training requires Training Planes powered by the most reliable of engines.

Pan American Airways Clipper Pilots—like our Army Bomber Pilots—are schooled in twin-engine Trainers powered by JACOBS.

**JACOBS AIRCRAFT ENGINE CO.**  
POTTSTOWN • PENNSYLVANIA • U.S.A.

Col. R. L. Scott, Jr. (right) and Col. R. H. Carmichael tell of their experiences on the sky battle fronts of the Far East

TAKE it from one who should know, America's fighter pilots and bomber-plane gunners are better shots than their opponents in the Jap air force—and for a sound reason. Colonel Robert L. Scott, Jr., Army Air Corps, says that when an American airman pulls the trigger on his machine guns, he's usually on the mark, but that Jap pilots and gunners always shoot behind their target.

Scott has just returned from China where he headed the fighter group of Brigadier General Claire Chennault's air force, and personally shot down at least thirteen Nipponese planes. American aerial gunnery is top-notch, he declares, largely because most of our airmen learned to shoot at an early age. The average American boy—at least outside our big cities—owned a BB gun at eight and went hunting with his daddy at twelve. The art of leading a moving target, learned from shooting on the wing, is what makes our men good aerial gunners, Scott says. On the other hand, few Japanese airmen ever went “duckin'” as boys and never developed the knack of leading a moving object.

Drawling Colonel Scott, a thirty-five-year-old Georgian, is mighty proud of the fact that his American Army Air Force fighter pilots took over from the famed Flying Tigers and kept up the destructive record of the AVG soldiers of fortune.

“The Japs,” he says, “sorta figured they'd have an easy time of it when the veteran Tigers moved out, and we stepped in. But we got nineteen Zeros the first day without losing a plane and have got ten or twelve to one ever since.”

In attacking a Zero, Scott advises, get on his tail and aim for the point where the wing joins the fuselage, and give him a few bursts.

“If you've hit where you aimed,” he says, “at first it seems as though you've missed. Nothing happens immediately, but then a tongue of flame appears and slowly spreads. Then he blows up and you fly right through the pieces.”

When Colonel Scott flew home from China recently, to teach his hard-won knowledge of killing Japs to our fledgling fliers, he passed a flight of American bombing planes over the Atlantic midway between South America and Africa. The lead plane of the group en route to the fighting front had been

named “Georgia Jerk,” by its crew noted. On arrival at the American in Brazil, Scott inquired who was manding the Georgia Jerk, saying he must have been a cracker like him.

“Yep,” came the reply, “he's a Georgia boy. Came from your home and he says you taught him to Name's Scott, Lieutenant Roland Scott. Yep, that's right; your brother. Said he hoped to take place at the front so you could home for a while.”

FOR many decades, military w have vied in thinking up me which declared either: (1) infant the decisive factor in land warfare, artillery dominates battlefields. general, it seems, once wrote that “i try is the queen of battle.” It was c tered by another who said, “Art conquers, infantry occupies.” He a that, if infantry was the queen, lery was king.

German Stukas appeared for a ti have permanently banished these pretenders, although they later back into the lists. Now another tender has put in his bid for the th

This writer recently asked Major eral A. A. (“Archie”) Vandegrift, led the Marines into the Solomon August and commanded our forces during the heavy fighting last fall, caused the most casualties among Japs—infantry machine-gun and fire, artillery fire or dive bombing.

“We haven't any official statis Vandegrift said, then turned to his of staff, Colonel Gerald Thomas asked, “But how about it, Gerry?”

“I'd say, definitely, Chief, that gr strafing by airplanes killed the Japs,” Thomas replied.

American planes, firing both .50 ber machine guns and 37-mill cannon, accounted for many of the ponese killed at Guadalcanal by air fire, while attacking landing barges. same destructive fire killed many dreds and probably thousands of in New Guinea, particularly when tried his ill-fated offensive on Moresby over the Owen Stanley M tains. In that rugged terrain, the had to stick to the single mountai where they were fair targets for th lied airmen. . . .

JOHN G. N.

## "Damn the Torpedoes!" —we'll grow our own palm trees

IT was a matter of convenience to let Nature grow the palm trees in Africa. Palm oil was then extracted from the pulp of the palm fruit, and American manufacturers used it—among other ways—in tin plating.

When the torpedoes began to cut into the cargo space for palm oil, scientists at the "University of Petroleum," Shell's research laboratories, made a study of its chemical structure. Tin plating is always important. Right now it is critical.

The result was that Shell scientists

produced an oil from petroleum which, by every laboratory test, fulfills the functions of palm oil, insofar as it enters the process of plating tin over other metal. They did better than that:

Shell's substitute "palm oil" from our own oil derricks hasn't the shortcomings of natural palm oil: it is more oxidation-stable, and does not thicken, or become inflammable. . . .

War pressure is hastening realization of the wealth we have at hand in petroleum, and the science which

puts it to work in wholly unexpected ways. When we could get palm oil and rubber from trees, and silk from the silk worm, it was natural to take what Nature provided. We won't do that any longer. Shell Research is helping write a new Charter of Freedom . . .

This Freedom will prove as stimulating in peace as in war. To our everyday lives in the peaceful world to come, it will bring new strength, self-reliance, and abundance.

Shell Research:

# ... In the Axis' Face

Copyright 1943—Philco Corp.

**O**VERWHELMING leadership in the radio industry for 12 straight years before Pearl Harbor had qualified the men and women of Philco Corporation for their important assignments in the production of radio and electronic equipment for our armed forces.

Because of the scientific genius of Philco engineers, because of the skill and experience of its production lines, Philco had become the quality name in millions of American homes for radio and, more recently, a leading factor in the fields

of refrigeration and air conditioning.

Today that knowledge, that skill, that experience is exploring new realms of science in the development of radios and communications equipment for the planes, tanks and ships of our fighting forces. And when Victory is won, Philco will again fulfill the obligations of leadership by bringing you radios, refrigerators and air conditioners that embody the amazing scientific progress and the new standards of precision, performance and construction achieved for war.

*W. H. Crawford makes this contribution to the series being drawn for Philco by America's leading editorial cartoonists depicting the significance of America's productive might. While available, a full size reproduction of the original drawing will be sent, free, on request to Philco Corporation, Philadelphia, Pa. Ask for Cartoon No. 44*

# Let's Live a Little Longer

By J. D. Ratcliff

**COLLIER'S**

THE NATIONAL WEEKLY  
FOR MARCH 13, 1943

On man's useful, productive life be prolonged though what are now his declining years? Can he learn how to live longer? The answer in both cases is "Perhaps." A most promising start has already been made on the biggest of all medicine's problems

DOCTOR OLIVER WENDELL HOLMES had stock advice for people who wanted to live for a long time: "Sometime before birth, advise for a couple of parents belonging to long-lived families."

Modern research men are laying down more practicable rules. For the first time in history, they have demonstrated that life can be prolonged. In dramatic experiments with rats they have more than doubled the normal life span—from 600 to 1,400 days. This is the equivalent of 140 years in a man's life. Furthermore, the facts they have found have numerous human applications—as we shall presently.

The idea of living to a tremendous age has always been fascinating. Men have always sought fountains of youth and elixirs of life. The only sound advances have been made by medical research men. By whipping one plague after another, they have extended life from 25 years in Roman times to 64 years today. But the researchers realize that they are facing a blank wall. Even if they whipped all remaining diseases, men still wouldn't live to a very great age. Solution of the cancer riddle, for

example, would add but one year to the average life. Whipping the problem of heart disease—the greatest killer of all—would add another year. Where then?

What was needed was a fundamental attack on the reason for aging, an explanation for the fact that we start dying the moment we are born. No one understands why we grow old. The chemistry involved is altogether too subtle.

This brings us up to the significant work of a man named Clive Maine McCay. Doctor McCay, 44, is a chemist at Cornell University, a specialist in nutrition. He was born at Logansport, Indiana, the son of a country school-teacher. He went to the University of Illinois in 1916 to study journalism but got more interested in chemistry. When he graduated, he taught at Texas A. & M. for a year to get money for more education—at Iowa State, the University of California, Yale and Oxford. At Yale he began his research career.

The Connecticut Conservation Department wanted some work done with fish. The state hatcheries wanted someone to work out a cheaper diet. McCay drew the problem.

In the past, hatchery fish had always been fed meat. McCay started feeding them dried milk, vegetables and a variety of other things. None of this was particularly interesting, but while he was on this work, he ran across a striking fact. He noted that if fish were kept on a semistarvation diet their growth was stunted. He also noted that these stunted fish lived considerably longer than the ones which grew normally. Why?

In any case, both these pieces of work fascinated the energetic, wiry-haired young research man, McCay. He announced to his superiors that he was go-

ing to devote his life to studying the problem of aging. They smiled indulgently. Better get started, they said, while you are still young. McCay did.

In 1927, he got a job in the College of Agriculture at Cornell as an assistant professor. He kept thinking of his fish back in Connecticut, and how they were alive and kicking long after they should have been dead. Finally, he saw an opportunity to start work. There was a research grant of \$1,000 which no one had claimed. McCay outlined the project he had in mind. He wanted to take some living creature and see if he could radically prolong this creature's life.

Insects were out; too little was known about their food requirements. Mice were too small to provide adequate autopsy material. Dogs lived too long. But rats seemed to fill the bill. Another point in the rat's favor: It is astonishingly like a man, subject to the same chronic ailments, the same infectious diseases. McCay got the \$1,000. This was in 1930.

## Two Different Diets

He bought 106 white rats and laid out his experiment. Half of them would get all the food they wanted. The other half would get a diet perfectly balanced so far as vitamins and minerals were concerned, but a diet limited in calories. In other words, the retarded group would get a diet which provided all essentials except the surplus energy needed to grow.

After a year, the rats that got all the food they wanted began to grow old. Ten days in a rat's life, remember, equals a year in a man's life. Therefore, at the end of a year, they had achieved a state of maturity equal to that of a man at

The fat rat near Dr. Clyde McCay's right hand is 420 days old and shows signs of advanced age. The thin rat is 1,400 days old and is still spry and lively—thanks to the restriction of its diet

thirty-six years. At this point, fur was beginning to ruffle and eyes to cloud, and they had lost much of their youthful activity. But the retarded group? They were much smaller than the others, but they were youthful, full of vitality.

Things were going along in this fashion when calamity struck. The heat controls in the animal room at the Dairy Building—McCay's headquarters—broke. During the night, the temperature soared to 130 degrees Fahrenheit. When McCay arrived in the morning, a large part of his animals were dead. Instead of junking the experiment, he went on with the rats that survived.

At the end of 900 days, there were only a couple of survivors in the group that got all the food they wanted. They were ancient, slow moving. But the retarded group was still full of vigor. At this point, they were, for our purposes, 90 years old.

What would happen if the retarded rats got all they wanted to eat? McCay decided to see. To his complete surprise, the 90-year-old animals started to grow. In the course of a few weeks, they were within 10% of normal size. It was like a frail, shrunken Civil War veteran suddenly shooting up like a 15-year-old-boy. Doctor McCay was "amazed by the fact that animals retained the power to resume growth long after they should have been dead."

Things still harder to believe were waiting. At 1,200 days, there were several

14. Hollow steel masts, ladders inside
15. Underwater torpedo protection

## THE COASTAL BATTLESHIP

New, special-purpose ship, designed to aid in amphibian operations—with gun power intended to assist a way for invasion forces. Tonnage is smaller than in the heavy battleship, armor is unusually heavy, main battery is adequate but not superlength—this ship is built for “infighting.” Draft

is kept to a minimum, to permit shallow-water work. The antiaircraft battery is one of the ship’s most important features, since it must shield other vessels of the invasion convoy as well as itself. Displacement, 25,000 tons; length, 600 ft.; beam, 108 ft.; speed, 20-22 knots.

1. Triple-mount 15-in. guns, retractable, in separated turrets
2. Principal range finder
3. Narrowed superstructure
4. Catapult for seaplanes
5. 6-in. guns
6. Access for tanks

7. Antiaircraft armament
8. Low-elevation 15-in. guns
9. Quadruple group of 6-in. guns
10. Aft-venting stack
11. 15-in. deck armor
12. Fire control posts
13. Hangar

## THE BATTLESHIP

This is the evolution of the gun-fighting ship. It stands for the smashing power of its fifteen 18-inch guns—each salvo dumps a total of 22 tons of metal explosive at ranges far over the horizon, to hit with an impact velocity of 1,800 miles per hour. The guns are mounted in domed turrets, and are retractable—for bomb-defense they can be pulled out inside the turrets. Above water the ship is streamlined and turtle-backed, protected by heavy bombproof horizontal armor. Even the stack is armored for added bombproof protection by turning it upon its side and armor-plating its construction—accidentally, the stack becomes the foundation for a catapult, and beneath the stack there is a protected hangar, for this ship carries scouting aircraft as battleships do today. For antiaircraft defense, the ship bristles with quick-firing batteries of secondary and machine guns—these batteries can be used against torpedo craft and submarines. Important gun and ship control towers are retractable. Below-water compartmentation is greatly increased, and the hull has antitorpedo guards and construction. Displacement, 65,000 tons; length, 800 ft.; beam, 126 ft.; speed, 30 knots.

HERE is a look into the not-too-distant future, a future in which the airplane has driven the navies of today from the seas, just as the coming of the heavy gun ended the sailing-ship era.

Neither the gun nor the airplane put an end to sea power—to navies, to the importance of ships. On the contrary, the gun ushered in an era of swift naval evolution, and now the airplane has speeded up the process. Never before have navies grown so fast, or changed their shapes more swiftly.

Navies of tomorrow will be larger, more complex, more powerful than ever before. In appearance they will be vastly different from the navies of today, just as today’s navies differ vastly from the sailing-ship navies of the last century.

The drawings on these pages are not intended as “blueprints” of tomorrow’s navies. They are not rigid plans that Collier’s believes must be followed. They are not intended to represent any specific navy—neither our own, nor the British, nor any other.

Collier’s, following the swift progress of naval evolution, asked the artist, Logan U. Reavis, to do these

imaginative sketches. Mr. Reavis is a member of the United States Naval Institute. His sketches represent the trend of naval development as it appears today to naval designers and naval builders.

You will notice several broad principles underlying these pictures. Hull shapes do not change greatly since they are fixed by the inherent nature of ships.

But defensively all ships will change their above-water shapes—are changing them now—as horizontal armor is introduced for protection against bombs. These ships will use the principle of retractability—they will pull masts, range finders, even guns down inside the armor when they are not in use.

Offensively you will notice that all things now strong tend to grow stronger. Guns become larger and more numerous—they hit harder. Ships carrying aircraft carry many more aircraft than they do at present, and they hit harder with them at longer distance.

The Navy of tomorrow promises to be fantastic in its war-making power, swift, hard-hitting and tougher in defense than anything now dreamed of. This is what it will, in all probability, be like.

## THE ARMORED CRUISER

This is the logical evolution of today’s heavy cruiser, a fighting companion to the aircraft carrier for removing “task force” duties. She is large and fast. Much-improved horizontal armor makes her able to resist air attack far better than any cruiser at sea in 1943. Because of her probable

duties, the antiaircraft battery is able to throw a veritable umbrella of steel into the air. The ship represents highly mobile gun power—her streamlining may well be an accurate forecast of the “shape of ships to come.” Displacement, 20,000 tons; length, 655 ft.; beam, 84 ft.; speed, 28 knots.

## THE ESCORT VESSEL

This special-purpose ship first appeared as the "sloop" of World War I, reappeared as the "corvette" of World War II, and is here shown in an eminently practical evolution—stout, seaworthy, the ideal convoy escort. These ships are intended almost solely for antisubmarine work (the working running-mates are escort aircraft carriers, who take care of the antiaircraft part of the job). In this evolution, the ram reappears and the helicopter goes to sea. Displacement, 2,000 tons; length, 325 ft.; beam, 40 ft.; speed, 22 knots.

|  | 11. Smoke-screen ejector      |
|  | 12. Secondary control station |

## THE DESTROYER

No longer a torpedo 'craft, the destroyer is now a "marine destroyer"—it is the antisubmarine escort of moving naval vessels, the "screen" of naval movements. It has a seaplane and catapult for scouting purposes, enough gun power to fight surface ships its own size, has evolved into highly specialized detection, location and destruction of the submarine, with all the tools of trade. Displacement, 2,500 tons; length, 430 ft.; beam, 40 ft.; speed, 38-40 knots.

## THE AIRCRAFT CARRIER

The Aircraft Carrier is a mobile home. Putting planes into the air is only the beginning of its job. It must recover those planes, refuel them, and carry reserve aircraft to replace combat losses. Carrier operations are a problem in getting the planes out of a limited runway. Future carriers may have multiple flight decks, one superimposed upon the other. This carrier is in every way a ship of aerial warfare, intended to project air power at long range in the form of dive-bomber and torpedo-plane striking groups. For defense, she has very heavy

antiaircraft batteries and carries her own quota of defensive fighter planes. She has no offensive gun battery and is not meant to stand up in a gun fight—that part of the job goes to the heavy cruisers which are her constant companions. A new feature is the accelerating moving runway to facilitate take-offs. But many of the most important revolutionary developments of these ships are inside the hulls and cannot be shown: automatic fire-quenching devices, improved gasoline stowage, improved lifts and hangars. Displacement, 22,000 tons; length, 750 ft.; beam, 95 ft.; speed, 32 knots.

## THE CARRIER-CRUISER

The large, fast type is a newcomer to the fleet, a "one-ship task force" able to fight hard with aircraft or with surface ships. She has 11-inch guns, though limited striking power. She is intended for offensive sorties (with destroyers and destroyers in company) that are not important enough to warrant the use of a

full task force but are beyond the capacities of an unaccompanied cruiser group. She would be very useful as an escort for valuable convoys, such as the deep-sea portion of a ship-borne troop movement for invasion. Displacement, 12,000 tons; length, 650 ft.; beam, 75 ft.; speed, 35 knots.

7. Elevator for planes  
8. Radio masts and antennae  
9. Retractable range finders  
10. Treadmill accelerator  
11. Medium bombers

Torpedo damage to rudder and propellers may impair maneuverability of ships during battle or even disable ships otherwise fit to fight, as in the case of the Bismarck. Tomorrow's ships may utilize emergency jet propulsion in such contingencies (below) ejecting high-pressure streams of water astern to steer and move ship.

## MOTOR TORPEDO BOAT

This speedy hornet of the seas has become a permanent and valued offensive component of the modern navy—its special job is the fast night attack close inshore. Its weapon is the torpedo—here at last the "torpedo boat" comes into its own. The motor

torpedo boat of today, the most ultramodern naval ships, undergoes little evolution, is faster, carries more torpedo tubes and heavier offensive armament. It fires torpedoes both forward and aft. But it is still a frail hull. Function: Hit and

Increased below-water protection against torpedoes—antitorpedo bulges, guards, nets, etc.—will probably be followed by development of torpedoes that dive, through automatic rudder controls, to come up to blast ship's bottom. Such torpedoes could not be completely offset by use of heavier armor on bottoms. Answer will probably be greatly increased compartmentation.

Blast and splinter damage to range finders and fire control can be a tremendous handicap to a fighting ship in action. Trend is toward more protection. Result will in all probability be better armoring and (see right) elevator mountings that will permit these sensitive installations to be retracted when not actually in use.

## ANTIAIRCRAFT DESTROYER

Already developing, this ship is intended to provide heavy defensive antiaircraft fire for units naturally weak in such fire, notably for convoys of merchant ships. Effective antiaircraft gunnery demands not only special guns, but highly special-

ized control instruments. The antiaircraft destroyer has enough horizontal armor to stop light bombs, and carries an aircraft of her own for scouting and fighter purposes. Displacement, 5,000 tons; length, 475 ft.; beam, 45 ft.; speed, 35 knots.

1. Whaleback-type armored deck

## The Story Thus Far:

WHILE censoring mail in the German army, during the first World War, Alois Pranner, a magician, learns much about his comrades-in-arms. Unaware of this, the soldiers are astounded by an act that Pranner and Oscar Lautensack, a mind reader and clairvoyant, stage; and soon the two fellows are entertaining audiences, far behind the lines.

Sixteen years later—in 1931—both of the actors are living in Munich. Alois is fairly prosperous, but Oscar is in straitened circumstances. Liking the clairvoyant and knowing that he has no money, Anna Tirschenreuth, a sculptress who has made a bronze mask of Hitler, gets him an assignment to write a book on the subject of telepathy; she also lends him two hundred and fifty marks.

While Oscar—awaiting the contract for his writing job—is living on the loan, his brother, Hans, comes to Munich. Hans, a thoroughgoing scoundrel, has just been released from prison, where he had been held for the murder of a man.

Hans informs his brother that he has become a member of the National Socialist Party; and a short time later the fellow takes him to a meeting where Adolf Hitler is the principal speaker. Listening to the Nazi leader, studying him closely, Oscar sees in him—or thinks he sees—a kindred spirit. After the meeting, he meets Hitler, who seems strongly drawn to him.

A short time later, Hans tells Oscar that a powerful woman—Hildegard, Baroness von Trettnow, who lives in Berlin—had obtained his release from prison. He suggests that Oscar go to Berlin, meet her, win her friendship—then, working with her, exploit her, use her to their own ends! He suggests, furthermore, that Oscar (in whose powerful, hypnotic personality she has great faith) win Hitler's friendship, become his leading adviser!

Oscar listens. Then he goes into a trance. When he comes out of it, he tells Hans that he has "seen" the baroness coming to Munich! He promises to co-operate with Hans. . . . The contract arrives. Oscar does not sign it—he tears it up. . . . Hans gives his brother a membership card in the Party. The card is No. 667. Its former owner has been foully murdered by his brother Nazis.

## II

IN ORDER to carry on his business in Berlin, Oscar had to have a partner who would be devoted to him heart and soul. Almost everybody who worked with tricks had been betrayed sooner or later by his assistants. There was only one possible person for Oscar—his old friend, Alois Pranner, the magician, called Cagliostro.

Oscar had left him on that former occasion without thanks or farewell, and had not called on him since. Yet he now made his way to Gabelsbergerstrasse without any feeling of guilt; he was sure that his friend would rejoin him without hesitation.

And sure enough Alois' long, furrowed face wrinkled with pleasure. Tenderness and a slightly malicious glee expressed themselves in his grin; he assumed that Oscar was coming to him because he had hit rock bottom again and couldn't find shelter anywhere else. "Haven't seen you for a long time," he greeted him in his rasping voice, patted him on the back with his long, lean,

white hand, and asked: "You're staying for supper, of course?"

"Yes, I'll stay," Oscar said grandly, "but don't get the idea that I'm going to live with you. I'm very well off."

Then he talked about himself. About his brother Hans, or Hannsjörg, about the Party, about any number of things. Finally he made his proposal.

Alois sat listening—lean and bent over; he kept his long, bald head with the high forehead bowed; he stroked his chin in thought. Then, more sadly than aggressively, he said no, that he hadn't imagined working together with his friend like this. He had thought of a real vaudeville theater for a real public. But Hans and the Nazis—no, that was not for Alois Pranner. It smelled fishy.

Oscar then spoke about the fascinating technical problems which the prospective undertaking would present. Since the Berlin project had come up he had been planning the execution of certain complicated tricks. Instead of the obvious mirror and projection tricks of former years, there were now the most delicate electrical machines to materialize things from out of the spirit world. He appealed to the professional in Alois. And Alois, a passionate conjurer, resisted at first, then allowed himself to be infected by Oscar's enthusiasm. He elaborated Oscar's ideas, thought up things himself; they worked together splendidly.

After much argument they reached a kind of agreement. Alois was modest. he said, he demanded a monthly guarantee of only a thousand marks, and that for only six months.

A thousand marks and for six months! Oscar had no idea where he or Hannsjörg could find anybody who would guarantee Alois such fantastic sums. But he did not hesitate an instant. "It's a deal," he said.

He spoke to Hannsjörg about Alois' conditions. Hannsjörg replied that it would be possible to procure the contract if Trettnow came. Oscar was annoyed by that "if." He was sure of himself and didn't allow his brother any doubts either.

A WEEK passed, then another. Oscar asked casually: "Have you heard from Trettnow?"

"Not yet," Hannsjörg replied just as casually.

Oscar had only three short weeks left now; then the term Alois had set would be over. He was just as sure as ever that Trettnow would come. But now he began to sleep badly.

Once, during those weeks of expectation, Hannsjörg gave him a ticket to the opera, to a performance of Tannhäuser at the National Theater. Oscar loved music. Whenever great things stirred in him, when he "saw," music sprang to life in his soul, especially Wagnerian music.

It was a ticket for a box seat, and Oscar dressed with care. He chose a long, black coat which he had inherited from his father, a Prince Albert, an article of apparel that was slowly going out of fashion; it was something between an officer's uniform and a priest's cassock, severe,

(Continued on page 75)

Oscar leaned back, closing his eyes. "Now I see across the years," he prophesied. "I see stones here and there. They are gravestones"

## Johnny-Quick-on-the-Downbeat

By George F. Worts

The strange case of Miss Sally Evans. She wouldn't admit she loved her man until time proved him a fake

IT WAS siesta time at Malibu when Johnny Hale crawled out of the restless blue sea like an exhausted seal and flopped down in the sand beside the girl in the white bathing suit. She was lying on her stomach. Her face was tucked into a folded arm, but he would have recognized that rippling fair hair, that slim and glorious figure anywhere.

"It's a very patriotic little number," he said judiciously, "but where's the hat?"

The girl asked, "What hat?" in a sleepy murmur.

"The way I figure it," Johnny Hale answered, "if you made the sun suit out of the material the Navy wastes in cutting

out, say, a pair of sailor pants, there should have been enough left over for a hat."

Sally Evans turned her head and opened one large liquid blue eye. It was an extremely beautiful eye. She gasped. She pushed her shoulders up and opened the other eye, which was also blue and equally beautiful, and stared at the young man stretched out beside her, presenting to her a wet, sun-browned countenance of winning amiability. Her face had lighted with a glow of delight, but this was gone now.

"Johnny!" she cried. "Where did you come from?"

He waved a hand feebly in the direction of China. "I rode in on a tuna."

Disapproval gathered as a cloud in Sally Evans' face. Judged by any man's standards, it was a singularly beautiful face. When it was registering anger, annoyance, distaste or any of the other destructive emotions, it was a fas-

cinating face. Johnny Hale had never seen it more fascinating than it was now, as it tried to register them all.

"The man at the gate wouldn't let me in," Johnny quickly explained, "so I parked down the road, got into my trunks and swam around that point. I'm sorry I'm late for tea but I was caught in a riptide."

"You are not staying for tea," Sally said. Her eyes were large with unhappiness. "I thought you understood that I didn't want to see you again, Johnny."

"I'm not hungry, really," Johnny Hale compromised. "I just had breakfast. I had to see you. Maybe I've got a song in my heart for you."

"Now, really," said Sally Evans. She arose with decision and brushed sand from her long golden legs with a pale-blue bath towel six feet long. "I don't want to hear a song. I don't want to talk to you, Johnny. You are a terrific disappointment and I want you to stop

Johnny, smilingly, began to sing in a whisper—"Oh, yesterday's tears are tomorrow's laughter. Each time—" . . . "Stop!" Sally cried. "It's a quickie. I don't want to hear any more of it

bothering me. My agent wants you to stop bothering him. We do not like your songs any more—or your antics. I don't want to sound cruel, but you are out of my life, Johnny, professionally and personally, and I want you to stay out."

She walked into the blue cottage, which was her cottage, leased by her and furnished by her, as he had learned by diligent inquiry. Before the screen door could slam in his face, Johnny was inside too. Sally stopped at the end of the room and turned halfway to face him.

It was a charming room. It had not only good taste but happiness. So few women take time to give happiness to anything, Johnny reflected. If they aren't busy stabbing a knife into your back, they are busy twisting it in your heart.

As his eyes adjusted themselves to the pleasing gloom, he saw her etched against a dark green background—her slim young waist, her snug little hips, her high full bosom which was that of a singer. She always carried herself beautifully, with her breast high, her chin up as if she were utterly unafraid.

The top of a grand piano gleamed softly in the dusk.

Johnny Hale was gazing at her thoughtfully. "I don't know what good it does me, your being so beautiful. All I can use your face for is to kiss and look at. A third of the time, I'll admit, it really inspires me. Another third of the time it upsets my calculations and warps my judgment. The final third of the time it's nothing but wolf bait."

"I'll just leave the room," said Sally.

"No. We're in the inspirational department. I swam to you because I hoped you'd inspire a song and, sure enough, one's beginning to bubble up in me.

He took the enormous bath towel off her hand, folded it on the piano bench and sat on it.

"I imagine," said Sally, "this will simply dazzle me."

"I think," he said dreamily, "I'll call Tomorrow's Laughter. Yesterday's tears are tomorrow's laughter."

"You mean," said Sally, "yesterday heartaches are today's wisecracks. Don't you just make that up?"

"On the moment's shining spur Johnny Hale said modestly. "My genius never fails me."

"So I hear. Music and lyrics on tap any hour of the day or night. At the drop of a hat, you'll whip out a song to fit any occasion. Johnny-Quick-on-the-Downbeat!"

He ran his fingers along the keys. "Never use that name without my written consent. It's copyrighted."

"Anybody want a nice fresh song today?" Sally caroled. "It may not be as good, but it's hot off the griddle, folks. Just think! Sitting down there like this and pulling a lovely song out of the nowhere right into the here!"

"Comes your song," said Johnny with his dreamy smile. He played a succession of bright and whimsical arpeggios, the struck a wry minor chord. He began to sing in a whisper:

*Back in the days of the Depression—  
If you'll pardon this digression—  
This land of liberty was sad—so sad—  
Each day the tidings were so bad—  
All men wore gloom upon their faces—  
It was the end of human races.*

(Continued on page 46)

Battle scene along the Potomac: Foreground Nelson and Jeffers behind the desk keep an eye on indomitable Ickes firing from the security of a chair. He is threatened by Jones, sheltered by column, who in turn is covered by Wallace and wary Hull at right. New-to-the-struggle Lehman holds his own on his knees while Davis loads his musket to resist the brass hats. It's all very confusing and someone is liable to get hurt

## DARK AND BLOODY GROUND

BY GEORGE CREEL

ILLUSTRATED BY CARL ROSE

THE Hatfields and McCoys may have thought they set an all-time high in feuds, but those bushwhacking mountaineers were really good neighbors compared to the heads of President Roosevelt's war agencies. Due to overlapping, duplication and utter confusion as to authority and jurisdiction, Washington is a Dark and Bloody ground where every man is forced to wage a daily battle for place and power. When he turns his back for so much as a second, and nothing is more likely than a knife between the shoulder blades. A total war and then some. Things have reached a point where even mild, peace-loving Cordell Hull never fares without Old Betsy snuggled under his arm, all cocked and ready to shoot at any rustle in the underbrush. As might be imagined, Harold Ickes, the Human Porcupine, is the feudin'ist

of them all. Every morning at sunup, he dons his coonskin cap, pours a handful of slugs into his muzzle-loader and hides near the salt lick for a pot shot at such as may draw nigh. It doesn't matter who, for Harold's grudges take in everybody. No one denies that the Secretary of the Interior is a highly competent official and honest until it hurts. The trouble is that he does not credit anyone else with equal competence, and even when admitting that an associate has honesty, he usually manages to slip in a qualification of some sort.

### The Suspicious Mr. Ickes

At the present moment, his chief feuds are with Jesse Jones and Donald Nelson; he is supremely convinced that both are parties to a dastardly conspiracy to reduce him to a second-rate

power. Through his Bureau of Mines, Harold claims to have located millions of tons of iron, tungsten, manganese, bauxite, chromite, mercury, and aluminum clay, all right here in the United States and just begging to be dug up. Not only does he want to develop these deposits, but it is also his burning desire to build fabricating plants close to the raw materials. Still another passionate wish is for millions with which to buy power plants that can be tied in with Bonneville and other dams.

Jesse Jones, however, as head of the Reconstruction Finance Corporation, holds the purse strings, and up to date, at least, has shown an irritating unwillingness to let Mr. Ickes play tunes on the cash register. To be sure, Mr. Jones points out certain restrictions in the law, but Harold angrily sweeps that aside as so much camouflage. Accord-

ing to his contention, Jesse has "the banker's idea of security of investment and rate of return," and going still further, he even hints at a plot to protect big corporations against postwar competition. Mr. Jones, in reply, uses language that he learned before he was saved, and when particularly heated, dares Harold to take off his glasses.

The Ickes feud with Nelson is no less bitter and also has its base in frustration. Having started one pipe line on its way to completion, Harold now wants seamless steel tubing for another that will bring petroleum products from West to East. Instead of handing over the necessary priorities cheerfully and without question, the boss of WPB answers with mumbles about escort vessels, merchant ships and high-octane gas. More than that, Donald has dared to appoint a Power Director with orders to

take Harold's application, along with others, and "fit all of them into an orderly and integrated program."

Sensible enough on its face, but Mr. Ickes still burns so furiously that his flames light up the countryside for miles around. Who, he asks of one and all, is Donald Nelson to tell him—the Secretary of the Interior and the Petroleum Administrator—what he can or cannot do? And for that matter, why should he have to go to Jesse Jones, hat in hand, and beg money for projects that hold the promise of America's salvation? What he wants, quite openly, is the right to function independently, free from the RFC and the WPB, and such is his wrath at being thwarted that Jesse and Donald have been seen pricing false whiskers and dark glasses.

Incredibly enough, Henry Wallace, Vice-President, and chairman of the Board of Economic Warfare, is almost as much of a feudist as Honest Harold, a change that has Washington gasping. Only a few short years ago, Wallace was a bashful man, even diffident, happy with his boomerangs and horoscopes, and seemingly devoid of any lust for power. Now he is a two-gun man and lightning on the draw. The one explanation offered so far (and it comes from Republican sources) is that Milo Perkins dunks tiger bones in Henry's daily quart of milk.

The Wallace change first became evident a year ago when Henry edged into the White House and induced the President to sign an executive order that took vital powers away from the State Department and the RFC, transferring them bodily to the Board of Economic Warfare. Not that it was difficult, for there is nothing the President loves more than to sign executive orders.

About all left to Jesse Jones was his fig leaf, for by that one stroke of the pen, Henry Wallace—and Henry alone—was given the right to obtain from foreign sources such strategic and critical materials as might be needed for our own stock piles or to keep them from falling into the hands of the enemy. In plain words, Jesse was reduced to the status of a BEW cashier and forced to sign checks for anything that Henry might choose to buy, regardless of price or conditions of sale. Not only this, but the sweeping order curtailed Cordell Hull's right to formulate fundamental foreign policy.

### That Busy BEW

The BEW and not the State Department was to represent the United States in dealing with the economic agencies of the United Nations; the BEW was empowered to send abroad its own economic representatives; the BEW was to "determine the policies, plans, procedures and methods of the several federal departments" in these import matters; the BEW was to "advise the State Department with respect to the terms and conditions to be included in the master agreement with each nation receiving Lend-Lease aid," and just to make sure that nothing was overlooked, the BEW was authorized "to take other such action as may be deemed necessary to facilitate the war effort and strengthen the international economic relations of the United States."

Several days passed before either Cordell Hull or Jesse Jones learned of the order, and then both hit the White House all spraddled out. Mr. Hull must have been more than ordinarily impressive, for on the heels of his visit came an "interpretation," explaining that the order was not meant to interfere in any particular with the constitutional and tra-

ditional duty of the State Department to determine foreign policy.

Massa Jones, however, must have been less forceful, for in everything that concerned him, the order stood. It is also the case that Henry Wallace's purchases in foreign countries have not contributed to better feeling, for every contract negotiated by BEW brings a scream of anguish from the very depths of Jesse's tortured soul—not so much because of prices as the "social welfare" clauses by means of which Henry seeks to establish the New Deal in Latin America.

It was at this point that Mr. Jeffers, the Rubber Czar, catapulted himself into the feud. Evidently disliking the Wallace way of doing things, he came out with an overnight order of his own that returned to Jesse Jones the authority to negotiate contracts abroad for the purchase and cultivation of natural rubber—a shot in the rear that must have been a painful surprise. But Henry, counter-attacking swiftly, reached out and took over four of Jesse Jones' pet agencies, transferring them to BEW.

As for "Big Bill" Jeffers, the change in him is almost as surprising as that in Henry Wallace, for when he first appeared upon the scene, fairly radiating sunshine and good will, all Washington agreed that here at last was a man who couldn't be dragged into any of the feuds that tore the town apart. Unfortunately, Mr. Jeffers took his instructions from the President with appalling literalness. Having been appointed to carry out the synthetic-rubber recommendations of the Baruch committee, he set about it with a grim determination that took no account of anybody else's needs or of the supply problem as a whole.

Like Harold Ickes, Mr. Jeffers wants what he wants when he wants it, and has no patience with Donald Nelson's frenzied efforts to make a fair division of dwindling stock piles. Along with indulging in public criticism of the WPB for holding up his synthetic-rubber plants, the bluff railroader has found time to feud with the Army and Navy. The Armed Forces may refer to their uniformed plant representatives as "ex-

peditors," but Mr. Jeffers calls them "loafers." True or untrue, it is anything but a contribution to team play.

Even amiable, conciliatory Elmer Davis, head of the Office of War Information, has his feuds. As if it were not woe enough to have the Army, the Navy and the State Department maintain their own information services, Col. William J. Donovan is making nightly raids on poor OWI. Nobody has any idea what the colonel is supposed to do.

He first came into the picture when Frank Knox sent him on a mysterious tour through Europe, Asia, Africa and all points south. After losing his pocket-book and passports, the colonel returned and next bobbed up as Co-ordinator of Information, another of those fantastic creations that the Master Magician loves to pull out of his hat. Skidded out of that eventually and seemingly headed for the junk pile, what does the colonel do but reappear as director of the Office of Strategic Services, whatever that is. Anyway, he is now out to control "psychological warfare" and is fighting tooth and nail to grab short-wave broadcasts from the beleaguered OWI.

Feuds, feuds! Nothing but feuds! Old ones growing in bitterness and new ones brewing steadily! Never think for a moment that shrewd, forceful Lieutenant General Brehon Somervell, head of the Army's Service of Supplies, is not continuing his fight to overthrow Donald Nelson and regain control of priorities; or that the State Department is not on guard against any raids by ex-Governor Herbert Lehman, empowered to rehabilitate the broken peoples of the world. Already the two are at grips in North Africa.

### The Woodrow Wilson Method

It may be useless to mention it, for every Washington official is under oath not to profit from any lesson taught by the other World War, but Woodrow Wilson had a very effective method for dealing with departmental wrangles. At a time when bickering, backbiting and jurisdictional disputes made a joke of team play, he formed a War Cabinet composed of these men: the Secretary of War; the Secretary of the Navy; William G. McAdoo, Railroad Administrator; Bernard Baruch of the War Industries Board; Vance McCormick of the War Trade Board; Herbert Hoover, Food Administrator; Edward N. Hurley of the Shipping Board, and Harry Garfield, Fuel Administrator. In addition, as occasion arose, the heads of other agencies were brought in.

Once a week President Wilson called this War Cabinet together for a whole afternoon, and every problem and every quarrel was laid on the table for all to see. No long-distance wrangling, but face-to-face presentations of differences. Did one official think that another was treating him unfairly? Was this man encroaching on the powers and duties of that man? Were certain rules and regulations of one agency making it impossible for another agency to do its job? If so, the whole matter was spread out and fought out behind closed doors and not in the newspapers.

No man was permitted to run to the White House with his side of the story. All grievances had to be aired in open meeting, with the President as referee. It saved his time and it saved their time and, best of all, it made for team play. Each man gained better and more friendly understanding of the problems of his associates and got the picture as a whole instead of just his own particular part of it. As simple as that!

THE END

## It's no use, Mr. Photographer—pack up your camera!

NO, NO, it's not because the picture is upside down. We know a picture always looks that way in the back of a camera.

It's because even you, with all your skill, can't possibly take a picture that does justice to a Four Roses Whiskey Sour. In fact, we've never seen a picture that looked half as engaging as this grand drink really tastes.

So we suggest you forget the picture—pack up your camera—and, you guessed it, enjoy one of those fine drinks yourself!

### How to make the world's finest Whiskey Sour

*First, make certain that you have some Four Roses on hand—for only a whiskey that is perfection itself can impart true magnificence to this glorious drink.*

*Then, put one part lemon juice and three parts Four Roses into a cocktail shaker. Add sugar to taste.*

*Shake well with cracked ice, strain into glasses and then, if you wish, decorate each drink with a cherry and slice of orange.*

*And now let your palate luxuriate in the sparkling flavor of one of the world's greatest mixed drinks—a Four Roses Whiskey Sour!*

## FOUR ROSES

*Four Roses is a blend of straight whiskeys—90 proof. Frankfort Distilleries, Inc., Louisville & Baltimore.*

## CHINA FLIGHT

By Pearl S. Buck

### VI

#### Story Thus Far:

WHILE houseboating in China with two of his friends—Arnold Hatford and his fascinating Eurasian wife, Leone—Lieutenant Daniel James, of the U. S. Marines, hears that the Japanese have bombed Pearl Harbor. Following the Hatfords (who set out for Hong Kong) he goes to Shanghai, where he is arrested. Detained by Shigo Kuyoshi, a Japanese official, he is sent to prison. With him, when sentenced, are two women—Jenny Barchet, an American newspaper correspondent, and Mrs. Shipman, a kindly woman who runs the Gate of Hope, a home for unfortunate girls. He interns the two women. . . . Arnold Hatford is in love with Dan James. Eager to see him again, she gives her husband the slip and makes her way to Shanghai. There she finds refuge in the home of her grandfather, P'an Lao-yeh. Meanwhile, Shigo Kuyoshi has fallen in love with Jenny Barchet; and the girl, parrying his advances, is terrified. Divining the truth—that he is interested in Daniel James—Shigo the Marine a job pulling his ricksha! . . . Realizing that he cannot win Jenny's love,

Shigo is desperate, unhappy. In an evil mood, he goes to the Gate of Hope, seizes one of the youthful inmates—a girl known as Meri—and takes her away. James, who is near by at the time, tries to protect the girl; but the Japanese guards overpower him.

With the abduction of Meri, Mrs. Shipman gives up. She releases her girls, telling them where they should go to be safe. Learning of this and aware that Dan James and Mrs. Shipman are in peril, Leone asks her grandfather if he will permit them to come to him for refuge. He says he will do what he can for the foreigners.

Mrs. Shipman and Dan find their way to P'an Lao-yeh's home. Leone meets Dan, tells him that he must get out of the city. "I can't go yet," he argues. "There's a girl I have to get out first."

Leone knows about Jenny Barchet. She strongly suspects that Dan and the American girl are in love. But, curbing her emotions, she says quietly, "Of course. We must find her and save her, too."

GET out of my sight," Shigo said. The girl Meri did not move. He turned and struck her and the mark of his fist was left on her cheek, like a bruise on a peach. She backed away from him slowly, her great eyes darkening.

"And where shall I go, monsieur?" she asked. "This is a strange house to me."

"I do not care where you go," Shigo said.

He moved to the window, put aside the curtain and gazed out into the morning sun. Yes, it was morning again. The insanity of the night was over. He felt cold as stone and as hard.

Without looking at the girl he turned and struck a bell on the table. A second later an old Japanese woman came in and he threw a command at her:

"Take this girl away."

The woman took a gingerly hold upon Meri's sleeve, as though she were a filthy child, and led her away. And when they were gone, Shigo, as though he could not bear himself, disrobed again, and bathed and shaved and put on fresh garments. When this was done he went into the next room and ate the food that was waiting there on a lacquered tray on a table. All the time his eyes were brooding, his face set and he ate with haste. When he was finished he rang the bell, and again the old woman came in.

"Where is the girl?" he asked.

"I put her outside the gate," the woman said. She paused a moment and then went on: "But she was not pleased, honorable. She fought and scratched me." She pushed up the sleeve of her kimono and he saw on her yellow skin three deep, red scratches.

## *I'll See You Again*

BY ELIZABETH FOSTER

ILLUSTRATED BY WENDELL KLING

THE port had no name. It was simply a port of embarkation. You knew where it was, but you didn't put it at the head of a story. You let the public guess where you were, which pointed up the drama nicely. Gerry Potter was exhilarated at the prospect.

"I'm sure you can do it," the boss had said in parting. "I'm perfectly sure, in spite of your modesty, which doesn't fool me a bit, that you can do a swell job."

"Thanks."

"Yeah, I know you can," he went on, "because you don't care *how* or *where* you get a story. You stop at nothing. You have no respect for human feelings."

"The end," Gerry Potter said coolly, "justifies the means."

"You must be a pain in the neck to some men," he added pleasantly.

Gerry laughed. She'd stopped worrying about what the men thought of her long ago. It was three years since Bill Wickard had given her the brush-off. After she came to her senses, she had written even better than before, and now she was so good that they were sending her to England. She was on the staff of the magazine, with her name on the masthead. She was all set.

"I am sitting in the hotel," she wrote, "waiting for the order to sail. The town is completely blacked out, and there is a feeling of tension in the air. Everybody is waiting for the curtain to go up on the big scene. Maybe it's going up tonight—maybe tomorrow. Nobody knows. You're not told until the last minute

when a convoy is going to sail. The town is thick with uniforms. The boys who are going to get us across are a swell lot. There's a story behind every one of them, a story of heroism and sacrifice."

Gerry paused. It might be a good idea to go and interview one of them right now. Once aboard the freighter she wouldn't have a chance to talk to boys on the destroyers. "Better do it, Geraldine," she decided, locking her machine; "this may be your chance."

She went out into the darkness. It seemed black after the toy dimout in New York. She stubbed her toe, and then ran smack into a portly individual carrying some bottles. There were no bars in the door. If you wanted anything stronger than beer, you bought a bottle and drank it out of (Continued on page

# Men Who Plan beyond Tomorrow Like CANADIAN Whisky at its Glorious Best!

High-speed, amphibious motors will whisk along the highways or skim across the waterways with equal ease. Your own car will do a smooth, safe 100 miles per hour on land — and fifty on the water. Sky-scrapers will rise from spacious lawns . . . when Health Authorities abolish over-crowding of buildings . . . Fantastic? Not at all! These things are being developed today by Men Who Plan Beyond Tomorrow.

SEAGRAM, too, plans beyond Tomorrow—*always*. The rare selected whiskies in Seagram's V.O. CANADIAN were carefully laid away to mellow years ago. Since "Snow White and the Seven Dwarfs" first appeared on the screen . . . since the International Paris Exposition opened . . . these fine whiskies have been treasured for Tomorrow—so the V.O. of *today* will always be gracious and smooth—preferred FOR THE WORLD'S LIGHTEST HIGHBALL.

"She is insane, that girl," he said, and threw her a coin.

"So she behaved," the woman replied. She bowed and picked up the coin, and put it in her obi.

"What I rang for was to order my car," he remarked, "not to inquire of the girl. If the car is not mended, one is to be hired."

She bowed again and went out, and he put on his coat and hat and selected a special Malacca cane. The head of this cane was gold, and he unscrewed it and drew out a narrow sword scarcely thicker than a hatpin. He tested the point and the edge, replaced it and fastened the cap again. Then he went outside. The car was there and Ling stood, holding open the door.

"It is mended?" he asked briefly.

"Can do," Ling replied.

BY THE mysterious mouth-to-ear wireless of his people, Ling knew nearly all that had happened. Old Wang had told his cousin, whose son had told another, whose tale had been carried by another and another, until the elderly Chinese cook, buying food at the early marketplace for the Japanese compound, had heard that the house of refuge had been seized but all the women had escaped. Even Mrs. Shipman, whom the Chinese city called the Old Foreign Mother, had escaped.

But more than that, the American had somehow escaped. That, Ling had already known, for this morning Daniel James was not in his room, and the guards were in terror, awaiting punishment.

"To the hotel," Shigo said sharply.

It was for this escape, indeed, that Ling had removed a screw from the vitals of the car. Obviously it was too difficult for the American to escape from this overguarded compound. Then he must have as many opportunities as possible to get outside. The American had made good use of his chance, Ling thought, grinning to himself. But Americans were clever, once they knew their danger.

He enjoyed the misery of the guards as they contemplated their prisoner's empty room, and their agitation as they waited for arrest.

But thus far Shigo Kuyoshi had paid them no heed. All the neighborhood knew that he had brought back with him last night a pretty foreign girl with wild eyes. An hour ago this girl had been thrust outside the gate, and a neighbor had taken her in because she belonged to the Old Foreign Mother and must be returned to her.

The elderly Chinese bringing his tale to Ling had told him all he knew and with what Ling knew, it made a whole. Therefore Ling quickly replaced the screw which yesterday he had removed. Now that his purpose was accomplished, he was curious to know where his Japanese master wished to go so early in the morning.

Inside the car Shigo sat with his eyes fixed unblinkingly on nothing. He was strengthening himself in arrogance. The dispatches which he had read as he ate his breakfast were all good. In the South Seas, Japanese forces were steadily winning against the Americans. It could not be doubted that before long the Philippines would belong to Japan. Thailand had submitted, and Burma was an over-ripe fruit.

He lifted his head suddenly and his face assumed the arrogant lines of a proud priest. Yes, the Japanese—were

they not destined to rule over the world? And he was a Japanese. As he thus made himself large, he saw Jenny smaller and smaller. A helpless American girl—why should he be afraid of her? Why even did he want her, except for a moment? An hour or two—a day at most—it would be enough. He would throw her out as he had the girl this morning. It would be his pride to be as careless of her life.

"Wait here," he told Ling haughtily at the hotel door. "I shall be only a short while. When I come out, there will be a woman with me. You are to help me put her in the car. Then drive back quickly."

Ling did not answer and he turned away to hide his curling lip.

In a frenzy of arrogance Shigo went upstairs and to her door. She opened it, ready, he saw, to go out for her walk.

He did not smile, "You are to come with me," he said.

"Where?" she asked. His eyes were strange and glazed, and she was suddenly terrified.

"You are going with me to my house," he said. "I have so decided."

He came near as he spoke, and with a great gesture he unsheathed his narrow sword. She stepped back. But as she retreated he came forward, inexorably following her.

They did not speak a word in that insane pursuit. Step by step he pressed her back. Suddenly without warning she turned and before he could imagine it she had run to the window.

He shouted aloud but it was too late. She had flung the window wide and at the sound of his voice she leaped. He ran to save her if he could. He could do nothing. The hotel was only three stories high, but he saw her flying body strike a sharp cornice heavily. He saw her crumple on the pavement below.

He was downstairs himself in less than a moment, pushing back the crowds with his cane, striking at them, and cursing them.

"Lift her into the car," he commanded Ling. He took her wrist. "No, she is not dead."

He stepped into the car with a strange sense of triumph. He had her absolutely in his power. . . .

In his own corner of the servants' quarters Ling was seemingly only smoking after his dinner. Actually he was

sorting out a tangle of threads in his mind. The American girl was now upstairs in a bedroom. She was still unconscious—that, he knew from the tale that came down out of the kitchen. For she had been taken up to her but she had not been able to eat. She knew nothing. The Japanese doctor had been called and he was still there.

Meanwhile soldiers were searching the city for the escaped American man. Ling had not been found, neither he nor the old American woman. Ling squatted comfortably on his heels, and closed his eyes in pleasure. Would the Japanese find the car again today or not? Obviously he would not, because he would not leave the American girl. Everybody knew he was infatuated with her.

Ling had felt great pity for her this morning as she lay in the car, her long fair hair streaming down over the seat. Certainly he would like to help her against his enemy. But how could he? If he could find the escaped American, that one could perhaps do something. Americans always thought of ways to what they wanted.

"I had better find the American," he thought.

HE ROSE and knocked the ash out of his pipe and stuck it in his belt and dusted himself off. He left the servants' quarters and went with his leisurely loose step in the direction of the Gate of Hope.

There at first he found no one. The house had been looted and was in great disorder. He knew, looking at it, exactly what had happened here because it had happened anywhere. The soldiers had flung open all they wanted and then had taken the doors open for the poor on the streets, who take whatever they can. On the floors there were scattered the pictures of many girls. He picked up one or two idly and stared at them. The American woman was a good-looking woman, working her way to heaven by saving these who were not worth saving.

"Some people go on pilgrimages," he mused, "and some do such good work."

There was much to be said in praise of the white foreigners, he thought, instead of these Japs, who neither went on pilgrimages nor did good works. In his soul rose in loathing of the enemy and suddenly he determined that he would

do all that he could to help the Americans.

Now suddenly, having made up his mind, he smelled the odors of cooking food and guided by his nose he came to a kitchen. There in the midst of all the wreckage of the looted house he found an old manservant cooking rice and cabbage on the earthen cooking stove. He knew him because he had seen him sometimes following the Old Foreign Mother, but they had never spoken.

He greeted him: "You are eating?"

"I am about to eat," old Wang replied.

"It is very sensible of you," Ling said courteously. "To continue life in the midst of death shows a wise man."

"What is done is done," old Wang replied. He dipped up a bowl of the fragrant rice and cabbage stew, and offered it to Ling.

Ling was too polite to accept it. "I have eaten—I have eaten," he said.

"A man can always eat again unless he is ill," old Wang said with equal courtesy. So the end of it was that they sat down together on their heels and supped up the good food, and then by skillful questions Ling followed his thread.

"Alas that this should have happened," he remarked, looking about at the waste everywhere. "And your mistress such a good old white woman in spite of her foreigners! All respected her. May I ask—was she killed?"

"No, she was not," Wang replied.

"I am glad of that," Ling said.

He noticed now a dawning look of recognition in the old man's eyes and he met it firmly. "I hire myself to the Japanese head-devil," he said. "I drive his car. What would you have? I must eat. But he is my enemy."

"If you understand that, there is no reason why you should not eat his food," Wang replied.

Ling leaned nearer to him. "There is a young American who has been imprisoned this last month in the same house where I sleep. He has escaped."

"I know that," Wang said calmly.

"Can you tell me if he is safe?"

THE two of them looked at each other, and Ling smiling made the sign of secret brotherhood. Now this sign, wherever it was made, was the token of those who served the guerrillas, and Wang knew it, too, for he also was of the brotherhood. They grasped each other's hands and laughed.

"Why did you not tell me at once?" Wang exclaimed. "I know where the Americans are—yours and mine." He leaned over and whispered into Ling's ear. "They are hidden in the House of P'an."

Ling gave himself a blow on the side of his head with his right palm. "How stupid I am," he remarked. "Why did I not think of that? It was the Old Foreign Mother who made the match between the P'an granddaughter and the Englishman, and I have driven the head-devil's car there more than once to drink tea, and I knew the whole matter and never tied the ends of threads together."

"There they are," old Wang said gravely. "But the question is: What shall be done with them? Their fat cook tells me that old Mr. P'an cannot eat because he is so anxious lest they be found and the whole house put to death."

"Ah," said Ling, "there is that danger." He reflected a moment and then he rose. "I will walk past the house and talk to that cook," he said. "It may be I can think of a way or two."

"If you can, I will help you," old Wang said. "After all, the Old Foreign Mother is my rice bowl. And, besides, I promised her husband to see that she

died in peace and was buried in a real coffin. She has no one but me."

"I will call upon you," Ling promised.

Thus following his thread, he came in the late afternoon to the house of the P'an family. He knew it as all knew it, for it was a rich house.

When he got to the great gate, however, it was not so easy to enter. It was locked and when he pounded on it with both hands, only a wicket opened and the gateman put his head out.

"Who are you, you son of a turtle, to pound on our gate as if it were your own?" he shouted.

"I come with a message," Ling replied.

"Who sent you?" the gateman inquired. By now everyone in the house knew that two foreigners were being

ny's name, she had only wanted to be alone. She had fulfilled every courtesy, it is true. Mrs. Shipman she had put into her mother's room, and Daniel had been given a room used for guests. She had seen to their welfare, and she had called the servants together and told them that the visit was only for a little while and yet so long as it lasted they must all be silent for their lives.

"We must remember," she told the group of simple, anxious faces, "that these are Americans, and that Americans are fighting our enemies, too. In the South Seas this very day there are Americans losing their lives to fight these enemies of ours, and in our way we help them when we take care of these Americans in our house until they can escape."

dark hair, who pulled the ricksha for head-devil, and escaped last night," Leone said rapidly.

"What makes you think he is her?" Leone asked next.

At this Ling grinned. "I know him here," he whispered, "and so is the Foreign Mother. What I have to tell about the American girl. I know who she is, too. That is what I must tell white man."

Then Leone opened the gate. If indeed this man knew what he said, she must let him in and bring him before Daniel. So without a word she barred the gate behind him, and the gateman stared, his jaw ajar, and led him toward Mrs. Shipman's room.

She found Mrs. Shipman asleep in chair and woke her, and Ling stood before the two women and told the story of how Jenny had leaped from the window and had struck the cornice and fallen to the street.

"Oh, my soul and body!" Mrs. Shipman whispered. She was in her stocking feet and now she began quickly to put on her stout leather shoes. "Of course Dan'l has got to know, but what will do? What can any of us do?"

She hurried ahead of them to Daniel's room. "You let me go in first," she told Leone. They waited outside the door of the small court of his room. Then in a moment she came out beckoning and they went into the court.

DANIEL had been watching a column of ants. That is, he had been sitting absorbed for half an hour, watching them struggle against a bit of brick that had fallen over their hole, but actually he had been restlessly wondering what he could do next, planning how he might get to the hotel somehow and find Jenny. "Dan'l!" Mrs. Shipman said abruptly. He looked up and there she was. Something in her face made him get to his feet.

"What's wrong?" he demanded.

"News from Jenny," she said. "The chauffeur's here. At least he says he is the chauffeur."

"Ling?" Dan asked.

"How did you know?" Mrs. Shipman asked in turn.

He felt into his bosom and brought out the bit of paper he had never dared to take out. "The fellow wrote this," he said.

She looked at it. "I reckon he's your friend," she said. "But Dan'l, there's bad news."

"She's not—"

"Not dead, no," Mrs. Shipman said. "But she's hurt and in that Jap's house. Yes, that's where she is, Dan, and now what are we going to do?" Leaving her with the question she had gone to the door and motioned to Leone and Ling, and they came in.

"You translate, dearie," Mrs. Shipman said to Leone, and Ling stood before them and told his story and Leone translated.

Daniel looked at Leone. "He says she is now upstairs?"

"On the second floor," Leone translated, "in a room which opens to the north. The old Japanese woman is taking care of her."

"Can the woman be bribed?" Daniel asked.

She met his eyes, full of trouble, and knowing that they did not see her. "Leone has never tried to bribe her but he fears not," she translated.

"Just how badly hurt is Jenny?" Daniel asked.

Again there was the murmured Chinese.

"She is very badly hurt," Leone translated. "Her head was bleeding and

hidden in an inner court and all were terrified at any strange face.

At this Ling stepped boldly forward and whispered in the gateman's ear. "It is for the male foreigner."

The man's face went green and he shut the wicket quickly and rushed to the back of the house to find Mr. P'an. He burst into the court where his master was walking back and forth. It was impossible for Mr. P'an now to continue the quiet study of old books, since at any moment he expected to have enemy soldiers raid the house.

"Master!" the gateman cried without courtesy of any kind, "there is a man at the gate who wants the white man."

MR. P'AN'S pale face turned the color of soapstone. "Now this is what comes of mixing up with foreigners," he groaned. "Foreigners have brought me nothing but sorrow and I shall die because of them. Call my granddaughter."

The man ran on until he came upon Leone's old nurse and she took the message to Leone, who sat alone in her own room. Ever since Daniel had spoken Jen-

This they understood very well, and when she went on to tell them that Daniel was a soldier who belonged to a ship of war, they swore that they would help her and say nothing.

But none of this eased for a moment her own heart. It was not she whom he loved or could love, she told herself sadly. That she loved him, he must never know.

Upon this sorrowful reverie her old nurse now intruded. She came near, her dim eyes anxious. "There is one at the gate who wants the white man," she whispered to Leone.

Leone rose at once. "Who is he?"

The old woman shook her head. "That I was not told," she said. But she ran to fetch the gateman, and the gateman had to confess that in his fright he had not asked the man who he was, and so in impatience and fear, Leone herself went to the gate and opened the wicket.

"Why have you come?" Leone asked, seeing the man was but a servant. "I have a message for the white man," Ling said in a low voice.

"What white man?" Leone asked.

"The tall one with the dark eyes and

## SOMEWHERE WEST OF SUEZ

**R**OARING in from the desert night, a procession of transport planes sits down at a secret base somewhere west of Suez.

Out of them steps the greatest gathering of military leaders in history—Commanders in Chief, Chiefs of Staff, Aides and Ministers.

The base commander greets them, and the United Nations go into a council of war—almost in the enemy's camp!

Today, Air Transport makes the entire globe a conference table for the highest ranking officials of the United Nations.

Over a world-wide system of air routes, they fly to Moscow or Melbourne, London or Washington, Chungking or Casablanca—in a matter of hours and days.

They meet face to face in the same business-like manner as a group of executives who fly to Chicago to confer on speeding up production in a dozen plants from coast to coast.

They thrash out critical problems and come to personal, clear-cut decisions, right on the spot. No confusion, no slow down in the process of winning the war.

Today, the Airlines are working hand in hand with the U.S. Army Air Transport Command in the globe-circling job of military supply by air—in addition to maintaining regular scheduled service between industrial centers for passengers, mail and Air Express on the war production front at home.

When you travel by Air *make reservations early; please cancel early if plans change.* When you use Air Express *speed delivery by dispatching shipments as soon as they're ready.* Air Transport Association, 1515 Massachusetts Ave., N.W., Washington, D. C.

IF YOU CAN'T FIGHT, YOUR DOLLARS CAN. BUY BONDS!

thinks her arm was broken. But it is certain that she is unconscious."

Dan leaped to his feet. "Of course I shall simply go there myself," he said. "I must get hold of a pistol somehow. I can't go with only my fists. But with a pistol I'd be a match for a dozen or so of the Japs. If Ling could have the car ready—why not? I believe I could do it."

She translated again in her rapid soft voice. But Ling shook his head.

"He says it would be folly," she said. "He says that he feels it would not be fair to his old parents to take so sure a chance of his death."

"Then I'll go alone," Dan said grimly.

All this time Mrs. Shipman had said not a word. Now she spoke. "No, you won't," she said. "I'll go. I've been plenty of times to see that wicked man." "You can't go!" Daniel cried.

"I can and will," Mrs. Shipman said firmly. "I'll go and ask the wretch what he did with my poor crazy Meri, and I'll just go quietly by myself tonight, when nobody is expecting me, and Ling can open the gate and let me in."

"But what good will it do?" Dan demanded. "You can't get her out, Mrs. Shipman—you can't carry her."

"Dan'l, he'll keep me there, too—I'll maneuver it so," she retorted. "I been thinkin' it all out while you talked. I'll fix it. And one step at a time, my dears, I'll think of something and Ling will be our go-between. I can get word to him and he can get word to you."

LEONE poured out the liquid rush of Chinese and Ling nodded and nodded again.

"He says this is possible," Leone translated. "He says he will help."

Ling's calm voice began again and Leone turned to him.

"Tell the old Foreign Mother that I will help when she needs me," he said. "Tell her that there must be a signal—let it be this, that she is to put a light in the window at midnight and if she opens and closes the curtains three times I shall be under her window ready for anything—a message she drops down, or whatever she sends down."

This Leone translated for Daniel while Mrs. Shipman listened, and nodded.

"I'd rather do it my way," Daniel broke in stubbornly.

But Leone smiled her melancholy smile. "He says he'll open the gate to Mrs. Shipman tonight when the moon touches the tip of the Silver Pagoda," she said.

At midnight Mrs. Shipman pulled her old fedora from under the mat where she kept it and put it on her head. Dan watched her with troubled eyes.

"It's all wrong for you to be doing this instead of me," he said. "If it were not that you know this town better than I do, I wouldn't let you. I'm swallowing my pride—thinking of Jenny."

"We're all thinkin' of Jenny, I guess," Mrs. Shipman said. She went over to Leone and took the girl in her arms with meaningful warmth. "Now don't worry," she said loudly. "Everything's goin' to be all right and I mean all right for you, dearie, or I won't count it's right."

She kissed Leone soundly on both cheeks, buttoned about her the old garment which had once been Paul's overcoat, smiled at them, and trudged away.

IN THE room she had just left, Leone and Daniel looked at each other. It was the first time they had been alone since they had parted on the houseboat. Now she divined in him a deep and embarrassing and with angelic patience she set herself to dispel it. They had been very near love, she knew, on that day when they had parted. She had known it but he had not. He did know it now as the cause of his embarrassment before her. But she comprehended very well that it was she who had first stirred his imagination and heart, and irony of ironies, had made him ready to love Jenny twice as easily as he might have loved her, if he had met Leone first.

For he had resisted Leone, who was his host's wife, and he had resisted himself the very idea of loving her, even while he felt so clearly her beauty and her charm. Had they been together a little longer he might have yielded against his will. But they were parted and he had left her stirred and yet yielding. When upon that softness of his heart there fell the image of Jenny Barchet, a woman so different and free, all the impeded possibility of love poured out.

She put out her hand and took Leone's. "You must believe I am very happy that you are in love," she said gently. "I'm glad that you have found her, though such strange circumstances, in such a sorrowful time."

Her pretty, formal English sounded like a foreign language to him, and he was grateful, for it removed her from him still further.

"And, Doctor, on your way here, would you pick up these groceries for me?"

COLLIER'S

ADOLPH SCHUS

"We decided not to build just at this time"

GEORGE LICHTY

Appreciate that, Leone—and a lot," said simply.

Embarrassment left him, as she said it should, and he sat down at a distance from her.

She looked at him with grave eyes, standing there in the middle of the room. "I left Arnold," she said.

"I'm sorry for that," he cried. "I am sorry for that. A decent fellow."

"Very decent," she said gently. "So decent." Her accent, half-French, half-Chinese, made her infinitely foreign. "But I cannot love him. So his home is not my home. No—never! It is better for me to come back here. They will think me dead and then he will marry again an English lady."

She shrank from this intimate talk and was so grateful to her that he did not want her to know he did. But with delicate antennae of her instincts she felt his withdrawal and nothing moved to her the hopelessness of her position for him as this. For with her beauty and her loneliness would he not have found her some affection and some sympathy, had he not met Jenny? But now she was so deeply in love with Jenny that she was insulated against all other men. She smiled a slight and wistful

"You are only thinking of your own," she said softly. "Is it not so?" "I am afraid it is," he said honestly. "I can't forget her for a moment—lying in that house."

"No," she sighed. "No, of course you can't. Well, if I promise you shall have

"Can you promise?" he countered. "I promise," she said. "I promise at any cost."

"Do you know the cost?" he asked. She shook her lovely head. "I do not know what it is," she said, "if it will make me happy."

And then having revealed her heart she turned and fled. . . .

He was at the gate. The two night guards leaned against the wall half asleep. They stirred when he came near and made automatic motions to lift their rifles. Then seeing that it was only he, they leaned their heads against the wall. He made a great noise of opening the gate to look out and then barring it again. The night. When the guards heard that they would relax themselves and go to bed. Actually he let the strong iron bar drop outside its hasp, so that the gate was open, and when the Old Foreign soldier pushed the gate she would find so. He made more great noise of go-

ing to his room across the compound, and then having banged his own door, he crept through the high shrubs around the wall until he was near the gate again. If the Old Foreign Mother waked the guards by chance, he would be there to help her.

But she did not wake them. She had trudged silently through the night-black streets and no one had challenged her. In these times people did not loiter in the dark streets. There was always the chance of drunken Japanese soldiers roistering homeward and making a joke of anyone they found alone on their way. But she passed no one and after the half-hour's walk, she came near to the gate she knew so well. It was very dark—even the lamp above it had been put out. She softened her footsteps and felt for the gate and pushed it gently. It moved beneath her touch, and she knew that Ling had prepared it.

"Good fellow," she thought, "and thank Thee, God, for having sent him to me."

SHE slipped through the gate and a dim inner light fell on the guards. She hesitated a moment when she saw them, but they did not move. One was squatting on his heels, the other sitting with his back against the wall, their guns in their listless hands. She crept by them as softly as an old cat and walked on the dead grass of the lawn around toward the front of the house. Upstairs a bright light burned in the northwest corner, and downstairs there was another. She walked up the steps and tried the door. It, too, was unlocked and she went in. The light was in the hall. The stairs lay ahead.

She looked to right and left and saw no one. She stepped forward as lightly as she could, keeping on the heavy Chinese rugs, and so reached the stairs. They were carpeted as well and still her feet made no noise. So step by step, too easily, dangerously easily, she thought, "except that God has prepared my way," she went upstairs, opened the door of the room in the northwest corner, and found herself face to face with Shigo. . . .

He had been restless and troubled all day. Instead of working he had wandered from room to room, impatient for Jenny's waking. Still she had not waked. He had sent for the doctor twice, each time sure that some change for the worse had come over the beautiful pale girl lying on the big bed. Each time the young Japanese surgeon, whose work it was to care for the wounded in battle, examined the girl with cautious care and

Take an empty tube with you when you buy

## Coffin for Hitler

Sinister, coffin-like bullet-sealing rubber gas tanks for warplanes will hasten the death of Hitlerism—and perhaps of Hitler himself. Able to "absorb" bullets without leaking gasoline, they will save many an American flyer from crashing in flames.

Seiberling is building thousands of these ingenious tanks—with the same manufacturing skill that has made the Seiberling

name on rubber products like Sterling on silver. Seiberling today is building war supplies of many kinds—by new and improved methods. One Seiberling development cuts the "curing" time for rubber boats and pontons from two days to 35 minutes. It has been made available to the entire rubber industry so that our fighting forces may get

more of this vital equipment *quickly*. Thousands of tons of rubber are needed for planes, tanks, guns and ships. You can help provide it by patriotically conserving *your* tires. Seiberling Dealers, highly expert in tire care, can help you do this. Victory is our first job. When that job is completed, we will apply our war production experience to the building of better than-ever Seiberling peacetime products.

in a silence. He did not ask who she was for he knew. He knew, but even had he not known, he would not have asked Shigo a word concerning her.

There was a look of complacency upon his smooth young face. His superior, Shio Kuyoshi, had been so unwise as to become infatuated with a prisoner of war. He had kept her interned, it was true, as all Americans were interned, but he had visited her daily. Now he had brought her here. Why had she not been taken to a hospital? If his superior had been with further unwisdom, it would be easy to make certain demands upon him, as for instance, a share in profits of local taxes or in the illicit sale of opium to the Chinese guerrillas. Surges had little chance for such profits. After all, they were not so lucrative, the Chinese were too ignorant to know how to use them, and they always died they were poison. Then, too, he expected Shigo of a large share in the profits of the city. These must be enormous. Why should he not share them? Such future possibilities made him now very courteous to Shigo, though not.

"Do not think she is likely to die," he said to Shigo. "There is no definite conclusion. I see no sign of internal bleeding. The arm is only sprained." "Then why does she lie there like that?" Shigo demanded.

THE doctor turned up the palms of his hands. "The nervous system of American females is very ill-balanced," he said.

"They have been severely spoiled. A Japanese woman could be forced to consciousness. Indeed, she would force herself, for she would feel it necessary to struggle back to her duty to her family and so on. But this girl is simply not going to live."

"Is she really unconscious?" Shigo asked. Several times during the day he suspected Jenny of pretending.

"She is unconscious," the doctor replied, "but it may be partly voluntary. If it is, she may not wish to wake."

Shigo had thanked the doctor and allowed him to go away. But the curious thought that Jenny might be in a trance from which she did not wish to waken made

him determined to test her for himself.

Therefore when he had eaten his dinner and had drunk his usual fill of wine, had sat a while in his study pretending to work and actually in an inner quiver of excitement, he went upstairs to the room where Jenny lay. The old Japanese woman was there, sitting on the floor beside the bed. He dismissed her with a few curt words:

"You may go. I wish to watch this patient for a while myself, to discern the state of her illness."

The old woman obeyed him as always, without hesitation or question.

So it was that he had sat down beside the bed and allowed himself to look at her lovely sleeping face. He did not move to touch her. He only gazed at her face for a long time, hypnotizing himself with its stillness. He did not want to touch her. She was too beautiful to be touched.

"You are a goddess," he murmured fervently, "carved out of ivory, carved out of marble. I have carved you—perhaps only I can bring you to life again." He remembered some old story he had read in Western mythology of the beautiful statue which a sculptor had loved and brought to life. The strange mystic side of him exulted in making a mystery now of this woman whom in so absolute a fashion he possessed. "I do possess you," he murmured. "I have the power over you. No one can take you from me."

For hours he sat, motionless and unknowing, his eyes never moving from her face. Now and again a bell from a temple near by rolled its solemn note into the night and died away. He heard the sound and it became part of the mystery. Slowly he felt something gathering in himself, a force like the tide, against which he would not struggle. When it rose to its height, he would let his love seize hold of this woman, and then she would wake—she would wake!

It was when the temple bell had rolled out for the seventh time that he heard a noise at the door. He tore his eyes away from that face and saw Mrs. Shipman.

She stood there, her hands deep in the huge pockets of Paul's old coat, her

white hair straggling from under his old hat.

"You're drunk," she said calmly.

He brought himself back with an effort from his own trance. "I am not," he said thickly.

"You look drunk," she said. She took off her hat and put it on a chair and began unbuttoning the coat. The room was hot and perfumed with some sort of sickly smell.

He sprang to his feet and stared at her wildly, "What are you doing here?" he cried. "Do not think you will be allowed to stay."

"God sent me here," she said in her loud flat voice. "And as long as I'm here I'll open the window. The air is terrible." She padded heavily across the floor. She was very tired but she put weariness away from her. It was no time for her to be tired now when she had this fellow to cope with. She threw open the window and a rush of cold air came in and she felt better. When she turned he was standing there as though he did not know what to do with her.

"What I really come for," she remarked, "was to know what you did with my poor Meri, you bad man."

"She is not here," he said. He watched her warily. If he dared leave for a moment he would go and call the guards. But he did not want to leave her with Jenny. How did she know Jenny was here? She was a clever old woman and she was not here without a purpose.

"I could have got away," Mrs. Shipman said without paying the slightest apparent attention to him, "except that I kept thinking of that poor Meri of mine. I told you she was crazy, you wicked soul. A man that'll take away a poor demented girl—"

"Do not speak of her!" Shigo suddenly screamed.

"You tell me where she is, then," Mrs. Shipman retorted.

"She is out on the streets," Shigo said sullenly, "where she belongs!"

"You're lying, probably," Mrs. Shipman said. She ambled over to the bed and stood looking down on Jenny. "What have you done to this poor child?" she inquired severely. "I don't put anything beyond you. Have you drugged her?"

"She had an accident when she was being transferred to another place of internment," Shigo replied with dignity. "I had her brought here until she recovers."

MRS. SHIPMAN seemed not to hear him. She leaned over Jenny and touched her cheeks with a tender hand. "Wake up, my dearie," she said coaxingly. "It's only old Mother Shipman. I've come to take care of you, child. Mother Shipman is not going to leave you, neither. I'm going to stay right here and look after you, dearie, if it has to be until the end of this cruel war."

Shigo did not speak. Watching that sleeping face, he saw a quiver of the long lashes and he stepped forward noiselessly. At that moment Jenny opened her eyes full upon him. For one dazed second her eyes clung to him. Then they closed again.

"Jenny, Jenny!" Mrs. Shipman cried. "Oh, Jenny child!" But Jenny had gone back into her trance. There was no waking her.

"There!" Mrs. Shipman said angrily to Shigo. "you see what you have done. She's afraid to come to, after what you've done to her, you scoundrel!"

"But I have done nothing," Shigo said. "I have done nothing at all but what has been good!"

Like a petulant child he turned and rushed from the room.

"I just called the coal man and told him we converted to coal. He suggests converting to wood"

JOHN KAY KARAFFA

JOHN KAY KARAFFA

# BIG FREEZE

BY BILL DAVIDSON

Consider the strange case of Arthur Wirtz, whose hobby became Big Business because he knew a frozen asset when he saw one

BACK in 1931, when Arthur Wirtz was a prosperous young businessman quietly making a tidy fortune out of Chicago real estate, his wife caught him one Friday morning staring at sleet-covered Lake Shore Drive, watching little children gaily wending their way to a near-by frozen pond with skates under their arms. Mr. Wirtz was tapping the window sill with his large forefinger and saying "H'mm."

Saturday morning he was gone. On the breakfast table was a historic note reading: "Flying to Detroit to buy a bankrupt hockey stadium to play around with. Will be back tonight. Please have roast beef for dinner."

Wirtz has never been the same since. Because he gave way to that one little impulse, he now finds himself indulging in a hobby in which he owns or controls the Detroit Olympia, the Detroit Red Wings hockey team, the Indianapolis Capitols hockey team, the Omaha Knights hockey team, the Chicago Stadium, the Indianapolis Coliseum, the Omaha Coliseum, the Broadway hit, Stars on Ice, Sonja Henie's Hollywood Ice Review of 1943 and Sonja Henie.

This is without a doubt one of the most prosperous collections of sports

bric-a-brac in history. It brings in well over \$4,000,000 a year. It puts the incredible Mr. Wirtz, a rank amateur, in the same promotorial bracket with Samuel Goldwyn and Mike Jacobs. It has opened up a spectacular new entertainment medium that has Broadway, Hollywood and the sports world all gnashing their teeth in helpless rage.

"It is," as Mike Jacobs put it, after reading that the Sonja Henie show had grossed \$400,000 in thirteen rent-free days at Wirtz's own Chicago Stadium, with a sell-out Wirtz hockey game sandwiched in between, "blitzkrieg!"

Last year, Wirtz came within a game of making a clean sweep of hockey when his Indianapolis and Omaha teams won the championships of their respective leagues, and the first-place Detroit Red Wings won the first three games of the Stanley Cup play-offs.

This year, a few more of his hockey holdings have come to light. When the Brooklyn Americans disbanded at the start of the season, it was discovered that several of the players were Wirtz property, lent to the faltering team to keep it from falling on its face last year. And when the Rangers went crazy at the beginning of the current campaign trying to find a goalie who could prevent the opposition from scoring less than ten goals per game, they finally came up with Jim Franks, a Wirtz chattel out of Omaha. This, too, was in the form of a magnanimous loan.

"We were afraid to dig further," said the late Frank Calder, president of the National Hockey League, "lest we find that the hydrogen and oxygen compris-

ing the water which makes our ice were also obtained from Mr. Wirtz on a lend-lease basis."

Brother Wirtz has been so secretive about himself that he deliberately uses Sonja Henie's name in advertising all his ice productions. Even many of the performers have never even heard of him, and the huge, boyish, 6-foot-4-inch, 220-pound giant takes great delight in wandering around incognito backstage, watching the rehearsals with open-mouthed wonder and listening to the gripes of the chorus girls.

When Mr. Wirtz says hobby, he means hobby. He is president of the property management firm of Wirtz, Haynie & Ehrat, Inc., in Chicago; president of the Chicago Mortgage and Realty Co., the \$10,000,000 Forman Realty Trust, and several lesser corporations. He is also a power in Illinois politics and a personal friend of several high-ranking members of both the Republican party and the current national administration.

## Caught with the Loot

Wirtz was born in Chicago on June 23, 1901. His father, Frederick Wirtz, was also a real-estate operator. The family lived moderately in a small house on the North Side. Young Arthur had a normal childhood, interrupted only by occasional episodes in which he nearly drove his mother to distraction by coming home with live goats obtained in trading expeditions on the West Side. Mrs. Wirtz never quite understood where the unusual prizes came from until one day she caught 12-year-old Arthur heading westward in the van of a picked neighborhood baseball team. Under his arm was one of her best silver vegetable dishes.

"Where are you going with that?" asked Mrs. Wirtz.

"Well, you see, Mom, this is our share of the purse. The Thunderbolt Terrors are putting up a basket of eels, winner take all. But don't worry, Mom, we can't lose. I got Joe Thomas of Lake Forest Academy to pitch for us."

The game was canceled.

Young Arthur went to Evanston Academy and then to Northwestern University. At Evanston, he suddenly shot up to the startling height of 6 feet 3 inches and filled out to 170 pounds. He hit Northwestern in the war year 1918, and because of the suspension of eligibility rules, became one of the few freshmen to play varsity football at that institution. By this time he was 6 feet 4 and well over 200 pounds.

According to George Halas, coach of the Chicago Bears, who played against him that year, "The kid was potentially one of the toughest tackles I have ever seen."

Wirtz played in the historic 1918 game against the great Naval Training Station team from Great Lakes.

Great Lakes started that game by pushing the Wildcats all over the field. Something was wrong. Every time Northwestern tried a play, there would be three Great Lakes men to drop the ball carrier behind the line of scrimmage. Then, in the second quarter, Wirtz noticed something. He rushed back into the huddle.

"For crying out loud!" he said. "It's Bob Kohler and Paddy Driscoll. They

Not too long ago all those spectator-filled seats in the mural behind Arthur Wirtz were empty. Due to his shrewd showmanship, three hockey teams and a \$1,000,000 touring ice show, his four arenas are usually jammed to the hilt

both played with us before they enlisted in the Navy. They know our signals by heart."

With Wirtz doing some rapid mental calculation, the Wildcats changed their signals right then and there on the field. The game ended in a 0 to 0 tie.

That was the end of college athletics for Wirtz. He transferred to Michigan in his sophomore year, and before residence and eligibility rules allowed him to play again, he had graduated. He went into the real-estate business, got married, and began amassing the above-mentioned tidy fortune.

Then, in 1931, Wirtz met Old Jim Norris, the millionaire grain operator. The two began talking sports. Wirtz was a former football player, Norris had played hockey as a kid and was crazy about the game. Soon he had Wirtz going to hockey matches.

One day Norris said, "I understand the Detroit Olympia hockey stadium is bankrupt, and the receivers are selling it for a song. It's a good piece of real estate, and maybe we can have some fun with it."

"I'll go home and think it over," said Wirtz.

That was Thursday. On Saturday, the Olympia was theirs.

On Monday, Wirtz phoned Norris. "I have just discovered," he said, "that we are also the owners of a hockey team—the Detroit Cougars in the National League. This team was the property of the arena, and went along as part of the deal."

"I am busier than you are," said Norris. "From now on, you are the active partner of this outfit. I will furnish capital and keep my mouth shut."

So Wirtz took command, with Old Jim Norris and Young Jim Norris (now a lieutenant in the Navy) hovering in the background. That's the way it's been ever since.

## Putting White Elephants to Work

Wirtz did all right, too. First, he changed the name of the team from the Cougars to the Red Wings, for unexplained artistic reasons. Then he merged the team with the Chicago Shamrocks a bit of Norris property in the old American League and went out and bought a few new players. Before any one knew what had happened, Detroit climbed from last place in the National League in 1931 to first in 1932. More over, the Olympia was out of the red for the first time in its history.

No sooner was this news announced than the receivers of the bankrupt \$5,500,000 Chicago Stadium came to Wirtz "Please," they begged, "please take this white elephant off our hands."

Wirtz couldn't resist. But when the next hockey season was over, he found himself with not one but two of the largest indoor arenas in the country—standing idle and empty until the following winter. For months, Wirtz tried to figure out what to do, while the hockey profits slipped away.

The situation in the meantime became even more acute. The Detroit team needed young players, so Wirtz had to buy a couple of farm teams, the Indianapolis Capitols and the Omaha Knights. But in order to purchase these two teams he also had to lease the two arenas that went with them. So there he was with more empty stadiums to worry about.

His single original holding, the Olympia, had now multiplied to three hockey teams and four arenas.

One night while watching a small skating exhibition at the College Inn in

ALL CARS WERE ENGINEERED FOR PRE-WAR DRIVING...THEY SHOULD BE RE-TUNED AND RE-ADJUSTED TO PROVIDE LONG-LASTING, THRIFTY WARTIME TRANSPORTATION

THE car you drive today has *two* jobs to do. First, it must meet your own essential driving needs. Second, it must help meet the vital transportation needs of America. It's doubly important, then, that your car be kept in perfect shape...conditioned to do those jobs right. You may not be eligible to buy a new car...but everybody is eligible to have his present car converted to a "Victory Model." It's just as easy as it ever was to go to your Oldsmobile dealer for a tune-up. He tunes your car for *today's* new type of driving. He adjusts it for

maximum efficiency at "35 and under." He tunes it for maximum economy on today's lower-octane gasoline. And he helps you protect it against the ill effects of low speeds and limited driving—such as run-down battery, neglected tires, diluted lubricants, sticky valves. Drive in to your Oldsmobile dealer's today...whatever make of car you own...and drive out a "Victory Car."

# "FIRSTS"

## A ZENITH HABIT

A GOVERNMENT official was being shown a new idea in the Zenith laboratories. In passing, he commented upon the outstanding manner in which the radio industry was effecting the rapid and continuous changes necessitated by war requirements. A Zenith official replied—he said:

"... the answer is easy. Radio and Radionics represent a trigger-quick, fast moving business. Concerns that couldn't 'change overnight' are out. In this industry, we're used to fighting with new ideas—only—now we're 'fighting' Japs and Germans instead of each other."

In that statement is evidenced the condition that made possible Zenith's attainment of industry leadership. Ever increasing public acceptance of Zenith name and product resulted from a never ceasing stream of Zenith "firsts"—new features—new devices and new sets which enabled us to truthfully say to the public:

# "ONLY ZENITH HAS THIS"

Today you find as commonplaces—essentials—of most radio sets—features first introduced to the public by Zenith—such as—

## "FIRST"

### Push Button Tuning

Years—yes, years ahead of the industry—(1928) a Zenith set embodied push button selection of the station desired. Our slogan in 1928 was "Push the button—there's your station."

For over seven years, Zenith Radio Corporation has advertised on our short wave sets—"Europe, South America or the Orient Every Day or your money back." It has never been called upon for a refund.

## "FIRST"

### House Current Sets

"Way back when" (1926) all home radios were operated from storage batteries until Zenith offered the first set run by house current.

BELOW—A FEW NEW ZENITH "FIRSTS"—"FROZEN" BY ZENITH CHANGEOVER TO WAR PRODUCTION

## "FIRST"

### Long Distance Push Button Portable

1942 saw the national introduction of a revolutionary new portable—the Zenith Trans-Oceanic. Without increase in size or weight it gave push button operation for foreign and U. S. short wave stations—tuned in the same way as locals—and standard broadcasts too. It contained a disappearing fish pole antenna plus dual Wavemagnets—operated from battery or house current—was born of Zenith pioneering in LONG DISTANCE RADIO RECEPTION.

—AND THESE ARE JUST A FEW OF THE MANY ZENITH "FIRSTS"—

## "MILITARY SECRET"

Today all Zenith production centers on war needs. What we are making is a military secret. But three things we can tell you. First... we are dealing with the thing we know—Radio—and Radionics exclusively. Second... we are learning every day—gaining new knowledge which will reflect itself in Zenith civilian products when the time

arrives. Third... we now know—by first hand experience—that our Army and Navy are more than "up-to-date"—they are alert and progressive in thought and action—almost unbelievably so. This fact is a great reassurance to us here as citizens—it commands our complete confidence as it would yours if you knew what we know.

## RADIONICS

### the New Miracle Industry

Four great industries are destined to lead this country back to normalcy after victory is won.

Planes and Radionics are two of the four. Radio—never a necessity on ship or train—is as essential as the engine itself to that great new form of individual and mass transportation—the airplane.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make.

the tooth mug in your bedroom. Gerry recognized Joe Billings, one of her fellow correspondents.

"Where are you off to, Geraldine?" he asked.

"I'm on my way to the canteen to get a story."

"Come back with me and have a drink. I've got a couple of bottles of usquebaugh."

"No, thanks, Joe. I'm working."

Joe sighed. "Oh, Gerry! You're all story and no girl. Why don't you think about something besides work once in a while?"

"Yes. Why don't I?" replied Gerry, knowing the answer. She went off in the general direction of the harbor, trusting to luck to see her through the black-out and the unfamiliar streets.

THE canteen was blue with smoke. It was a democratic affair, patronized by officers and men alike. You could get soft drinks and beer, and there was a juke box that played the latest hits from Broadway and Piccadilly. Women were allowed, but only on sufferance. It was a man's place, where they came to pretend for a few hours that all was well with the world.

Gerry ordered a beer at a table by herself.

Somebody dropped a nickel in the juke box, and a polka rent the air. A few couples got up and danced, but it was hard work because people kept milling around. The room was very full.

"I say!" exclaimed a young voice in the accents of Oxford and Cambridge. "Aren't you Miss Geraldine Potter?"

Gerry was a little surprised at being recognized here, but she looked up at him composedly enough. He had darkish red hair and a lean face set with blue eyes. Her glance fell on the gold braid on his sleeve. There was lots of it.

"Why, yes," she answered quietly, "I'm Gerry Potter."

"I recognized you from your pictures," he said. "They're like you, but they don't do you justice, you know."

"Don't they?" said Gerry.

"You're being sent to England, aren't you?"

"Yes."

"To write some articles on Englishwomen."

"That was the idea," she replied.

He sat down without asking permission, offered her a cigarette, and ordered two more beers. "I read your magazine

whenever I can get it," he went on. "We have several copies in the wardroom of my ship, and they're thumbed to pieces. We all liked your stories about America and the war. Give us some more, will you?"

"I can't," she said. "I'm on assignment. I've got to write about England."

"I expect you'll do a gorgeous job," he went on.

Gerry was pleased by his compliments but she knew she must get down to work. Here was something made to order, a nugget dropped right into her lap.

"Look here," she began, "never mind about me. I want to know about you—what goes on in your life."

"No," he said; "I'm a frightfully dull subject."

"Yes, please! I want you to tell me what it's like to be torpedoed."

"I can't," he said, "because I've never been torpedoed. When it comes to drama, the other boys have all the luck. I just lead a humdrum life—back and forth, back and forth across the Atlantic. I might as well be the skipper of a ferry boat. I'm bored as the devil."

"I don't believe you," she said. "I don't believe you at all."

Her voice implied that he knew a lot if he would only tell her. His expression changed slightly. He leaned his arms on the table and looked at her.

"I'd rather not talk shop—do you mind?" he said.

She knew that he had to be handled differently: questioning would not draw anything out of him.

"I get frightfully sick of it," he added. "I'd much rather talk about something else."

They had finished their beers.

"Where shall we go now?" he asked.

Gerry was a little baffled because he was taking it for granted she was spending the evening with him. "No place," she said evenly. "I've got to stay here. I've got to get a story from somebody. I can't get one from you."

"We can go to the movies," he went on, "or we can go back to my digging in the hotel. I left my second-in-command asleep there, but we can wake him up. He won't mind, if we bring along a bottle of whisky."

There was no pleading in his voice. He was merely telling her what she was going to do for the rest of the evening. Ordering her around, as from a bridge.

She opened her mouth to protest and then closed it again. Perhaps, after

Rodney de Sarro

"I wish you weren't so darned anxious to be the first robin sighted!"

## PASSING ALL TESTS WITH FLYING COLORS!

**M**EN WHO demand perfection itself are getting it—in Mallory! To them the Mallory label in a hat is as much an "O. K." as an Identification Badge in a war plant—and is equally necessary!

The "production secret" behind THE STERLING (\$6.50, at right) is the 'Cravenette' process—exclusively Mallory's in hatmaking. 'Cravenette' means that THE STERLING is *style-protected*: dampness won't dim its original luxury. It fairly "sings through showers" and that means

it holds longer-lasting smartness for you.

THE DEFENDER (\$10, at left) is of *Pliafelt*—another Mallory exclusive improvement in hatmaking. Its resiliency laughs at outrageous treatment; preserves this hat's fresh style lines and makes it "grow to your head." Wear THE DEFENDER with brim snapped down in front, or "off the face." Worn either way it's an eye-catcher!

Any Mallory, though, will brighten your looks (and the looks *she* gives you). What's more, you can enjoy Mallory prestige at prices as "gentle to the touch" as these fine hats themselves. *Other Mallory styles from Five Dollars to Ten Dollars.*

*Buy War Bonds and War Stamps to help keep this hat in its rightful place, on top!*

SCENE FROM THE WARNER BROS. MOTION PICTURE, "AIR FORCE"

## There's a new glamour girl in Hollywood

She doesn't wear sweaters, or pose for glamour photographs. She's never seen at night clubs. And though her autograph is well-known in certain French and German cities, nobody has ever asked her for it.

Yet Mary Ann — star of Warner Brothers' new picture, "Air Force" — passed every screen test with flying colors. And that's no more than you'd expect from a Boeing Flying Fortress!\*

"Air Force" is the story of a Boeing B-17, and the gallant hell-for-leather crew that flew her to glory... via Pearl Harbor, Wake Island, Manila,

the Coral Sea and Australia. Made in collaboration with the Army Air Forces, it's a picture to make your heart skip a beat... then beat faster.

What the camera *doesn't* show is an invisible supporting cast: the Boeing designers and engineers, the technicians and researchers, the craftsmen and workmen who originated the Flying Fortress and now keep a steady stream of B-17's and other war planes flowing from Boeing plants — in Seattle, Wichita and Canada.

More than twenty-five different kinds of engineering know-how are represented by several

thousand Boeing engineers. Daily they challenge the word "impossible," in a relentless, 'round-the-clock effort to do the job *better*, and do it in *less time*.

*Some day this effort will be applied to making life richer and happier, in a peaceful world. For Boeing engineering talent and experience, while devoted primarily to the continued advancement of aeronautics, also encompass resources which are relevant to almost every phase of civilized life.*

DESIGNERS OF THE FLYING FORTRESS • THE STRATOLINER • PAN AMERICAN CLIPPERS

ple of drinks, he'd loosen up and talk. "You haven't told me your name," she said. "Haven't I? Awfully sorry! My name is Toby Fentress." Gerry wondered what his rank was. He hadn't had time to learn the insignia of British naval uniforms. But she knew he was pretty high up. He had a disarmingly easy way with him. There was something childish and appealing about Toby Fentress, in spite of the amount of gold braid on his sleeve. He looked at her and smiled, and she smiled back. "Come on," he said, "I'm bored with this place. I want to get out of here."

HE PILOTED her away into the blackout. She did not ask where they were going. It was better to be pliant with a man like this, especially if he wanted something. They went to his hotel. The second-in-command turned out to be a pink-cheeked boy named Alwyn. He looked too young to be in command of anything. Toby introduced him briefly as Miss Geraldine Potter. "You're kidding," said the boy. "No, I'm not. Ask her! Look at her!" Alwyn said shyly, "You wrote those articles about American shipyards. We all read them and thought they were splendid. We also liked another one, about bomber pilots. Jolly good!" Gerry felt pleasantly warm inside. Praise from these boys meant something. Toby found two glasses and a tooth mug

and poured the drinks. Then he came and sat down beside her on the bed.

"Isn't this much nicer," he asked, "than talking shop in that ghastly canteen?"

"Yes," said Gerry, remembering how she'd spurned another invitation that evening to drink whisky in a hotel bedroom. But the story she was after was on her mind. All she'd needed was one British naval officer, and now she had two of them.

"Look," she said to Alwyn, "tell me something about life on a destroyer—something I can use in an article I'm writing."

Alwyn grinned at Toby. "I don't think we'd better tell her about life on board the Ariadne, do you, Toby?"

"No, Alwyn, I don't," replied Toby, seriously.

Then they both broke into roars of laughter, as though the subject was unfit for feminine ears. They made it sound like a naughty picnic.

Gerry felt a little exasperated, but she laughed. She wondered fleetingly what the rest of the staff would think if they could see her now, frustrated by a couple of British officers.

Toby took her hand. "Listen, Geraldine!" he said. "We want to have a good time. It's so long since we saw a nice girl! I know it isn't frightfully exciting, talking to us in this ghastly bedroom, but it's about all we have to offer. You don't know what it means to talk to a woman."

"Then go to the wardens' meeting! Don't prance around here in it!"

COLLIER'S

GEO. PRICE

From a long way off came a voice, saying, "I know you can get a story, because you have no respect for human feelings."
